# K.S. Rangasamy College of Technology (Autonomous)

# **Curriculum & Syllabus**

of

**B.E. Computer Science and Engineering** 

(For the batch 2020 - 24)

R 2018

Courses Accredited by NBA, Accredited by NAAC "A++" Grade, Approved by AICTE, Affiliated to Anna University, Chennai.

KSR Kalvi Nagar, Tiruchengode – 637 215.

Namakkal District, Tamil Nadu, India.

#### MISSION

- To produce competent software developers, system designers and network programmers.
- To keep abreast of the latest developments and technological transformations in computer science and engineering for social benefits.

#### PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- **PEO1:** Graduates will provide effective solutions for software and hardware industries by applying the concepts of basic science and engineering fundamentals.
- PEO2: Graduates will be professionally competent and successful in their career through lifelong learning.

# PEO3:

Graduates will contribute individually or as member of a team in handling projects and demonstrate social responsibility and professional ethics.

#### PROGRAMME OUTCOMES (POs)

**Engineering Graduates will be able to:** 

- PO1: Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **PO2**:

Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

**PO3**:

Design /development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

- PO4: Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5: Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- PO6: The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

**PO7**:

Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8:

Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9:

Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10:

Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11:

Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

#### PROGRAMME SPECIFIC OUTCOMES (PSOs):

Engineering Graduates will be able to:

**PSO1:** Apply standard Software Engineering practices and strategies in software project development using open-source programming environment and deliver a quality product for business success.

PSO2: Analyze and Interpret data by applying advanced data analytic models for decision making in Complex Problems and facilitate inter disciplinary research.

# MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES (PEOs) WITH PROGRAMMEOUTCOMES (POs)

The B.E. Computer Science and Engineering Programme outcomes leading to the achievement of the objectives are summarized in the following Table.

Programme Educational					Pr	ogramr	ne Outo	omes				
Objectives	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
PEO 1	3	1	3	2	2	1	1	1	2	2	3	1
PEO 2	3	3	3	2	2	1	1	1	2	2	3	1
PEO 3	3	2	3	2	2	1	1	1	3	2	3	1

Contributions: 1-low, 2-medium, 3-high

Objective(s)	<ul> <li>related situations.</li> <li>To equip students with effective speaking and listening skills in English.</li> <li>To facilitate learners to enhance their writing skills with coherence and appropriate format</li> </ul>						d career			
At the end of the course the students will be able to  CO1: Utilize digital literacy tools to develop listening skills & make use of contextual clues to infer meanings of unfamiliar words  CO2: Able to select, compile & synthesize information using communication strategies for an effective oral presentation  CO3: Skim & Scan the textual content & infer meanings of unfamiliar words to develop reading & vocabulary skills  CO4: Generate ideas from sources to develop coherent content and support with relevant details in writing  CO5: Recognize the basic phonetic patterns of language & execute it for competent loud reading							tegies for an op reading & evant details			

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

# Listening

Listening to Short Audios - Watching Short Videos - answering MCQs and Vocabulary Check- Listening to Short Comprehension Passages – Guided Listening – Listening to songs and cognizing the lyrics [4]

# **Speaking**

Brainstorming - Group Discussion (unstructured) - Self Introduction - Just a Minute (JaM) - Short Narratives - Cue Cards – Picture Cards – Conversational Practices (Preliminary) [4]

# Reading

Silent Reading - Scanning and Skimming - Reading short and Medium Passages - Cognition of Theme and Inferential Meaning - Academic and Functional Vocabulary List (350 words) - Word Power Check - Loud Reading -Modulation and Pronunciation Check [4**]** 

# Writing

Functional Vocabulary and Word Power - Data Interpretation - Paragraph Writing - Letter Writing - Email Writing -Conversational Fill Ups

#### Matrices

Characteristic equation - Eigen values and Eigen vectors of a real matrix - Properties of Eigen values and Eigen vectors – Cayley-Hamilton theorem (without proof) – Orthogonal transformation of a symmetric matrix to diagonal form - Reduction of quadratic form to canonical form by orthogonal transformation - Nature of quadratic form. [8]

# **Differential Calculus**

Curvature - radius of curvature (Cartesian and polar co-ordinates) - Centre of curvature - Circle of curvature nvolute and evolute – envelope. [9]

#### **Functions of Several Variables**

Partial differentiation – Homogeneous functions and Euler's theorem – Jacobians – Taylor's series for

BoS Chairman

functions of two variables – Maxima and minima of functions of two variables – Constrained maxima and minima : Lagrange's Method of Undetermined Multipliers. [9]

# Differential Equations

Linear differential equations of second and higher order with constant co-efficient - R.H.S is  $e^{\Box x}$ ,  $\sin\Box x$ ,  $\cos\Box x$ ,  $x^n$  $n \square 0$ ,  $e^{\square x} \sin \square x$ ,  $e^{\square x} \cos \square x$ ,  $e^{\square x} x^n$ ,  $x^n \sin \square x$  and  $x^n \cos \square x$  — Differential equations

with variable co-efficients : Cauchy's and Legendre's form of linear equation – Method of variation of parameters– Simultaneous first-order linearequations with constantco-efficients. [9]

# Integral Calculus

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.

# Objective(s)

**Outcomes** 

- To endow with the periodic properties of elements and molecular orbitals variation of orbitals
- To assist the learners to apply the thermodynamic functions to electro chemical reactions and its application
  - To help the learners to analyze the hardness of water and its removal techniques
- To endow with various spectroscopy techniques and its applications
- To facilitate the students with the basics of stereochemistry and types of chemical reactions with their mechanism

# Course

#### At the end of the course, the student will be able to

CO1: Rationalize the periodic properties of elements and molecular orbitals variation of orbitals

CO2: Apply the thermodynamic functions to electro chemical reactions and its application

CO3: Analyse the cause and effects of hardness of water and its removal techniques

CO4: Interpret the various spectroscopy techniques and its applications

CO5: Infer the types of stereochemistry and chemical reactions with their mechanism

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

#### **Periodic Properties**

Effective nuclear charge - atomic and ionic sizes - ionization energies - electron affinity - electronegativity polarizability - oxidation states - penetration of orbitals- variations of s, p, d and f orbital energies of atoms electronic configurations, ionic, dipolar and Vander- waals interactions. Hard soft acids and bases (HSAB). Molecular orbitals of diatomic molecules - plots of the multicentre orbitals. Equations for atomic and molecular orbitals. Energy level diagrams of diatomics. Pi-molecular orbital of butadiene and benzene. [9] Chemical **Equilibria and Corrosion** 

Thermodynamic functions - energy - entropy - enthalpy- free energy - Gibbs-Helmholtz equation - Van 't Hoff isotherm. Cell potentials - Nernst equation - applications - EMF series - applications - Poteniometric and Conductometric titrations.

Corrosion- types of corrosion - chemical and electrochemical corrosion - mechanism - Factors influencing corrosion - Corrosion control methods (impressed current and sacrificial anode methods) -Corrosion inhibitors. [9]

#### **Water Chemistry**

Sources - Water quality parameters - impurities in water and their effects. Hardness - Estimation of hardness effect of hard water in various industries-Softening of water- zeolite process- ion-exchange process - reverse osmosis - electrodialysis. Boiler troubles - methods of prevention.

# **Analytical Techniques and Applications**

Absorption laws - Ultra violet spectroscopy (UV) - Principle - Instrumentation (Block diagram) - applications. Infra red spectroscopy (IR)- Instrumentation (Block diagram) - selection rule - types of fundamental vibrations applications. Nuclear magnetic resonance spectroscopy (NMR) - Principle - selection rule - Instrumentation (Block diagram) - chemical shift - factors influencing the chemical shift -applications. Atomic absorption spectroscopy (AAS) - Principle - Instrumentation (Block diagram) -applications. [9] Concepts in Organic Chemistry

Structural isomerism- types - Stereoisomerism - geometrical (Maleic and Fumaric acids) - optical isomerism (Lactic and Tartaric acids) - symmetry - chirality- enantiomers - diastereomers - optical activity - absolute configurations. Introduction to reactions - substitution - addition - oxidation - reduction - cyclization and ring openings - mechanism.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

#### **Basics and Statics of Particles**

Introduction -Units and Dimensions-Laws of Mechanics-Principle of transmissibility-Lame's theorem, Parallelogram and triangular Law of forces–Vectors–Vectorial representation of forces and moments.

# **Vector Operations**

Addition, subtraction, dot product, cross product-Coplanar Forces-Resolution and Composition of forces-Equilibrium of a particle-Forces in space-Equilibrium of a particle in space-Equivalent systems of forces-Single equivalent force. [12]

#### **Equilibrium of Rigid Bodies**

Free body diagram—Types of supports and their reactions—requirements of stable equilibrium—Static determinacy, Moments and Couples-Moment of a force about a point and about an axis-Vectorial representation of moments and couples-Varignon's theorem-Equilibrium of Rigid bodies in two dimensions. Trusses: Introduction, axial members, calculation of forces on truss members using method of joints-Method of sections. [12]

#### **Properties of Surfaces and Solids**

Determination of Areas and Volumes-Centroid, Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method; T section, I section, Angle section, Hollow section using standard formula) - Parallel axis theorem and perpendicular axis theorem- Polar moment of inertia -Mass moment of inertia of thin rectangular section -Relation between area moment of inertia and mass moment of inertia. [12] Dynamics of Particles Displacement, Velocity, acceleration and their relationship-Relative motion -Projectile motion in horizontal plane – Newton's law – Work Energy Equation – Impulse and Momentum.

#### **Elements of Rigid Body Dynamics, friction and Beams**

Translation and Rotation of Rigid Bodies: Velocity and acceleration—General Plane motion: Crank and Connecting rod mechanism.

#### **Friction**

Frictional force-Laws of Coloumb friction-Simple contact friction-Ladder friction-Rolling resistance-Ratio of tension in belt.

#### Transverse bending on beams

Types of beams: Supports and loads - Shear force and bending moment in beams - Cantilever, simply supported and overhanging beams.

# **Introduction to Computer and Programming**

Introduction to Computers - Evolution of computers - Generations of computers and Programming Languages-Introduction to components of a computer system -Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithm: Flowchart-Pseudocode with examples. From algorithms to programsvariables (with data types) - Type Qualifiers - Constants - Operators - expressions and precedence ,Branching ,Loops and Arrays

Console I/O – Unformatted and Formatted Console I/O – Conditional Branching and Loops - Writing and evaluation of conditionals and consequent branching -Iteration and loops - Arrays (1-D, 2-D), Character arrays and Strings [9]

#### **Functions and Pointers**

Functions: Scope of a Function – Library Functions and User defined functions - Function Prototypes –Function Categorization - Function Arguments - Arguments to main function - The return Statement - Recursion - Passing Arrays to Functions- Storage class Specifiers. Introduction to Pointer Variables - The Pointer

Operators - Pointer Expressions - Pointers and Arrays - Generating a Pointer to an Array - Indexing Pointers— Dynamic memory allocation[9]

# Structures, Unions, Enumerations, Typedef and Preprocessors

Structures - Arrays of Structures- Arrays and Structures within Structures - Passing Structures to Functions Structure Pointers - Unions - BitFields - Enumerations - typedef - The preprocessor and comments. [9]

File: Streams – Reading and Writing Characters - Reading and Writing Strings -, File System functions - Random Access Files [9]

# LIST OF EXPERIMENTS

- 1 Implementation of Simple computational problems using various formulas.
- 2 Implementation of Problems involving Selection statements.
- 3 Implementation of Iterative problems e.g., sum of series.
- Implementation of 1D Array manipulation.
- 5 Implementation of 2D Array manipulation.

6 Implementation of String operations.

- Implementation of Simple functions and different ways of passing arguments to functions and Recursive Functions.
- Implementation of Pointers
- Implementation of structures and Union.
- 10 Implementation of Bit Fields, Typedef and Enumeration.
- 11 Implementation of Preprocessor directives.
- 12 Implementation of File operations.

#### Advanced English Listening Module

Extended Listening to Podcasts – Listen and Watch Video Clips - answering Inferential Multiple Choice Questions and Vocabulary Check- Listening to Lengthy Discourses – Structured Listening – Listening to Songs and Cognizing the Lyrics-Listening to popular speeches, news briefs and stories [4]

#### Oral Communication

Debates – Group Discussion (Structured) and rotate roles – Elevator Speech – Prepared Talk – Extempore – Brief Technical presentations- Spin-a-Yarn – Short Film reviews – talk on silent videos – Dialogues and Role plays (Intermediate & Higher Level) - Interviews

#### Critical Reading Process

Silent Reading – Scanning and Skimming - Reading comprehension with logical reasoning questions – Cognition of Theme and Inferential Meaning – advanced Academic and Functional Vocabulary List (1000 words) – word webs and semantic threads - Loud Reading - Modulation and Pronunciation Check - Mind maps - Note making

- Deep Reading Skills

[4]

# **Academic Writing Practices**

Sentence Equivalence and Text completion tasks - Data Interpretation - Essay Writing - Letter Writing - Business Emails -Conversational Fill Ups-Rewordify (select a text and simplify/enhance the language)- Reports on events [3]

#### To provide exposure and ability in handling situations involving multiple integrals, Beta and Gamma functions. To familiarize the students with the basic concepts in Vector calculus. To get exposed to the fundamentals in analytic functions, conformal mappings and Bilinear Objective(s) transformation. To acquire skills to understand the concepts involved in Cauchy's integral formula. Cauchy's residue theorem and Contour integration. To understand the concepts in Laplace transform techniques and its properties. At the end of the course, the students will be able to CO1: Evaluate double and triple integrals and analyze Beta and Gamma functions. CO2: Analyze the basic concepts of vector calculus to verify Green's, Stoke's and Gauss Divergence Course theorems. CO3: Construct the analytic functions and Bilinear transformation. **Outcomes** CO4: Apply Cauchy's integral formula and Cauchy's residue theorem to evaluate the complex integrals. CO5: Apply Laplace transform techniques for solving differential equations.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

# **Multiple Integrals**

Double integration - Cartesian and polar coordinates - Change of order of integration - Area between two curves -Area as double integral – Triple integration in Cartesian coordinates.

Beta and Gamma functions: Relationship between Beta and Gamma functions – Properties – Problems.

#### **Vector Calculus**

Introduction - gradient of a scalar point function - directional derivative - angle of intersection of two surfaces divergence and curl(excluding vector identities) - solenoidal and irrotational vectors - Green's theorem in the plane Gauss divergence theorem -Stokes' theorem(without proof)- verification of the above theorems and evaluation of integrals using them. [9]

# **Analytic Functions**

Analytic functions – Necessary conditions (Cauchy–Riemann equations)- Polar form of Cauchy–Riemann equations Sufficient conditions (without proof) – Properties of analytic functions – Harmonic function –Harmonic conjugate

- Construction of analytic functions- Conformal mapping: w = z + a, az, 1/z-Bilinear transformation.

Complex Integration Cauchy's Integral theorem (without proof) - Cauchy's integral formula - Taylor's and Laurent's series (without proof) - Classification of singularities - Cauchy's residue theorem - Contour integration - Circular and semi-circular

contours (excluding poles on real axis).

#### **Laplace Transforms**

LTD,2011

Conditions for existence - Transform of elementary functions - Basic properties - Shifting theorems- Derivatives and integrals of transforms — Transform of unit step function - Dirac's delta function- Initial and final value theorem-Transform of periodic functions. Inverse Laplace transform - Convolution theorem(excluding proof) - Solution of second order ordinary differential equation with constant co-efficients - simultaneous equations of first

orde	er with constant co-efficients. [10]

To enable the students to correlate the theoretical principles with application oriented studies in optoelectronic materials Objective(s) To Explain the principles of laser, types of laser and demonstrate the applications of laser To state the principle of optical fiber and to understand the design and applications of optical fibers. To introduce advanced materials and nano technology for various engineering applications At the end of the course, students will be able to CO1: Analyze the basic ideas of semiconductors and devices CO2: Apply the principles of LCD, photodetectors and optoelectronic devices Course CO3: Outline the basic ideas about classification of laser and various applications of laser. Outcomes CO4: Elaborate the propagation of light in fiber optic cables, communication link and

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

CO5: Gain broad view on advanced materials, nano technology and their engineering

# **Semiconductor Physics**

Introduction-Elemental and compound semiconductors-Intrinsic and extrinsic semiconductors-Properties-carrier concentration in intrinsic and extrinsic semiconductors (qualitative)-p-n junction diode: characteristics-p-n junction transistors: characteristics (CB and CE)-Bipolar characteristics (Biased and unbiased)-FET: characteristics and applications. [10]

#### **Optoelectronic Materials and Devices**

applications

Photoconductive materials – Light Dependent Resistor – Working of LDR – Applications of LDR – Photovoltaic materials - Solar cell - Construction and working of a solar cell - Applications of solar cells - Liquid crystals - Liquid crystal Display (LCD) - Construction and advantages of LCD - Electro optic materials - Optoelectric effect-ElectroOptic Modulation.

#### Laser Technology

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversiondifferent types of lasers: gas lasers (CO<sub>2</sub>), solid-state lasers (Nd: YAG), dye lasers, Semiconductor laser (Homojunction and Hetero junction)-Properties of laser beams-applications of lasers in science and engineering. [8]

#### **Fiber Optics and Sensors**

Principles – cone of acceptance, numerical aperture (derivation)- Modes of propagation –Fabrication of optical fibre: Crucible-crucible technique - Classification: based on materials, modes and refractive index profile- Splicing: types of splicing- Losses in optical fiber - Detectors - Fiber optical communication links (Block diagram) - Advantage of fiber optical cable over copper cables- Fiber optic sensors: liquid level sensors, Temperature and Displacement sensors. [9]

#### Advanced Materials and Nanotechnology

New Engineering Materials: Metallic glasses – preparation, properties and applications – Shape memory alloys

BoS Chairman

[9]

(SMA) - characteristics, properties of NiTi alloy applications - advantages and disadvantages of SMA

Nano Materials: Nanomaterials: Properties- Top-down process: Ball Milling method – Bottom-up process: Vapour Phase Deposition method- Carbon Nano Tube (CNT): Properties, preparation by electric arc method, Applications. [9]

DC and AC Circuits - Electrical circuit elements (R. L and C). Voltage and current sources - Kirchhoff's current and voltage laws - Serial and parallel circuits - Analysis of simple circuits with DC excitation. Representation of sinusoidal waveforms, Peak and RMS values, Phasor representation, Real power, Reactive power, Apparent power, Power factor.

Analysis of single phase AC circuits consisting of R, L, C, RL, RC, RLC combinations.

[12]

DC&AC Machines - Construction, Types and Operation-Faraday's laws of electromagnetic induction - Transformers: Construction, Working principle, Types, Losses in transformers, Regulation, Efficiency and applications-Simple Problems - Applications

Generation of rotating magnetic fields - Three phase induction motor: Construction, working principle, Characteristics, Starting - Single phase induction motor: Construction, working principle and applications - Synchronous generators: Construction, Working principle and applications.

Electrical Power Generation Systems - Sources of electrical energy: Renewable and non-renewable - Principles and schematic diagram of Hydroelectric power plant, Thermal power plant, Nuclear power plant, Solar PV system and Wind energy conversion systems.

**Electrical Installations and House Wiring -** Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB Types of Batteries, Important Characteristics for Batteries - UPS.

Single phase and three phase systems: Three phase balanced circuits, Phase sequence, voltage and current relations in star and delta connections - Basic house wiring tools and components - Domestic wiring: Service mains, meter board, distribution board, energy meter. Different types of wiring: staircase, fluorescent lamp and ceiling fan.

Electrical Energy Conservation & Safety - Elementary calculations for energy consumption - BEE Standards Electrical energy conservation - Methods. Electric shock, Precautions against shock, Objectives of earthing, Types of earthing - Basic electrical safety measures at home and industry. [6]

# Introduction to Computer Aided Drafting (CAD) Software

Theory of CAD software – Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension) – Drawing Area (Background, Crosshairs, Coordinate System) - Dialog boxes and windows - Shortcut menus (Button Bars) - The Command Line and Status Bar - Different methods of zoom as used in CAD - Select and erase objects. [5+12]

#### **Orthographic Projection**

Theory of projection – Terminology and Methods of projection – first angle and third angle projection – Conversion of pictorial views into orthographic views.

#### **Projection of Solids and Sections of Solids**

Projections of simple solids: prism, pyramid, cylinder and cone (Axis parallel to one plane and perpendicular to other, axis inclined to one plane and parallel to other).

Sections of simple solids: prism, pyramid, cylinder and cone in simple positions (cutting plane is inclined to one of the principal planes and perpendicular to the other) – True shape of sections. [6+12] Isometric Projection Principles of Isometric projection – Isometric scale, Isometric views, Conventions – Isometric views of lines, Planes, Simple and compound Solids – Conversion of Orthographic views in to Isometric view. [6+12]

# **Application of Engineering Graphics**

Geometry and topology of engineered components: creation of engineering models and their presentation in standard 2D blueprint form and as 3D wire-frame and shaded solids - Geometric dimensioning and Tolerancing-Use of solid modeling software for creating associative models - Floor plans: windows, doors, and fixtures such as water closet (WC), bath sink, shower, etc. - Applying colour coding according to building drawing practice -Drawing sectional elevation showing foundation to ceiling - Introduction to Building Information Modelling (BIM). [7+12]

**Total Hours: 90**

	To enable the students to create an awareness on Engineering and Human Values												
Objective(s)													
	To inculcate the habits of appreciate the right of others												
	• T	o impart knov	vledge on sat	fety and risk									
	• T	o know the gl	obal issues a	and its importa	ance								
		d of the cou	•	lent will be a	ble to								
		pply ethics in	•										
Course													
Outcomes	CO3: A	pply ethics in	Work Place										
	CO4: R	ealize the res	ponsibilities	and right in th	e society								
	CO5: E	xplain the glo	bal issues an	id responsibil	ities of leade	rs to address	the same						

Note: The hours given against each topic are of indicative. The faculty have the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

#### **Human Values**

Moral values and Ethics - Integrity-Work ethic-Service learning-Civic virtue-Respect for others - Living Peacefully -Caring - Sharing - Honesty - Courage-Valuing time - Cooperation - Commitment - Empathy - Self-confidence -Character – Spirituality-Introduction to yoga and meditation for professional excellence and Stress management.

#### **Engineering Ethics**

Senses of 'Engineering Ethics'-Variety of moral issues-Types of inquiry-Moral dilemmas - Moral Autonomy -Kohiberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles – Theories about right action - Self - interest - Customs and Religion - Uses of Ethical Theories. [6] Engineering as social experimentation

Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics A Balanced Outlook on Law. [6]

#### Safety, Responsibilities and rights

Safety and Risk - Assessment of Safety and Risk Benefit Analysis and Reducing Risk - Respect for Authority -Collective Bargaining - Confidentiality - Conflicts of Interest - Occupational Crime - Professional Right -Employee Right – Intellectual Property Rights (IPR) – Discrimination. [6]

Global Issues

BoS Chairman

Mult	tinational Corporations – environmental Ethics – Computer Ethics – Weapons Development – Engineers as
	nagers – Consulting Engineering – Engineers as Expert Witnesses and Advisors – Moral Leadership – Code of
Con	nduct – Corporate Social Responsibility. [6]

### LIST OF EXPERIMENTS

- 1. Determination of wavelength of laser and particle size diffraction.
- 2. Determination of radius of a plano convex lens Newton's ring.
- 3. Determination of a thickness of thin wire Air wedge method.
- 4. Determination of wavelength of mercury spectral lines spectrometer grating.
- 5. Determination of dispersive power of a prism.
- 6. Determination of NA, acceptance angle of an optical fiber.
- 7. Determination of band gap of a semiconductor PN junction diode.
- 8. V-I characteristics of solar cell.
- 9. Characteristics of Zener diode.
- 10. Determination of Hall coefficient of a given semiconductor and its charge carrier density.

	Common to all branches										
Semester	Hours / Week Total Credit Maximum Marks										
Semester	L T P hrs C CA ES Total										
II 0 0 4 60 2 60 40 100  • To acquire skills in basic engineering practices.											
Objective(s)	<ul> <li>To identify the hand tools and instruments.</li> <li>To provide hands on experience in Fitting, Carpentry, Sheet metal, Welding and lathe shop.</li> <li>To provide practical training on house hold wiring and electronic circuits.</li> <li>To offer real time activity on plumbing connections in domestic applications.</li> </ul>										
Course Outcomes	At the end of the course, the student will be able to: CO1: Perform facing, plain turning, drilling. CO2: Make a model of fitting and carpentry: Square, Dovetail and Cross lap joints. CO3: Fabricate the models of sheet metal and welding joints. CO4: Construct and demonstrate electrical and electronic wiring circuit. CO5: Construct the water pipe line in plumbing shop.										

#### **Machine Shop**

Safety aspects in machine shop, Study of Lathe and Radial drilling machine, Turning, Facing and Drilling.

### **Fitting and Carpentry**

Safety aspects in Fitting and Carpentry, Study of tools and equipments, Preparation of models- Square, Dove tail joint, Cross Lap.

### **Sheet Metal and Welding**

Safety aspects in Sheet metal and Welding, Study of tools and equipments, Sheet metal models - Scoope, Cone, Tray, Preparation weld joints -Lap, butt, T-joints. Study of Gas Welding and Equipments.

### **Electrical Wiring & Electronics**

Safety aspects of Electrical wiring, Study of Electrical Materials and wiring components, Wiring circuit for a lamp using single and stair case switches. Wiring circuit for fluorescent lamps, Basic electronic circuit.

### **Plumbing**

Study of plumbing tools, assembly of G.I. pipes/PVC and pipe fittings, Cutting of threads in G.I.Pipes/PVC by thread cutting dies.

#### Smithy, Plastic Moulding and Glass Cutting

Safety aspects in smithy, plastic moulding and glass cutting, Study of tools and equipments.

#### Lists, Stacks And Queues

Abstract Data Type (ADT) – The List ADT – The Stack ADT – The Queue ADT

[12]

# **Suggested Activities:**

Converting an algorithm from recursive to non-recursive using stack.

Demonstrating stack for Towers of Hanoi application.

Developing any application (student's choice) using all the linear data structures.

### **Suggested Evaluation Methods:**

Tutorials on applications of linear data structures. Checking output of programs implemented.

#### **Trees**

Preliminaries - Binary Trees - The Search Tree ADT - Binary Search Trees - AVL Trees - Tree Traversals - B - Trees -B+Trees.

[9]

### **Suggested Activities:**

Implementing binary tree and tree traversals.

Solving expressions using expression trees by determining infix, prefix and postfix expressions. Developing any application using trees.

### **Suggested Evaluation Methods:**

Tutorials on trees

Check output of programs implemented. Quiz

on various topics of the unit.

# Sorting and Searching

Preliminaries - Insertion Sort - Shellsort - Heapsort - Mergesort - Quicksort - External Sorting - Searching: Sequential search- Binary Search - Hashed list searches. [7]

### Suggested Activities:

External learning - External sorting implementation.

Implementation of all sorting techniques in C language.

Demonstration of searching techniques under best and worst case inputs.

### **Suggested Evaluation Methods:**

Tutorials on external sorting.

Checking output of programs implemented

### **Hashing and Priority Queues (Heaps)**

Hashing – Hash Function – Separate chaining – Open addressing – Rehashing – Extendible hashing – Priority Queues (Heaps) – Model – Simple Implementations – Binary Heap – Applications of Priority Queues – d – Heaps. [7]

### **Suggested Activities:**

Implementation of Hashing

Implementation of simple applications of Priority queue

# **Suggested Evaluation Methods:**

Tutorials on hashing

Check output of programs implemented. Quiz

on various topics of the module.

### **Graphs**

Definitions - Topological Sort - Shortest-Path Algorithms - Unweighted Shortest Paths - Dijkstra's Algorithm - Minimum Spanning Tree - Prim's Algorithm, Kruskal's Algorithm - Applications of Depth-First Search -Undirected Graphs - Biconnectivity.

[10]

### Suggested Activities:

Implementation of various shortest path algorithms

Implementation of Minimum Spanning Tree

#### **Suggested Evaluation Methods:**

Tutorials on various topic of the module Check

output of programs implemented.

Quiz on various topics of the module.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

#### Introduction to C++ and Functions:

Evolution of C++ - Concepts of OOP - Advantages of OOP, Basics of C++: Structure of a C++ Program- Streams in C++ and Stream Classes - Unformatted Console I/O Operations, C++ Declarations, Functions: Return by Reference - Default Arguments - Const arguments - Inline Functions - Function Overloading. [9]

#### Suggested Activities:

Knowing the concepts of OOPS, structure of OOPS.

Developing simple programs in C++ basics, functions and its types

# **Suggested Evaluation Methods:**

Checking output of programs implemented

Group Discussion on OOPS features and difference between C and C++ Quiz for the above topics.

#### Classes and Objects, Constructors and Destructors:

Classes in C++ - Declaring Objects- Access Specifiers and their Scope - Defining Member Functions - Static Members – Array of Objects – Object as Function Arguments – Friend Function and Friend Classes, Constructors and Destructors: Characteristics - Parameterized Constructor - Overloading Constructor - Copy Constructor -Dynamic Initialization Constructor - Destructors.

#### Suggested Activities:

Simple programs using classes and objects, static members

Implementation of simple programs using constructor and destructor

Implementation of simple programs using friend functions and classes, array of objects

### **Suggested Evaluation Methods:**

Quiz for the above activities.

Checking output of programs implemented

Group Discussion for the above activities

### Inheritance, Compile Time Polymorphism and Type Conversion:

Inheritance: Reusability - Types of Inheritance - Abstract Classes - Object as Class Member, Operator Overloading: Rules for Operator Overloading - The Keyword Operator - Unary and Binary Operators Overloading-Overloading using Friend Function – Type Conversion. [10]

### **Suggested Activities:**

Implement inheritance and its types in C++ program

Implement compile time polymorphism and unary, binary operator overloading concept in C++ program.

# **Suggested Evaluation Methods:**

Quiz for the above activities.

Checking output of programs implemented

Group discussion on overloading using friend Function and type conversion

### Pointers, Memory Models, Binding and Polymorphism:

Pointers: Pointer to Class - Pointer to Object - void, wild and this Pointers - Pointer to Constant and Constant Pointers, Memory Models: Dynamic Memory Allocation – Heap Consumption – Dynamic Objects, Polymorphism: Binding in C++ - Pointer to Base and Derived class objects – Working with Virtual Functions – Pure Virtual Functions – Object Slicing – Virtual Destructor. [9]

### Suggested Activities:

Develop simple programs using pointers and its types

Develop simple programs using virtual functions Suggested

#### **Evaluation Methods:**

Quiz for the above activities.

Checking output of programs implemented

Group discussion on pure virtual function and virtual destructor.

### **Generic Programming with Templates, Exception Handling:**

Class Templates – Function Templates – Exception Handling: Principles of Exception Handling – try, throw and catch keywords – Re-throwing Exception – Specifying Exception. [8]

# Suggested Activities:

Develop simple programs on class template and function template. Develop simple programs using exceptional handling and its types.

#### Suggested Evaluation Methods:

Quiz for the above activities.

Checking output of programs implemented

Group discussion on Exceptional handling Concepts

Objective(s)	To introduce number systems and codes, basic postulates of Boolean algebra and show the correlation between Boolean expressions.     To design and analyse combinational circuits     To study the concept of sequential circuits.     To analyse the concept of asynchronous sequential circuits.     To introduce the concept of memories and programmable logic devices.												
Course Outcomes	CO1 CO2 CO3 CO4	: Explain : Analyze : Design : Analyze	the fundame digital loging and analy the asynch	entals of r c family ar ze synchi rronous se	nd design com ronous seque equential circui	tem and app binational ci ntial logic ci ts.	rcuits rcuits	ebra to design o					

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

#### **Digital Fundamentals**

Review of Number Systems - Conversion methods - complements - Binary codes: Weighted and non Weighted codes Boolean postulates and laws - De-Morgan's Theorem - Boolean function - Logic Gates- Implementations of Logic Functions using logic gates, Minimization of Boolean expressions - Sum of Products (SOP) - Product of Sums (POS)- Canonical forms -

- Karnaugh map Minimization - Don't care conditions.

[9]

#### **Logic Family And Combinational Circuits**

TTL and CMOS Logic families and their characteristics.

COMBINATIONAL CIRCUITS: Design procedure - Adders - Subtractors - Serial, Parallel adder- BCD adder - Magnitude Comparator – Multiplexer / Demultiplexer - encoder / decoder – code converters: binary to gray, gray to binary, BCD to excess 3 code

#### **Sequential Circuits**

Flip flops SR, JK, T, D and Master slave – Characteristic table and equation – Application table – Edge triggering – Level Triggering -Ripple counters - Synchronous counters - Modulo - n counter-Design of Synchronous FSM- Analysis of clocked sequential circuits: state equation - State table - State diagram - State reduction & assignment - Register: shift registers -Universal shift register– Shift counters [9]

#### **Asynchronous Sequential Circuits**

Analysis procedure - Transition table - Flow table - Race conditions -Design of fundamental mode circuits - Primitive flow table - Reduction of state and flow table - Race free state assignment - Hazards: Static - Dynamic - Essential - Hazards elimination. [9]

#### **Memory Devices**

Classification of memories: ROM - PROM - EPROM - EPROM - EAPROM, RAM. Static RAM Cell- Dynamic RAM cell Bipolar RAM cell - MOSFET RAM cell - Programmable Logic Devices: Programmable Logic Array (PLA) - Programmable Array Logic (PAL) - Field Programmable Gate Arrays (FPGA) - Implementation of combinational logic circuits using ROM, PLA, and PAL.[9] Practice:

- Design and implement combinational circuits using logic gates 1.
- 2. Design and implement synchronous sequential circuits
- 3. Construct and simulate combinational circuit using multisim
- Construct and simulate synchronous & asynchronous sequential circuit using multisim Tutorials:
- Number system, logic gates, K-map reduction
- 2. Design of combinational circuits
- 3. Design of sequential and asynchronous sequential circuits
- Hazards, PLDs Implementation of combinational logic circuit using ROM, PLA, PAL

Total Hours: 45+15(Tutorial) = 60 hours

# Course **Outcomes**

#### At the end of the course, the students will be able to

CO1: Demonstrate the implementation of Linear Data structures and its applications

CO2: Investigate Balanced Parenthesis and Postfix expressions with the

help of Stack ADT

CO3: Implement Non-Linear Data Structure

CO4: Implement sorting and searching techniques

CO5: Implement Shortest Path and Minimum Spanning Tree algorithm

- 1. Implementation of List Abstract Data Type (ADT)
- 2. Implementation of Stack ADT
- 3. Implementation of Queue ADT 4. Implementation of stack applications:
  - (a) Program for 'Balanced Parenthesis'
  - (b) Program for 'Evaluating Postfix Expressions'
- 5. Search Tree ADT
- Implementation of Internal Sorting
- 7. Develop a program for external sorting
- Develop a program for various Searching Techniques.
- Implementation of Shortest Path algorithm
- 10. Implementation of Minimum Spanning tree algorithm.

Objective(s)  Course Outcomes	wit	L T P 60 C CA ES Total  0 0 4 60 2 60 40 100  To design various UML diagrams and develop object oriented programs using C++ with associated libraries.  To learn how to implement class, objects, constructors and destructors in C++. To learn how inheritance promote code reuse in C++. To apply exception handling and use built in classes from STL.  At the end of the course, the students will be able to  O1: Demonstrate the input/output operations and user defined functions  D2: Implement the concept of class and objects  O3: Demonstrate the concept of reusability and compile time polymorphism													
	CO4: CO5:	CO4: Implement the concept of dynamic objects and runtime polymorphism													

### The laboratory should be preceded by a tutorial to design UML diagrams.

- 1. Construct a C++ program to manage the input and output operations using stream classes
- 2. Construct a C++ program to manage large amount of statements using functions
- 3. Design a C++ program to implement the concept of class and objects
- 4. Develop a C++ program to initialize the class members using constructors and destroy the objects by using destructor
- 5. Design a C++ program for reusability using inheritance
- 6. Write a C++ program to perform compile time polymorphism
- 7. Develop a C++ program to implement the concept of dynamic objects
- 8. Develop a C++ program to implement runtime polymorphism
- 9. Develop a C++ program to allow functions and classes to operate with generic types using templates.
- 10. Construct a class in C++ to handle predefined and user defined exceptions

### **Basic Concepts of Algorithms**

Introduction - Fundamentals of Algorithmic Problem Solving - Important Problem types -Fundamentals of the analysis of algorithm efficiency - Analysis Framework - Asymptotic Notations and Basic Efficiency Classes -Recurrence relations: Methods for solving recurrence relations [9]

#### **Mathematical Analysis of Algorithms**

Mathematical Analysis of Non-recursive Algorithms and Examples - Mathematical Analysis of Recursive Algorithms - Example: Fibonacci numbers - Empirical Analysis of Algorithms

#### **Brute Force and Divide & Conquer Techniques**

Selection Sort and Bubble Sort - Brute-force string matching - Merge sort - Multiplication of Two n-Bit Numbers - Quick Sort - Binary Search - Binary tree Traversal and Related Properties [9]

#### **Algorithm Design Paradigm**

Decrease and Conquer Technique: Insertion Sort - Depth first Search and Breadth First Search - Transform and Conquer Technique: Presorting - Dynamic Programming: Computing a Binomial Coefficient - Warshall's and Floyd's Algorithm - The Knapsack Problem and Memory Functions - Optimal Binary Search trees - Greedy Technique: Huffman trees [9]

#### **NP Hard and NP-Complete Problems**

P and NP problems - NP complete problems - Backtracking: N-Queen's Problem - Hamiltonian Circuit problem Branch and Bound Techniques: Traveling salesman problem

**Total Hours: 45**

Objective(s)	work This comp To im To re	working principles  This course provides an ample way to identify and solve the issues related to operating system components  To implement page replacement and disk scheduling algorithm  To recognize various implementation of file systems								
At the end of the course student will able to CO1: Recognize the basics of system software, operating systems and its structures CO2: Analyze the process scheduling and synchronization problem CO3: Examine the deadlocks and memory management CO4: Comprehend the file concepts and directory structure CO5: Recognize the concepts of allocation methods and disk scheduling.										

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

# **Introduction to Operating Systems**

Introduction to system software: Assemblers-Loaders-Linkers-Compilers, Definition of Operating systems-Computersystem organization- Computer-system Architecture- Operating system structure- Operating system operations. System Structures: Operating system services-User and Operating-system Interface-System calls-Types of system

calls-System programs

### **Process Management**

Process of OS: Process concept-Process scheduling-Operations on processes- Interprocess communication-Examples of IPC systems, Multithreaded programming: Overview-Multicore programming-Multithreading models-Threading issues, Process scheduling-Basic concepts-Scheduling criteria-Scheduling Algorithms, Synchronization: The critical section problem-Peterson's solution-Synchronization hardware- Mutex locks-Semaphores-Classic problems of synchronization-Monitors [10]

# **Deadlocks and Memory Management**

Deadlocks: System model-Deadlock characterization-Methods for handling deadlocks-Deadlock prevention-Deadlock avoidance-Deadlock detection-Recovery from deadlock, Memory Management strategies:-Swapping-Contiguous memory allocation-Segmentation-Paging-Structure of the Page table, Virtual Memory Management :Background-Demand paging-Copy-on-write-Page replacement-Allocation of frames-Thrashing [10] Storage Management File systems: File concept-Access methods-Directory and Disk structure-File-system mounting-File sharing-Protection[8]

**File Management** 

BoS Chairman

[9]

Implementing file systems: File-system structure- File-system implementation-Directory implementation-Allocation methods-Free-space management. Mass storage structure:Overview of mass-storage structure-Disk structure-Disk attachment-Disk scheduling-Disk management-Swap-space management **Total Hours: 45** Text book(s): Abraham Silberschatz, Peter B Galvin, Gerg Gagne, "Operating System Concepts", Wiley India Pvt. Objective(s)	compute Discussion of data of To sturbill hierarce.	<ul> <li>To gain the knowledge about basic structure, Instructions and functional units of a digital computer</li> <li>Discuss in detail the operation of the arithmetic unit including the algorithms and implementation of data manipulation.</li> <li>To study in detail the different types of control and the concept of pipelining and study the hierarchical memory system, cache memory</li> <li>Study the different ways of communicating with I/O devices and standard I/O interfaces</li> <li>To understand the instruction and thread level parallelism concepts and multicore processors.</li> </ul>									
Course Outcomes	CO1: D CO2: Exp CO3: I h CO4: Su	describe the boress the baselivision of fixed Discuss the chazards.  In a marize the Memory According Knowledge	pasic structuric design of ed numbers concept of Infection Concept of ess and Stare about Parage	Addition and and basics ostruction exert for Cache mendard I/O International Additional	er, Instruction subtraction of floating poecution, generated mory and its erfaces.	for fixed poin int numbers eration of cor s performand	nt numbers, restrict numbers, restricted signals, ce, interrupte	ssing modes. multiplication and pipelining and s, buses, Direct ssor architecture			

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

# **Basic Structure of Computers**

Functional units - Basic operational concepts - Bus structures - Software performance - Memory locations and addresses – Memory operations – Instruction and instruction sequencing – Addressing modes – Assembly language – Basic I/O operations – Stacks and gueues.

#### **Arithmetic Unit**

Addition and subtraction of signed numbers - Design of fast adders - Multiplication of positive numbers - Signed operand multiplication and fast multiplication - Integer division - Floating point numbers and operations. [9] Basic **Processing Unit** 

Fundamental concepts – Execution of a complete instruction – Multiple bus organization – Hardwired control – Micro programmed control - Pipelining - Basic concepts - Data hazards - Instruction hazards - Influence on Instruction sets - Data path and control consideration - Superscalar operation.

### Memory and I/O Systems

Speed, Size, Cost - Cache memories - Performance considerations - Accessing I/O Devices - Interrupts - Direct Memory Access - Buses- Interface Circuits- PCI,USB.

#### **Parallelism and Multiprocessors**

Instruction Level Parallelism: ILP concepts - Pipelining overview - Compiler Techniques for Exposing ILP - Dynamic Branch Prediction - Dynamic Scheduling - Hardware Based Speculation - Static scheduling - Thread Level Parallelism: Symmetric and Distributed Shared Memory Architectures - Case studies: Intel core i7, Atom

**Processors** [10]

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

### Introduction to Entrepreneurship & Entrepreneur

Meaning and concept of Entrepreneurship, the history of Entrepreneurship development, Myths of Entrepreneurship, role of Entrepreneurship in Economic Development, Agencies in Entrepreneurship

[6]

Management and Future of Entrepreneurship.

The Entrepreneur: Meaning, the skills required to be an entrepreneur, the entrepreneurial decision process, Role models, Mentors and Support system.

### Business Opportunity Identification and Preparing a Business Plan

Business ideas, methods of generating ideas, and opportunity recognition, Idea Generation Process, Feasibility study, preparing a Business Plan: Meaning and significance of a business plan, components of a logical business plan.

#### **Innovations**

Innovation and Creativity - Introduction, Innovation in Current. Environment, Types of Innovation, School of Innovation, Analysing the Current Business Scenario, Challenges of Innovation, Steps of Innovation

[6]

Management, Experimentation in Innovation Management, Participation for Innovation, Co-creation for Innovation, Proto typing to Incubation. Blue Ocean Strategy-I, Blue Ocean Strategy-II. Marketing of Innovation, Technology Innovation Process

### Financing & Launching the New Venture

Importance of new venture financing, types of ownership, venture capital, types of debt securities, determining ideal debt-equity mix, and financial institutions and banks.

[6]

Launching the New Venture: Choosing the legal form of new venture, protection of intellectual property, and formation of the new venture

### Managing Growth & Rewards in New Venture

Characteristics of high growth new ventures, strategies for growth, and building the new ventures.

Managing Rewards: Exit strategies for Entrepreneurs, Mergers and Acquisition, Succession and exit [6] strategy, managing failures - bankruptcy

Objective(s)	• Toll • Toll • Toll • Toll avo	<ul> <li>To learn different programming language in Linux editor environment</li> <li>To implement different operating system algorithm</li> <li>To implement the performance of different algorithms like CPU scheduling</li> </ul>										
Course Outcomes	At the end of the course, the students will be able to  CO1: Learn the basics of Operating system installation and shell scripts and analyze the System calls for Process and inter process communications  CO2: Examine the Steps in process operation and examine the criteria involved in CPU scheduling algorithms.  CO3: Analyzing the different deadlock avoidance mechanism and implement Classic problem of Synchronization using semaphores  CO4: Classifying the Storage Management and outline the page replacement algorithms  CO5: comprehend the File concept and its allocations and understand the factors in disk scheduling algorithms											

- Installation of Operating system and implementation of Basic Shell Programming Concepts like Loops, Functions, Patterns, Substitutions.
- 2. Familiarization with System calls for Process and inter process communications.
- 3. Implement the operation on process.
- 4. Implement and analyze the scheduling criteria's of CPU Scheduling Algorithms.
- Implement Deadlock avoidance mechanism from deadlock in a real time environment using C. 5.
- Implement Classic problem of Synchronization using semaphores.
- 7. Implement Contiguous Memory Allocation.
- 8. Implement Page replacement algorithm.
- Implement various file allocation Methods.
- 10. Implement Disk Scheduling to find the seek time of accessing the required information using different Scheduling algorithm.

### At the end of the course student will able to

CO1:Know the concept of components, categories and ISO/OSI model of networks CO2:Describe

the Concept of various error detection techniques and Flow, Error control.

CO3:Compare the concept of Circuit switching and Packet switching.

CO4:Gain the knowledge of Congestion control and QoS Techniques.

CO5: Identify the Purpose of Domain Name Space, Email and FTP.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

### **Data Communications**

Networks - Components and Categories - Line Configuration - Topologies - Protocols and Standards - ISO / OSI model - Transmission Media - Coaxial Cable - Fiber Optics - Interfaces (RS232 Standard) and Modems

[9]

### **Data Link Layer**

Course

**Outcomes** 

Error – detection and correction – Parity – LRC – CRC – Hamming code – Flow Control and Error control – Stop and wait – go back-N ARQ – selective repeat ARQ- sliding window – HDLC. - LAN - Ethernet IEEE 802.3 – Connecting devices-Repeaters-Hubs-Bridges [9]

#### **Network Laver**

Internetworks - Circuit Switching - Packet Switching - IP addressing methods - Sub netting - Super netting-Routers- Routing Algorithms - Distance Vector Routing - Link State Routing- ICMP / Frame format, Query Messages. [9]

### **Transport Layer**

Duties of transport layer - Multiplexing - Demultiplexing - Sockets - User Datagram Protocol (UDP) -Transmission Control Protocol (TCP) - Congestion Control - Quality of services (QOS)-Techniques [9] **Application Layer** 

Domain Name Space (DNS) – Email (SMTP)-File Transfer protocol (FTP) – HTTP – HTTPS-World Wide Web.

#### Case Study: Structural Health Monitoring, Traffic Control, Health Care, Pipeline Monitoring, **Precision Agriculture.** [9]

Total Hours: 45

### Objective(s)

- To familiarize the students with various data models and query language.
- Gain knowledge on data storage and indexing concepts.
- To expose the fundamentals of transaction processing and recovery concepts.
- To make the students aware of the various current trends in database system.
- To know the current trends of various databases

# Course **Outcomes**

### At the end of the course student will able to

- CO1: Express the knowledge of data base systems and analyze the various data models
- CO2: Employ the concept of Data Definition Language and Data Manipulation Language and apply the various Normal Forms in database design
- CO3: Express the knowledge of secondary storage device and the concepts of hashing, B Tree, B+ Tree in indexing to retrieve the data
- CO4: Apply the various concurrency control techniques in database transactions and recovery techniques
- CO5: Classify the recent databases such and Express the knowledge of data warehousing and data mining

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

### **Introduction and Conceptual Modeling**

Introduction Database systems – DBMS Applications – Purpose of DBMS – Views of Data - Database System Architecture -Data Storage and Querying - DB Users and Administrators - Data Models - ER model - Relational Model – Relational Algebra and Calculus.

#### Relational Model

Introduction to SQL - Intermediate SQL - Advanced SQL - Triggers - Functions and Procedures - Embedded SQL - Normalization for Relational Databases (up to 5NF).

### **Data Storage and Indexing Concepts**

Record storage and Primary file organization -RAID - Operations on Files- Heap File- Sorted Files- Hashing Techniques – Index Structure for files –Different types of Indexes- B-Tree - B+Tree. [9]

Transaction Management Transaction - Transaction Concepts- Transaction Model- Desirable properties of Transaction- Schedule and Recoverability- Serializability - Concurrency Control - Types of Locks- Two Phase locking- Time stamp based concurrency control – Recovery Techniques – Concepts- Immediate Update- Deferred Update. [9]

Current Trends Object Oriented Databases - Distributed databases - Homogenous and Heterogeneous-Distributed data Storage - Distributed Transaction - Commit Protocols - Data Mining- Data Mining Applications -Data Warehousing.

#### INTRODUCTION

Internet Basic - Introduction to HTML - List - Creating Table - Linking document - Frames - Graphics to HTML Doc - Style sheet - Style sheet basic - Add style to document - Creating Style sheet rules - Style sheet properties - Font - Text - List - Color and background color - Box - Display properties. [9]

### **JAVASCRIPT**

introduction to Javascript - Advantage of Javascript - Javascript Syntax - Datatype - Variable - Array -Operator and Expression - Looping Constructor - Function - Dialog box - Events [9] XML and JDBC Features of XML, The XML Declaration, Element Tags- Nesting and structure, XML text and text formatting element, Table element, Mark-up Element and Attributes, Document Type Definition Schema-Introduction-Jdbc Architecture-Types Drivers-Statement-ResultSetPreparedStatement-Connection Modes-SavePoint-Batch Updations-CallableStatement [10]

## **PERL AND JSP**

Programming CGI Scripts – PERL-Introduction-JspLifeCycle-Jsp Scopes-Implicit Objects & Jsp Directives:page ,include,taglib-Jsp Scripting

Elements:declaratives,scriptlets,expressionsJspActions:StandardAction ,Custom Actions-DataBase Connectivity in JSP [10] APPLICATIONS

e-Business Models - Building an e-Business - e-Marketing - Database connectivity - Online Payments -Security - XML and e-Commerce - m-Business. [9]

### Practice:

- 1. Design a personal web page using CSS
- 2. Write a Java Script program which makes use of Java Script's inbuilt objects
- 3. Design web page for employee details using XML with database connectivity
- 4. A web page using PERL
- 5. Write a JSP program to implement Students mark Statements with database connectivity

Total Hours: 45 hours

	To present SQL and procedural interfaces to SQL comprehensively
	To perform various commands in RDBMS
Objectives	To Perform PL/SQL programming using concept of Cursor Management, Error Handling,
Objectives	Package and Triggers
	To design the applications like payroll
	To apply procedures and functions in PL/SQL
	At the end of the course, the students will be able to
	CO1: Implement the Data Definition Language, Data Manipulation Language and Data
Course	Control Language commands in RDBMS
Outcomes	CO2: Employ the Sub queries to retrieve data from multiple tables
	CO3: Implement the High-level language extension with Cursors and Triggers
	CO4: Implement the Procedures and Functions in PL/SQL
	CO5: Demonstrate the views, joins and Embedded SQL in RDBMS

### **List of Experiments**

- 1. Data Definition Language (DDL) commands in RDBMS.
- 2. Data Manipulation Language (DML), Data Control Language (DCL) and Transaction Control Language (TCL) commands in RDBMS.
- 3. Implementation of Sub queries.
- 4. Creation of views and joins.
- 5. High-level language extension with Cursors. 6. High level language extension with Triggers
- 7. Procedures and Functions.
- 8. Embedded SQL.
- 9. Design and implementation of Payroll Processing System.
- 10. Design and implementation of Banking System.
- 11. Design and implementation of Railway Reservation System.

	Understand the fundamentals of lexical analysis phase of compiler
	Discuss syntactic analysis functionalities of compiler
Objective(s)	Identify the processes involved in intermediate code generation
	Explain issues code generation phase of compiler
	Describe optimization techniques
	At the end of the course, the students will be able to
	·
Course	CO1: Understand the basics of compilers and describe phases of compilers CO2:
Outcomes	Interpret the major role played by syntax analysis
	CO3: Explain the processes involved in intermediate code generation CO4:
	Summarize the major processes involved in code generation. CO5:
	Illustrate the features of code optimization.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

### **LEXICAL ANALYSIS**

Introduction to Compilers-Structure of compiler -The phases of compiler - Cousins of compiler -The grouping of phases-Compiler construction tools. The role of the lexical analyzer- Input Buffering -Specification of Tokens -Recognition of Tokens [9]

### SYNTAX ANALYSIS

The role of the parser-Context-free grammars-Writing a grammar-Top down parsing- Recursive Descent Parser Predictive Parser-LL(1) Parser-Bottom-up Parsing- Shift Reduce Parser-LR parsers-SLR parser - Canonical LR parser -LALR Parser.

### INTERMEDIATE CODE GENERATION

Intermediate languages -Three-Address Code -Types and Declarations -Translation of Expressions -Rules for Type Checking and Type Conversions -Control Flow -Back patching -Switch Statements -Procedures.[9]

#### **CODE GENERATION**

Issues in the Design of a Code Generator -Target Language -Addresses in the Target Code -Basic Blocks and Flow Graphs –Optimization of Basic Blocks –A Simple Code Generator. [9] **CODEOPTIMIZATION** Code Optimization – Principal Sources of Optimization-Peephole Optimization-Introduction to Data Flow Analysis – Run Time Environments - Storage Organization - Stack Allocation of Space - Access to Non-Local Data on the Stack.[9]

### **Introduction to Testing**

Software Testing - Definition of Software Testing - Objective and Limits of Testing - Principles of Software Testing-Software Testing Life Cycle- Testing Strategy - Roles and Responsibilities of a Software Tester in Organizations -Origins of Defects - Cost of Defects - Independent Verification and Validation. [9] Software testing Requirements Software Testing Requirements - Analyzing the requirements - Classifying the Functional and Non Functional Requirements with their types. Software Testing Review Process - Objective of Software Testing Review - Types of Reviews - Peer Review, Walkthrough, Inspection - Checklists of Review Process - Review Log. [9] Testing **Techniques** 

White Box Testing Techniques - Static and Dynamic Testing - Statement Coverage - Decision Coverage - Basic Path Testing - Control Flow Graph Coverage - Branch Coverage - Conditional Coverage - McCabe's Cyclomatic Complexity – Mutation Testing. Black Box Test Techniques – Boundary Value Analysis – Equivalent Class Partition Error Guessing – Decision Table – State Transition Table – Pair Wise Testing – UseCase Testing. [9]

### **Testing Types**

Unit Testing - Smoke Testing - Functional Testing and its Types - Integration, System Testing, User Acceptance Testing (Alpha and Beta)- Non Functional Testing and its Types – Performance Testing (Load, Volume and Stress)-Recovery Testing, Browser Compatibility Testing - Security Testing - Scalability Testing - Usability Testing - Ad Hoc Testing - Internationalization Testing - Configuration Testing - Data warehouse Testing and Business Intelligence Testing - Mobile Testing. [9]

### **Automation Tools and Test Cases**

Software Test Automation – Scope of Automation - Design and Architecture for Automation – Automation Testing using Selenium Tool – Definition of Test Case – Standard, Guidelines and Naming Conventions for Test Case Design - Characteristics of Good Test Cases and its templates - Creation of Test Case Requirement Coverage – Traceability Matrix – Test Case Review Process – Test Execution – Test Log – Reporting of Test Execution - Risk Based Testing Approach. [9]

#### Introduction to value Education

[9]

Understanding value Education-Self exploration as the process for value education-Continuous Happiness and prosperity-the basic human aspirations-right understanding-relationship and physical facility -happiness and prosperity - current scenario - method to fulfill the basic human aspirations

### Harmony in the Human Being

[9]

Understanding Human being as the Co-Existence of the self and the Body-Distinguishing between the needs of the self and the body-the body as an instrument of the self-understanding harmony in the self-harmony of the self with the body - programme to ensure self-regulation and health

### Harmony in the Family and Society

[9]

Harmony in the Family -the basic unit of human interaction-values in human- to - human relationship -'Trust' the foundation value in relationship -'Respect'- as the right evaluation-understanding harmony in the society -vision for the universal human order.

### Harmony in the Nature/Existence

[9]

Understanding harmony in the Nature-Interconnectedness, self-regulation and mutual fulfillment among the four orders of nature - realizing existence as co-existence at all levels -the holistic perception of harmony in existence.

### Implications of the Holistic Understanding

[9]

Natural Acceptance of human values- definitiveness of human conduct- a basis for humanistic education, humanistic constitution and universal human order- competence in professional ethics -holistic technologies, production systems and management models-typical case studies - strategies for transition towards value base life and profession

Objective(s)	To implement the object oriented programming and working with python packages     To enhance the knowledge in database connectivity     To develop the programs in GUI												
Course Outcomes	CO2: Understand the modular design and execution handling												

### LIST OF EXPERIMENTS

- Implement the basic concepts of Python 1.
- 2. Implement List, string and Tuples
- Implement the concept of Decision making and looping statements. 3.
- 4. Implement File operations
- 5. Build models using object oriented concepts
- 6. Working with data using pandas
- 7. Perform various numpy operations and special functions
- 8. Build models using database connectivity
- 9. Build model using GUI
- 10. **Drawing using Turtle**
- Mini project to predict the time taken to solve a problem given the current status of the user. 11.

Objective(s)	<ul> <li>To study the basic concepts of MYSQL.</li> <li>To discover the PHP operators and functions.</li> <li>To apply the knowledge of string handling functions in PHP.</li> <li>To expand knowledge of MYSQL database connectivity and file handling functions in PHP.</li> </ul>
Course Outcomes	At the end of the course, the students will be able to CO1: Interpret the concepts of MYSQL and its record selection technologies. CO2: Demonstrate the basic concepts and developing a simple application using PHP operators and Functions. CO3: Exhibit the string handling functions in PHP. CO4: Demonstrate the MYSQL database connectivity. CO5: Demonstrate the file handling functions in PHP.

- Connecting the MYSQL database and perform the following
  - a. Creating and Deleting Database.
  - b. Creating a Table.
  - c. Examining the Results.
  - d. Inserting / Retrieving Data into / from Tables.
- 2. a. Selecting Specific Rows and Columns.
  - b. Deleting and Updating Rows.
  - c. Loading a Database from a File.
- 3. PHP program that displays a welcome message
- 4. PHP program to implement Simple data storage, operators and Functions.
- 5. PHP script implements string handling functions.
- 6. PHP Script that implements the database connectivity.
- 7. PHP scripts that implement the following file handling operations
  - i. Reading data

from the file ii.

Writing data to

the file iii.

Printing all the

records.

Write a PHP script to add the Rollno, name, six subjects' marks into Mark table in MySQL and display the average and result

Course Objective(s)	business To know To know To under To know	To make the Engineering student to know about the basic of economics & how to organize a business  To know the financial aspects related to business.  To know about functions of banks.  To understand the different methods of appraisal of projects and  To know about the pricing & capital techniques.									
Course Outcome s	CO2: Desc CO3: Expla CO4: Interp	ify suitable cribe the formain the kinds pret fixed co	demand forms of busing sof banks a stand variation	ecasting tecless and diffe and illustrate able cost and	e able to hniques and prentiate between the Balance so technical feature the managements	een proprionsheet with assibility and	etorship and suitable exa d economic	l partnership Imple feasibility			

#### **Basic Economics**

Definition of economics - nature and scope of economics - basic concepts of economics - factors of production demand analysis – definition of demand – Law of demand – Exception to law of demand – Factors affecting demand – elasticity of demand – demand forecasting – definition of supply – factors affecting supply – elasticity of supply - market structure - perfect competition - imperfect competition - monopoly - duopoly - oligopoly and bilateral

monopoly. [9]

### **Organization and Business Financing**

Forms of business – proprietorship – partnership - joint stock company - cooperative organization – state Enterprise -mixed economy - Money and banking - kinds of banking - commercial banks - central banking functions - control of credit - monetary policy - credit instrument - Types of financing - Short term borrowing - Long term borrowing Internal generation of funds - External commercial borrowings - Assistance from government budgeting support and international finance corporations- analysis of financial statement- Balance sheet-profit and loss account-Funds flow

statement- Examples in all members

[9]

### **Financial Accounting and Capital Budgeting**

The balance Sheet and related concepts – The profit and loss statement and related concepts – Financial ratio analysis - Cash flow analysis - fund flow analysis - Capital budgeting - Average rate of return - Payback period Net present value and internal rate of return.

### **Cost Analysis**

Types of costing – traditional costing approach - activity based costing - Fixed Cost – variable cost – marginal cost - cost output relationship in the short run and in long run - pricing practice - full cost pricing - marginal cost pricing - going rate pricing - bid pricing - pricing for a rate of return - appraising project profitability - cost benefit analysis - feasibility reports - appraisal process - technical feasibility - economic feasibility - financial feasibility. [9]

### **Break Even Analysis**

Basic assumptions –break even chart – managerial uses of break even analysis - applications of break even analysis

in engineering projects. **Total Hours: 45**

Objective(s)	need	•		•	•	•		
Pre-requisites	Fundar	nentals in lin	ear algebra /	statistics / p	robability			

	At the end of the course, the students will be able to
	CO1: Understand the basics of Data Sciences
Course	CO2: To know the mathematical foundations needed for data Science and perform Exploratory Data
Outcomes	Analysis.
	CO3: Implement models such as k-nearest Neighbors, Naive Bayes, linear and logistic
	Regression, decision trees, neural networks and clustering. CO4: Create effective
	visualization of given data CO5: Build data science applications.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction to core concepts and technologies: Introduction, Terminology, Data-Properties of Data, Types of data, Why Data Science? Computer Science, Data Science, and Real Science, data science process, Data Acquisition and Data Science Life Cycle, Ethics in Data Science, data science toolkit, Example applications. Data wrangling: Sources of data, Data collection and API, Working with data: Reading Files, Cleaning Data. [8]

### **Statistical Inference, Exploratory Data Analysis:**

Statistical thinking in Data Science, Statistical Inference, Statistical Analysis-Mean, Median, Mode, Standard Deviation, Range, Percentile, Modeling, Exploratory Data Analysis: Philosophy of Exploratory Data Analysis, Data

Basic Machine Learning Algorithms: Brief introduction, Linear / Polynomial Regression, Logistic Regression, Classification, Regularization, Support vector machines, Naive Bayes, Cross Validation, Label Encoding, Random Forests, Decision Trees, Clustering, Dimensionality reduction, Manifold learning, Introduction to Neural Networks, Confusion Matrix - Evaluation Metrics - Recall, Precision, F-measure, Accuracy.

Data visualization: Introduction, Types of data visualization, Data Visualization - Basic principles, ideas and tools for basic data visualization tools (plots, graphs and summary statistics)- various visualization techniques used in Data Science. Data visualization Tool: Working with Tableau, Creating charts, Mapping data in Tableau. create your own visualization of a complex dataset [10]

Applications of Data Science, Case Studies of Data Science Application, Recommender Systems on Real-World Data Sets, Weather forecasting, Stock market prediction, Object recognition. [8]

### Laboratory:

- Perform Data exploration and preprocessing
- Implement Linear and Logistic regression
- Implement Naive Bayes classifier for dataset stored as CSV file.
- Implement regularized logistic regression
- 5. Build models using different Ensembling techniques
- 6. Build models using Decision trees
- 7. Build model using SVM with different kernels
- Implement K-NN algorithm to classify a dataset.
- 9. Build model to perform Clustering using K-means after applying PCA and determining the value of K using Elbow method.
- 10. Simulate Singular Value Decomposition

Mini project to predict the time taken to solve a problem given the current status of the user.

Total Hours: 45+15=60 hours

### Introduction

Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers, Benefits of Cloud Computing, Cloud computing - Cluster computing, Grid computing, Assessing the role of Open Standards, Measuring the cloud's value, Cloud Architecture - Exploring the cloud computing stack

### Cloud Computing Architecture & Infrastructure as a Service

Cloud computing stack, Service Models (XaaS) - Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Software as a Service (SaaS), Deployment Models - Public, Private, Hybrid and Community Cloud, Infrastructure as a Service (IaaS), Resource Virtualization - Server, Storage, Network

#### Platform as a Service & Software as a Service

Introduction to PaaS, Cloud Platform and Management - Computation, Storage, Software as a Service (PaaS) Introduction, Web Services, Web 2.0, Web OS, Service Management in Cloud Computing - Service Level Agreements (SLAs), Billing & Accounting, Comparing Scaling Hardware: Traditional vs. Cloud, Managing Data in Cloud

### **Cloud Security**

Infrastructure Security, Data security and Storage - Data privacy and security Issues, Jurisdictional issues, Identity & Access Management, Access Control, Trust, Reputation, Risk, Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations

### **Cloud Storage and Case Studies**

Cloud Storage - Cloud Array, Shared Cloud Storage, Cloud Storage Gateway-Sync, Case Studies - Creating private laaS in Eucalyptus, Creating virtual server in Microsoft Azure, Creating virtual sever in Amazon EC2, Hosting application in Google Google Cloud.

### Preparing a Presentation

Presenting data using Power Point- Power Point preparation and presentation, Design principles for creating effective Power Point slides with visuals displaying data. - Profile, - Problem, and a set of basic Excel charts, use to create a presentation.

### Creating effective slides using PowerPoint

Create effective slides using PowerPoint. Tools within Power Point, structure story line, create story boards, identify primary elements of slide design, display data and finalize slide presentation.

### Research Designs and Data Sources

Overview of the topics: process of data collection and analysis. Starting with a research question - Review of existing data sources- Survey data collection techniques- Importance of data collection- Basic features affect data analysis when dealing with sample data. Issues of data access and resources for access.

## Measurements and Analysis Plan

Importance of well-specified research question and analysis plan: various data collection strategies - Variety of available modes for data collection - review of literature - Tools at hand for simple analysis and interpretation.

**Total Hours: 10**

### Preparation of Manuscript

Data necessary before writing a paper: the context in which the scientist is publishing. Learning and identification of research community - advantages of scientific journal publication and manuscript preparation ethical values in publishing.

Writing the paper (2)

Writing research paper - structure of the paper - usage of bibliographical tools - abstract preparation and to do a peer review for the abstract of the others, as in real academic life. Plagiarism of the prepared manuscript.

Copyright law in India-Meaning of copyright-Classes of works for copyright protection -Ownership of CopyrightAssignment of copyright-Intellectual Property Rights (IPR) of Computer Software-Copyright Infringements-

Procedure for registration

(3)

Patent System In India -Types of Patent Applications-patentable invention - Not patentable-Appropriate office for filing -Documents required Publication and Examination of Patent Applications -Grant of Patent-Infringement of Patents -E-filing of Patent applications

#### Deploying Mobile App. in play store

(5)

Introduction to Application Stores - Play Store, App Store, Microsoft Store, Creating App - Android, iOS, UWP, Defining Manifest, Certifying App, Create Store Listing, Sharing Screenshots, Sharing App Credentials for Testing.

#### Introduction to C++ and Functions:

Evolution of C++ - Concepts of OOP - Advantages of OOP, Basics of C++: Structure of a C++ Program Streams in C++ and Stream Classes - Unformatted Console I/O Operations, C++ Declarations, Functions: Return by Reference -Default Arguments - Const arguments - Inline Functions - Function Overloading. [9]

### Classes and Objects, Constructors and Destructors:

Classes in C++ - Declaring Objects- Access Specifiers and their Scope - Defining Member Functions - Static Members - Array of Objects - Object as Function Arguments - Friend Function and Friend Classes. Constructors and Destructors: Characteristics - Parameterized Constructor - Overloading Constructor - Copy Constructor - Dynamic Initialization Constructor - Destructors. [9]

### Inheritance, Compile Time Polymorphism and Type Conversion:

Inheritance: Reusability - Types of Inheritance - Abstract Classes - Object as Class Member, Operator Overloading: Rules for Operator Overloading - The Keyword Operator - Unary and Binary Operators Overloading-Overloading using Friend Function - Type Conversion. [10]

### Pointers, Memory Models, Binding and Polymorphism:

Pointers: Pointer to Class - Pointer to Object - void, wild and this Pointers - Pointer to Constant and Constant Pointers, Memory Models: Dynamic Memory Allocation - Heap Consumption - Dynamic Objects, Polymorphism: Binding in C++ - Pointer to Base and Derived class objects - Working with Virtual Functions -Pure Virtual Functions - Object Slicing - Virtual Destructor. [9]

### Generic Programming with Templates, Exception Handling:

Class Templates - Function Templates - Exception Handling: Principles of Exception Handling - try, throw and catch keywords - Re-throwing Exception - Specifying Exception.

#### Introduction to C#:

Introducing C# – Understanding .NET – Overview of C# – Literals – Variables – Data Types – Operators – Expressions – Branching – Looping – Methods – Arrays – Strings – Structures – Enumerations. [8]

## Object-Oriented Programming in C#:

Classes - Objects - Inheritance - Methods - Polymorphism - Interfaces - Operator Overloading - Delegates -Events – Errors – Exceptions – Collections – Managing Filesystem. [8]

#### ASP.NET Core Web Application using Razor Pages:

Introduction to ASP.NET Core Web Application – Environment Setup – Project Layout – Static and Default Files Enabling and Defining Razor Pages – Shared Layouts – Using code-behind files.

#### Data Manipulation using Razor Pages:

Introduction to ADO.NET - Connection Class with Authentication - Command Class - DataReader Class -DataAdapter Class – DataSet – OnGet –OnPost – OnPostDelete – OnPostEdit – OnPostView – REST API – Model and Controller for REST API. [10]

#### Model-View-Controller (MVC) in ASP.NET Core:

Introduction to MVC – Setting up an ASP.NET Core MVC Website – MVC Routing – Controllers and Actions – Model – Views – Parameters Passing – View Helpers – Model Validation. [9]

#### Introduction

Introduction to packet tracer: key features, benefits. Recognize the purpose and functions of various network devices such as routers, switches, bridges and hubs. Identify common applications and their impact on the network. Identify the appropriate media, cables, ports, and connectors to connect network devices to other network devices and hosts in a LAN.

## **LAN Switching Technologies**

Packet tracer: create the topology, configure and verify initial switch configuration including remote access management. Configure switch IOS basics – hostnames, console, privilege password and telnet password. [9]

## IP Addressing

IPv4 address - necessity of using private and public IP addresses for IPv4 addressing, IPv4 addressing scheme using VLSM and summarization to satisfy addressing requirements in a LAN environment. Subnet mask and [9] DNS lookup.

## **IP Routing Technologies**

Basic routing concepts - boot process of IOS routers - configure and verify utilizing the CLI to set basic router configuration - configure and verify operation status of a device interface, both serial and Ethernet - verify router configuration and network connectivity. [9]

## **Firewall and Network Security**

Firewall configuration strategies-packet filtering-firewall configuration and administration - working with proxies and application - level firewalls-authenticating users- setting up a virtual private network- building your own firewall

## **Introduction to Data Mining**

Motivation and importance - What is Data Mining - Relational Databases - Data Warehouses - Transactional Databases Advanced Database Systems - Data Mining Functionalities - Interestingness of a pattern Classification of Data Mining Systems - Major issues in Data Mining.

## Data Warehouse and Olap Technology for Data Mining

What is a Data Warehouse - Multi-Dimensional Data Model - Data Warehouse Architecture - Data Warehouse Implementation - Development of Data Cube Technology - Data Warehousing to Data Mining. Preprocessing

Why Pre-process the Data? - Data Cleaning - Data Integration and Transformation Data Reduction - Discretization and Concept Hierarchy Generation - Data Mining Primitives: Mining Association rule in large Databases - Association Rule Mining - Mining Single-dimensional Boolean Association rules from Transactional Databases - Mining Multi-dimensional Association rules from relational databases & Data Warehouses. [9]

#### **Classification and Prediction**

Concepts and Issues regarding Classification and Prediction - Classification by Decision Tree Induction - Bayesian Classification - Classification by Back-propagation - Classification Based on Concepts from Association Rule Mining. [9] **Cluster Analysis** 

What is Cluster Analysis? - Types of Data in Cluster Analysis - A Categorization of Major clustering methods - partitioning methods - Hierarchial methods - Density-Based Methods: DBSCAN - Grid-based Method: STING - Model-based Clustering Method: Statistical approach - Outlier analysis [9]

Interpret the knowledge and reasoning in propositional logic and first order logic. Objective(s) Gain knowledge on Planning and acting in the real world. Learn to represent uncertain knowledge in solving AI problems Understand the different forms of learning. At the end of the course, the students will be able to CO1: Understand the concepts of intelligent agents and problem solving aspects. CO2: Interpret the knowledge of propositional logic and FOL. Course CO3: Understand the issues of planning problems. Outcomes CO4: Describe the Uncertainty and probabilistic reasoning. CO5: Summarize the types of learning methods and AI applications.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

## **Problem Solving**

Introduction - What is Artificial Intelligence? - Structure of Intelligent Agents - Problem formulation - Uninformed search strategies - Informed search strategies - Constraint satisfaction problems [9] Knowledge and Reasoning

Logical agents – Propositional logic – First-order logic – Inference in first order logic – Unification - Forward Chaining - Backward Chaining - Resolution [9]

## Planning

Planning Problem - Planning with state-space search - Partial-order planning - Planning graphs - Planning and acting in the real world - Conditional planning - Multi agent planning. [9] Uncertain Knowledge and Reasoning Uncertainty - Notations and Axioms of Probability - Probabilistic Reasoning - Bayesian networks (Semantics, Exact Inference, Approximate Inference) - Inference in Temporal models - Hidden Markov models [9] Learning and Applications

Learning from observation -Inductive learning -Decision trees - Ensemble Learning - Explanation based learning -Statistical Learning methods. Applications of Artificial intelligence. [9]

#### Hands On:

- 1. Develop PEAS descriptions for given AI tasks
- 2. Implement Hill climbing algorithm
- 3. Write a program to generate the output for A\* algorithm
- 4. Write a program to show the Tic Tac Toe game for 0 and X
- 5. Implementation of Bayesian Belief networks
- 6. Approximate inferences in Bayesian network
- 7. Implementation of decision problems for various real-world applications
- 8. To learn various Bayesian parameters
- 9. Implementation of Hidden Markov Models
- 10. Implement propositional logic inferences for AI tasks

## **Python Concepts**

Interpreter - Program Execution - Statements - Expressions - Flow Controls - Functions - Numeric Types -Sequences - Strings, Tuples, Lists and - Class Definition - Constructors - Inheritance - Overloading - Text & Binary Files - Reading and Writing.

CO5: Leveraging web scraping and visualizing the results of analytics effectively

## **Data Wrangling**

Combining and Merging DataSets - Reshaping and Pivoting - Data Transformation - String Manipulation, Regular Expressions. [9]

#### **Data Aggregation, Group Operations, Timeseries**

grouping concepts

GoupBy Mechanics - Data Aggregation - Groupwise Operations and Transformations - Pivot Tables and Cross Tabulations - Date and Time Date Type tools - Time Series Basics - Data Ranges, Frequencies and Shifting. [9]

#### Web Scraping

Data Acquisition by Scraping web applications -Submitting a form - Fetching web pages - Downloading web pages through form submission - CSS Selectors. [9]

## **Visualization In Python**

Matplotlib package - Plotting Graphs - Controlling Graph - Adding Text - More Graph Types - Getting and setting values - Patches.

## Hands On:

- 1. Basic Python Programs
- 2. Program using String Operations
- 3. Program on python Data structures
- 4. Working with data in python using pandas
- Design a personal web page using CSS
- 6 Visualization in python using mathlotlib

## **Cloud Computing:**

Introduction – Characteristics of Cloud computing – Architecture – Types – Service Models – SaaS, IaaS, PaaS - Regions - Cloud Security [8]

## Big Data & Data Science:

Introduction – Data science and Challenges – HDFS & Hadoop – Structured and Unstructured data – Processing Big Data - Supervised & Unsupervised Learning - Text Analysis - Data visualization [10]

#### AI/ML & AIOps:

Introduction – Structure of Intelligent Agents – Knowledge and Reasoning – Machine Learning – Deep Learning Applications of AI – AIOps Technologies – AIOps Benefits – Implementation [10]

#### RPA:

Introduction - Variables - Control flow - Data Tables and Excel Automation - UI Automation - Selectors -**Email Automation** [8]

## SRE & ServiceNow:

Introduction – Adopting a DevOps & SRE Model – SRE vs DevOps – Architecture & Lifecycle – Practices – Error Budgets - Toil Management - DevOps Tools - Introduction to ServiceNow - Reporting & Managing Issue – Benefits [9]

**Total Hours: 45 hours**

<ul> <li>To know the basics of Linux OS, Linux environment and file system</li> <li>To understand and make effective use of the UNIX commands</li> <li>To learn and understand the use of process fundamentals in Linux</li> <li>To enhance the skills needed for the shell scripting and shell programming</li> <li>To develop the writing skills for system programming</li> </ul>														
At the end of the course, the students will be able to CO1: Apprehend the basics of Linux environment and file system CO2: Demonstrate and execute the files and directories commands to store in directories CO3: Interpret the uses of commands for the processes in Linux CO4: Analyze and implement the programs using shell programming CO5: Design and execute the filter commands using regular expressions to match a string of text														
Note: Hours not						•								

number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

#### Introduction

Linux Introduction and File System - Basic Features, Advantages, Installing Requirement, Basic Architecture of Unix/Linux System, Kernel, Shell, Linux File System - Boot Block, Super Block, Inode Table, Data Blocks, How Linux Access Files, Storage Files, Linux Standard Directories.

#### **Files and Directories Commands**

Files and Directories Commands - cd, ls, cp, md, rm, mkdir, rmdir, pwd, file, more and less, Creating and Viewing Files Command - cat, File Comparisons Commands - cmp and comm, View files, Disk Related Commands, Checking Disk Free Spaces, System Startup and Shut - Down Process, init and Run Levels. [09]

#### **Essential Linux Commands**

Understanding Shells, Processes in Linux - Process Fundamentals, Connecting Processes Commands - pipes and tee, Input/Output Redirecting, Manual Help, Background Processing, Managing Multiple Processes, Changing Process Priority with nice Command, Scheduling of Processes Commands - at, cron, batch, kill, ps, who and sleep, Printing Commands - find, sort, touch and file, File Related Commands - ws, sat, cut and dd, Mathematical Commands - bc, expr, factor and units, Creating and Editing Files Commands - vi and vim. [09]

## Shell Programming

Shell Programming - Basic of Shell Programming, Various Types of Shell Available in Linux, Comparisons Between Various Shells, Shell Programming in Bash - read Command, Conditional and Looping Statements, Case Statements, Parameter Passing and Arguments, Shell Variables, System Shell Variables, Shell Keywords, [09] Creating Shell Programs.

## Filtering Commands

Filtering Commands - pr, head, tail, cut, paste, sort, uniq and tr, Filter using Regular Expressions - grep, egrep, and sed; AWK Programming – Report Printing with AWK. [09]

#### Hands On:

- 1. Execution of files and directory commands to list all files or directories in the current directory.
- 2. Execution of scheduling of processes commands to schedule one-time jobs for a specific time and date
- Implementation of Shell script to perform operations on files and strings.
- 4. Implementation of Shell programming concepts such as conditional and looping statements, and functions.
- 5. Implement and execute the C program in Linux.
- 6. Implementation of inter process communication between two unrelated processes.
- 7. Execution of filtering commands for filtering text for effective file operations.
- 8. Execution of filters and regular expressions commands grep, awk and sed that use all of its features.

	At the end of the course, the students will be able to
Course	CO1: Apply data modeling techniques to design and configure custom objects, fields, and relationships in Salesforce.
Outcomes	CO2: Apply advanced data management and customization techniques in Salesforce to enhance data organization and user experience.
	CO3: Evaluate and recommend appropriate Salesforce user setup and security settings to control access and permissions.
	CO4: Develop advanced automation solutions using Process Builder and Visual Workflow to meet complex business requirements.
	CO5: Evaluate and recommend appropriate reporting and analytics strategies based on business

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

requirements.

#### Salesforce Fundamentals

Introduction to CRM-CRM Use Cases - Why Salesforce? - Overview of Salesforce platform and its Architecture -Advantage of Salesforce, Salesforce editions and licenses - Salesforce user interface and navigation - Salesforce Mobile App and Salesforce Lightning Experience -Signing up Developer Edition - Standard Objects - Creating Custom Objects - Fields and data types - Apps Creation. [80]

## Salesforce Data Management and Customization Essentials

Relationships and junction objects, Roll up Summary- Creating Formula Fields, Schema Builder. Data Validation -Validation rules. Working with Record Types and Page Layouts - Compact Layout- Lightning Record Pages - Home Page Customization -Path Settings. - List Views - Data import and data management tools.

#### **Security and Data Access**

Organization Security Controls - Passwords, IP restrictions, Network Settings. User Setup and Security - User Creation- Security Model: Meta Data - Profile settings and permissions - Permission set- Salesforce Sharing model -Organization Wide Defaults (OWD) - Role Hierarchy- Sharing Rules- Manual Sharing - Sharing rules and public groups. [10]

#### **Business Process Automation**

Introduction to WorkFlow and Process Builder - Work flow rules - Work flow action - Flows: Types of Flow Screen Flow- Record Trigrrered Flow- Scheduled Trigger Flow- Auto Launched Flow, uses cases of Process Automation. Email Alerts and Field Updates - Approval Processes. [10]

#### Reports, Dashboards, and Analytics

Creating or customizing a report - Summarizing data, report formats and filtering data, scheduling, Report Charts and Dashboard Components. Creating and modifying dashboards-custom report types - Summary Report-

Tabular Report- matrix Report- Dash Boards: Standard DashBoards & Dynamic DashBoards.

[07]

#### Hands On:

- 1. Create Objects, Fields and App
- 2. Explore Data Types
- 3. Create Field Relationships
- 4. Create Record Types(create), Page Layout (adding section, field property settings), Page Layout Assignment (assign page layout based on Record types)
- 5. Create Lightning Record Page, List View, Path Settings
- Validation Rule
- 7. Automation I
  - a. Screen Flow
  - b. Auto Launched Flow
- 8. Automation II
  - a. Record Trigger Flow
  - b. Scheduled Flow
  - c. Approval Process
- 9. Security
  - a. Profiles and Permission Set
  - b. Org Wide Default
  - c. Roles
  - d. Sharing Rules
  - e. Manual Sharing
- 10. Reports and Dashboards
  - a. Custom Report Types
  - b. Dynamic Dashboards
  - Report and Dashboards Sharing

Objective(s)	To learn various scripting languages     To understand the basic of JQuery												
Course Outcomes	At the end of the course, the students will be able to CO1:  Course  Understand the concept Scripting and JavaScript												

Note: The hours given against each topic are of indicative. The faculty have the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

## Introduction to Scripting and JavaScript

Scripts and Programs, Origin of Scripting, Scripting Today, Characteristics of Scripting languages, Web Scripting, and the universe of Scripting Languages, what is JavaScript – Object models – Design philosophy – Versions of JavaScript - The JavaScript core language - System objects - Advanced facilities - JavaScript and Java – JavaScript operators and precedence. [9]

JQuery Introduction to jQuery -Using jQuery Core -jQuery Events - jQuery Effects - AJAX and JQuery -HTML5 Forms and JQuery UI [10]

Ruby Introduction: Ruby, Rails, the structure and Execution of Ruby Programs, Package Management with RUBYGEMS, Ruby and web: Writing CGI scripts, cookies, Choice of Webservers, SOAP and web services, RubyTk - Simple Tk Application, widgets, Binding events, Canvas, scrolling. [8]

Introduction to TCL TCL structure, syntax, variables and data in TCL, control flow, data structures, input/output, procedures, strings, patterns, files.

Advanced TCL Eval, source, exec and up level commands, Name spaces, trapping errors, event driven programs, making applications internet aware, Nuts and Bolts internet programming, Security issues, C interface, Java interface. [10]

			(	Open Electiv	е							
Semester												
Semester	L	Т	Р	TOLAI FIIS.	С	CA	ES	Total				
	2 0 2 45 3 50 50 100											
Objectives	<ul> <li>To become familiar with the advanced features of Java Language</li> <li>To discover how to write Java applications this can communicate with Relational Databases</li> <li>To understand the possible actions can be performed using JSP</li> <li>To develop Web Applications using Servlets / JSP</li> <li>To understand the process of deploying JSP pages in popular servers like Tomcat</li> </ul>											

	CO1:	Interpret the java fundamentals and essentials of inheritance
	CO2:	Execute the various commands in RDBMS for data management
Course	CO3:	Apply the elements available in JSP for web page design
Outcomes	CO4:	Explore the various JSP actions in web application development
	CO5:	Demonstrate the process of developing and consuming API in JSP

#### **Java Fundamentals**

Java Architecture, Language basics, OOPS, Garbage collection, String, String buffer, Collection Framework, Packages, Exception Handling, Abstract, Interfaces.

#### RDBMS and JDBC

RDBMS/SQL/PL/SQL: Introduction to RDBMS, DML, DDL, Select statement, Restricting and Sorting data, Single row functions, Group functions, Joins, JDBC: Introduction, Establishing Connection, Execute query process results, Meta Data and Prepared Statement, Callable Statement and Transactions.

#### **JSP Elements**

Scripting Elements: Scriptlets, Expression, Declarations, Data Types, Variables, Operators, JSP Directive Elements: Page, Include and Taglib. [9]

## **JSP Actions and Expression Language**

JSP Actions: Standard Actions, forward, include, param, useBean, setProperty, getProperty, element, attribute, body, EL Expression, JSP Standard Tag Library, Core Library.

#### **AJAX**

HTML: Introduction, Forms, JavaScript: Introduction to JavaScript, JavaScript objects, JavaScript validations, JSON, JSP GET and POST, JSP API, AJAX: Introduction, AJAX application, AJAX database application. [9]

#### INTRODUCTION TO PARALLEL COMPUTING

Scope of Parallel Computing - Parallel Programming Platforms - Implicit Parallelism - Limitations of Memory System Performance - Control Structure of Parallel Platforms - Communication Model of Parallel Platforms - Physical Organization of Parallel Platforms - Communication Costs in Parallel Machines - Impact of Process -Processor Mapping and Mapping Techniques.

#### **PARALLEL ALGORITHM DESIGN**

Preliminaries – Decomposition Techniques – Characteristics of Tasks and Interactions – Mapping Techniques for Load Balancing - Methods for Containing Interaction Overheads - Parallel Algorithm Models - Basic Communication Operations - One-to-All Broadcast and All-to-One Reduction - All-to-All Broadcast and Reduction - All-Reduce and Prefix Sum Operations - Scatter and Gather - All-to-All Personalized Communication- Circular Shift - Improving the Speed of some Communication Operations. [9]

## PROGRAMMING USING MESSAGE PASSING AND SHARED ADDRESS SPACE

Principles of Message Passing Programming – Building Blocks – Send and Receive Operations – MPI – Message Passing Interface - Topologies and Embedding - Overlapping Communication with Computation - Collective Communication and Computation Operations - Groups and Communicators - POSIX thread API - OpenMP: a Standard for Directive based Parallel Programming – Applications of Parallel Programming - Matrix-Matrix Multiplication - Solving Systems of Equations - Sorting Networks - Bubble Sort Variations -Parallel Depth First Search [9]

## **DISTRIBUTED COMPUTING PARADIGM**

Paradigms for Distributed applications - Basic algorithms in Message passing Systems - Leader Election in Rings - Mutual Exclusion in Shared Memory. [9]

## **FAULT TOLERANT DESIGN**

Synchronous Systems with Crash Failures - Byzantine Failures - Impossibility in Asynchronous Systems - Formal Model for Simulation - Broadcast and Multicast - Specification of a Broadcast Service - Implementing a Broadcast Service - Multicast in Groups - Distributed Shared Memory - Linearizable - Sequentially Consistent Shared Memory – Algorithms [9]

Total Hours: 45 hours

Note: The hours given against each topic are of indicative. The faculty have the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

OSI Security Architecture-Classical Encryption Techniques-Cipher Principles-Data Encryption StandardCipher Design Principles and Modes of Operation -Double DES-Triple DES-AES - Blowfish-RC5 algorithm [9] **Number Theory and Public key cryptography** 

Finite Fields and Number Theory- Groups, Rings, Fields-Modular arithmetic-Euclid's algorithm-Finite fieldsPolynomial Arithmetic - Prime numbers-Fermat's and Euler's theorem-Testing for primality - The Chinese remainder theorem- Discrete logarithms-Key management - Diffie-hellman key exchange- Elliptic Curve Arithmetic and Cryptography- Key distribution- Public Key Cryptography and RSA. [10] Authentication and hash function

Authentication requirement - Authentication function - MAC - Hash function - Security of hash function and MAC -MD5 - SHA - HMAC - CMAC - Digital signature and authentication protocols - DSS - EI Gamal -Schnorr. [9]

#### **Network Security**

Kerberos – X.509 Authentication services- E-mail Security -Pretty Good Privacy-S/MIME-IPSecurity -Web Security [9]

## System level security

Intrusion Detection System – Virus and related threats – Countermeasures – Firewalls and types- design principles – Practical implementation of cryptography and security.

decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

### **GETTING STARTED WITH MOBILITY**

Mobility landscape, Mobile platforms, Mobile apps development, Overview of Android platform, setting up the mobile app development environment along with an emulator, a case study on Mobile app development

# **BUILDING BLOCKS OF MOBILE APPS**

App user interface designing -mobile UI resources (Layout, UI elements, Draw-able, Menu), Activitystates and life cycle, interaction amongst activities. App functionality beyond user interface -Threads, Async task, Services -states and lifecycle. Notifications. Broadcast receivers. Telephony and SMS APIs Native data handling -ondevice file I/O, shared preferences, mobile databases such as SQLite, and enterprise data access (via Internet/Intranet)

# **SPRUCING UP MOBILE APPS**

[10]

Graphics and animation -custom views, canvas, animation APIs, multimedia -audio/video playback and record, location awareness, and native hardware access (sensors such as accelerometer and gyroscope)

### **TESTING MOBILE APPS**

[09]

Debugging mobile apps, White box testing, Black box testing, and test automation of mobile apps, JUnit for Android, Robotium, MonkeyTalk

# **TAKING APPSTO MARKET**

3.

[06]

Versioning, signing and packaging mobile apps, distributing apps on mobile market place

**Total Hours: 45 hours** Text book(s): Anubhav Pradhan, Anil V. Deshpande, "Composing Mobile Apps: Learn/Explore/Apply/ Using Android", Wiley India Private Limited, 1st Edition, 2014. Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

# **Problem Solving**

Introduction - What is Artificial Intelligence? - Structure of Intelligent Agents - Problem formulation - Uninformed search strategies - Informed search strategies - Constraint satisfaction problems [9] Knowledge and Reasoning

Logical agents - Propositional logic - First-order logic - Inference in first order logic - Unification - Forward Chaining - Backward Chaining - Resolution

# **Planning**

Planning Problem - Planning with state-space search - Partial-order planning - Planning graphs - Planning and acting in the real world - Conditional planning - Multi agent planning, [9] Uncertain Knowledge and Reasoning Uncertainty - Notations and Axioms of Probability - Probabilistic Reasoning - Bayesian networks (Semantics, Exact Inference, Approximate Inference) – Inference in Temporal models – Hidden Markov models [9] Learning and Applications

Learning from observation -Inductive learning -Decision trees - Ensemble Learning - Explanation based learning – Statistical Learning methods. Applications of Artificial intelligence. [9] Hands On:

- 1. Develop PEAS descriptions for given AI tasks
- 2. Implement Hill climbing algorithm
- 3. Write a program to generate the output for A\* algorithm
- 4. Write a program to show the Tic Tac Toe game for 0 and X
- 5. Implementation of Bayesian Belief networks
- **6.** Approximate inferences in Bayesian network
- 7. Implementation of decision problems for various real-world applications
- 8. To learn various Bayesian parameters
- 9. Implementation of Hidden Markov Models

10. Implement propositional logic inferences for AI tasks

Total Hours: 45 hours

### Introduction

History - Semantic Web Layers - Semantic Web technologies - Semantics in Semantic Web - XML: Structuring -Namespaces - Addressing - Querying - Processing [9]

RDF and Semantic Web - Basic Ideas - RDF Specification - RDF Syntax: XML and Non- XML - RDF elements -RDF relationship: Reification, Container, and collaboration - RDF Schema - Editing, Parsing, and Browsing RDF/XML-RQL-RDQL [9]

# Ontology

Why Ontology - Ontology movement - OWL - OWL Specification - OWL Elements - OWL constructs: Simple and Complex - Ontology Engineering: Introduction - Constructing ontologies - Reusing ontologies - On-To-Knowledge Semantic Web architecture [9]

# **Logic and Inference**

Logic - Description Logics - Rules - Monotonic Rules: Syntax, Semantics and examples - Non- onotonic Rules -Motivation, Syntax, and Examples - Rule Markup in XML: Monotonic Rules, and Non-Monotonic Rules [9] **Applications of Semantic Web Technologies** 

RDF Uses: Commercial and Non-Commercial use – Sample Ontology – e-Learning –Web Services – Web mining - Horizontal information - Data Integration - Future of Semantic Web

Objective(s)	<ul> <li>To provide an in-depth knowledge of XML and Web Services.</li> <li>To understand the fundamental concepts of Web services.</li> <li>To understand the fundamental concepts of XML Technology.</li> <li>To design Web service Architecture.</li> <li>To Study Building Blocks of Web services and content management using XML</li> </ul>									
Course Outcomes	At the end of the course, the students will be able to CO1: Know the fundamental elements in XML and XML Technologies and schemes CO2: Design and analysis the Architecture of Web Services. CO3: Construct building blocks of Web services CO4: Design XML web service in E-Business and implement xml in E-Business CO5: Analyze Content Management in XML.									

# **Xml Technology Family**

XML – benefits – Advantages of XML over HTML – EDL –Databases – XML based standards – DTD –XML Schemas – X- Files – XML processing – DOM –SAX- presentation technologies – XSL – XFORMS – XHTML – voice XML - Transformation - XSLT - XLINK - XPATH - XQ [9]

# **Architecting Web Services**

Business motivations for web services – B2B – B2C- Technical motivations – limitations of CORBA and DCOM – Service - oriented Architecture (SOA) - Architecting web services - Implementation view - web services technology stack – logical view – composition of web services – deployment view – from application server to peer – process view - life in the runtime

# **Web Services Building Block**

Transport protocols for web services – messaging with web services – protocols – SOAP – describing web services WSDL – Anatomy of WSDL – manipulating WSDL – web service policy – Discovering web services – UDDI – Anatomy of UDDI- Web service inspection – Ad- Hoc Discovery – Securing web services. [9]

### Implementing Xml In E-Business

B2B - B2C Applications - Different types of B2B interaction - Components of e-business XML systems - ebXML -Rosetta Net Applied XML in vertical industry – Web services for mobile devices. [9]

#### **Xml And Content Management**

Semantic Web - Role of Meta data in web content - Resource Description Framework - RDF schema -Architecture of semantic web - content management workflow - XLANG -WSFL. [9]

# **Introduction To Information Storage**

Information Storage – evolution of storage architecture – data center infrastructure – virtualization and cloud computing. Data Center Environment: host - connectivity - disk dive performance - DAS benefits and limitations flash drives. Intelligent Storage Systems: components - storage provisioning - types of Intelligent storage syste[9] **Storage Networking Technologies** 

Fibre Channel Storage Area Networks: components – FC connectivity – switched fabric ports – FC architecture – fabric services - switched fabric login types - zoning - FC SAN topologies - virtualization in SAN. IP SAN and FcoE: iSCSI - FCIP - FcoE [9]

# **Network Attached Storage**

NAS: Benefits - file sharing and network file sharing - components - I/O operations - implementations - file sharing protocols – factors affecting NAS performance – file level virtualization. Object-Based and Unified Storage: Object-Based storage devices – content-addressed storage – CAS use case – Unified storage. [9] Backup and **Archive** 

Introduction to Business Continuity: Information Availability – BC: terminologies – planning life cycle – failure analysis – business impact analysis – technology solutions. Backup: Purpose – considerations – granularity – methods – architecture – operations – topologies – backup in NAS environments – targets – data duplication for backup – Data Archive. [9]

# Replication

Local replication: terminology – uses – replica consistency – technologies – restore and restart considerations – virtualization environment. Remote replication: modes – technologies – migration in virtualization environment. [9]

### Introduction

Introduction-Issues-Ad hoc wireless Internet-MAC protocols for Ad hoc wireless networks-Classification of MAC protocols-Contention-Based protocols: MACAW-MACA -Contention-Based protocols with Reservation Mechanisms-D-PRMA-CATA-HRMA-SRMA/PA-Contention-Based protocols with Scheduling Mechanisms: DPS-DWOP.

# **Ad Hoc Routing Protocols**

Introduction-Classifications of Routing Protocols-Table-Driven Routing Protocols-On-Demand ProtocolsDSR-AODV-TORA-LAR-ABR-Hybrid Routing Protocols-Implementation of routing protocols using NS2 Simulator.

# **Transport Layer And Security Protocols For Ad Hoc Wireless Networks**

Classification of Transport Layer Solutions-TCP Over Ad Hoc Wireless Networks: Feedback-Based TCP-TCP with Explicit Link Failure Notification-Split TCP-Security in Ad Hoc Wireless Networks-Network Security Requirements-Network Security Attacks-Key Management-Secure Routing in AdHoc Wireless Networks.

# **Quality Of Service In Ad Hoc Wireless Networks**

Introduction-Issues-Classifications of QoS Solutions-MAC Layer Solutions: Cluster TDMA-IEEE 801.11eNetwork Layer Solutions-QoSRouting Protocols-Ticket-Based QoS Routing Protocol-PLBQR-TDR-QoSFrameworks for Ad Hoc WirelessNetworks: QoS Model-QoS Resource reservation signalling-SWAN.

# **Wireless Sensor Networks**

Introduction-Sensor Network Architecture-Data Dissemination-Data Gathering-MAC Protocols for Sensor Networks-Location Discovery-Quality of a Sensor Network.

### **AGILE METHODOLOGY**

Theories for Agile Management - Agile Software Development - Traditional Model vs. Agile Model -Classification of Agile Methods - Agile Manifesto and Principles - Agile Project Management - Agile Team Interactions – Ethics in Agile Teams – Agility in Design, Testing – Agile Documentations – Agile Drivers, Capabilities and Values. [9]

### **AGILE PROCESSES**

Lean Production - SCRUM, Crystal, Feature Driven Development-Adaptive Software Development - Extreme Programming: Method Overview - Lifecycle - Work Products, Roles and Practices.

[9]

# AGILITY AND KNOWLEDGE MANAGEMENT

Agile Information Systems – Agile Decision Making – Earl'S Schools of KM – Institutional Knowledge Evolution Cycle - Development, Acquisition, Refinement, Distribution, Deployment, Leveraging - KM in Software Engineering - Managing Software Knowledge - Challenges of Migrating to Agile Methodologies -Agile Knowledge Sharing - Role of Story-Cards - Story-Card Maturity Model (SMM), Role and Skill of Tester in Agile Team. [9]

### **AGILITY AND REQUIREMENTS**

Impact of Agile Processes in RE-Current Agile Practices - Variance - Overview of RE Using Agile -Managing Unstable Requirements - Requirements Elicitation - Agile Requirements Abstraction Model -Requirements Management in Agile Environment, Agile Requirements Prioritization - Agile Requirements Modeling and Generation – Concurrency in Agile Requirements Generation.

[9]

# **AGILITY AND QUALITY ASSURANCE**

Agile Product Development – Agile Metrics – Feature Driven Development (FDD) – Financial and Production

Metrics in FDD - Agile Approach to Quality Assurance - Test Driven Development - Agile Approach in Global Software Development.

**Total Hours: 45 hours**

# Introduction To Software Forensics, Software Code and Analysis Tools

Motivations and Rationales - General Characteristics - Black hat Products - Other Products - Summary - The Programming Process Digital Forensic Definitions - Software Forensics - Objectives and Objects of Software Forensics - Identity - Other Object of Study - Software Forensic Tools - The Process - The Products - Finally, Already, the Tools - Software Forensic Technologies and Practices - Content Analysis - Legal Considerations - Presentation in Court [9]

# The Player-Hackers, Crackers, Phreaks, and Other Doodz

Terminology -Types of Black hats -The Products -The Resulting Objects -The Analytical Tools -Forensic Tools

[4]

# Advanced Tools, Law and Ethics-Software Forensics In Court

Decompilation -Desquirr -Dcc Boomerang -Plagiarism -JPlag -YAP -Other Approaches -summary -Legal Systems Differences Within Common Law -Jurisdiction -Evidence -Types of Evidence - Rules of Evidence -Providing Expert Testimony - Ethics - Disclosure - Blackhat motivations as a Defense [9]

# Computer Virus and Malware Concepts and Background, Programming Cultures and Indicators

History of Computer viruses and Worms -Malware Definition and Structure -Virus Structure -Trojan structure -Logic Bomb Structure -Remote Access Trojan (RAT) Structure -Distributed Denial of Service (DDoS) Structure Detection and Antidetection Techniques -Detection Technologies -tealth and Antidetection Measures -Summary -User Interface -Cultural Features and "Help" -Functions -Programming Style -Program structure -Programmer Skill and Objectives -Developmental Strictures -Technological Change -Summary.

### Stylistic Analysis and Linguistic Forensics, Nalysauthorship Ais

Biblical Criticism -Shakespeare and Other Literature -Individual Identification and Authentication -Content Analysis Noncontent Analysis - The Content/Noncontent Debate - Noncontent Metrics as Evidence of Authorship - Additional Indicators - Summary - Problems - Plagiarism Detection Versus Authorship Analysis - How Can It Work? - Source Code Indicators -

More General Indicators - Is It Reliable?

### Hands On:

- 1. Implement the command line statement to recover lost files on SD/USB/HB in windows.
- 2. Implement and show the result of Safe Back tool for the suspect drive to create backup.
- 3. Implement and show the result of JPLAG plagiarism to find pairs of similar programs among a given set of programs.
- 4. Design the steps to capture TCP packets in Wireshark tool.

Design the content analysis for the given paragraph using grammar checker.

Introduction: Learning Problems - Designing a Learning System - Perspectives and Issues in Machine Learning -Concept Learning - task - search - finding maximally specific Hypotheses - version spaces and candidate elimination algorithm-inductive bias [9]

Decision Tree Learning and Artificial Neural Networks: Decision Tree Representation - Problems - basic decision tree learning algorithms - hypotheses search - Issues - Artificial Neural Networks: Introduction -Representations - Problems - Perceptrons - Multilayer networks and Back Propagation Algorithm - example. [9]

Bayesian Learning: Bayes Theorem - Concept Learning - Maximum Likelihood and Least-Squared Error Hypothesis - Maximum Likelihood Hypotheses for Predicting Probabilities - Bayes Optimal Classifier - Gibbs Algorithm - Naïve Bayes Classifier – Example. [9]

Instance Based Learning and Cluster Analysis: Introduction – k-Nearest Neighbour Learning – Locally Weighted Regression - Radial Basis Functions - Case-Based Reasoning, Cluster Analysis- Introduction - Types - A Categorization of Major clustering methods -partitioning methods - Hierarchical methods - Density-Based Methods. [9]

Learning Sets of Rules: Learning sets of rules: Introduction – sequential covering algorithms – Learning Rule Sets-First order rules - FOIL - Induction as Inverted deduction - inverting resolution - Rough Set Theory: Conceptsof rough sets-Feature selection and rule induction-Theory and its applications - Reinforcement learning -Introduction – Learning task – Q learning-Nondeterministic Rewards and Action, Temporal Difference Learning-Generalizing from Examples. [9]

### Hands on:

- 1. Write a python program to import and export data using Pandas library functions.
- 2. Demonstrate various data pre-processing techniques for a given dataset.
- 3. Implement Simple and Multiple Linear Regression Models.
- 4. Develop Decision Tree Classification model for a given dataset and use it to classify a new sample.
- 5. Implement Naïve Bayes Classification in Python.
- 6. Build KNN Classification model for a given dataset.
- 7. Build Artificial Neural Network model with back propagation on a given dataset.
- 8. Write a python program to implement K-Means clustering Algorithm.

#### **Basics**

Distributed Database, Two General Problem, Byzantine General problem and Fault Tolerance, Hadoop Distributed File System, Distributed Hash Table, ASIC resistance, Turing Complete.

Cryptography: Hash function, Digital Signature - ECDSA, Memory Hard Algorithm, Zero Knowledge Proof.

**Blockchain** 

Introduction, Advantage over conventional distributed database, Blockchain Network, Mining Mechanism, Distributed Consensus, Merkle Patricia Tree, Gas Limit, Transactions and Fee, Anonymity, Reward, Chain Policy, Life of Blockchain application, Soft & Hard Fork, Private and Public blockchain. Blockchain Technology for IoT **Applications** 

[9]

**Distributed Consensus** 

Nakamoto consensus, Proof of Work, Proof of Stake, Proof of Burn, Difficulty Level, Sybil Attack, Energy utilization and alternate.

[8] Cryptocurrency

History, Distributed Ledger, Bitcoin protocols - Mining strategy and rewards, Ethereum - Construction, DAO, Smart Contract, Truffle -Design and issue Crypto currency, Mining, DApps, GHOST, Vulnerability, Attacks, Sidechain, Namecoin.

**Cryptocurrency Regulation and Applications** 

Stakeholders, Roots of Bit coin, Legal Aspects-Crypto currency Exchange, Black Market and Global Economy. Applications: Internet of Things, E-Governance, Land Registration, Medical Record Management System, Domain Name Service and future of Blockchain-Naive Blockchain construction - Hashcash implementation, Smart Contract Construction, AWS Blockchain Templates. [10]

Hands on:

- 1. Creating Merkle tree
- 2. Creation of Block
- 3. Blockchain implementation
- 4. Creating ERC20 token
- 5. Blockchain implementation using Merkle Trees
- 6. Mining in Blockchain
- 7. Peer-to-Peer implementation using Blockchain
- 8. Creating Crypto-currency Wallet

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

### INTRODUCTION

Overview of text mining-Definition-General Architecture—Pre-processing—Types of Problems- Collecting documents-document standardization-tokenization-lemmatization-vector generation for prediction-sentence boundary determination -evaluation performance [80]

### TEXT EXTRACTION AND CLUSTERING

Text Extraction: Introduction, Rapid automatic keyword extraction: candidate keywords, keyword scores, adjoining keywords, extracted keywords, Benchmark evaluation: precision and recall, efficiency, stoplist generation, Evaluation on new articles.

Clustering: Multilingual document clustering: Multilingual LSA, Tucker1 method, PARAFAC2 method. [10]

### **CLASSIFICATION**

Content-based spam email classification using machine-learning algorithms, Utilizing nonnegative matrix factorization for email classification problems, Constrained clustering with k-means type algorithms. [80]

# **TEXT STREAMS**

Introduction, Text streams, Feature extraction and data reduction, Event detection, Trend detection, Event and trend descriptions, Embedding semantics in LDA topic models: Introduction, vector space modeling, latent semantic analysis, probabilistic latent semantic analysis, Latent Dirichlet allocation, embedding external semantics from Wikipedia, data-driven semantic embedding. [10]

# RECENT TRENDS

Visualization Approaches -Architectural Considerations -Visualization Techniques in Link Analysis -Example-Mining Text Streams -Text Mining in Multimedia -Text Analytics in Social Media -Opinion Mining and Sentiment Analysis -Document Sentiment Classification -Opinion Lexicon Expansion -Aspect-Based Sentiment Analysis -Opinion Spam Detection -Text Mining Applications and Case studies (Vector Representations of Words - Word Embeddings for the digital humanities)-Implementing Recommender System in Python. [09]

Hands on:

- 1. Implement methods for Text Preprocessing.
- 2. Implement methods for word relationship analysis

- Implement methods for topic analysis.
- Implement methods for text classification.
- Implement methods for text clustering.
- 6. Implement methods for sentiment analysis.

Total Hours: 45 hours

	50 CS E54 - Cyber Security												
Elective – V													
Semester	Hour	s/Week		Total hrs Credit Maximum Marks									
Semester	L	T	Р	Totaliis	С	CA	ES	Total					
VIII	2	0	2	45	3	50	50	100					
Objective(s)	<ul> <li>To understand the basic concepts and challenges in cyber security</li> <li>To impart the knowledge on modern tools to resolve the security issues</li> <li>To provide an ability to use basic security tools to enhance system security and can develop basic security enhancements in stand-alone applications.</li> </ul>												

	At the end of the course, the student will be able to
	CO1: Recognize the concept of cybercrime in mobile devices
_	CO2: Enumerate the cyber security challenges in the modern devices.
Course Outcomes	CO3: Analyze the working principle of cyber security tools and methods
	CO4: Understand the state of the art of Mobile platform security models
	CO5: Evaluate the various testing strategies in Mobile Security

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

### INTRODUCTION TO CYBERCRIME

Cybercrime- definition and origins of the word- Cybercrime and information security - Classifications [9] of cybercrime- Cybercrime and the Indian ITA 2000 - A Global Perspective on cybercrimes- Cloud Computing-Proliferation of Mobile and Wireless Devices- Trends in Mobility. Credit Card Frauds in Mobile and Wireless Computing Era.

### CYBER SECURITY CHALLENGES IN MODERN DEVICES

Security Challenges Posed by Mobile Devices- Registry Settings for Mobile Devices - Authentication Service Security- Attacks on Mobile/Cell Phones - Mobile Devices: Security Implications [9] for Organizations-Organizational Measures for Handling Mobile-Devices-Related Security Issues - Organizational Security Policies and Measures in Mobile Computing Era, Laptops.

#### **TOOLS AND METHODS**

Tools and Methods Used in Cybercrime, Proxy Servers and Anonymizers- Phishing -Password [9] Cracking - Key loggers and Spywares, - Virus and Worms - Steganography - DoS and DDoS Attacks -SQL Injection, Buffer Over Flow - Attacks on Wireless Networks - Phishing, Identity Theft (ID Theft) - The Legal Perspectives - Cyberlaw: The Indian Context - The Indian IT Act. Introduction to Security Audit.

# Mobile platform security models

Android – iOSMobile platform security models – Detecting Android malware in Android markets

[9]

### **Mobile Security Testing**

Mobile platform internals – Security testing in the mobile app development lifecycle – Basic static and dynamic security testing - Mobile app reverse engineering and tampering- Assessing software protections

# Hands on:

- 1. Study of steps to protect your personal computer system by creating User Accounts with Passwords and types of User Accounts for safety and security.
- 2. Study the steps to protect a Microsoft Word Document of different version with different operating system.
- 3. Study the steps to remove Passwords from Microsoft Word
- 4. Study various methods of protecting and securing databases.
- 5. Study "How to make strong passwords" and "passwords cracking techniques".
- 6. Study the steps to hack a strong password.

	<ul> <li>relations.</li> <li>To gain the knowledge of social influence and its structure representation.</li> <li>To understand the information networks in social web and related applications.</li> <li>To describe the trust network analysis.</li> <li>To use software to simulate the dynamics of networks.</li> </ul>												
At the end of the course, the students will be able to: CO1:Explore Social network data and social relations. CO2:Model social network data and understand its logical relationships. CO3:Analyze complex network structure of web for information retrieval. CO4:Mine the behavior of the users in the social networks. CO5:Simulate the dynamics of networks based on social network models.													

INTRODUCTION

Social network data-Formal methods- Paths and Connectivity-Graphs to represent social relations-Working with network data- Network Datasets-Strong and weak ties - Closure, Structural.

SOCIAL INFLUENCE [9]

Homophily- Mechanisms Underlying Homophily, Selection and Social Influence, Affiliation, Tracking Link Formation in On-Line Data, Spatial Model of Segregation - Positive and Negative Relationships - Structural Balance - Applications of Structural Balance, Weaker Form of Structural Balance..

### INFORMATION NETWORKS AND THE WORLDWIDE WEB

[10]

The Structure of the Web- World Wide Web- Information Networks, Hypertext, and Associative Memory- Web as a Directed Graph, Bow-Tie Structure of the Web- Link Analysis and Web Search Searching the Web: Ranking,

Link Analysis using Hubs and Authorities- Page Rank- Link Analysis in Modern Web Search, Applications, Spectral Analysis, Random Walks, and Web Search..

#### SOCIALNETWORK MINING [9]

Clustering of Social Network graphs: Betweenness, Girvan Newman Algorithm-Discovery of communitiesCliques and Bipartite Graphs-Graph Partitioning Methods-Matrices-Eigen values Sim-rank.

#### NETWORK DYNAMICS [9]

Cascading Behaviour in Networks: Diffusion in Networks, Modelling Diffusion - Cascades and Cluster, Thresholds, Extensions of the Basic Cascade Model- Six Degrees of Separation-Structure and Randomness, Decentralized Search Empirical Analysis and Generalized Models- Analysis of Decentralized Search...
