K. S. Rangasamy College of Technology

(Autonomous)

Curriculum & Syllabus of B.Tech. Artificial Intelligence and Data Science (For the batch admitted in 2021 - 2025)

R2018

Accredited by NAAC with A++ Grade, Approved by AICTE, Affiliated to Anna University, Chennai.

KSR Kalvi Nagar, Tiruchengode – 637 215. Namakkal District, Tamil Nadu, India.

ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

VISION

To achieve excellence in educational programming, industry collaboration, research, and innovation in the field of Data Science and Artificial Intelligence.

MISSION

- To empower the cognitive skills of the students by enhancing knowledge in the Artificial Intelligence domain
- To facilitate Data Science Technology and Professionalism through value-added courses and collaborative learning

1. PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- **PEO1:** Core Competence: Graduates will demonstrate their technical skills and competency in various applications through the use of Artificial Intelligence and Data Science
- **PEO2:** Successful Career: Graduates will establish their knowledge by adopting Artificial Intelligence and Data Science technologies to solve the real-world problems
- PEO3: Ethics and life-long learning: Graduates will engage in lifelong learning to excel in their profession with social awareness and responsibility

2. PROGRAMME OUTCOMES (POs)

Engineering Graduates will be able to:

- **PO1:** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3: Design /development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **PO4:** Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- **PO6:** The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **PO7:** Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9: Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **PO10:** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

3. PROGRAMME SPECIFIC OUTCOMES (PSOs):

Engineering Graduates will be able to:

PSO1: Develop IT infrastructure: Ability to design, implement and apply computational skills related to Artificial

Intelligence and Data Science

PSO2: Design / Develop software products: Ability to apply tools and techniques to provide

successful solutions in the multidisciplinary field

PSO3: Innovative Career: Ability to critique the role of information and analytics for an innovative career, research

activities, and consultancy

4. PEO/PO Mapping

Programme	Programme Outcomes														
Educational Objectives	PO1	PO2	PO3	PO4	PO5	PO6	P07	PO8	PO9	PO10	PO11	PO12

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Matrices

Characteristic equation – Eigen values and Eigen vectors of a real matrix – Properties of Eigen values and Eigen vectors – Cayley-Hamilton theorem (without proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by orthogonal transformation - Nature of quadratic form

[9]

Differential Calculus

Curvature – radius of curvature (Cartesian and polar co-ordinates) – Centre of curvature – Circle of curvature – Involute and evolute – envelope.

[9]

Rev. No.3/w.e.f. 22.07.2024

Passed in BoS Meeting held on 24/05/2024

Approved in Academic Council Meeting held on 25/05/2024

Functions of Several Variables

Partial differentiation – Homogeneous functions and Euler's theorem – Jacobians – Taylor's series for functions of two variables - Maxima and minima of functions of two variables - Constrained maxima and minima: Lagrange's Method of Undetermined Multipliers.

[9]

Differential Equations

Linear differential equations of second and higher order with constant co-efficient - R.H.S is $e^{\alpha x}$, $sin\alpha x$, $cos\alpha x$, $x^n n > 0$, $e^{\alpha x} sin\beta x$, $e^{\alpha x} cos\beta x$, $e^{\alpha x} x^n$, $x^n sin\alpha x$ and $x^n cos\alpha x$ — Differential equations with variable co-efficients: Cauchy's and Legendre's form of linear equation - Method of variation of parameters -Simultaneous first-order linear equations with constant co-efficient.

[9]

Integral Calculus

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction,

[9]

Integration of irrational functions - Improper integrals.

Semiconductor Physics

Introduction-Elemental and compound semiconductors-Intrinsic and extrinsic semiconductors-Properties-carrier concentration in intrinsic and extrinsic semiconductors (qualitative)-p-n junction diode: characteristics, p-n junction transistors: characteristics (CB and CE)-Bipolar characteristics (Biased and unbiased)-FET: characteristics and applications.

[10]

Optoelectronic Materials and Devices

Photoconductive materials – Light Dependent Resistor – Working of LDR – Applications of LDR, Photovoltaic materials – Solar cell – Construction and working of a solar cell – Applications of solar cells, Liquid crystals – Liquid crystal Display (LCD) – Construction and advantages of LCD, Electro optic materials – Optoelectric effect-Electro-Optic Modulation.

[9]

Laser Technology

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion-different types of lasers: gas lasers (CO2), solid-state lasers (Nd: YAG), dye lasers, Semiconductor laser (Homojunction and Hetero junction)-Properties of laser beams-applications of lasers in science and engineering.

[8]

Fiber Optics and Sensors

Principles – cone of acceptance, numerical aperture (derivation)- Modes of propagation –Fabrication of optical fibre: Crucible-crucible technique - Classification: based on materials, modes and refractive index profile– Splicing: types of splicing- Losses in optical fiber – Detectors – Fiber optical communication links (Block diagram) – Advantage of fiber optical cable over copper cables- Fiber optic sensors: liquid level sensors, Temperature and Displacement sensors.

[9]

New Materials

Engineering Materials: Metallic glasses – preparation, properties and applications, Shape memory alloys (SMA): characteristics, properties of NiTi alloy applications – advantages and disadvantages of SMA Nano Materials: Nanomaterials: Properties- Top-down process: Ball Milling method – Bottom-up process: Vapour Phase Deposition method- Carbon Nano Tube (CNT): Properties, preparation by electric arc method - Applications.

Objective(s)	 To imparting basic principles of thought process, reasoning and inferencing. To gain knowledge on sustainability is at the core of Indian Traditional knowledge Systems connecting society and nature. To inculcate holistic life style of yogic science and wisdom capsulesin To know sanskrit literature are also important in modern society with rapid technological advancements and societal disruptions. To gain the knowledge on Indian artistic and its tradition 											
Course Outcomes	CO1: Know tradition CO2: Know CO3: Ability	of the course many festival onal activities harvest festiv to do case st m Indian artis	s have religion rals, celebrate rudies on phil	ous origins ar e seasonal ch	nd entwine cu nange	ultural and re	ligious signifi	cance in

50 CS 0P1 - Programming for Problem Solving Laboratory

Common to all Branches

Semester	Hou	ırs/Week		Total hrs	Credit		Maximum Marks			
	L	Т	Р		С	CA	ES	Total		
I	0	0	4	60	2	60	40	100		

Objective(s)

- To enable the students to apply the concepts of C to solve simple problems
- To use selection and iterative statements in C programs
- To apply the knowledge of library functions in C programming
- To implement the concepts of arrays, functions, structures and pointers in C
- To implement the file handling operations through C

At the end of the course, the students will be able to

CO1: Apply how to read, display basic information and use selection and iterative statements

CO2: Demonstrate C program to manage collection of related data

Course Outcomes

- CO3: Design and Implement different ways of passing arguments to functions, Recursion and implement pointers concepts
- CO4: Develop a C program to manage collection of different data using structures, Union, user-defined data types and preprocessor directives
- CO5: Demonstrate C program to store and retrieve data using file concepts

LIST OF EXPERIMENTS

- 1. Implementation of Simple computational problems using various formulas.
- 2. Implementation of Problems involving Selection statements.
- 3. Implementation of Iterative problems e.g., sum of series.
- 4. Implementation of 1D Array manipulation.
- 5. Implementation of 2D Array manipulation.
- 6. Implementation of String operations.
- 7. Implementation of Simple functions and different ways of passing arguments to functions and Recursive Functions.
- 8. Implementation of Pointers
- 9. Implementation of structures and Union.
- 10. Implementation of Bit Fields, Typedef and Enumeration.
- 11. Implementation of Preprocessor directives.
- 12. Implementation of File operations.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Essential Grammar - II

Application of tenses – auxiliaries - correct usage and importance in formal communication - business vocabulary - vocabulary exercises through web-based applications – vocabulary exercises through web-based applications, usage and application through mock meetings - situational conversation: application of grammar and correct spoken English according to context/ situation and application in business scenario.

[6]

Written Communication - II

Email writing- formal and Informal - email writing structure - Inquiry letters - Instruction letters - complaint letters - routine business letters - sales letters - technical writing - essay writing - paragraph writing.

Fundamentals of Effective Communication

Public speaking: fundamentals of effective public speaking – types: extempore speech, manuscript speech, and ways to enhance public speaking skills – storytelling - oral review - presentation skills: PowerPoint presentations - effective ways to structure the presentation - importance of body language - leadership skills - leader's role, responsibilities and skill required - understanding good leadership behaviors - learning the difference between leadership and management - gaining insight into your patterns, beliefs and rules - defining qualities and strengths of leadership - determining how well you perceive what's going on around you - learning about commitment and how to move things forward - making key decisions - handling your and other people's stress, empowering, motivating and inspiring others, leading by example - effective feedback - problem solving skill - confidence building.

[7]

Corporate / Business Etiquettes

Corporate grooming and dressing - etiquettes in social and office setting - understand the importance of professional behavior at the work place - understand and Implement etiquettes in workplace - presenting oneself with finesse and making others comfortable in a business setting - Importance of first impression, grooming, wardrobe - Introduction to Ethics in engineering and ethical reasoning, rights and responsibilities

[4]

Diversity and Inclusion

Socio-cultural and cross-cultural sensitivities at the workplace: PwD and LGBT at the workplace - learning disabilities at the workplace - caste, class, regionalism, religion and poverty - the different identities of Indian employees and employers and how to include everyone - global diversity identities of race, religion,nationhood - appropriate social media use values sciences - values of a good manager - ethics in business - embodying organizational pridewithgrace.

Introduction to value Education

Understanding value Education-Self exploration as the process for value education-Continuous Happiness and prosperity-the basic human aspirations-right understanding-relationship and physical facility –happiness and prosperity - current scenario – method to fulfill the basic human aspirations

[6]

Harmony in the Human Being

Understanding Human being as the Co-Existence of the self and the Body-Distinguishing between the needs of the self and the body-the body as an instrument of the self-understanding harmony in the self-harmony of the self with the body – programme to ensure self-regulation and health

[6]

Harmony in the Family and Society

Harmony in the Family –the basic unit of human interaction-values in human- to - human relationship –'Trust' the foundation value in relationship –'Respect'- as the right evaluation-understanding harmony in the society – vision for the universal human order.

[6]

Harmony in the Nature/Existence

Understanding harmony in the Nature-Interconnectedness, self-regulation and mutual fulfillment among the four orders of nature – realizing existence as co-existence at all levels –the holistic perception of harmony in existence.

[6]

Implications of the Holistic Understanding

Natural Acceptance of human values- definitiveness of human conduct- a basis for humanistic education, humanistic constitution and universal human order- competence in professional ethics –holistic technologies, production systems and management models-typical case studies – strategies for transition towards value base life and profession

Probability and Random Variables

Axioms of probability - Conditional probability - Baye's theorem - Random variable - Probability mass function - Probability density function - Properties - Moments - Moments generating function and their properties.

[9]

Standard Distributions

Discrete Distributions: Binomial, Poisson and Geometric distributions - Continuous Distributions: Uniform, Exponential and Normal distributions.

[9]

Testing of Hypothesis

Test of significance: small samples - Student's t-test - Single mean - Difference of means - F-test - Analysis of Variance - Completely Randomized Design - One way classification - Randomized Block Design - Twoway classification.

[9]

Classification of Random Processes

Definitions and examples of first order, second order, strictly stationary, wide-sense stationary and ergodic processes - Markov process.

[9]

Random Process Markov chains

Random Walks - Eigen values and Rapid mixing - Expander graphs - Markov chain Monte Carlo -Approximate Counting - High-dimensional geometry and Statistics: Concentration of measure - Dimension reduction – Locality sensitive hashing – Nearest-neighbor search.

Developing Use Cases – Building the Requirements Model – Negotiating and Validating Requirements.	
Analysis and Design	
Requirements Modeling: Scenarios, Information, Analysis Classes – Scenario Based Modeling – Data	[0]
Modeling – Class-Based Modeling – Flow Oriented Models – Behavioral Models.	[9]
Design Process and Concepts – Design Model: Data Design Elements – Architectural Design – Component Level Design – Deployment Level Design – User Interface Design – Pattern-Based Design.	
Software Testing	
Software Testing	
Based Testing – Testing for Specialized Environments, Architectures and Applications – Testing Object-Oriented	[9]
and Web Based Applications – User Interface Testing – Configuration Testing – Security Testing – Performance	[3]
Testing.	
Software Engineering Tools	
Requirements Management Tools (e.g., IBM Rational Doors)	
Design Tools (e.g., Sparx Enterprise Architect)	
Development Tools: IDEs (e.g., Xcode, Eclipse, IntelliJ IDEA, NetBeans, Microsoft Visual Studio, Atom)	
Source Control Management (e.g., GitHub), Release Orchestration (e.g., OpenMake)	[9]
Collaboration (e.g., Jira, Trello, Slack)	
Testing Tools and Frameworks: Testing Tools (e.g., Junit, Selenium) - PaaS (e.g., PythonAnywhere, AWS	
Code9, Heroku).	
selecting appropriate tools as per the software development.

Module	Suggested Activities	Suggested Evaluation Methods
1	OOP concepts with real time examples	Think Pair Share(TPS)
	Demonstration of class and objects	Assignment
	Demonstration of types of Inheritance	Surprise Test
	Developing programs using string handling methods	Quiz
2	Assigning real time scenario of interface concepts	Assignment
	Executing program without exception handling	TPS Activity
	Differentiating ordinary problem solving method and thread based problem solving method	Quiz
	Accessing remote methods using RMI	Code Debugging
3	Create packages and accessing classes/methods	Quiz
	Classifying the IO streams and its classes by preparing chart / drawing block diagram	Technical Seminar
	Storing records such as primitive data and objects permanently using files	Flipped Class Room
	Providing assignment on auto boxing / un boxing	Assignment
	Demonstration on cloning objects	Quiz
4	Classifying the collection interfaces and its classes by preparing chart / drawing block diagram	Flipped Class Room
	Performing adding/searching/sorting of data using appropriate collection methods	Technical Seminar
	Learning the concept of legacy classes and more utility classes	Quiz
5	Assigning data such as email-id, phone numbers, etc. for validation using regular expressions	Think Pair Share
	Executing SQL Queries using database tables	Quiz
	Establishing database connectivity between Java and any Database	Flipped Class Room

Basic Concepts of Algorithms

Introduction - Fundamentals of Algorithmic Problem Solving - Important Problem types -Fundamentals of the analysis of algorithm efficiency - Analysis Framework - Asymptotic Notations and Basic Efficiency Classes - Recurrence relations: Methods for solving recurrence relations.

Lab Exercise: Implement a Merge Sort algorithm to sort a given set of elements and determine the time required to sort the elements. Repeat the experiment for different values of n, the number of elements in the list to be sorted .The elements can be read from a file or can be generated using the random number generator.

Mathematical Analysis of Algorithms

Mathematical Analysis of Non-recursive Algorithms and Examples - Mathematical Analysis of Recursive Algorithms - Example: Fibonacci numbers - Empirical Analysis of Algorithms.

Lab Exercise: Implementation of Binary search algorithm using Divide & Conquer method.

Brute Force and Divide & Conquer Techniques

Selection Sort and Bubble Sort - Brute-force string matching - Merge sort - Multiplication of Two n-Bit Numbers - Quick Sort - Binary Search - Binary tree Traversal and Related Properties. [9]

Lab Exercise: Implementation of Merge Sort algorithm using Divide & Conquer method.

[9]

[9]

Algorithm Design Paradigm

Decrease and Conquer Technique: Insertion Sort - Depth first Search and Breadth First Search - Transform and Conquer Technique: Presorting - Dynamic Programming: Computing a Binomial Coefficient - Warshall's and Floyd's Algorithm - The Knapsack Problem and Memory Functions - Optimal Binary Search trees - Greedy Technique: Huffman trees.

[9]

Lab Exercise: Implement 0/1 Knapsack problem using Dynamic Programming.

NP Hard and NP-Complete Problems

P and NP problems - NP complete problems - Backtracking: N-Queen's Problem - Hamiltonian Circuit Problem Branch and Bound Techniques: Traveling salesman problem.

[9]

Lab Exercise: Implement N Queen's problem using Back Tracking.

Total Hours 45

Objective(s)	 To learn the concepts of protocol layering and communication To explore the various components required to build networks To learn the functions of network layer and the various routing protocols To familiarize the functions and protocols of the Transport layer To learn the working principles of application layer protocols 												
Course Outcomes	Course At the end of the course, the students will be able to CO1: Acquire knowledge about protocol layering and communication CO2: Recognize the different error control, techniques and LAN models in data link layer.												

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Introduction and Physical Layer Networks - Network Types - Protocol Layering - TCP/IP Protocol suite - OSI Model - Physical Layer: [9] Performance - Transmission media - Switching - Circuit Switched Networks - Packet Switched Networks **Data Link Laver** Introduction - Framing - Link-Layer Addressing - DLC Services - Data-Link Layer Protocols - Block coding -[9] CRC- Checksum- Hamming Codes - HDLC - PPP - Wired LANs: Ethernet and IEEE 802.3 - Wireless LANs-IEEE 802.11 - Connecting Devices. **Network Layer** Internet Protocol (IP) suite; IPv4 and IPv6 addressing and headers -Address Space - Classful Addressing -Classless Addressing - Next Generation IP –Transition from IPv4 to IPv6 – Routing protocols - Distance-vector [9] and Link-state approaches; Interior and Exterior Gateway Protocol concepts - Multicast Routing - Multicast Distance Vector- Network layer performance **Transport Layer** Introduction -Transport Layer Protocols - User Datagram Protocol - Transmission Control Protocol - TCP [9] Services-Features - Segment - TCP Connection -TCP congestion control - Data Compression - Quality of services (QOS) -Data Flow Characteristics - Flow control to improve QOS **Application Layer** World Wide Web and HTTP - FTP- SFTP- Electronic Mail: SMTP, POP3, IMAP, MIME - Domain Name System-[9] Cryptography and Network Security-Introduction-Confidentiality-Symmetric-Key Ciphers - Asymmetric-Key Ciphers **Total Hours** 45 Text book(s): Behrouz A. Forouzan, "Data communication and Networking", 5th Edition, Tata McGraw Hill, 2013. Behrouz A. Forouzan, "TCP/IP Protocol Suite", 4th Edition, Tata McGraw Hill, 2015. 2. Reference(s): James F. Introduction to Entrepreneurship & Entrepreneur

Meaning and concept of Entrepreneurship, the history of Entrepreneurship development, Myths of Entrepreneurship, role of Entrepreneurship in Economic Development, Agencies in Entrepreneurship Management and Future of Entrepreneurship.

[6]

[6]

The Entrepreneur: Meaning, the skills required to be an entrepreneur, the entrepreneurial decision process, Role models, Mentors and Support system.

Business Opportunity Identification and Preparing a Business Plan

Business ideas, methods of generating ideas, and opportunity recognition, Idea Generation Process, Feasibility study, preparing a Business Plan: Meaning and significance of a business plan, components of a business plan.

Innovations

Innovation and Creativity - Introduction, Innovation in Current. Environment, Types of Innovation, School of Innovation, Analysing the Current Business Scenario, Challenges of Innovation, Steps of Innovation Management, Experimentation in Innovation Management, Participation for Innovation, Co-creation for Innovation, Proto typing to Incubation. Blue Ocean Strategy-I, Blue Ocean Strategy-II. Marketing of Innovation, Technology Innovation Process

[6]

Financing & Launching the New Venture

Importance of new venture financing, types of ownership, venture capital, types of debt securities, determining ideal debt-equity mix, and financial institutions and banks.

[6]

Launching the New Venture: Choosing the legal form of new venture, protection of intellectual property, and formation of the new venture

Managing Growth & Rewards in New Venture

Characteristics of high growth new ventures, strategies for growth, and building the new ventures.

Managing Rewards: Exit strategies for Entrepreneurs, Mergers and Acquisition, Succession and exit strategy, managing failures - bankruptcy

 To analyze data, choose relevant models and algorithms for respective application To demonstrate the working of algorithms for data mining tasks such association classification, and clustering. To obtain practical experience working with all real data sets. To develop a research interest towards advances in data mining 													
CO1: Create a training data set using data mining tools. Course CO2: Perform and interpret different distribution using R.	 To obtain practical experience working with all real data sets. To develop a research interest towards advances in data mining At the end of the course, the students will be able to CO1: Create a training data set using data mining tools. CO2: Perform and interpret different distribution using R. CO3: Apply data mining techniques and methods to mine frequent itemsets in large data sets. CO4: Identify appropriate data mining algorithms to solve real world problems. 												

LIST OF EXPERIMENTS

- 1. Create a training data set using Weka tool.
- 2. Apply pre-processing techniques to the training data set.
- 3. Implementation of statistical measures using R.
- 4. Data visualization using R.
- 5. Visualize and explore big tabular datasets using vaex library.
- 6. Implementation Apriori algorithm.
- 7. Implementation of FP-growth algorithm.
- 8. Implementation of Decision tree algorithm.
- 9. Implementation of Bayesian classification algorithm.
- 10. Implementation of K-means algorithm.
- 11. Implementation of Association rule mining using MATLAB
- 12. Implementation of Supervised Learning Algorithms using MATLAB

- 13. Implementation of Unsupervised Learning Algorithms using MATLAB
- 14. Implementation of Outlier Detection Algorithms using MATLAB

Objective (s)	in the aca To help the for effection of the core to help the and composite to help the following to help the and composite to help the following the follow	 To help the learners to paraphrase the reading passages, to draft continuous writing and review texts in the academic and professional contexts To help the learners to acquire the phonetic skills of the language and express themselves precisely for effective professional presentations To help the learners to enrich their verbal reasoning and ability to match the employability requirements of the corporates To help the learners to comprehend the preliminary level of aptitude skills required to attend placement and competitive online exams To help the learners to comprehend the Pre - Intermediate level of aptitude skills required to attend placement and competitive online exams At the end of the course, the student will be able to CO1: Interpret and infer the meaning in the reading passages, organize continuous writing and review 										
Course Outcome s	cO1: Interp texts both a cO2: Adapt cO3: Interp of the co cO4: Infer company recruit cO5: Infer to	ret and infer the cademically and to and demons ret the various of the concepts of the concept	e meaning in the professionally trate the phone concepts of vers and employable preliminary leads to the preliminary lead	ne reading post. It is skills accommodate the skills accommodate th	curately fong and rel	or effective late for the	e presentations e concepts to t ing to competi	s professionally. he requirements tive exams and				
Unit-1	Written Comm							Hrs				

Reading Comprehension Level 2 (Paraphrasing Poems) - Letter Drafting - Email Writing - Paragraph Writing - Newspaper and Book Review Writing - Skimming and Scanning - Interpretation of Pictorial Representations.

Practices: Sentence Completion-SentenceCorrection-JumbledSentences-Synonyms&Antonyms – Using the Same Word as Different Parts of Speech-Editing

Materials: Instructor Manual, Word power Made Easy Book, News Papers

Unit-2 Oral Communication-Part3

Self-Introduction-Miming (Body Language)-Introduction to the Sounds of English-Vowels, Diphthongs & Consonants, Introduction to Stress and Intonation - Extempore - News Paper and Book Review- Technical Paper Presentation.

Material: Instructor Manual, News Papers
Unit-3 Verbal Reasoning-Part1

4

Analogies-Alphabet Test-Theme Detection-Family Tree-Blood Relations (Identifying relationships among group of 8 people) -Coding &Decoding-Situation Reaction Test -Statement & Conclusions Material: Instructor Manual, Verbal Reasoning by R.S.Aggarwal Quantitative Aptitude -Part1 Unit-4 6 ProblemonAges-Percentages-ProfitandLoss-Simple&CompoundInterest-Averages-Ratio, Proportion Material: Instructor Manual, Aptitude Book Unit-5 Quantitative Aptitude –Part2 Speed, Time&WorkandDistance-PipesandCisterns-MixturesandAllegations-Races-ProblemonTrains - Boats and 6 Streams Practices: Puzzles, Sudoku, Series Completion, Problemon Numbers Material: Instructor Manual, Aptitude Book **Total** 30 **Evaluation Criteria** Particular S.No **Test Portion** Mar ks 15Questions 1 Evaluation1 - Written Test 50 EachfromUnit1,3,4&5(External Evaluation) Extempore & Miming-Unit 2 Evaluation2 - Oral 2 30 (External Evaluation by English, MBA Dept.) Communication

Internal Evaluation by the Dept.

Course Outcomes At the end of the course, the students will be able to CO1: Classify the applications of AI to implement intelligent agents. CO2: Apply the various technologies which are more appropriate for different types of learning tasks in multiple domains. CO3: Solve real-world problems using Machine Learning, Big Data and IoT. CO4: Apply necessary tools to meet Industry 4.0 standards. CO5: Develop a small AI system in a team environment.

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Introduction to Compilers

Definition of compiler, interpreter and its differences, the phases of a compiler, Lexical Analysis — Role of Lexical Analyzer — Input Buffering — Specification of Tokens — Recognition of Tokens —regular expressions, finite automata, from regular expressions to finite automata, Minimizing DFA, (LEX) lexical analyzer generator.

Syntax Analysis

Role of Parser – Grammars – Error Handling – Context-free grammars – Writing a grammar – Top Down Parsing - General Strategies Recursive Descent Parser Predictive Parser-LL(1) Parser-Shift Reduce Parser-LR Parser - LR (0)Item Construction of SLR Parsing Table - Introduction to LALR Parser - Error Handling and Recovery in Syntax Analyzer-YACC.

Intermediate Code Generation

Syntax Directed Definitions, Evaluation Orders for Syntax Directed Definitions, Intermediate Languages: Syntax Tree, Three Address Code, Types and Declarations, Translation of Expressions, Type Checking.

Run-Time Environment and Code Generation

Storage Organization, Stack Allocation Space, Access to Non-local Data on the Stack, Heap Management - Issues in Code Generation - Design of a simple Code Generator.

Code Optimization

Principal Sources of Optimization – Peep-hole optimization - DAG- Optimization of Basic Blocks- Global Data Flow [8] Analysis - Efficient Data Flow Algorithm.

Foundations of Learning

Components of learning – learning models – geometric models – probabilistic models – logic models – grouping and grading – learning versus design – types of learning – supervised – unsupervised – reinforcement – theory of learning – feasibility of learning – error and noise – training versus testing – theory of generalization – generalization bound – approximation generalization tradeoff – bias and variance

Linear Models

Linear classification – univariate linear regression – multivariate linear regression – Logistic regression – perceptrons – multilayer neural networks – learning neural networks structures – support vector machines – generalization and overfitting – regularization – validation

Distance-Based Models

Nearest neighbor models – K-means – clustering around medoids – silhouttes – hierarchical clustering – k-d trees [9] – locality sensitive hashing – non-parametric regression

Ensemble Learning

Ensemble Learning Model Combination Schemes, Voting, Error-Correcting Output Codes, Bagging: Random [9] Forest Trees, Boosting: Adaboost, Stacking.

Reinforcement Learning

Passive reinforcement learning – direct utility estimation – adaptive dynamic programming – temporal-difference learning – active reinforcement learning – exploration – learning an action utility function – Generalization in reinforcement learning – policy search – applications in game playing – applications in robot control

Introduction

R Basics – Using R as a calculators – Functions – Factors – Dataframes – R packages – Dealing with missing values – Data pipelines – Coding and Naming Conventions – Programming and Integration of workflow and documentation – creating an R Markdown/knitr document in Studio – YAML Language - Markdown Language – Running in R code in Markdown Documents

[9]

[9]

Data Manipulation

Reading and Formatting Datasets – Manipulating data with dplyr – Visualizing Data – Basic Graphics – ggplot2 package – Facets – Scaling – Working with Large Datasets – Subsampling – Hex and 2D Density Plots

Supervised and Unsupervised Learning

Machine Learning – Supervised Learning – Regression vs Classification – Inference vs Prediction – Linear Regression – Logistic Regression – Validating Models - Sampling Approaches – Supervised Learning Packages – Naïve Bayes - Unsupervised Learning – Dimensionality Reduction – Clustering – Association Rules – Importing data – Exploring the Data – Fitting Models

[9]

R Package

Expressions – Basic data type – Data Structures – Control Structures – Functions – Recursive functions – Working with vectors and lists – Building an R package-creating an R package – Description – Namespaces – Checking the Package – Roxygen

[9]

Version Control

Version Control abd Repositories – Using Git in RStudio – GitHub – Collaborating on GitHub – Profiling and Optimization – Profiling – Parallel Execution – Bayesian Linear Regression – Formulas and their Model Matrix

Introduction to HTML

Introduction to HTML, Essential Tags, Tags and Attributes, Text Styles and Text Arrangements, Text, Effects, Exposure to Various Tags, Colour and Background of Web Pages, Lists and their Types, Attributes of Image Tag, Hypertext, Hyperlink and Hypermedia, Links, Anchors and URLs, Links to External Documents, Different Section of a Page and Graphics, Creating Table, Frame, Form and Style Sheet.

[3]

[3]

Stylesheet

Introduction, Cascading Style Sheets (CSS), CSS Syntax, Inserting CSS: Inline, Internal, External, ID and Class Selectors, Colours, Backgrounds, Borders, Text, Font, List, Table, CSS Box Model, Normal Flow Box Layout: Basic Box Layout, Display Property, Padding, Margin, Positioning: Relative, Float, Absolute; CSS3 Borders, Box Shadows, Text Effects and shadow, Basics of Responsive Web Designs, Media Queries, Introduction to Bootstrap.

Java Script and jQuery

[3]

Java Script: Objects, Methods, Events and Functions, Operators, Data Types, Literals, Array and Dialog Boxes, Dynamically Changing Text, Style, Content, jQuery: Fundamentals of jQuery, Loading and using jQuery, Library files, Call-back functions, jQuery Selectors, jQuery Events, jQuery Effects, jQuery with AJAX.

Server-Side Scripting

Web Servers (Apache and IIS), Introduction to PHP, Basic Programming Concepts of PHP: Variables, Data types, Constants, Scope of Variables, Type of Variables, Operators, Arrays, Control Structures, Looping, Functions: User Defined Functions, Built-in Function, Array Functions, Date and Time Functions, String Functions, PHP Server Variables, Working with form, Uploading files to Web Server using PHP, Session Handling.

[3]

Web Services

Working with PHP and MySQL, Connecting to Database, Creating, Selecting, Deleting, Updating Records in a table, Inserting Multiple Data. Installation and usages of Codelgniter, WordPress.

To impart necessary knowledge on python needed for data science To implement statistics measures using R To acquire knowledge on regression models To implement classification models. To develop programming skills required to build real world applications.												
 To develop programming skills required to build real world applications. At the end of the course, the students will be able to CO1: Predict the class of a dataset using python programming CO2: Implement statistics measures and visualize the data using R CO3: Implement regression algorithm to predict the model. CO4: Implement classification techniques to predict the model CO5: Implement data science techniques for social media data 												

- 1. Write a program in Python to predict the class of a dataset
- 2. Implementation of Statistics and Visualization in R
- 3. Implementation of Linear Regression
- 4. Implementation of Logistic Regression
- 5. Implementation of Naive Bayesian Classifier
- 6. Implementation of Decision Trees
- 7. Implementation of Support Vector Machine
- 8. Implementation of Neural Networks
- 9. Implementation of Sentiment Analysis
- 10. Implementation of Object Detection
- 11. Implementation of Text Data Analysis
- 12. Implementation of Sentiment Analysis using MATLAB
- 13. Implementation of Object Detection using MATLAB
- 14. Implementation of Text Data Analysis using MATLAB

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Methodology

- Project Work Phase-I shall be evaluated by the project review committee (Project coordinator, Project Guide and HOD/Subject experts in the department)
- Three reviews shall be conducted with subject expert and the student(s) shall make a presentation on the progress made by him / her / them during the reviews
- Student(s) shall submit a project technical report comprising of title, problem statement, importance of work, modifications, proof of concept, methodology and review of literature during the 3rd review
- The total marks obtained in the three reviews shall be reduced to 100 marks and rounded to the nearest integer
- The schedule will be announced by the Project Coordinator and Head of the Department

Unified Process and Use Case Diagrams

Introduction to OOAD with OO Basics - Unified Process – UML diagrams – Use Case –Case study – the Next Gen POS system, Inception -Use case Modelling – Relating Use cases – include, extend and generalization – When to use Use-cases

Static UML Diagrams

Class Diagram— Elaboration – Domain Model – Finding conceptual classes and description classes – Associations – Attributes – Domain model refinement – Finding conceptual class Hierarchies – Aggregation and Composition - Relationship between sequence diagrams and use cases – When to use Class Diagrams

Dynamic and Implementation UML Diagrams

Dynamic Diagrams – UML interaction diagrams - System sequence diagram – Collaboration diagram – When to use Communication Diagrams - State machine diagram and Modelling –When to use State Diagrams - Activity diagram – When to use activity diagrams - Implementation Diagrams - UML package diagram - When to use package diagrams - Component and Deployment Diagrams – When to use Component and Deployment diagrams

Design Patterns

GRASP: Designing objects with responsibilities – Creator – Information expert – Low Coupling – High Cohesion Controller-Design Patterns – creational – factory method – structural – Bridge – Adapter – behavioural – Strategy – observer –Applying GoF design patterns – Mapping design to code

Testing

Object Oriented Methodologies – Software Quality Assurance – Impact of object orientation on Testing – Develop Test Cases and Test Plans

Introduction to C#

Introduction C# - Understanding .NET - Overview of C# - Literals - Variables - Data Types - Operators - Expressions -Branching – Looping – Methods – Arrays – Strings – Structures – Enumerations.

Object-Oriented Programming in C#

Classes - Objects - Inheritance - Methods - Polymorphism - Interfaces - Operator Overloading - Delegates - Events -Errors – Exceptions – Collections – Managing Filesystem.

ASP.NET Core Web Application using Razor Pages

Introduction to ASP.NET Core Web Application - Environment Setup - Project Layout - Static and Default Files - Enabling and Defining Razor Pages – Shared Layouts – Using code-behind files. [10]

Data Manipulation using Razor Pages

Introduction to ADO.NET - Connection Class with Authentication - Command Class - DataReader Class - DataAdapter Class - DataSet - OnGet - OnPost - OnPostDelete - OnPostEdit - OnPostView - REST API - Model and Controller for REST API. [10]

Model-View-Controller (MVC) in ASP.NET Core

Introduction to MVC - Setting up an ASP.NET Core MVC Website - MVC Routing - Controllers and Actions - Model -Views – Parameters Passing – View Helpers – Model Validation.

Objective(s)	To achie To learn making.To discovered	ve a deep untile the basics of the basics of the industrial transfer in the	nderstanding of HCI (huma stry-standard	d tools and sp	life-cycle of onteraction) and ecific project	design the pr nd the psycho deliverables	ocess, purpo ology behind in UI/UX.	

At the end of the course, the student will be able to

CO1: Establish the baseline principles of UI design as a form of effective human communication.

CO2: Make use of practical communication-based guide to interaction and visual design.

CO3: Integrate the concepts of Communication-based design process from interaction to visual

CO4: Apply the material design principles and its components used to create a user interface.

CO5: Design a simple user interface by applying the advanced material components.

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Introduction

Course

Outcomes

UI Is Communication Concept - Communication Design Principles- UI Design Situation - Core Principles of UI Is Communication - Effective Communication - Intuitive UI- Necessary and Unnecessary Consistency - Unintuitive UI- Inductive UI- Deductive UI.

[9]

Interaction and Visual Design

Interactions - Controls - Commands - Labels and Instructions - Feedback - Task Steps and Navigation - Surfaces - Errors and Notifications - Dynamic Elements - Importance of Visual Design- Graphic Designers - Layout --Typography and Text – Color -Affordances-Icons and Glyphs-Animations and Transitions- Demanding Attention.

[9]

Communication Design Process

Communicating to People - Emotional Connection - Personality -Attributes-GoodTone-MotivatingUsers-MinimizingEffort-Forgiveness-Building Trustworthiness -Courageous Design-communicationdrivendesignprocess-Basicdesignprocess-Mistakes- Planningphase-Design phase-Refinement phase.

[9]

Material Design and Components

Material Design: Introduction, Principles. Material Environment: Surfaces. Elevation. Light and Shadows. Basic Components: App bars Bottom and Top, Bottom Navigation, Buttons, Cards, Text Fields, Navigation Drawer.

[9]

Advanced Components

Advanced Components: Backdrop, Check boxes, Chips, Date Pickers, Dialogs, Dividers, Image List, Lists, Menus, Progress Indicators, Radio Buttons, Sheets- Bottom and Side, Sliders, Snackbars, Switches, Tabs, ToolTips, Time Pickers.

	To Introduce database development lifecycle and conceptual modelling
	 To learn relational database design using conceptual mapping and normalization
Objective(s)	 To learn data model and querying in object relational and No-SQL databases
	 To deploy analytical databases for OLAP and OLTP.
	To understand some key concepts of data science.
	At the end of the course, the students will be able to
	CO1: Interpret the database development lifecycle and apply conceptual modeling
Course	CO2: Apply the conceptual –to-relational mapping and normalization to design relational database
Outcomes	CO3: Apply the data model and querying in Object-relational and No-SQL databases.
Outcomes	CO4: Design and deploy operational databases for OLTP (online transaction processing) and
	design and deploy analytical databases for OLAP (online analytical Processing).
	CO5: Interpret some key concepts of data science.
Note: The hou	rs given against each topic are of indicative. The faculty has the freedom to decide the hours required for

Conceptual Data Modeling

Database Environment-Database System Development Life Cycle- Requirements- Collections- Database Design- [9] Entity Relationship Model-Enhanced ER Model- UML Class diagrams

Relational Database Design and Normalization

ER and EER –to relational mapping-Update anomalies – Functional Dependencies- Inference Rules-Minimal [9] Cover-Properties of relational Decomposition- Normalization (Up to BCNF)

Object Relational and NoSQL Databases

Mapping-EER to ODB Schema –Object identifier-Reference-Types-row types-UDTs –Sub Types and Super Types-User-Defined Routines-Collection Types-Object Query Language; No-SQL:CAP Theorem-Document-based: MongoDB data model and CRUD operations: Column-based: Hbase Data model and CRUD operations.

XML

Semi-structured data and XML - Oxygen XML Editor - XPath and XQuery - FLWOR expressions - NoSQL databases and web applications - MongoDB - Documents and collections - CAP theorem vs. ACID - The Express server-side framework - Database CRUD actions and HTTP verbs - The REST API and RESTful web services.

Data Virtualization

Data virtualization - The Cisco Information Server - Query optimization - Database failure and recovery - RAID - Distributed databases - Object databases - Cloud computing - Data science - Data mining- Big Data, Hadoop, and MapReduce.

Introduction to Social Network Analysis

Introduction to Web - Limitations of current Web - Development of Semantic Web - Emergence of the Social Web - Network analysis - Development of Social Network Analysis - Key concepts and measures in network analysis - Electronic sources for network analysis - Electronic discussion networks, Blogs and online communities

Modelling, Aggregating and Knowledge Representation

Ontology and their role in the Semantic Web - Ontology-based Knowledge Representation - Ontology languages for the Semantic Web - RDF and OWL - Ontological representation of social individuals, Ontological representation of social relationships, Aggregating and reasoning with social network data, Advanced Representations

Extraction and Mining Communities in Web Social Networks

Extracting evolution of Web Community from a Series of Web Archive - Detecting Communities in Social Networks - Definition of Community - Evaluating Communities - Methods for Community Detection & Mining - Applications of Community Mining Algorithms - Tools for Detecting Communities Social Network Infrastructures and Communities

Predicting Human Behavior and Privacy Issues

Understanding and Predicting Human Behaviour for Social Communities - User Data Management, Inference and Distribution - Enabling New Human Experiences - Reality Mining - Context-Awareness - Privacy in Online Social Networks - Trust in Online Environment - Trust Models Based on Subjective Logic - Trust Network Analysis - Combining Trust and Reputation.

Visualization and Applications of Social Networks

Graph Theory- Centrality- Clustering - Node-Edge Diagrams, Matrix representation, Visualizing Online Social Networks, Visualizing Social Networks with Matrix-Based Representations- Matrix + Node-Link Diagrams,

Objective(s)	 To learn the fundamentals of natural language processing To apply the word level analysis in the given text To understand the use of CFG and PCFG in NLP To understand the role of semantics of sentences and pragmatics To apply the NLP techniques to IR applications 													
Course Outcome s	CO1:Cla CO2: De CO3: Imp CO4: De	ssify the differ sign an innov plement a rule sign a tag set mpare and co	rent language ative application be based systemated based for station contrast the use	modeling ion using NLF m to tackle m istical process	component orphology/sy sing for real-	ntax of a lar time applica		s of NLP						

Introduction

Origins and challenges of NLP – Language Modeling: Grammar-based LM, Statistical LM - Regular Expressions, Finite-State Automata – English Morphology, Transducers for lexicon and rules, Tokenization, Detecting and Correcting Spelling Errors, Text Normalization, Minimum Edit Distance

[9]

Word Level Analysis

Unsmoothed N-grams, Evaluating N-grams, Smoothing, Interpolation and Backoff – Word Classes, Part-of-Speech Tagging, Named Entities and Named Entity Tagging, HMM Part-of-Speech Tagging, Rule-based, Stochastic and Transformation-based tagging, Issues in PoS tagging – Hidden Markov and Maximum Entropy models.

[9]

Syntactic Analysis

Context-Free Grammars, Grammar rules for English, Treebanks, Normal Forms for grammar – Dependency Grammar – Syntactic Parsing, Ambiguity, Dynamic Programming parsing – Shallow parsing – Probabilistic CFG, Probabilistic CYK, Probabilistic Lexicalized CFGs - Feature structures, Unification of feature structures.

[9]

Semantics and Pragmatics

Requirements for representation, First-Order Logic, Description Logics – Syntax-Driven Semantic analysis, Semantic attachments – Word Senses, Relations between Senses, Thematic Roles, selectional restrictions – Word Sense Disambiguation, WSD using Supervised, Dictionary & Thesaurus, Bootstrapping methods – Word Similarity using Thesaurus and Distributional methods.

[9]

Discourse Analysis and Lexical Resources

Discourse Coherence – Reference Phenomena, Anaphora Resolution using Hobbs and Centering Algorithm – Coreference Resolution – Resources: Porter Stemmer, Lemmatizer, Penn Treebank, Brill's Tagger, WordNet, PropBank, FrameNet, Brown Corpus, British National Corpus (BNC), Lexicons for Sentiment, Affect, and Connotation- NLP Applications: Information extraction, Question Answering Systems, Chatbots & Dialogue Systems, Automatic Speech Recognition and Text-to-Speech

	To understand the need for reinforcement learning and Markov decision process											
	 To study the evaluation of dynamic programming and Monte Carlo methods 											
Objective(s)	 To 	understand	the tempor	al difference l	earning and	prediction						
	To implement the functional approximation methods in Reinforcement Learning											
	To apply the policy gradient methods and policy approximation											
	At the end	d of the cou	rse, the stu	idents will be	able to							
Course	CO1: Unde	erstand the	reinforceme	nt learning, its	scope and I	Markov decisio	n process					
Outcomes	CO2: Evaluate and iterate dynamic programming and implement Monte Carlo methods											
Outcomes	CO3: Predict temporal difference learning and evaluate its optimality											
		CO4: Implement on policy prediction with approximation and non-linear function approximation										
	CO5: Appl			and policy gra		m						

Introduction

Reinforcement Learning – Examples – Elements of Reinforcement Learning – Limitations and Scope – The Agent – Environment Interface – Goals and Rewards – Returns and Episodes – Unified Notation for Episodic and Continuing Tasks – Policies and Value Functions – Optimal Policies and Optimal Value Functions – Optimality and Approximation.

Dynamic Programming and Monte Carlo Methods

Policy Evaluation, Improvement, Iteration – Value Iteration – Asynchronous Dynamic Programming - Generalized Policy Iteration - Efficiency of Dynamic Programming – Monte Carlo Prediction – Monte Carlo Estimation of Action Values, Control, Control without Exploring Starts – Off policy Prediction via Importance Sampling – Incremental Implementation - Off policy Monte Carlo Control – Discounting aware Importance Sampling – Per-decision Importance Sampling.

Temporal Difference Learning

TD Prediction – Advantages of TD Prediction Methods – Optimality of TD(0) –Sarsa: On-policy TD Control – Q-learning: Off-policy TD Control – Expected Sarsa– Maximization Bias and Double Learning – Games, After states and Other Special Cases – n-step TD Prediction, Sarsa, Off Policy Learning – Per-decision Methods with Control Variates – The n-step Tree Backup Algorithm – A Unifying Algorithm.

Function Approximation Methods

On-policy Prediction with Approximation – Value-function Approximation – The Prediction Objective(VE) – Stochastic-gradient and Semi-gradient Methods – Linear Methods – Feature Construction for Linear Methods – Selecting Step-Size Parameters Manually – Nonlinear Function Approximation: Artificial Neural Networks – Least-Squares TD – Memory-based Function Approximation – Kernel-based Function Approximation

Policy Gradient Methods

[9]

[9]

[9]

[9]

Policy Approximation and its Advantages – The Policy Gradient Theorem – Reinforce: Monte Carlo Policy Gradient – Reinforce with Baseline – Actor–Critic Methods – Policy Gradient for Continuing Problems – Policy Parameterization for Continuous Actions.

Data Mining

Introduction to Data Mining - Statistical Modeling - Machine Learning - Computational Approaches to Modeling - Feature Extraction - Statistical Limits on Data Mining - Bonferroni's Principle - Hash Functions - Indexes - Indexes - Secondary Storage - The Base of Natural Logarithms - Power Laws.

[9]

MapReduce and Finding Similar Items

MapReduce - Algorithms Using MapReduce - Extensions to MapReduce - Complexity Theory for MapReduce, Applications of Near-Neighbor Search - Shingling of Documents - Locality-Sensitive Hashing for Documents - Distance Measures.

[9]

Mining Data Streams and Link Analysis

The Stream Data Model - Sampling Data in a Stream - Filtering Streams - Counting Distinct Elements in a Stream - Estimating Moments - Counting Ones in a Window - Decaying Windows, Link Analysis - PageRank.

[9]

Frequent Item sets and Clustering

The Market-Basket Model - Market Baskets and the A-Priori Algorithm - Limited-Pass Algorithms - Counting Frequent Items in a Stream - Clustering - Hierarchical Clustering - K-means Algorithms - The CURE Algorithm.

[9]

Mining Social Network Graphs

Social Networks as Graphs - Clustering of Social-Network Graphs - Direct Discovery of Communities - Partitioning of Graphs - Finding Overlapping Communities - Simrank - Counting Triangles - Neighborhood Properties of Graphs.

Introduction
[9]
Introduction to Big Data Platform – Challenges of conventional systems - Web data – Evolution of Analytic scalability, analytic processes and tools, Analysis vs reporting - Modern data analytic tools, statistical concepts:

Sampling distributions, resampling

Data Analysis [9]

Regression modeling, Multivariate analysis, Bayesian modeling, inference and Bayesian networks, Support vector and kernel methods, Analysis of time series: linear systems analysis, nonlinear dynamics - Rule induction

Mining Data Streams
Introduction to Streams Concepts – Stream data model and architecture - Stream Computing, Sampling data in a stream – Filtering streams – Counting distinct elements in a stream – Estimating moments – Counting oneness in a window – Decaying window - Realtime Analytics Platform(RTAP) applications - case studies - real

time sentiment analysis, stock market predictions.

Frequent Itemsets and Clustering

Mining Frequent itemsets - Market based model – Apriori Algorithm – Handling large data sets in Main memory – Limited Pass algorithm – Counting frequent itemsets in a stream – Clustering Techniques – Hierarchical – K-Means – Clustering high dimensional data – CLIQUE and PROCLUS

Frameworks and Visualization

MapReduce – Hadoop, Hive, MapR – Sharding – NoSQL Databases - Hadoop Distributed file systems – Visualizations - Visual data analysis techniques, interaction techniques

Introduction to Python

[9]

Structure of Python Program-Underlying mechanism of Module Execution-Branching and Looping-Problem Solving Using Branches and Loops-Functions - Lists and Mutability- Problem Solving Using Lists and Functions

Lab Exercises

- 1. Demonstrate usage of branching and looping statements 2
 - 2. Demonstrate Recursive functions

3. Demonstrate Lists

Sequence Datatypes and Object-oriented programming

[9]

Sequences, Mapping and Sets- Dictionaries- -Classes: Classes and Instances-Inheritance-Exceptional Handling-Introduction to Regular Expressions using "re" module.

Lab Exercises

- 1. Demonstrate Tuples, Sets and Dictionaries
- 2 Demonstrate inheritance and exceptional handling

3. Demonstrate use of "re".

Using Numpy

[9]

Basics of NumPy-Computation on NumPy-Aggregations-Computation on Arrays-Comparisons, Masks and Boolean Arrays-Fancy Indexing-Sorting Arrays-Structured Data: NumPy's Structured Array.

Lab Exercises

 Demonstrate Aggregation Sorting Demonstrate Indexing and

Rev. No.3/w.e.f. 22.07.2024 Passed in BoS Meeting held on 24/05/2024 Approved in Academic Council Meeting held on 25/05/2024

Data manipulation with Pandas

[9]

Introduction to Pandas Objects-Data indexing and Selection-Operating on Data in Pandas-Handling Missing Data-Hierarchical Indexing - Combining Data Sets- Aggregation and Grouping-Pivot Tables-Vectorized String Operations -Working with Time Series-High Performance Pandas- and query()

Lab Exercises

- 1. Demonstrate handling of missing data 2. Demonstrate hierarchical indexing
- 3. Demonstrate usage of Pivot table

Visualization and Matplotlib

[9]

Basic functions of matplotlib-Simple Line Plot, Scatter Plot-Density and Contour Plots-Histograms, Binnings and Density-Customizing Plot Legends, Colour Bars-Three-Dimensional Plotting in Matplotlib.

Lab Exercises

1. Demonstrate Scatter Plot

2. Demonstrate 3D plotting

4.

At the end of the course, the students will be able to

CO1: Recognize the principles of Robotic Process Automation

CO2: Identify the key RPA tools and workflows used in intelligent automation.

CO3: Implement the functionalities of data manipulation and scrapping.

CO4: Analyzing the process of automation in documents.

CO5: Implement the concept of automation in different UI elements

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction to Robotic Process Automation:

Introduction to Robotic Process Automation - UiPath's Robotic Automation Framework - UiPath Tool Installation and Setup – UiPath Workflow Designer Panels - Types of Workflows, Sequences, Flowcharts and State Machines [3]

Data Manipulation and Scrapping:

Course

Outcomes

Data Manipulation Variables, Datatypes - Analyzing the process and aggregate datasets in the database and Usage, Managing Arguments – Data Scrapping - Debug Workflow - Error Handlings [3]

Recording and Advanced UI Interaction:

Introduction to Recording - Recording Types - Automatic Recording - Automatic Recording with Basic and Desktop - Automatic Recording with Web - Manual Recording - Input Methods - Screen Scraping - Data Scraping. [3]

Selectors, Image and Text Automation:

Introduction Selectors - Selectors with Wildcards - Full versus Partial Selectors - UiPath Explorer - About Image and Text Automation - Mouse and Keyboard Activities - Text Activities - OCR Activities - Image Activities. [3]

Excel, PDF and Email Automation:

Excel Activities - Data Tables Activities - Data Extraction from PDF - PDF Activities - Email Automation - Email Activities - Orchestrator UI Interface - Connecting the Local Robot to Orchestrator - Schedules - Managing Logs.

Total Hours: 15 hours

[3]

Data -Data Analysis-Microsoft EXCEL -Power BI-Business Intelligence (BI)- Power BI Desktop (Power Query,
Power Pivot, Power View)- Power BI Service- Power BI Mobile Flow - Overview of data visualization

MICROSOFT DATA ANALYTICS AND VISUAL ANALYTICS

[3]

Discover data analysis-Overview of data analysis- Roles in data- Tasks of a data analyst- Building with Power BI - Use Power BI-Building blocks of Power BI- Tour and use the Power BI service - Networks and Trees – Heat Map - Map Color.

MODELLING DATA [3]

Power BI Desktop models- Star schema design - Analytic queries -Configure report visuals - Power BI model framework- Power BI model fundamentals -develop an import model - develop a Direct Query model- develop a composite model -model framework.

SEMANTIC MODEL AND DAX FORMULAS

[3]

Work with tables -Create a date table - Work with dimensions - Data granularity - Work with relationships and cardinality - Model data in Power BI Desktop –DAX Formulas-datatypes-functions-operators-variables.

DAX FORMULAS APPLICATION AND CASE STUDY

[3]

Create simple measures - Create compound measures - Create quick measures calculated columns with measures - Case Study: Integration of Data Visualization with Hadoop - Visualization Dashboard Creations for Finance.

Total Hours 15

K.S. Rangasamy College of Technology (Autonomous)

Curriculum & Syllabi for Honors Degree

B. Tech. Artificial Intelligence and Data Science

(Honors – Data Science) (For batch admitted in 2021-2025)

R 2018

Accredited by NAAC with 'A++' grade, Approved by AICTE, Affiliated to Anna University, Chennai.

> KSR Kalvi Nagar, Tiruchengode – 637 215. Namakkal District, Tamil Nadu, India.
