K.S. Rangasamy College of Technology

(Autonomous)

Curriculum & Syllabus

of

B.E. Computer Science and Engineering

(For the batch 2020 - 24)

R 2018

Courses Accredited by NBA, Accredited by NAAC "A++" Grade, Approved by AICTE, Affiliated to Anna University, Chennai.

KSR Kalvi Nagar, Tiruchengode – 637 215. Namakkal District, Tamil Nadu, India.

VISION

To produce competent software professionals, academicians and researchers through Quality Education.

MISSION

- To produce competent software developers, system designers and network programmers.
- To keep abreast of the latest developments and technological transformations in computer science and engineering for social benefits.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: Graduates will provide effective solutions for software and hardware industries by applying the concepts of basic science and engineering fundamentals.

PEO2: Graduates will be professionally competent and successful in their career through lifelong learning.

PEO3:

Graduates will contribute individually or as member of a team in handling projects and demonstrate social responsibility and professional ethics.

PROGRAMME OUTCOMES (POs)

Engineering Graduates will be able to:

PO1: Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2:

Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3:

Design /development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4:

Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5: Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations

PO6:

The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7:

Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8:

Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9:

Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10:

Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11:

Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs):

Engineering Graduates will be able to:

PSO1: Apply standard Software Engineering practices and strategies in software project development using open-source programming environment and deliver a quality product for business success.

PSO2: Analyze and Interpret data by applying advanced data analytic models for decision making in Complex Problems and facilitate inter disciplinary research.

MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES (PEOs) WITH PROGRAMMEOUTCOMES (POs)

The B.E. Computer Science and Engineering Programme outcomes leading to the achievement of the objectives are summarized in the following Table.

Programme Educational		Programme Outcomes											
Objectives	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	
PEO 1	3	1	3	2	2	1	1	1	2	2	3	1	
PEO 2	3	3	3	2	2	1	1	1	2	2	3	1	
PEO 3	3	2	3	2	2	1	1	1	3	2	3	1	

Contributions: 1- low, 2- medium, 3- high

Objective(s)	 related situations. To equip students with effective speaking and listening skills in English. To facilitate learners to enhance their writing skills with coherence and appropriate format 							nd career		
At the end of the course the students will be able to CO1: Utilize digital literacy tools to develop listening skills & make use of contextual clues to information using communication strategies for effective oral presentation CO3: Skim & Scan the textual content & infer meanings of unfamiliar words to develop reading vocabulary skills CO4: Generate ideas from sources to develop coherent content and support with relevant detail in writing CO5: Recognize the basic phonetic patterns of language & execute it for competent loud reading								ategies for an op reading & levant details		

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Listenina

Listening to Short Audios - Watching Short Videos - answering MCQs and Vocabulary Check- Listening to Short Comprehension Passages - Guided Listening - Listening to songs and cognizing the lyrics [4]

Speaking

Brainstorming - Group Discussion (unstructured) - Self Introduction - Just a Minute (JaM) - Short Narratives - Cue Cards – Picture Cards – Conversational Practices (Preliminary) [4]

Reading

Silent Reading - Scanning and Skimming - Reading short and Medium Passages - Cognition of Theme and Inferential Meaning - Academic and Functional Vocabulary List (350 words) - Word Power Check - Loud Reading -Modulation and Pronunciation Check [4]

Writing

Functional Vocabulary and Word Power - Data Interpretation - Paragraph Writing - Letter Writing - Email Writing -Conversational Fill Ups

Matrices

Characteristic equation – Eigen values and Eigen vectors of a real matrix – Properties of Eigen values and Eigen vectors – Cayley-Hamilton theorem (without proof) – Orthogonal transformation of a symmetric matrix to diagonal form - Reduction of quadratic form to canonical form by orthogonal transformation - Nature of quadratic form. [8]

Differential Calculus

Curvature - radius of curvature (Cartesian and polar co-ordinates) - Centre of curvature - Circle of curvature nvolute and evolute – envelope. [9]

Functions of Several Variables

Partial differentiation – Homogeneous functions and Euler's theorem – Jacobians – Taylor's series for

functions of two variables – Maxima and minima of functions of two variables – Constrained maxima and minima : _agrange's Method of Undetermined Multipliers. [9]

Differential Equations

Linear differential equations of second and higher order with constant co-efficient - R.H.S is $e^{\Box x}$, $\sin\Box x$, $\cos\Box x$, x^n $n \square 0$, $e^{\square x} \sin \square x$, $e^{\square x} \cos \square x$, $e^{\square x} x^n$, $x^n \sin \square x$ and $x^n \cos \square x$ — Differential equations

with variable co-efficients : Cauchy's and Legendre's form of linear equation – Method of variation of parameters– Simultaneous first-order linearequations with constantco-efficients. [9]

Integral Calculus

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.

Objective(s)

- To endow with the periodic properties of elements and molecular orbitals variation of orbitals
- To assist the learners to apply the thermodynamic functions to electro chemical reactions and its application
- To help the learners to analyze the hardness of water and its removal techniques
- To endow with various spectroscopy techniques and its applications
- To facilitate the students with the basics of stereochemistry and types of chemical reactions with their mechanism

Course **Outcomes**

At the end of the course, the student will be able to

- CO1: Rationalize the periodic properties of elements and molecular orbitals variation of orbitals
- CO2: Apply the thermodynamic functions to electro chemical reactions and its application
- CO3: Analyse the cause and effects of hardness of water and its removal techniques
- CO4: Interpret the various spectroscopy techniques and its applications
- CO5: Infer the types of stereochemistry and chemical reactions with their mechanism

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Periodic Properties

Effective nuclear charge - atomic and ionic sizes - ionization energies - electron affinity - electronegativity polarizability - oxidation states - penetration of orbitals- variations of s, p, d and f orbital energies of atoms electronic configurations, ionic, dipolar and Vander- waals interactions. Hard soft acids and bases (HSAB). Molecular orbitals of diatomic molecules - plots of the multicentre orbitals. Equations for atomic and molecular orbitals. Energy level diagrams of diatomics. Pi-molecular orbital of butadiene and benzene. [9] Chemical **Equilibria and Corrosion**

Thermodynamic functions - energy - entropy - enthalpy- free energy - Gibbs-Helmholtz equation - Van 't Hoff isotherm. Cell potentials - Nernst equation - applications - EMF series - applications - Poteniometric and Conductometric titrations.

Corrosion- types of corrosion - chemical and electrochemical corrosion - mechanism - Factors influencing corrosion - Corrosion control methods (impressed current and sacrificial anode methods) -Corrosion inhibitors. [9]

Water Chemistry

Sources - Water quality parameters - impurities in water and their effects. Hardness - Estimation of hardness effect of hard water in various industries-Softening of water- zeolite process- ion-exchange process - reverse osmosis - electrodialysis. Boiler troubles - methods of prevention.

Analytical Techniques and Applications

Absorption laws - Ultra violet spectroscopy (UV) - Principle - Instrumentation (Block diagram) - applications. Infra red spectroscopy (IR)- Instrumentation (Block diagram) - selection rule - types of fundamental vibrations applications. Nuclear magnetic resonance spectroscopy (NMR) - Principle - selection rule - Instrumentation (Block diagram) - chemical shift - factors influencing the chemical shift -applications. Atomic absorption spectroscopy (AAS) - Principle - Instrumentation (Block diagram) -applications. [9] Concepts in Organic Chemistry

Structural isomerism- types - Stereoisomerism - geometrical (Maleic and Fumaric acids) - optical isomerism (Lactic and Tartaric acids) - symmetry - chirality- enantiomers - diastereomers - optical activity - absolute configurations. Introduction to reactions - substitution - addition - oxidation - reduction - cyclization and ring openings - mechanism.

Basics and Statics of Particles

Introduction -Units and Dimensions-Laws of Mechanics-Principle of transmissibility-Lame's theorem, Parallelogram and triangular Law of forces-Vectors-Vectorial representation of forces and moments.

Vector Operations

Addition, subtraction, dot product, cross product-Coplanar Forces-Resolution and Composition of forces-Equilibrium of a particle-Forces in space-Equilibrium of a particle in space-Equivalent systems of forces-Single equivalent force. [12]

Equilibrium of Rigid Bodies

Free body diagram-Types of supports and their reactions-requirements of stable equilibrium-Static determinacy, Moments and Couples-Moment of a force about a point and about an axis-Vectorial representation of moments and couples-Varignon's theorem-Equilibrium of Rigid bodies in two dimensions. Trusses: Introduction, axial members, calculation of forces on truss members using method of joints-Method of sections. [12]

Properties of Surfaces and Solids

Determination of Areas and Volumes-Centroid, Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method; T section, I section, Angle section, Hollow section using standard formula) - Parallel axis theorem and perpendicular axis theorem- Polar moment of inertia -Mass moment of inertia of thin rectangular section -Relation between area moment of inertia and mass moment of inertia. [12] **Dynamics of Particles** Displacement, Velocity, acceleration and their relationship-Relative motion -Projectile motion in horizontal plane – Newton's law – Work Energy Equation – Impulse and Momentum. [12]

Elements of Rigid Body Dynamics, friction and Beams

Translation and Rotation of Rigid Bodies: Velocity and acceleration—General Plane motion: Crank and Connecting rod mechanism.

Friction

Frictional force-Laws of Coloumb friction-Simple contact friction-Ladder friction-Rolling resistance-Ratio of tension in belt.

Transverse bending on beams

Types of beams: Supports and loads - Shear force and bending moment in beams - Cantilever, simply supported and overhanging beams.

Total Hours: 45 + 15(Tutorial) = 60 Hours

Introduction to Computer and Programming

Introduction to Computers - Evolution of computers - Generations of computers and Programming Languages-Introduction to components of a computer system -Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithm: Flowchart-Pseudocode with examples. From algorithms to programsvariables (with data types) - Type Qualifiers - Constants - Operators - expressions and precedence

,Branching ,Loops and Arrays

Console I/O – Unformatted and Formatted Console I/O – Conditional Branching and Loops - Writing and evaluation of conditionals and consequent branching -Iteration and loops - Arrays (1-D, 2-D), Character arrays and Strings [9]

Functions and Pointers

Functions: Scope of a Function – Library Functions and User defined functions - Function Prototypes –Function Categorization - Function Arguments - Arguments to main function - The return Statement - Recursion

- Passing Arrays to Functions- Storage class Specifiers. Introduction to Pointer Variables - The Pointer Operators - Pointer Expressions - Pointers and Arrays - Generating a Pointer to an Array - Indexing Pointers-Dynamic memory allocation[9]

Structures, Unions, Enumerations, Typedef and Preprocessors

Structures - Arrays of Structures- Arrays and Structures within Structures - Passing Structures to Functions Structure Pointers - Unions - BitFields - Enumerations - typedef - The preprocessor and comments. [9]

File: Streams – Reading and Writing Characters - Reading and Writing Strings -, File System functions - Random Access Files

Advanced English Listening Module

Extended Listening to Podcasts – Listen and Watch Video Clips - answering Inferential Multiple Choice Questions and Vocabulary Check- Listening to Lengthy Discourses – Structured Listening – Listening to Songs and Cognizing the Lyrics-Listening to popular speeches, news briefs and stories

Oral Communication

Debates – Group Discussion (Structured) and rotate roles – Elevator Speech – Prepared Talk – Extempore – Brief Technical presentations- Spin-a-Yarn – Short Film reviews – talk on silent videos – Dialogues and Role plays (Intermediate & Higher Level) – Interviews

Critical Reading Process

Silent Reading – Scanning and Skimming - Reading comprehension with logical reasoning questions – Cognition of Theme and Inferential Meaning – advanced Academic and Functional Vocabulary List (1000 words) – word webs and semantic threads - Loud Reading – Modulation and Pronunciation Check – Mind maps – Note making

- Deep Reading Skills

[4]

Academic Writing Practices

Sentence Equivalence and Text completion tasks – Data Interpretation - Essay Writing – Letter Writing – Business Emails – Conversational Fill Ups-Rewordify (select a text and simplify/enhance the language)- Reports on events

To provide exposure and ability in handling situations involving multiple integrals, Beta and Gamma functions. To familiarize the students with the basic concepts in Vector calculus. To get exposed to the fundamentals in analytic functions, conformal mappings and Bilinear Objective(s) transformation. To acquire skills to understand the concepts involved in Cauchy's integral formula, Cauchy's residue theorem and Contour integration. To understand the concepts in Laplace transform techniques and its properties. At the end of the course, the students will be able to CO1: Evaluate double and triple integrals and analyze Beta and Gamma functions. CO2: Analyze the basic concepts of vector calculus to verify Green's, Stoke's and Gauss Divergence theorems. Course CO3: Construct the analytic functions and Bilinear transformation. **Outcomes** CO4: Apply Cauchy's integral formula and Cauchy's residue theorem to evaluate the complex integrals. CO5: Apply Laplace transform techniques for solving differential equations.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Multiple Integrals

Double integration – Cartesian and polar coordinates – Change of order of integration – Area between two curves – Area as double integral – Triple integration in Cartesian coordinates.

Beta and Gamma functions: Relationship between Beta and Gamma functions – Properties – Problems.

Vector Calculus

Introduction - gradient of a scalar point function - directional derivative - angle of intersection of two surfaces divergence and curl(excluding vector identities) - solenoidal and irrotational vectors - Green's theorem in the plane Gauss divergence theorem -Stokes' theorem(without proof)- verification of the above theorems and evaluation of integrals using them. [9]

Analytic Functions

Analytic functions – Necessary conditions (Cauchy–Riemann equations)- Polar form of Cauchy–Riemann equations - Sufficient conditions (without proof) - Properties of analytic functions - Harmonic function - Harmonic conjugate

- Construction of analytic functions- Conformal mapping: w = z + a, az, 1/z -Bilinear transformation.

Complex Integration Cauchy's Integral theorem (without proof) – Cauchy's integral formula – Taylor's and Laurent's series (without proof) - Classification of singularities - Cauchy's residue theorem - Contour integration - Circular and semi-circular

contours (excluding poles on real axis).

Laplace Transforms

LTD,2011

1.

Conditions for existence – Transform of elementary functions – Basic properties – Shifting theorems- Derivatives and integrals of transforms — Transform of unit step function - Dirac's delta function- Initial and final value theorem-Transform of periodic functions. Inverse Laplace transform - Convolution theorem(excluding proof) - Solution of second order ordinary differential equation with constant co-efficients – simultaneous equations of first order with constant co-efficients. [10]

To enable the students to correlate the theoretical principles with application oriented studies in optoelectronic materials Objective(s) To Explain the principles of laser, types of laser and demonstrate the applications of laser To state the principle of optical fiber and to understand the design and applications of optical fibers. To introduce advanced materials and nano technology for various engineering applications At the end of the course, students will be able to CO1: Analyze the basic ideas of semiconductors and devices Course CO2: Apply the principles of LCD, photodetectors and optoelectronic devices CO3: Outline the basic ideas about classification of laser and various applications of laser. Outcomes CO4: Elaborate the propagation of light in fiber optic cables, communication link and applications

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

CO5: Gain broad view on advanced materials, nano technology and their engineering

Semiconductor Physics

Introduction-Elemental and compound semiconductors-Intrinsic and extrinsic semiconductors-Properties-carrier concentration in intrinsic and extrinsic semiconductors (qualitative)-p-n junction diode: characteristics-p-n junction transistors: characteristics (CB and CE)-Bipolar characteristics (Biased and unbiased)-FET: characteristics and applications. [10]

Optoelectronic Materials and Devices

applications

Photoconductive materials – Light Dependent Resistor – Working of LDR – Applications of LDR – Photovoltaic materials Solar cell – Construction and working of a solar cell – Applications of solar cells – Liquid crystals – Liquid crystal Display (LCD) - Construction and advantages of LCD - Electro optic materials - Optoelectric effect-ElectroOptic Modulation.

Laser Technology

[9]

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversiondifferent types of lasers: gas lasers (CO₂), solid-state lasers (Nd: YAG), dye lasers, Semiconductor laser (Homoiunction and Hetero junction)-Properties of laser beams-applications of lasers in science and engineering, [8]

Fiber Optics and Sensors

Principles - cone of acceptance, numerical aperture (derivation)- Modes of propagation -Fabrication of optical fibre: Crucible-crucible technique - Classification: based on materials, modes and refractive index profile- Splicing: types of splicing- Losses in optical fiber - Detectors - Fiber optical communication links (Block diagram) - Advantage of fiber optical cable over copper cables- Fiber optic sensors: liquid level sensors, Temperature and Displacement sensors. [9]

Advanced Materials and Nanotechnology

New Engineering Materials: Metallic glasses – preparation, properties and applications – Shape memory alloys

(SMA) - characteristics, properties of NiTi alloy applications - advantages and disadvantages of SMA

Nano Materials: Nanomaterials: Properties- Top-down process: Ball Milling method – Bottom-up process: Vapour Phase Deposition method- Carbon Nano Tube (CNT): Properties, preparation by electric arc method, Applications. [9]

DC and AC Circuits - Electrical circuit elements (R, L and C), Voltage and current sources - Kirchhoff's current and voltage laws - Serial and parallel circuits - Analysis of simple circuits with DC excitation. Representation of sinusoidal waveforms, Peak and RMS values, Phasor representation, Real power, Reactive power, Apparent power, Power factor.

Analysis of single phase AC circuits consisting of R, L, C, RL, RC, RLC combinations.

[12]

DC&AC Machines - Construction, Types and Operation-Faraday's laws of electromagnetic induction - Transformers: Construction, Working principle, Types, Losses in transformers, Regulation, Efficiency and applications-Simple Problems - Applications

Generation of rotating magnetic fields - Three phase induction motor: Construction, working principle, Characteristics, Starting - Single phase induction motor: Construction, working principle and applications - Synchronous generators: Construction, Working principle and applications.

Electrical Power Generation Systems - Sources of electrical energy: Renewable and non-renewable - Principles and schematic diagram of Hydroelectric power plant, Thermal power plant, Nuclear power plant, Solar PV system and Wind energy conversion systems.

Electrical Installations and House Wiring - Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB Types of Batteries, Important Characteristics for Batteries - UPS.

Single phase and three phase systems: Three phase balanced circuits, Phase sequence, voltage and current relations in star and delta connections - Basic house wiring tools and components - Domestic wiring: Service mains, meter board, distribution board, energy meter. Different types of wiring: staircase, fluorescent lamp and ceiling fan.

[8]

Electrical Energy Conservation & Safety - Elementary calculations for energy consumption - BEE Standards Electrical energy conservation - Methods. Electric shock, Precautions against shock, Objectives of earthing, Types of earthing - Basic electrical safety measures at home and industry. [6]

Objective(s)	 To learn Computer Aided Drawing skills to enable graphical communication. To learn drawing formats and conversion of pictorial views into orthographic views. To emphasize skills to project simple solids and sectional views. To impart the knowledge on use of drafting software to draw the isometric projection. To acquire graphical skills to illustrate design project. 												
			•	udent will be									
Course Outcomes	CO2: Con CO3: Drav CO4: Con	vert the pictor w the projection struct the isor	rial views in to on of simple s metric projecti	o orthographic olids and true ons of objects	ogies on grapl views using d shape of sect using drafting ineering graph	rafting softwa ions g software							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction to Computer Aided Drafting (CAD) Software

Theory of CAD software - Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension) -Drawing Area (Background, Crosshairs, Coordinate System) - Dialog boxes and windows - Shortcut menus (Button Bars) - The Command Line and Status Bar - Different methods of zoom as used in CAD - Select and erase objects. [5+12]

Orthographic Projection

Theory of projection – Terminology and Methods of projection – first angle and third angle projection – Conversion of pictorial views into orthographic views.

[6+12]

Projection of Solids and Sections of Solids

Projections of simple solids: prism, pyramid, cylinder and cone (Axis parallel to one plane and perpendicular to other, axis inclined to one plane and parallel to other).

Sections of simple solids: prism, pyramid, cylinder and cone in simple positions (cutting plane is inclined to one of the principal planes and perpendicular to the other) – True shape of sections. [6+12] Isometric Projection Principles of Isometric projection – Isometric scale, Isometric views, Conventions – Isometric views of lines, Planes, Simple and compound Solids – Conversion of Orthographic views in to Isometric view. [6+12]

Application of Engineering Graphics

Geometry and topology of engineered components: creation of engineering models and their presentation in standard 2D blueprint form and as 3D wire-frame and shaded solids - Geometric dimensioning and Tolerancing-Use of solid modeling software for creating associative models – Floor plans: windows, doors, and fixtures such as water closet (WC), bath sink, shower, etc. - Applying colour coding according to building drawing practice -Drawing sectional elevation showing foundation to ceiling - Introduction to Building Information Modelling (BIM). [7+12]

	To enable the students to create an awareness on Engineering and Human Values												
Objective(s) • To instill Moral and Social Values and Loyalty													
	To inculcate the habits of appreciate the right of others												
	• T	To impart knowledge on safety and risk											
	• T	o know the gl	obal issues a	and its import	ance								
		nd of the cou	•	dent will be a	ible to								
		pply ethics in	•										
Course		iscuss the eth		elated to eng	ineering								
Outcomes	CO3: A	pply ethics in	Work Place										
		ealize the res	•	•	•								
	CO5: E	xplain the glo	bal issues ar	nd responsibi	lities of leade	ers to addres	s the same						

Note: The hours given against each topic are of indicative. The faculty have the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Human Values

Moral values and Ethics - Integrity-Work ethic-Service learning-Civic virtue-Respect for others – Living Peacefully – Caring - Sharing - Honesty - Courage-Valuing time - Cooperation - Commitment - Empathy - Self-confidence -Character – Spirituality-Introduction to yoga and meditation for professional excellence and Stress management.

Engineering Ethics

Senses of 'Engineering Ethics'-Variety of moral issues-Types of inquiry-Moral dilemmas - Moral Autonomy -Kohiberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles – Theories about right action - Self - interest - Customs and Religion - Uses of Ethical Theories. [6] Engineering as social experimentation

Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics A Balanced Outlook on Law. [6]

Safety, Responsibilities and rights

Safety and Risk - Assessment of Safety and Risk Benefit Analysis and Reducing Risk - Respect for Authority -Collective Bargaining - Confidentiality - Conflicts of Interest - Occupational Crime - Professional Right -Employee Right – Intellectual Property Rights (IPR) – Discrimination. [6]

Global Issues

Mul	Itinational Corporations – environmental Ethics – Computer Ethics – Weapons Development – Engineers as
Mar	nagers Consulting Engineering Engineers as Evport Witnesses and Advisors Moral Leadership Code of
	nagers – Consulting Engineering – Engineers as Expert Witnesses and Advisors – Moral Leadership – Code of nduct – Corporate Social Responsibility. [6]
COI	nduct – Corporate Social Responsibility. [6] Total Hours: 30

LIST OF EXPERIMENTS

- 1. Determination of wavelength of laser and particle size diffraction.
- 2. Determination of radius of a plano convex lens Newton's ring.
- 3. Determination of a thickness of thin wire Air wedge method.
- 4. Determination of wavelength of mercury spectral lines spectrometer grating.
- 5. Determination of dispersive power of a prism.
- 6. Determination of NA, acceptance angle of an optical fiber.
- 7. Determination of band gap of a semiconductor PN junction diode.
- 8. V-I characteristics of solar cell.
- 9. Characteristics of Zener diode.
- 10. Determination of Hall coefficient of a given semiconductor and its charge carrier density.

Objective(s)	To proTo proTo offe	To provide hands on experience in Fitting, Carpentry, Sheet metal, Welding and lathe shop. To provide practical training on house hold wiring and electronic circuits.									
Course Outcomes	CO1: Perf CO2: Mak CO3: Fabi CO4: Con	At the end of the course, the student will be able to: CO1: Perform facing, plain turning, drilling. CO2: Make a model of fitting and carpentry: Square, Dovetail and Cross lap joints. CO3: Fabricate the models of sheet metal and welding joints. CO4: Construct and demonstrate electrical and electronic wiring circuit. CO5: Construct the water pipe line in plumbing shop.									

Machine Shop

Safety aspects in machine shop, Study of Lathe and Radial drilling machine, Turning, Facing and Drilling.

Fitting and Carpentry

Safety aspects in Fitting and Carpentry, Study of tools and equipments, Preparation of models- Square, Dove tail joint, Cross Lap.

Sheet Metal and Welding

Safety aspects in Sheet metal and Welding, Study of tools and equipments, Sheet metal models - Scoope, Cone, Tray, Preparation weld joints -Lap, butt, T-joints. Study of Gas Welding and Equipments.

Electrical Wiring & Electronics

Safety aspects of Electrical wiring, Study of Electrical Materials and wiring components, Wiring circuit for a lamp using single and stair case switches. Wiring circuit for fluorescent lamps, Basic electronic circuit.

Plumbing

Study of plumbing tools, assembly of G.I. pipes/ PVC and pipe fittings, Cutting of threads in G.I.Pipes/PVC by thread cutting dies.

Smithy, Plastic Moulding and Glass Cutting

Safety aspects in smithy, plastic moulding and glass cutting, Study of tools and equipments.

Objective(s)	• To • To • To	 To choose the appropriate data structure for a specified application To design and implement abstract data types such as linked list, stack, queue and trees To demonstrate various sorting, searching and graph algorithms To Learn and implement the hashing techniques To design a Priority Queue ADT and its applications 								
			•	students wi						
Course Outcomes	CO1: Express the concept of Linear data structures, applications and its implementations CO2: Appraise the knowledge of Tress with its operations CO3: Recognize the concept of Sorting ,Searching and its types CO4: Review various implementations and operations of Priority Queue and Hashing Techniques CO5: Apply Shortest Path and Minimum Spanning Tree algorithms and Biconnectivity									

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Lists, Stacks And Queues

Abstract Data Type (ADT) – The List ADT – The Stack ADT – The Queue ADT

[12]

Suggested Activities:

Converting an algorithm from recursive to non-recursive using stack.

Demonstrating stack for Towers of Hanoi application.

Developing any application (student's choice) using all the linear data structures.

Suggested Evaluation Methods:

Tutorials on applications of linear data structures. Checking output of programs implemented.

Trees

Preliminaries – Binary Trees – The Search Tree ADT – Binary Search Trees – AVL Trees – Tree Traversals - B − Trees −B+Trees. [9]

Suggested Activities:

Implementing binary tree and tree traversals.

Solving expressions using expression trees by determining infix, prefix and postfix expressions. Developing any application using trees.

Suggested Evaluation Methods:

Tutorials on trees

Check output of programs implemented. Quiz

on various topics of the unit.

Sorting and Searching

Preliminaries - Insertion Sort - Shellsort - Heapsort - Mergesort - Quicksort - External Sorting - Searching: Sequential search- Binary Search - Hashed list searches. [7]

Suggested Activities:

External learning - External sorting implementation.

Implementation of all sorting techniques in C language.

Demonstration of searching techniques under best and worst case inputs.

Suggested Evaluation Methods:

Tutorials on external sorting.

Checking output of programs implemented

Hashing and Priority Queues (Heaps)

Hashing – Hash Function – Separate chaining – Open addressing – Rehashing – Extendible hashing – Priority Queues (Heaps) – Model – Simple Implementations – Binary Heap – Applications of Priority Queues – d –Heaps.

[7]

Suggested Activities:

Implementation of Hashing

Implementation of simple applications of Priority queue

Suggested Evaluation Methods:

Tutorials on hashing

Check output of programs implemented. Quiz

on various topics of the module.

Graphs

Definitions – Topological Sort – Shortest-Path Algorithms – Unweighted Shortest Paths – Dijkstra's Algorithm Minimum Spanning Tree – Prim's Algorithm, Kruskal's Algorithm – Applications of Depth-First Search – Undirected Graphs - Biconnectivity.

[10]

Suggested Activities:

Implementation of various shortest path algorithms Implementation of Minimum Spanning Tree

Suggested Evaluation Methods:

Tutorials on various topic of the module Check

output of programs implemented.

Quiz on various topics of the module.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction to C++ and Functions:

Evolution of C++ - Concepts of OOP - Advantages of OOP, Basics of C++: Structure of a C++ Program - Streams in C++ and Stream Classes - Unformatted Console I/O Operations, C++ Declarations, Functions: Return by Reference – Default Arguments – Const arguments – Inline Functions – Function Overloading. [9]

Suggested Activities:

Knowing the concepts of OOPS, structure of OOPS.

Developing simple programs in C++ basics, functions and its types

Suggested Evaluation Methods:

Checking output of programs implemented

Group Discussion on OOPS features and difference between C and C++ Quiz for the above topics.

Classes and Objects, Constructors and Destructors:

Classes in C++ - Declaring Objects- Access Specifiers and their Scope - Defining Member Functions - Static Members – Array of Objects – Object as Function Arguments – Friend Function and Friend Classes, Constructors and Destructors: Characteristics - Parameterized Constructor - Overloading Constructor - Copy Constructor -Dynamic Initialization Constructor – Destructors. [9]

Suggested Activities:

Simple programs using classes and objects, static members

Implementation of simple programs using constructor and destructor

Implementation of simple programs using friend functions and classes, array of objects

Suggested Evaluation Methods:

Quiz for the above activities.

Checking output of programs implemented

Group Discussion for the above activities

Inheritance, Compile Time Polymorphism and Type Conversion:

Inheritance: Reusability - Types of Inheritance - Abstract Classes - Object as Class Member, Operator Overloading: Rules for Operator Overloading - The Keyword Operator - Unary and Binary Operators Overloading-Overloading using Friend Function – Type Conversion. [10]

Suggested Activities:

Implement inheritance and its types in C++ program

Implement compile time polymorphism and unary, binary operator overloading concept in C++ program.

Suggested Evaluation Methods:

Quiz for the above activities.

Checking output of programs implemented

Group discussion on overloading using friend Function and type conversion

Pointers, Memory Models, Binding and Polymorphism:

Pointers: Pointer to Class - Pointer to Object - void, wild and this Pointers - Pointer to Constant and Constant Pointers, Memory Models: Dynamic Memory Allocation – Heap Consumption – Dynamic Objects, Polymorphism: Binding in C++ - Pointer to Base and Derived class objects - Working with Virtual Functions - Pure Virtual Functions – Object Slicing – Virtual Destructor. [9]

Suggested Activities:

Develop simple programs using pointers and its types

Develop simple programs using virtual functions Suggested

Evaluation Methods:

Quiz for the above activities.

Checking output of programs implemented

Group discussion on pure virtual function and virtual destructor.

Generic Programming with Templates, Exception Handling:

Class Templates - Function Templates - Exception Handling: Principles of Exception Handling - try, throw and catch keywords – Re-throwing Exception – Specifying Exception. [8]

Suggested Activities:

Develop simple programs on class template and function template. Develop simple programs using exceptional handling and its types.

Suggested Evaluation Methods:

Quiz for the above activities.

Checking output of programs implemented

Group discussion on Exceptional handling Concepts

Total Hours: 45 hours

To introduce number systems and codes, basic postulates of Boolean algebra and show the correlation between Boolean expressions. To design and analyse combinational circuits To study the concept of sequential circuits. To analyse the concept of asynchronous sequential circuits. To introduce the concept of memories and programmable logic devices.											
Course Outcomes	At the end of the course, the students will be able to CO1: Explain the fundamentals of numbering system and apply Boolean algebra to design digital systems CO2: Analyze digital logic family and design combinational circuits CO3: Design and analyze synchronous sequential logic circuits CO4: Analyze the asynchronous sequential circuits. CO5: Explain the various semiconductor memories and implement combinational logic using PLDs										

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Digital Fundamentals

Review of Number Systems - Conversion methods - complements - Binary codes: Weighted and non Weighted codes Boolean postulates and laws - De-Morgan's Theorem - Boolean function - Logic Gates- Implementations of Logic Functions using logic gates, Minimization of Boolean expressions - Sum of Products (SOP) - Product of Sums (POS)- Canonical forms -

- Karnaugh map Minimization - Don't care conditions.

[9]

Logic Family And Combinational Circuits

TTL and CMOS Logic families and their characteristics.

COMBINATIONAL CIRCUITS: Design procedure - Adders - Subtractors - Serial Parallel adder - BCD adder - Magnitude Comparator - Multiplexer / Demultiplexer - encoder / decoder - code converters: binary to gray, gray to binary, BCD to excess 3 code

Sequential Circuits

Flip flops SR, JK, T, D and Master slave – Characteristic table and equation – Application table – Edge triggering – Level Triggering -Ripple counters - Synchronous counters - Modulo - n counter-Design of Synchronous FSM- Analysis of clocked sequential circuits: state equation - State table - State diagram - State reduction & assignment - Register: shift registers -Universal shift register- Shift counters [9]

Asynchronous Sequential Circuits

Analysis procedure - Transition table - Flow table - Race conditions -Design of fundamental mode circuits - Primitive flow table - Reduction of state and flow table - Race free state assignment - Hazards: Static - Dynamic - Essential - Hazards elimination. [9]

Memory Devices

Classification of memories: ROM - PROM - EPROM - EPROM - EAPROM, RAM. Static RAM Cell- Dynamic RAM cell Bipolar RAM cell - MOSFET RAM cell - Programmable Logic Devices: Programmable Logic Array (PLA) - Programmable Array Logic (PAL) - Field Programmable Gate Arrays (FPGA) - Implementation of combinational logic circuits using ROM, PLA, and PAL.[9] Practice:

- 1. Design and implement combinational circuits using logic gates
- 2. Design and implement synchronous sequential circuits
- 3. Construct and simulate combinational circuit using multisim
- Construct and simulate synchronous & asynchronous sequential circuit using multisim Tutorials: 4.
- Number system, logic gates, K-map reduction 1.
- 2. Design of combinational circuits
- Design of sequential and asynchronous sequential circuits
- Hazards, PLDs Implementation of combinational logic circuit using ROM, PLA, PAL

Course Objectives	 To help the learners to analyze the importance of environment, ecosystem and biodiversity. To familiarize the learners with the impacts of pollution and control. To enlighten the learners about waste and disaster management. To endow with an overview of food resources and human health. To enlighten awareness and recognize the social responsibility in environmental issues. 												
Course Outcomes	CO1. Recogn CO2. Analyzo CO3. Enlight CO4. Alertne	nize the cond e the source en of solid w ss about foo	cepts and , effects, aste and d resourc	udent will be a importance of and control meadisaster manages, population additional civic responsi	environment asures of pol jement. and health is	lution.	and biodive	rsity.					

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Environmental Studies, Ecosystem and Biodiversity

Environmental studies - Scope and multidisciplinary nature - Need for public awareness - Ecosystem - Structure and function. Biodiversity - Values of biodiversity - Endangered and endemic species - Hot spots - India a mega biodiversity nation - Threats - Conservation - In-situ and ex-situ - Case studies. [6] Environmental Pollution Pollution - Air, water, soil, noise and nuclear - sources, effects and control measures - Impacts of mining. -

Environment protection act - Case studies.

[6]

Waste and Disaster Management

Waste –Solid waste - e-waste - sources, effects and control measures. Disaster management - Earth quakes Landslides - Floods - Cyclones - Tsunami - Disaster preparedness - Case studies. [5] Food Resources,

Human Population and Health

World food problems - over grazing and desertification - effects of modern agriculture. Population - Population explosion and its impacts - HIV/AIDS - Cancer- Role of IT in environment and human health - Case studies. [6] Social Issues and the Environment

Unsustainable to sustainable development - Use of alternate energy sources - Rain water harvesting - Water shed management - Deforestation – Greenhouse effect - Global warming - Climate change - Acid rain - Ozone layer depletion - Waste land reclamation. Consumerism and waste products - Role of an individual in conservation of natural resources - Case studies.

Course **Outcomes**

At the end of the course, the students will be able to

CO1: Demonstrate the implementation of Linear Data structures and its applications

CO2: Investigate Balanced Parenthesis and Postfix expressions with the

help of Stack ADT

CO3: Implement Non-Linear Data Structure

CO4: Implement sorting and searching techniques

CO5: Implement Shortest Path and Minimum Spanning Tree algorithm

- 1. Implementation of List Abstract Data Type (ADT)
- 2. Implementation of Stack ADT
- 3. Implementation of Queue ADT 4. Implementation of stack applications:
 - (a) Program for 'Balanced Parenthesis'
 - (b) Program for 'Evaluating Postfix Expressions'
- 5. Search Tree ADT
- 6. Implementation of Internal Sorting
- 7. Develop a program for external sorting
- 8. Develop a program for various Searching Techniques.
- 9. Implementation of Shortest Path algorithm
- 10. Implementation of Minimum Spanning tree algorithm.

Objective	(s) • To • To • To	with associated libraries. To learn how to implement class, objects, constructors and destructors in C++. To learn how to overload functions and operators in C++. To learn how inheritance promote code reuse in C++. To apply exception handling and use built in classes from STL.												
Course Outcome	CO1: CO2:	At the end of the course, the students will be able to CO1: Demonstrate the input/output operations and user defined functions CO2: Implement the concept of class and objects CO3: Demonstrate the concept of reusability and compile time polymorphism CO4: Implement the concept of dynamic objects and runtime polymorphism												

The laboratory should be preceded by a tutorial to design UML diagrams.

- 1. Construct a C++ program to manage the input and output operations using stream classes
- 2. Construct a C++ program to manage large amount of statements using functions
- 3. Design a C++ program to implement the concept of class and objects
- 4. Develop a C++ program to initialize the class members using constructors and destroy the objects by using destructor
- 5. Design a C++ program for reusability using inheritance
- 6. Write a C++ program to perform compile time polymorphism
- 7. Develop a C++ program to implement the concept of dynamic objects
- 8. Develop a C++ program to implement runtime polymorphism
- 9. Develop a C++ program to allow functions and classes to operate with generic types using templates.
- 10. Construct a class in C++ to handle predefined and user defined exceptions

Objective(s)	 To choose the appropriate data structure and algorithm design method for a specifie Application To understand how the choice of data structures and algorithm design methods impacts the performance of programs. To solve problems using algorithm design methods such as the greedy method, divide and conquer, dynamic programming, backtracking and branch and bound. To solve NP-hard and NP-complete problems. 										
Course Outcomes	 At the end of the course, the students will be able to CO1: Classify the problem types and compare orders of growth to represent asymptotic notations. CO2: Apply and inspect recursive and non-recursive algorithms by mathematical notatio using sample algorithms. CO3: Apply 'Brute Force' and 'Divide and conquer' design techniques for sorting and searchir problems. CO4: Construct analogous algorithms for graph related problems. CO5: Apply 'Backtracking' and 'Branch and bound' techniques to solve NP-hard problems. 										

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Basic Concepts of Algorithms

Introduction - Fundamentals of Algorithmic Problem Solving - Important Problem types -Fundamentals of the analysis of algorithm efficiency - Analysis Framework - Asymptotic Notations and Basic Efficiency Classes -Recurrence relations: Methods for solving recurrence relations [9]

Mathematical Analysis of Algorithms

Mathematical Analysis of Non-recursive Algorithms and Examples - Mathematical Analysis of Recursive Algorithms - Example: Fibonacci numbers - Empirical Analysis of Algorithms

Brute Force and Divide & Conquer Techniques

Selection Sort and Bubble Sort - Brute-force string matching - Merge sort - Multiplication of Two n-Bit Numbers - Quick Sort - Binary Search - Binary tree Traversal and Related Properties [9]

Algorithm Design Paradigm

Decrease and Conquer Technique: Insertion Sort - Depth first Search and Breadth First Search - Transform and Conquer Technique: Presorting - Dynamic Programming: Computing a Binomial Coefficient - Warshall's and Floyd's Algorithm - The Knapsack Problem and Memory Functions - Optimal Binary Search trees - Greedy Technique: Huffman trees [9]

NP Hard and NP-Complete Problems

P and NP problems - NP complete problems - Backtracking: N-Queen's Problem - Hamiltonian Circuit problem Branch and Bound Techniques: Traveling salesman problem

	CS Hours / Week Total Credit Maximum Marks												
Semester		Hours / Week			Credit		Maximum Marks						
Serriester	L	Т	Р	hrs	С	CA	ES	Total					
IV	3	0	0	45	3	50	50	100					
Objective(s)	 To gain the knowledge about basic structure ,Instructions and functional units of a digital computer Discuss in detail the operation of the arithmetic unit including the algorithms and implementation of data manipulation. To study in detail the different types of control and the concept of pipelining and study the hierarchical memory system, cache memory Study the different ways of communicating with I/O devices and standard I/O interfaces To understand the instruction and thread level parallelism concepts and multicore processors 												
 To understand the instruction and thread level parallelism concepts and multicore processors. At the end of the course student will able to CO1: Describe the basic structure of computer, Instruction sequencing and Addressing modes. CO2: Express the basic design of Addition and subtraction for fixed point numbers, multiplication and division of fixed numbers and basics of floating point numbers CO3: Discuss the concept of Instruction execution, generation of control signals, pipelining and hazards. CO4: Summarize the concept of Cache memory and its performance, interrupts, buses, Direct Memory Access and Standard I/O Interfaces. CO5: Gain Knowledge about Parallelism concepts, compiler techniques, multiprocessor architecture and case studies on Intel's processors. 													

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Basic Structure of Computers

Functional units - Basic operational concepts - Bus structures - Software performance - Memory locations and addresses – Memory operations – Instruction and instruction sequencing – Addressing modes – Assembly language – Basic I/O operations – Stacks and queues.

Arithmetic Unit

Addition and subtraction of signed numbers - Design of fast adders - Multiplication of positive numbers - Signed operand multiplication and fast multiplication - Integer division - Floating point numbers and operations. [9] Basic **Processing Unit**

Fundamental concepts – Execution of a complete instruction – Multiple bus organization – Hardwired control – Micro programmed control - Pipelining - Basic concepts - Data hazards - Instruction hazards - Influence on Instruction sets - Data path and control consideration - Superscalar operation.

Memory and I/O Systems

Speed, Size, Cost - Cache memories - Performance considerations - Accessing I/O Devices - Interrupts - Direct Memory Access - Buses- Interface Circuits- PCI,USB.

Parallelism and Multiprocessors

Instruction Level Parallelism: ILP concepts - Pipelining overview - Compiler Techniques for Exposing ILP - Dynamic Branch Prediction - Dynamic Scheduling -Hardware Based Speculation - Static scheduling - Thread Level Parallelism: Symmetric and Distributed Shared Memory Architectures -Case studies: Intel core i7, Atom

Introduction to Entrepreneurship & Entrepreneur

Meaning and concept of Entrepreneurship, the history of Entrepreneurship development, Myths of Entrepreneurship, role of Entrepreneurship in Economic Development, Agencies in Entrepreneurship

[6]

Management and Future of Entrepreneurship.

The Entrepreneur: Meaning, the skills required to be an entrepreneur, the entrepreneurial decision process, Role models, Mentors and Support system.

Business Opportunity Identification and Preparing a Business Plan

Business ideas, methods of generating ideas, and opportunity recognition, Idea Generation Process, Feasibility study, preparing a Business Plan: Meaning and significance of a business plan, components of a [6] business plan.

Innovations

Innovation and Creativity - Introduction, Innovation in Current. Environment, Types of Innovation, School of Innovation, Analysing the Current Business Scenario, Challenges of Innovation, Steps of Innovation

[6]

Management, Experimentation in Innovation Management, Participation for Innovation, Co-creation for Innovation, Proto typing to Incubation. Blue Ocean Strategy-I, Blue Ocean Strategy-II. Marketing of Innovation, Technology Innovation Process

Financing & Launching the New Venture

Importance of new venture financing, types of ownership, venture capital, types of debt securities, determining ideal debt-equity mix, and financial institutions and banks.

[6]

Launching the New Venture: Choosing the legal form of new venture, protection of intellectual property, and formation of the new venture

Managing Growth & Rewards in New Venture

Characteristics of high growth new ventures, strategies for growth, and building the new ventures.

Managing Rewards: Exit strategies for Entrepreneurs, Mergers and Acquisition, Succession and exit [6] strategy. managing failures - bankruptcy

Objective(s)	 To identify and solve the issues related to Operating System Components. To learn different programming language in Linux editor environment To implement different operating system algorithm To implement the performance of different algorithms like CPU scheduling To implement the performance of different algorithms like page replacement, deadlock avoidance and detection 											
Course Outcomes	At the end of the course, the students will be able to CO1: Learn the basics of Operating system installation and shell scripts and analyze the System calls for Process and inter process communications CO2: Examine the Steps in process operation and examine the criteria involved in CPU scheduling algorithms. CO3: Analyzing the different deadlock avoidance mechanism and implement Classic problem of Synchronization using semaphores CO4: Classifying the Storage Management and outline the page replacement algorithms CO5: comprehend the File concept and its allocations and understand the factors in disk scheduling algorithms											

- Installation of Operating system and implementation of Basic Shell Programming Concepts like Loops, Functions, Patterns, Substitutions.
- Familiarization with System calls for Process and inter process communications. 2.
- 3. Implement the operation on process.
- 4. Implement and analyze the scheduling criteria's of CPU Scheduling Algorithms.
- Implement Deadlock avoidance mechanism from deadlock in a real time environment using C. 5.
- Implement Classic problem of Synchronization using semaphores.
- 7. Implement Contiguous Memory Allocation.
- 8. Implement Page replacement algorithm.
- Implement various file allocation Methods.
- 10. Implement Disk Scheduling to find the seek time of accessing the required information using different Scheduling algorithm.

Objective(s)	 To understand the computer networking basics and concepts of data communications, functions of different layers, IEEE To Know the standards employed in computer networking To make the students to get familiarized with different protocols and network components. To develop an understanding of different components of computer networks, various protocols, modern technologies and their applications. To understand the application layer and its applications 										

At the end of the course student will able to

CO1:Know the concept of components, categories and ISO/OSI model of networks CO2:Describe

the Concept of various error detection techniques and Flow, Error control.

CO3:Compare the concept of Circuit switching and Packet switching.

CO4:Gain the knowledge of Congestion control and QoS Techniques.

CO5: Identify the Purpose of Domain Name Space, Email and FTP.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Data Communications

Networks - Components and Categories - Line Configuration - Topologies - Protocols and Standards - ISO / OSI model - Transmission Media - Coaxial Cable - Fiber Optics - Interfaces (RS232 Standard) and Modems [9]

Data Link Layer

Course

Outcomes

Error – detection and correction – Parity – LRC – CRC – Hamming code – Flow Control and Error control –Stop and wait - go back-N ARQ - selective repeat ARQ- sliding window - HDLC. - LAN - Ethernet IEEE 802.3 -Connecting devices-Repeaters-Hubs-Bridges [9]

Network Layer

Internetworks - Circuit Switching - Packet Switching - IP addressing methods - Sub netting - Super netting-Routers- Routing Algorithms - Distance Vector Routing - Link State Routing- ICMP / Frame format, Query Messages. [9]

Transport Layer

Duties of transport layer - Multiplexing - Demultiplexing - Sockets - User Datagram Protocol (UDP) -Transmission Control Protocol (TCP) - Congestion Control - Quality of services (QOS)-Techniques [9] **Application Layer**

Domain Name Space (DNS) - Email (SMTP)-File Transfer protocol (FTP) - HTTP - HTTPS-World Wide Web.

Case Study: Structural Health Monitoring, Traffic Control, Health Care, Pipeline Monitoring, **Precision Agriculture.** [9]

Introduction to SQL - Intermediate SQL - Advanced SQL- Triggers - Functions and Procedures - Embedded SQL - Normalization for Relational Databases (up to 5NF).

Data Storage and Indexing Concepts

Record storage and Primary file organization -RAID - Operations on Files- Heap File- Sorted Files- Hashing Techniques – Index Structure for files –Different types of Indexes- B-Tree - B+Tree. [9]

Transaction Management Transaction - Transaction Concepts- Transaction Model- Desirable properties of Transaction- Schedule and Recoverability- Serializability - Concurrency Control - Types of Locks- Two Phase locking- Time stamp based concurrency control – Recovery Techniques – Concepts- Immediate Update- Deferred Update.

Current Trends Object Oriented Databases - Distributed databases - Homogenous and Heterogeneous-Distributed data Storage - Distributed Transaction - Commit Protocols - Data Mining Applications -Data Warehousing

Data VV	is critical ring.

INTRODUCTION

Internet Basic - Introduction to HTML - List - Creating Table - Linking document - Frames - Graphics to HTML Doc - Style sheet - Style sheet basic - Add style to document - Creating Style sheet rules - Style sheet properties - Font - Text - List - Color and background color - Box - Display properties. [9]

JAVASCRIPT

introduction to Javascript - Advantage of Javascript - Javascript Syntax - Datatype - Variable - Array -Operator and Expression - Looping Constructor - Function - Dialog box - Events [9] XML and JDBC Features of XML, The XML Declaration, Element Tags- Nesting and structure, XML text and text formatting element, Table element, Mark-up Element and Attributes, Document Type Definition (DTD),.XML Schema-Introduction-Jdbc Architecture-Types of Drivers-Statement-ResultSetPreparedStatement-Connection Modes-SavePoint-Batch Updations-CallableStatement [10]

PERL AND JSP

Programming CGI Scripts – PERL-Introduction-JspLifeCycle-Jsp Implicit Objects & Scopes-Jsp Directives:page ,include,taglib-Jsp Scripting

Elements:declaratives,scriptlets,expressionsJspActions:StandardAction,Custom Actions-DataBase Connectivity in JSP [10] APPLICATIONS

e-Business Models - Building an e-Business - e-Marketing - Database connectivity - Online Payments -Security - XML and e-Commerce - m-Business. [9]

Practice:

- 1. Design a personal web page using CSS
- 2. Write a Java Script program which makes use of Java Script's inbuilt objects
- 3. Design web page for employee details using XML with database connectivity
- 4. A web page using PERL
- 5. Write a JSP program to implement Students mark Statements with database connectivity

Total Hours: 45 hours

Objective(s)	•	To learn so To impleme To learn an	cket progra ent and ana d use simu	ork commar amming. alyze various alation tools. s to analyze	network pro		rious networ	k protocols						
Course Outcomes	Implem CO2: C CO3: U CO4: A	ent various compare the	protocols u performan on tools to a ous routing	•	nd UDP. nt transport	layer proto		otocols.						

- 1. Learn to use commands like tcp dump ,netstat, ifconfig, nslookup and trace route Capture ping and trace route PDU using a network protocol analyze rand examine.
- Write a HTTP web client program to download a webpage using TCP sockets. 2.
- 3. Applications using TCP sockets like:
 - i) Echo client and echo server
 - ii) Chat iii) File Transfer
- Simulation of DNS using UDP sockets. 4.
- Write a code simulating ARP /RARP protocols. 5.
- 6. Study of Network simulator(NS)and Simulation of Congestion Control Algorithms using NS2
- Study of TCP/UDP performance using Simulation tool. 7.
- Simulation of Distance Vector/Link State Routing algorithm. 8.
- 9. Performance evaluation of Routing protocols using Simulation tool.
- Simulation of error correction code (like CRC). 10.

	To present SQL and procedural interfaces to SQL comprehensively
	To perform various commands in RDBMS
Objectives	To Perform PL/SQL programming using concept of Cursor Management, Error Handling,
Objectives	Package and Triggers
	To design the applications like payroll
	To apply procedures and functions in PL/SQL
	At the end of the course, the students will be able to
	CO1: Implement the Data Definition Language, Data Manipulation Language and Data
Course	Control Language commands in RDBMS
Outcomes	CO2: Employ the Sub queries to retrieve data from multiple tables
	CO3: Implement the High-level language extension with Cursors and Triggers
	CO4: Implement the Procedures and Functions in PL/SQL
	CO5: Demonstrate the views, ioins and Embedded SQL in RDBMS

List of Experiments

- 1. Data Definition Language (DDL) commands in RDBMS.
- 2. Data Manipulation Language (DML), Data Control Language (DCL) and Transaction Control Language (TCL) commands in RDBMS.
- 3. Implementation of Sub queries.
- 4. Creation of views and joins.
- 5. High-level language extension with Cursors. 6. High level language extension with Triggers
- 7. Procedures and Functions.
- 8. Embedded SQL.
- 9. Design and implementation of Payroll Processing System.
- 10. Design and implementation of Banking System.
- 11. Design and implementation of Railway Reservation System.

	Understand the fundamentals of lexical analysis phase of compiler									
	Discuss syntactic analysis functionalities of compiler									
Objective(s)	Identify the processes involved in intermediate code generation									
	Explain issues code generation phase of compiler									
	Describe optimization techniques									
	At the end of the course, the students will be able to									
Course	CO1: Understand the basics of compilers and describe phases of compilers CO2:									
Outcomes	Interpret the major role played by syntax analysis									
	CO3: Explain the processes involved in intermediate code generation CO4:									
	Summarize the major processes involved in code generation. CO5:									
	Illustrate the features of code optimization									

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

LEXICAL ANALYSIS

Introduction to Compilers-Structure of compiler -The phases of compiler - Cousins of compiler -The grouping of phases-Compiler construction tools. The role of the lexical analyzer- Input Buffering -Specification of Tokens -Recognition of Tokens [9]

SYNTAX ANALYSIS

The role of the parser-Context-free grammars-Writing a grammar-Top down parsing- Recursive Descent Parser Predictive Parser-LL(1) Parser-Bottom-up Parsing- Shift Reduce Parser-LR parsers-SLR parser - Canonical LR parser -LALR Parser.

INTERMEDIATE CODE GENERATION

Intermediate languages -Three-Address Code -Types and Declarations -Translation of Expressions -Rules for Type Checking and Type Conversions -Control Flow -Back patching -Switch Statements -Procedures.[9]

CODE GENERATION

5.

Issues in the Design of a Code Generator -Target Language -Addresses in the Target Code -Basic Blocks and Flow Graphs –Optimization of Basic Blocks –A Simple Code Generator. [9] **CODEOPTIMIZATION**

Code Optimization - Principal Sources of Optimization-Peephole Optimization-Introduction to Data Flow Analysis -Run Time Environments - Storage Organization - Stack Allocation of Space - Access to Non-Local Data on the Stack.[9]

Introduction to Testing

Software Testing - Definition of Software Testing - Objective and Limits of Testing - Principles of Software Testing-Software Testing Life Cycle- Testing Strategy – Roles and Responsibilities of a Software Tester in Organizations – Origins of Defects - Cost of Defects - Independent Verification and Validation. [9] Software testing Requirements Software Testing Requirements - Analyzing the requirements - Classifying the Functional and Non Functional Requirements with their types. Software Testing Review Process - Objective of Software Testing Review - Types of Reviews - Peer Review, Walkthrough, Inspection - Checklists of Review Process - Review Log. [9] Testing **Techniques**

White Box Testing Techniques - Static and Dynamic Testing - Statement Coverage - Decision Coverage - Basic Path Testing - Control Flow Graph Coverage - Branch Coverage - Conditional Coverage - McCabe's Cyclomatic Complexity – Mutation Testing. Black Box Test Techniques – Boundary Value Analysis – Equivalent Class Partition Error Guessing – Decision Table – State Transition Table – Pair Wise Testing – UseCase Testing.

Testing Types

Unit Testing - Smoke Testing - Functional Testing and its Types - Integration, System Testing, User Acceptance Testing (Alpha and Beta)- Non Functional Testing and its Types – Performance Testing (Load, Volume and Stress)-Recovery Testing, Browser Compatibility Testing – Security Testing – Scalability Testing – Usability Testing – Ad Hoc Testing – Internationalization Testing – Configuration Testing - Data warehouse Testing and Business Intelligence Testing - Mobile Testing. [9]

Automation Tools and Test Cases

Software Test Automation – Scope of Automation - Design and Architecture for Automation – Automation Testing using Selenium Tool – Definition of Test Case – Standard, Guidelines and Naming Conventions for Test Case Design – Characteristics of Good Test Cases and its templates – Creation of Test Case Requirement Coverage – Traceability Matrix – Test Case Review Process – Test Execution – Test Log – Reporting of Test Execution – Risk Based Testing Approach. [9]

Introduction to value Education

[9]

Understanding value Education-Self exploration as the process for value education-Continuous Happiness and prosperity-the basic human aspirations-right understanding-relationship and physical facility -happiness and prosperity - current scenario - method to fulfill the basic human aspirations

Harmony in the Human Being

[91

Understanding Human being as the Co-Existence of the self and the Body-Distinguishing between the needs of the self and the body-the body as an instrument of the self-understanding harmony in the self-harmony of the self with the body – programme to ensure self-regulation and health

Harmony in the Family and Society

[9]

Harmony in the Family -the basic unit of human interaction-values in human- to - human relationship -'Trust' the foundation value in relationship -'Respect'- as the right evaluation-understanding harmony in the society -vision for the universal human order.

Harmony in the Nature/Existence

[9]

Understanding harmony in the Nature-Interconnectedness, self-regulation and mutual fulfillment among the four orders of nature – realizing existence as co-existence at all levels –the holistic perception of harmony in existence.

Implications of the Holistic Understanding

Natural Acceptance of human values- definitiveness of human conduct- a basis for humanistic education, humanistic constitution and universal human order- competence in professional ethics -holistic technologies, production systems and management models-typical case studies - strategies for transition towards value base life and profession

Objective(s)	 To study the basic concepts of MYSQL. To discover the PHP operators and functions. To apply the knowledge of string handling functions in PHP. To expand knowledge of MYSQL database connectivity and file handling functions in PHP.
Course Outcomes	At the end of the course, the students will be able to CO1: Interpret the concepts of MYSQL and its record selection technologies. CO2: Demonstrate the basic concepts and developing a simple application using PHP operators and Functions. CO3: Exhibit the string handling functions in PHP. CO4: Demonstrate the MYSQL database connectivity. CO5: Demonstrate the file handling functions in PHP.

- Connecting the MYSQL database and perform the following
 - a. Creating and Deleting Database.
 - b. Creating a Table.
 - c. Examining the Results.
 - d. Inserting / Retrieving Data into / from Tables.
- a. Selecting Specific Rows and Columns.
 - b. Deleting and Updating Rows.
 - c. Loading a Database from a File.
- 3. PHP program that displays a welcome message
- 4. PHP program to implement Simple data storage, operators and Functions.
- 5. PHP script implements string handling functions.
- PHP Script that implements the database connectivity. 6.
- PHP scripts that implement the following file handling operations
 - i. Reading data

from the file ii.

Writing data to

the file iii.

Printing all the

records.

Write a PHP script to add the Rollno, name, six subjects' marks into Mark table in MySQL and display the average and result

To make the Engineering student to know about the basic of economics & how to organize business To know the financial aspects related to business. To know about functions of banks. To understand the different methods of appraisal of projects and To know about the pricing & capital techniques.													
Course Outcome s	CO1: Iden CO2: Desc CO3: Expl CO4: Inter	tify suitable cribe the for ain the kind pret fixed c	demand forms of busing of banks ost and var	idents will be recasting tectors and different and illustrated itself and summarity and summarity and summarity.	hniques and erentiate betv the Balance d technical fe	veen propr sheet with asibility an	ietorship ar suitable ex d economic	nd partnership cample c feasibility					

Basic Economics

Definition of economics - nature and scope of economics - basic concepts of economics - factors of production demand analysis – definition of demand – Law of demand – Exception to law of demand – Factors affecting demand - elasticity of demand - demand forecasting - definition of supply - factors affecting supply - elasticity of supply - market structure - perfect competition - imperfect competition - monopoly - duopoly - oligopoly and bilateral

monopoly.

Organization and Business Financing

Forms of business – proprietorship – partnership - joint stock company - cooperative organization – state Enterprise -mixed economy - Money and banking - kinds of banking - commercial banks - central banking functions - control of credit - monetary policy - credit instrument - Types of financing - Short term borrowing - Long term borrowing Internal generation of funds - External commercial borrowings - Assistance from government budgeting support and international finance corporations- analysis of financial statement- Balance sheet-profit and loss account-Funds flow

statement- Examples in all members

[9]

Financial Accounting and Capital Budgeting

The balance Sheet and related concepts - The profit and loss statement and related concepts - Financial ratio analysis – Cash flow analysis – fund flow analysis – Capital budgeting – Average rate of return – Payback period Net present value and internal rate of return.

Cost Analysis

Types of costing – traditional costing approach - activity based costing - Fixed Cost – variable cost – marginal cost - cost output relationship in the short run and in long run - pricing practice - full cost pricing - marginal cost pricing - going rate pricing - bid pricing - pricing for a rate of return - appraising project profitability - cost benefit analysis - feasibility reports - appraisal process - technical feasibility - economic feasibility - financial feasibility [9]

Break Even Analysis

Basic assumptions –break even chart – managerial uses of break even analysis - applications of break even analysis

in engineering projects.

Pre-requisites	Fundar	mentals in lin	ear algebra	/ statistics / p	probability									

	At the end of the course, the students will be able to
	CO1: Understand the basics of Data Sciences
Course	CO2: To know the mathematical foundations needed for data Science and perform Exploratory Data
Outcomes	Analysis.
	CO3: Implement models such as k-nearest Neighbors, Naive Bayes, linear and logistic
	Regression, decision trees, neural networks and clustering. CO4: Create effective
	visualization of given data CO5: Build data science applications.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction to core concepts and technologies: Introduction, Terminology, Data-Properties of Data, Types of data, Why Data Science? Computer Science, Data Science, and Real Science, data science process, Data Acquisition and Data Science Life Cycle, Ethics in Data Science, data science toolkit, Example applications. Data wrangling: Sources of data, Data collection and API, Working with data: Reading Files, Cleaning Data. [8]

Statistical Inference, Exploratory Data Analysis:

Statistical thinking in Data Science, Statistical Inference, Statistical Analysis-Mean, Median, Mode, Standard Deviation, Range, Percentile, Modeling, Exploratory Data Analysis: Philosophy of Exploratory Data Analysis, Data

Basic Machine Learning Algorithms: Brief introduction, Linear / Polynomial Regression, Logistic Regression, Classification, Regularization, Support vector machines, Naive Bayes, Cross Validation, Label Encoding, Random Forests, Decision Trees, Clustering, Dimensionality reduction, Manifold learning, Introduction to Neural Networks, Confusion Matrix - Evaluation Metrics - Recall, Precision, F-measure, Accuracy.

Data visualization: Introduction, Types of data visualization, Data Visualization - Basic principles, ideas and tools for basic data visualization tools (plots, graphs and summary statistics)- various visualization techniques used in Data Science. Data visualization Tool: Working with Tableau, Creating charts, Mapping data in Tableau. create your own visualization of a complex dataset [10]

Applications of Data Science, Case Studies of Data Science Application, Recommender Systems on Real-World Data Sets, Weather forecasting, Stock market prediction, Object recognition. [8]

Laboratory:

- 1. Perform Data exploration and preprocessing
- Implement Linear and Logistic regression
- Implement Naive Bayes classifier for dataset stored as CSV file.
- 4. Implement regularized logistic regression
- 5. Build models using different Ensembling techniques
- 6. Build models using Decision trees
- 7. Build model using SVM with different kernels
- Implement K-NN algorithm to classify a dataset.
- 9. Build model to perform Clustering using K-means after applying PCA and determining the value of K using Elbow method.
- 10. Simulate Singular Value Decomposition

Mini project to predict the time taken to solve a problem given the current status of the user.

Total Hours: 45+15=60 hours

An understanding of when and where to use it using the appropriate industry models													
Course outcomes	At the end of the course, the students will be able to CO1:Know the Characteristics of Cloud computing CO2:To illustrate the Cloud service models and Cloud Deployment Models CO3:Develop an application using Paas Application frameworks CO4:Reveal the major security and privacy problems in the Cloud with security mechanism CO5:To use Open Source & Commercial Clouds														

Introduction

Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers, Benefits of Cloud Computing, Cloud computing - Cluster computing, Grid computing, Assessing the role of Open Standards, Measuring the cloud's value, Cloud Architecture - Exploring the cloud computing stack

Cloud Computing Architecture & Infrastructure as a Service

Cloud computing stack, Service Models (XaaS) - Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Software as a Service (SaaS), Deployment Models - Public, Private, Hybrid and Community Cloud, Infrastructure as a Service (laaS), Resource Virtualization - Server, Storage, Network

Platform as a Service & Software as a Service

Introduction to PaaS, Cloud Platform and Management - Computation, Storage, Software as a Service (PaaS) Introduction, Web Services, Web 2.0, Web OS, Service Management in Cloud Computing - Service Level Agreements (SLAs), Billing & Accounting, Comparing Scaling Hardware: Traditional vs. Cloud, Managing Data in Cloud

Cloud Security

Infrastructure Security, Data security and Storage - Data privacy and security Issues, Jurisdictional issues, Identity & Access Management, Access Control, Trust, Reputation, Risk, Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations

Cloud Storage and Case Studies

Cloud Storage - Cloud Array, Shared Cloud Storage, Cloud Storage Gateway-Sync, Case Studies - Creating private laaS in Eucalyptus, Creating virtual server in Microsoft Azure, Creating virtual sever in Amazon EC2,

Hostii	ng application in Google Google Cloud.

Objective(s)	• To	 To learn about the effective usage of power point presentation To prepare presentation with various effects To visualize the data in the presentation To acquire knowledge about data sources To investigate the research articles based on various applications 											
Course Outcomes	CO1: Devi CO2: Prep CO3: Attai CO4: Anal	d of the cour elop presenta pare a presen in the importa lyze the various rpret the tools	tion with visu tation with sunce of resea us sources o	ial effects ipporting data rch and data f research ar	a collection ticles								

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Preparing a Presentation

Presenting data using Power Point-Power Point preparation and presentation, Design principles for creating effective Power Point slides with visuals displaying data. - Profile, - Problem, and a set of basic Excel charts, use to create a presentation.

Creating effective slides using PowerPoint

Create effective slides using PowerPoint. Tools within Power Point, structure story line, create story boards, identify primary elements of slide design, display data and finalize slide presentation.

Research Designs and Data Sources

Overview of the topics: process of data collection and analysis. Starting with a research question - Review of existing data sources- Survey data collection techniques- Importance of data collection- Basic features affect data analysis when dealing with sample data. Issues of data access and resources for access.

Measurements and Analysis Plan

Importance of well-specified research question and analysis plan: various data collection strategies - Variety of available modes for data collection – review of literature - Tools at hand for simple analysis and interpretation.

Total Hours: 10

Preparation of Manuscript

Data necessary before writing a paper: the context in which the scientist is publishing. Learning and identification of research community - advantages of scientific journal publication and manuscript preparation ethical values in publishing.

Writing the paper (2)

Writing research paper - structure of the paper - usage of bibliographical tools - abstract preparation and to do a peer review for the abstract of the others, as in real academic life. Plagiarism of the prepared manuscript.

Copyright law in India-Meaning of copyright-Classes of works for copyright protection -Ownership of CopyrightAssignment of copyright-Intellectual Property Rights (IPR) of Computer Software-Copyright Infringements-

Procedure for registration

Patents (3)

Patent System In India -Types of Patent Applications-patentable invention - Not patentable-Appropriate office for filing -Documents required Publication and Examination of Patent Applications -Grant of Patent-Infringement of Patents -E-filing of Patent applications

Deploying Mobile App. in play store

(5)

Introduction to Application Stores - Play Store, App Store, Microsoft Store, Creating App - Android, iOS, UWP, Defining Manifest, Certifying App, Create Store Listing, Sharing Screenshots, Sharing App Credentials for Testina.

Objective(s)	 polymorphism. To learn how to design and implement generic classes with C++ templates. 												
Course Outcomes	To learn how to use exception handling in C++ programs. At the end of the course, the students will be able to CO1: Recognize the principles of object-oriented problem solving and programming												

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction to C++ and Functions:

Evolution of C++ - Concepts of OOP - Advantages of OOP, Basics of C++: Structure of a C++ Program Streams in C++ and Stream Classes - Unformatted Console I/O Operations, C++ Declarations, Functions: Return by Reference -Default Arguments - Const arguments - Inline Functions - Function Overloading. [9]

Classes and Objects, Constructors and Destructors:

Classes in C++ - Declaring Objects- Access Specifiers and their Scope - Defining Member Functions - Static Members - Array of Objects - Object as Function Arguments - Friend Function and Friend Classes, Constructors and Destructors: Characteristics - Parameterized Constructor - Overloading Constructor - Copy Constructor - Dynamic Initialization Constructor - Destructors. [9]

Inheritance, Compile Time Polymorphism and Type Conversion:

Inheritance: Reusability - Types of Inheritance - Abstract Classes - Object as Class Member, Operator Overloading: Rules for Operator Overloading - The Keyword Operator - Unary and Binary Operators Overloading-Overloading using Friend Function - Type Conversion. [10]

Pointers, Memory Models, Binding and Polymorphism:

Pointers: Pointer to Class - Pointer to Object - void, wild and this Pointers - Pointer to Constant and Constant Pointers, Memory Models: Dynamic Memory Allocation - Heap Consumption - Dynamic Objects, Polymorphism: Binding in C++ - Pointer to Base and Derived class objects - Working with Virtual Functions -Pure Virtual Functions - Object Slicing - Virtual Destructor. [9]

Generic Programming with Templates, Exception Handling:

Class Templates - Function Templates - Exception Handling: Principles of Exception Handling - try, throw and catch keywords - Re-throwing Exception - Specifying Exception.

Introduction

Introduction to packet tracer: key features, benefits. Recognize the purpose and functions of various network devices such as routers, switches, bridges and hubs. Identify common applications and their impact on the network. Identify the appropriate media, cables, ports, and connectors to connect network devices to other network devices and hosts in a LAN.

LAN Switching Technologies

Packet tracer: create the topology, configure and verify initial switch configuration including remote access management. Configure switch IOS basics – hostnames, console, privilege password and telnet password. [9]

IP Addressing

IPv4 address - necessity of using private and public IP addresses for IPv4 addressing, IPv4 addressing scheme using VLSM and summarization to satisfy addressing requirements in a LAN environment. Subnet mask and [9] DNS lookup.

IP Routing Technologies

Basic routing concepts - boot process of IOS routers - configure and verify utilizing the CLI to set basic router configuration - configure and verify operation status of a device interface, both serial and Ethernet - verify router configuration and network connectivity. [9]

Firewall and Network Security

Firewall configuration strategies-packet filtering-firewall configuration and administration - working with proxies and application - level firewalls-authenticating users- setting up a virtual private network- building your own

firewall [9] Total Hours: 45 Text book(s): CCNA Routing and Switching Study Guide Paperback – 15 Oct 2013 by **Todd Lammle** 2 Networking All-in-One For Dummies® Paperback - Import, 22 Oct 2010 by Doug Lowe Reference(s): Cisco ASA ConfigurationRichard A. Introduction to Data Mining

Motivation and importance - What is Data Mining - Relational Databases - Data Warehouses - Transactional Databases Advanced Database Systems - Data Mining Functionalities - Interestingness of a pattern Classification of Data Mining Systems - Major issues in Data Mining. [9]

Data Warehouse and Olap Technology for Data Mining

What is a Data Warehouse - Multi-Dimensional Data Model - Data Warehouse Architecture - Data Warehouse Implementation - Development of Data Cube Technology - Data Warehousing to Data Mining. Preprocessing

Why Pre-process the Data? - Data Cleaning - Data Integration and Transformation Data Reduction - Discretization and Concept Hierarchy Generation - Data Mining Primitives: Mining Association rule in large Databases - Association Rule Mining - Mining Single-dimensional Boolean Association rules from Transactional Databases - Mining Multi-dimensional Association rules from relational databases & Data Warehouses. [9]

Classification and Prediction

Concepts and Issues regarding Classification and Prediction - Classification by Decision Tree Induction - Bayesian Classification - Classification by Back-propagation - Classification Based on Concepts from Association Rule Mining. [9] **Cluster Analysis**

What is Cluster Analysis? - Types of Data in Cluster Analysis - A Categorization of Major clustering methods - partitioning methods - Hierarchial methods - Density-Based Methods: DBSCAN - Grid-based Method: STING - Model-based Clustering Method: Statistical approach - Outlier analysis [9]

Interpret the knowledge and reasoning in propositional logic and first order logic. Objective(s) Gain knowledge on Planning and acting in the real world. Learn to represent uncertain knowledge in solving AI problems Understand the different forms of learning. At the end of the course, the students will be able to CO1: Understand the concepts of intelligent agents and problem solving aspects. CO2: Interpret the knowledge of propositional logic and FOL. Course CO3: Understand the issues of planning problems. **Outcomes** CO4: Describe the Uncertainty and probabilistic reasoning. CO5: Summarize the types of learning methods and AI applications.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Problem Solving

Introduction - What is Artificial Intelligence? - Structure of Intelligent Agents - Problem formulation - Uninformed search strategies - Informed search strategies - Constraint satisfaction problems [9] Knowledge and Reasoning

Logical agents – Propositional logic – First-order logic – Inference in first order logic – Unification - Forward Chaining - Backward Chaining - Resolution [9]

Planning

Planning Problem - Planning with state-space search - Partial-order planning - Planning graphs - Planning and acting in the real world - Conditional planning - Multi agent planning. [9] Uncertain Knowledge and Reasoning Uncertainty – Notations and Axioms of Probability - Probabilistic Reasoning – Bayesian networks (Semantics, Exact Inference, Approximate Inference) - Inference in Temporal models - Hidden Markov models [9] Learning and Applications

Learning from observation -Inductive learning -Decision trees - Ensemble Learning - Explanation based learning -Statistical Learning methods. Applications of Artificial intelligence. [9]

- 1. Develop PEAS descriptions for given AI tasks
- 2. Implement Hill climbing algorithm
- 3. Write a program to generate the output for A* algorithm
- **4.** Write a program to show the Tic Tac Toe game for 0 and X
- 5. Implementation of Bayesian Belief networks
- 6. Approximate inferences in Bayesian network
- 7. Implementation of decision problems for various real-world applications
- 8. To learn various Bayesian parameters
- 9. Implementation of Hidden Markov Models
- **10.** Implement propositional logic inferences for AI tasks

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Python Concepts

Interpreter - Program Execution - Statements - Expressions - Flow Controls - Functions - Numeric Types -Sequences - Strings, Tuples, Lists and - Class Definition - Constructors - Inheritance - Overloading - Text & Binary Files - Reading and Writing. [9]

CO5: Leveraging web scraping and visualizing the results of analytics effectively

Data Wrangling

Combining and Merging DataSets – Reshaping and Pivoting – Data Transformation – String Manipulation, Regular Expressions. [9]

Data Aggregation, Group Operations, Timeseries

GoupBy Mechanics - Data Aggregation - Groupwise Operations and Transformations - Pivot Tables and Cross Tabulations - Date and Time Date Type tools - Time Series Basics - Data Ranges, Frequencies and Shifting. [9]

Web Scraping

Data Acquisition by Scraping web applications -Submitting a form - Fetching web pages - Downloading web pages through form submission – CSS Selectors.

Visualization In Python

Matplotlib package - Plotting Graphs - Controlling Graph - Adding Text - More Graph Types - Getting and setting values - Patches.

Hands On:

- 1. Basic Python Programs
- 2. Program using String Operations
- 3. Program on python Data structures
- 4. Working with data in python using pandas
- 5. Design a personal web page using CSS
- 6. Visualization in python using matplotlib

JAVA FUNDAMENTALS

Fundamentals of OOPs – Java Features – Java Architecture-Language Basics: set PATH, set CLASSPATH, Executing your first Java Program-Constants – Variables – Data types - Operators – Arrays –control statements Character Class-Strings: String class, String Buffer class, String Builder Class and String handling methods [9]

CLASS and OBJECTS

Class - Object- Methods-Method overloading-Constructor-Constructor Overloading-Wrapper Class -Inheritance-Method Overriding-super-final-Garbage Collection

PACKAGES, INTERFACES AND EXCEPTION HANDLING

Packages-Access specifiers -Built-in Packages, User defined Packages-Interfaces-Abstract Class-Exception Handling-try-catch-throw-throws-finally-finalize-Managing Predefined Exceptions- Creating and handling User

[8]

defined Exceptions [11]

COLLECTIONS

Collections: Iterator, Enumerator, List, Set, Queue Vector and Map. [8] MULTI THREADING AND JAVA NETWORKING

Multi threading - Java Thread model – Main thread – creating thread – creating multiple thread – Thread priority

Implementation. [9]

Practice:

- 1. Implementation of Simple Java Programs
- 2. Implementation of Array based Logical Programs
- 3. Implementation of Character, String class
- 4. Demonstration of communication of classes over objects using getter, setter, constructor, methods 5. Implementation of various inheritance
- Implementation of various data structures using Collections 6.

- methods – synchronization – IPC, RMI – Basics – RMI Layer – Stub, Skeleton - RMI

- Implementation of different applications using packages, interfaces and to check abnormal conditions 7. using exception handling.
- Implementation of multi-tasking concepts using threads 8.
- Implementation of accessing remote data using RMI. 9.
- 10.

Introduction

Linux Introduction and File System - Basic Features, Advantages, Installing Requirement, Basic Architecture of Unix/Linux System, Kernel, Shell, Linux File System - Boot Block, Super Block, Inode Table, Data Blocks, How Linux Access Files, Storage Files, Linux Standard Directories. [09]

Files and Directories Commands

Files and Directories Commands - cd, ls, cp, md, rm, mkdir, rmdir, pwd, file, more and less, Creating and Viewing Files Command - cat, File Comparisons Commands - cmp and comm, View files, Disk Related Commands, Checking Disk Free Spaces, System Startup and Shut - Down Process, init and Run Levels. [09]

Essential Linux Commands

Understanding Shells, Processes in Linux - Process Fundamentals, Connecting Processes Commands - pipes and tee, Input/Output Redirecting, Manual Help, Background Processing, Managing Multiple Processes, Changing Process Priority with nice Command, Scheduling of Processes Commands - at, cron, batch, kill, ps, who and sleep, Printing Commands - find, sort, touch and file, File Related Commands - ws. sat, cut and dd. Mathematical Commands - bc, expr, factor and units, Creating and Editing Files Commands - vi and vim.

Shell Programming

Shell Programming - Basic of Shell Programming, Various Types of Shell Available in Linux, Comparisons Between Various Shells, Shell Programming in Bash - read Command, Conditional and Looping Statements, Case Statements, Parameter Passing and Arguments, Shell Variables, System Shell Variables, Shell Keywords, [09] Creating Shell Programs.

Filtering Commands

Filtering Commands - pr, head, tail, cut, paste, sort, uniq and tr, Filter using Regular Expressions - grep, egrep, and sed; AWK Programming - Report Printing with AWK. [09]

Hands On:

- 1. Execution of files and directory commands to list all files or directories in the current directory.
- Execution of scheduling of processes commands to schedule one-time jobs for a specific time and date
- Implementation of Shell script to perform operations on files and strings.
- 4. Implementation of Shell programming concepts such as conditional and looping statements, and functions.
- 5. Implement and execute the C program in Linux.
- 6. Implementation of inter process communication between two unrelated processes.
- 7. Execution of filtering commands for filtering text for effective file operations.
- 8. Execution of filters and regular expressions commands grep, awk and sed that use all of its features.

	At the end of the course, the students will be able to
Course	CO1: Apply data modeling techniques to design and configure custom objects, fields, and relationships in Salesforce.
Outcomes	CO2: Apply advanced data management and customization techniques in Salesforce to enhance data organization and user experience.
	CO3: Evaluate and recommend appropriate Salesforce user setup and security settings to control access and permissions.
	CO4: Develop advanced automation solutions using Process Builder and Visual Workflow to meet complex business requirements.
	CO5: Evaluate and recommend appropriate reporting and analytics strategies based on business requirements.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Salesforce Fundamentals

CRM Use Cases - Why Salesforce? - Overview of Salesforce platform and its Architecture -Introduction to CRM-Advantage of Salesforce, Salesforce editions and licenses - Salesforce user interface and navigation - Salesforce Mobile App and Salesforce Lightning Experience -Signing up Developer Edition - Standard Objects - Creating Custom Objects - Fields and data types - Apps Creation. [80]

Salesforce Data Management and Customization Essentials

Relationships and junction objects, Roll up Summary- Creating Formula Fields, Schema Builder. Data Validation -Validation rules. Working with Record Types and Page Layouts - Compact Layout- Lightning Record Pages - Home Page Customization -Path Settings. - List Views - Data import and data management tools.

Security and Data Access

Organization Security Controls - Passwords, IP restrictions, Network Settings. User Setup and Security - User Creation- Security Model: Meta Data - Profile settings and permissions - Permission set- Salesforce Sharing model -Organization Wide Defaults (OWD) - Role Hierarchy- Sharing Rules- Manual Sharing - Sharing rules and public groups. [10]

Business Process Automation

Introduction to WorkFlow and Process Builder - Work flow rules - Work flow action - Flows: Types of Flow Screen Flow- Record Trigrrered Flow- Scheduled Trigger Flow- Auto Launched Flow. uses cases of Process Automation. Email Alerts and Field Updates - Approval Processes.

[10]

Reports, Dashboards, and Analytics

Creating or customizing a report - Summarizing data, report formats and filtering data, scheduling, Report Charts and Dashboard Components. Creating and modifying dashboards-custom report types - Summary Report-

Tabular Report- matrix Report- Dash Boards: Standard DashBoards & Dynamic DashBoards.

[07]

Hands On:

- 1. Create Objects, Fields and App
- 2. Explore Data Types
- 3. Create Field Relationships
- 4. Create Record Types(create), Page Layout (adding section, field property settings), Page Layout Assignment (assign page layout based on Record types)
- 5. Create Lightning Record Page, List View, Path Settings
- Validation Rule
- 7. Automation I
 - a. Screen Flow
 - b. Auto Launched Flow
- Automation II
 - a. Record Trigger Flow
 - b. Scheduled Flow
 - c. Approval Process
- 9. Security
 - a. Profiles and Permission Set
 - b. Org Wide Default
 - c. Roles
 - d. Sharing Rules
 - e. Manual Sharing
- 10. Reports and Dashboards
 - a. Custom Report Types
 - b. Dynamic Dashboards
 - c. Report and Dashboards Sharing

Introduction to Scripting and JavaScript

Scripts and Programs, Origin of Scripting, Scripting Today, Characteristics of Scripting languages, Web Scripting, and the universe of Scripting Languages, what is JavaScript – Object models – Design philosophy – Versions of JavaScript - The JavaScript core language - System objects - Advanced facilities - JavaScript and Java – JavaScript operators and precedence. [9]

JQuery Introduction to jQuery -Using jQuery Core -jQuery Events - jQuery Effects - AJAX and JQuery -HTML5 Forms and JQuery UI [10]

Ruby Introduction: Ruby, Rails, the structure and Execution of Ruby Programs, Package Management with RUBYGEMS, Ruby and web: Writing CGI scripts, cookies, Choice of Webservers, SOAP and web services, RubyTk - Simple Tk Application, widgets, Binding events, Canvas, scrolling. [8]

Introduction to TCL TCL structure, syntax, variables and data in TCL, control flow, data structures, input/output, procedures, strings, patterns, files. [8]

Advanced TCL Eval, source, exec and up level commands, Name spaces, trapping errors, event driven programs, making applications internet aware, Nuts and Bolts internet programming, Security issues, C interface, Java interface. [10]

	CO1: Inte	pret the java fundamentals and essentials of inheritance
	CO2: Exe	cute the various commands in RDBMS for data management
Course	CO3: App	y the elements available in JSP for web page design
Outcomes	CO4: Exp	ore the various JSP actions in web application development
	CO5: Den	nonstrate the process of developing and consuming API in JSP

Java Fundamentals

Java Architecture, Language basics, OOPS, Garbage collection, String, String buffer, Collection Framework, Packages, Exception Handling, Abstract, Interfaces.

RDBMS and JDBC

RDBMS/SQL/PL/SQL: Introduction to RDBMS, DML, DDL, Select statement, Restricting and Sorting data, Single row functions, Group functions, Joins, JDBC: Introduction, Establishing Connection, Execute query process results, Meta Data and Prepared Statement, Callable Statement and Transactions.

JSP Elements

Scripting Elements: Scriptlets, Expression, Declarations, Data Types, Variables, Operators, JSP Directive Elements: Page, Include and Taglib. [9]

JSP Actions and Expression Language

JSP Actions: Standard Actions, forward, include, param, useBean, setProperty, getProperty, element, attribute, body, EL Expression, JSP Standard Tag Library, Core Library.

AJAX

HTML: Introduction, Forms, JavaScript: Introduction to JavaScript, JavaScript objects, JavaScript validations, JSON, JSP GET and POST, JSP API, AJAX: Introduction, AJAX application, AJAX database application.

INTRODUCTION TO PARALLEL COMPUTING

Scope of Parallel Computing - Parallel Programming Platforms - Implicit Parallelism - Limitations of Memory System Performance - Control Structure of Parallel Platforms - Communication Model of Parallel Platforms - Physical Organization of Parallel Platforms - Communication Costs in Parallel Machines - Impact of Process -Processor Mapping and Mapping Techniques. [9]

PARALLEL ALGORITHM DESIGN

Preliminaries - Decomposition Techniques - Characteristics of Tasks and Interactions - Mapping Techniques for Load Balancing - Methods for Containing Interaction Overheads - Parallel Algorithm Models - Basic Communication Operations – One-to-All Broadcast and All-to-One Reduction – All-to-All Broadcast and Reduction - All-Reduce and Prefix Sum Operations - Scatter and Gather - All-to-All Personalized Communication- Circular Shift - Improving the Speed of some Communication Operations . [9]

PROGRAMMING USING MESSAGE PASSING AND SHARED ADDRESS SPACE

Principles of Message Passing Programming - Building Blocks - Send and Receive Operations - MPI - Message Passing Interface - Topologies and Embedding - Overlapping Communication with Computation - Collective Communication and Computation Operations - Groups and Communicators - POSIX thread API - OpenMP: a Standard for Directive based Parallel Programming – Applications of Parallel Programming - Matrix-Matrix Multiplication - Solving Systems of Equations - Sorting Networks - Bubble Sort Variations -

DISTRIBUTED COMPUTING PARADIGM

Paradigms for Distributed applications - Basic algorithms in Message passing Systems - Leader Election in Rings - Mutual Exclusion in Shared Memory. [9]

FAULT TOLERANT DESIGN

Parallel Depth First Search

Synchronous Systems with Crash Failures - Byzantine Failures - Impossibility in Asynchronous Systems - Formal Model for Simulation - Broadcast and Multicast - Specification of a Broadcast Service - Implementing a Broadcast Service - Multicast in Groups - Distributed Shared Memory - Linearizable - Sequentially Consistent Shared Memory – Algorithms

Introduction

OSI Security Architecture-Classical Encryption Techniques-Cipher Principles-Data Encryption StandardCipher Design Principles and Modes of Operation -Double DES-Triple DES-AES - Blowfish-RC5 algorithm [9] Number Theory and Public key cryptography

Finite Fields and Number Theory- Groups, Rings, Fields-Modular arithmetic-Euclid's algorithm-Finite fieldsPolynomial Arithmetic - Prime numbers-Fermat's and Euler's theorem-Testing for primality - The Chinese remainder theorem- Discrete logarithms-Key management - Diffie-hellman key exchange- Elliptic Curve Arithmetic and Cryptography- Key distribution- Public Key Cryptography and RSA. [10] Authentication and hash function

Authentication requirement – Authentication function – MAC – Hash function – Security of hash function and MAC -MD5 - SHA - HMAC - CMAC - Digital signature and authentication protocols - DSS - EI Gamal -Schnorr. [9]

Network Security

Kerberos – X.509 Authentication services- E-mail Security -Pretty Good Privacy-S/MIME-IPSecurity -Web Security [9]

System level security

Intrusion Detection System - Virus and related threats - Countermeasures - Firewalls and types- design principles - Practical implementation of cryptography and security.

GETTING STARTED WITH MOBILITY

[06]

Mobility landscape, Mobile platforms, Mobile apps development, Overview of Android platform, setting up the mobile app development environment along with an emulator, a case study on Mobile app development

BUILDING BLOCKS OF MOBILE APPS

App user interface designing -mobile UI resources (Layout, UI elements, Draw-able, Menu), Activitystates and life cycle, interaction amongst activities. App functionality beyond user interface -Threads, Async task, Services -states and lifecycle, Notifications, Broadcast receivers, Telephony and SMS APIs Native data handling -ondevice file I/O, shared preferences, mobile databases such as SQLite, and enterprise data access (via Internet/Intranet)

SPRUCING UP MOBILE APPS

[10]

Graphics and animation -custom views, canvas, animation APIs, multimedia -audio/video playback and record, location awareness, and native hardware access (sensors such as accelerometer and gyroscope)

TESTING MOBILE APPS

Debugging mobile apps, White box testing, Black box testing, and test automation of mobile apps, JUnit for Android, Robotium, MonkeyTalk

TAKING APPSTO MARKET

[06]

Versioning, signing and packaging mobile apps, distributing apps on mobile market place

Total Hours: 45 hours

Objective(s)	 To learn various scripting languages To understand the basic of JQuery To learn Ruby and working with web To learn the basics of TCL To learn the advanced concepts of TCL 											
Course Outcomes	• To learn the advanced concepts of TCL At the end of the course, the students will be able to CO1: Understand the concept Scripting and JavaScript CO2: Explore the concept of JQuery CO3: Understanding use of Ruby CO4: Analyze the structure of TCL CO5: Explore the commands and issues in TCL											

Note: The hours given against each topic are of indicative. The faculty have the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Introduction to Scripting and JavaScript

Scripts and Programs, Origin of Scripting, Scripting Today, Characteristics of Scripting languages, Web Scripting, and the universe of Scripting Languages, what is JavaScript - Object models - Design philosophy Versions of JavaScript - The JavaScript core language - System objects - Advanced facilities - JavaScript and Java – JavaScript operators and precedence.

JQuery Introduction to jQuery -Using jQuery Core -jQuery Events - jQuery Effects - AJAX and JQuery -HTML5 Forms and JQuery UI [10]

Ruby Introduction: Ruby, Rails, the structure and Execution of Ruby Programs, Package Management with RUBYGEMS, Ruby and web: Writing CGI scripts, cookies, Choice of Webservers, SOAP and web services, RubyTk - Simple Tk Application, widgets, Binding events, Canvas, scrolling. [8]

Introduction to TCL TCL structure, syntax, variables and data in TCL, control flow, data structures, input/output, procedures, strings, patterns, files. [8]

Advanced TCL Eval, source, exec and up level commands, Name spaces, trapping errors, event driven programs, making applications internet aware, Nuts and Bolts internet programming, Security issues, C interface, Java interface. [10]

Objective(s)	InterpGainLearrUnde	Gain knowledge on Planning and acting in the real world. Learn to represent uncertain knowledge in solving Al problems Understand the different forms of learning.										
Course Outcomes	At the end of the course, the students will be able to CO1: Understand the concepts of intelligent agents and problem solving aspects. CO2: Interpret the knowledge of propositional logic and FOL. CO3: Understand the issues of planning problems. CO4: Describe the Uncertainty and probabilistic reasoning. CO5: Summarize the types of learning methods and AI applications.											

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Problem Solving

Introduction - What is Artificial Intelligence? - Structure of Intelligent Agents - Problem formulation - Uninformed search strategies - Informed search strategies - Constraint satisfaction problems [9] Knowledge and Reasoning

Logical agents – Propositional logic – First-order logic – Inference in first order logic – Unification - Forward Chaining – Backward Chaining – Resolution [9]

Planning

Planning Problem - Planning with state-space search - Partial-order planning - Planning graphs - Planning and acting in the real world - Conditional planning - Multi agent planning. [9] Uncertain Knowledge and Reasoning Uncertainty – Notations and Axioms of Probability - Probabilistic Reasoning – Bayesian networks (Semantics, Exact Inference, Approximate Inference) – Inference in Temporal models – Hidden Markov models [9] Learning and Applications

Learning from observation -Inductive learning -Decision trees - Ensemble Learning - Explanation based learning – Statistical Learning methods. Applications of Artificial intelligence. [9] Hands On:

- 1. Develop PEAS descriptions for given AI tasks
- 2. Implement Hill climbing algorithm
- 3. Write a program to generate the output for A* algorithm
- **4.** Write a program to show the Tic Tac Toe game for 0 and X
- 5. Implementation of Bayesian Belief networks
- **6.** Approximate inferences in Bayesian network
- 7. Implementation of decision problems for various real-world applications
- **8.** To learn various Bayesian parameters
- 9. Implementation of Hidden Markov Models

10. Implement propositional logic inferences for AI tasks

Objective(s)	To To and rule	understand learn the or markup in	the concept itology and s XML	of RDF and emantic web	its schemas architecture	e • To con	emantic web struct logic ar					
 Understanding of the semantic web process and issues. At the end of the course, the students will be able to CO1: Gain knowledge in Semantic Web and its Technologies CO2: Construct the RDF data model and defining the vocabularies used in RDF data model CO3: Identify the requirements of Ontology and know the sublanguages CO4: Write the Monotonic and Non monotonic Rules CO5: Realize the applications of semantic web technologies 												

Introduction

History – Semantic Web Layers – Semantic Web technologies – Semantics in Semantic Web – XML: Structuring – Namespaces - Addressing - Querying - Processing [9]

RDF and Semantic Web - Basic Ideas - RDF Specification - RDF Syntax: XML and Non- XML - RDF elements -RDF relationship: Reification, Container, and collaboration – RDF Schema – Editing, Parsing, and Browsing RDF/XML-RQL-RDQL [9]

Ontology

Why Ontology - Ontology movement - OWL - OWL Specification - OWL Elements - OWL constructs: Simple and Complex - Ontology Engineering: Introduction - Constructing ontologies - Reusing ontologies - On-To-Knowledge Semantic Web architecture [9]

Logic and Inference

Logic - Description Logics - Rules - Monotonic Rules: Syntax, Semantics and examples - Non- onotonic Rules -Motivation, Syntax, and Examples - Rule Markup in XML: Monotonic Rules, and Non-Monotonic Rules [9]

Applications of Semantic Web Technologies

RDF Uses: Commercial and Non-Commercial use - Sample Ontology - e-Learning -Web Services - Web mining - Horizontal information - Data Integration - Future of Semantic Web

Introduction To Information Storage

Information Storage – evolution of storage architecture – data center infrastructure – virtualization and cloud computing. Data Center Environment: host - connectivity - disk dive performance - DAS benefits and limitations flash drives. Intelligent Storage Systems: components – storage provisioning – types of Intelligent storage syste[9] **Storage Networking Technologies**

Fibre Channel Storage Area Networks: components - FC connectivity - switched fabric ports - FC architecture fabric services - switched fabric login types - zoning - FC SAN topologies - virtualization in SAN. IP SAN and FcoE: iSCSI - FCIP - FcoE [9]

Network Attached Storage

NAS: Benefits – file sharing and network file sharing – components – I/O operations – implementations – file sharing protocols – factors affecting NAS performance – file level virtualization. Object-Based and Unified Storage: Object-Based storage devices - content-addressed storage - CAS use case - Unified storage. [9] Backup and **Archive**

Introduction to Business Continuity: Information Availability – BC: terminologies – planning life cycle – failure analysis – business impact analysis – technology solutions. Backup: Purpose – considerations – granularity – methods – architecture – operations – topologies – backup in NAS environments – targets – data duplication for backup – Data Archive. [9]

Replication

Local replication: terminology - uses - replica consistency - technologies - restore and restart considerations virtualization environment. Remote replication: modes – technologies – migration in virtualization environment. [9]

The activities

The course will involve 40-50 hours of technical training, and 40-50 hours of project development. The activities involved in the project along with duration are given in table 1.

Table 1: Activities

Activity Name	Activity Description	Time(Weeks)
Choosing a Project	Selecting projects from the list of projects categorized various technologies & business domains	2
Team Formation	Students shall form a team of 4 members before enrolling to a project. Team members shall distribute the project activities among themselves.	1
Hands on training	Students will be provided with hands-on training on selected technology in which they are going to develop the project.	2
Project Development	Project shall be developed in agile mode. The status of the project shall be updated to the mentors via appropriate platform.	6

		Project deliverable must include the working code,		
	Code submission,	project document and demonstration video. All the	2	
	project Doc and Demo	project deliverables are to be uploaded to cloud	S	
		based repository such as GitHub.		

Mentor review and Approval	Mentor will be reviewing the project deliverable as per the milestone schedule and the feedback will be provided to the team.	1
Evaluation and Scoring	Evaluators will be assigned to the team to evaluate the project deliverable, and the scoring will be provided based on the evaluation metrics	1

Total 16 weeks

ılly, it involves 15 weeks of learning and doing, and one week for evaluation. The evaluation will be sess technical and soft skills as given in table 2.

Table 2: Evaluation Schema

		Skills	Weightage

Hands On:

- 1. Implement the command line statement to recover lost files on SD/USB/HB in windows.
- 2. Implement and show the result of Safe Back tool for the suspect drive to create backup.
- 3. Implement and show the result of JPLAG plagiarism to find pairs of similar programs among a given set of programs.
- 4. Design the steps to capture TCP packets in Wireshark tool.

Design the content analysis for the given paragraph using grammar checker.

Introduction to Multimedia

Elements of multimedia system – Need and aspects of multimedia - Information units. Sound - Audio file formats – MIDI – Images - Computer Image Processing - Principles of animation - Animation techniques - Creating animated scenes - Video Basic concepts - Video Capture - Recording format - Storage for multimedia - CD Technologies - Multimedia Workstations [9] **Multimedia Tools**

Basic tools - Image-editing tool - Painting and drawing tools - Sound editing programs - Video formats - Linking multimedia objects - OLE -presentation tools - authoring tools. [9]

Multimedia Operating Systems

Introduction - Real Time - Resource Management - Process Management - File Systems - Database Systems - Multimedia Database Management System - Characteristics of an MDBMS - Data Analysis - Data Structure - Operations on Data -Integration in a Database Model [9]

Multimedia Communication Systems

Application Subsystem - Transport Subsystem - Synchronization - Introduction - Notion of Synchronization - Presentation Requirements - A Reference Model for Multimedia Synchronization - Synchronization in distributed environment. [9]

Data Compression and Multimedia Applications

Source entropy and hybrid coding - JPEG - MPEG - H.261 - DVI. Video conferencing - Tele conferencing - Tele services messaging services – retrieval services – Tele action services.

Introduction to Intelligent Systems and Soft Computing

Intelligent Systems - Types of Intelligent Systems - Knowledge Based Systems - Knowledge Representation and Processing - Soft Computing

Fundamentals of Fuzzy Logic Systems

Background - Fuzzy Sets - Fuzzy Logic Operations - Implication - Some Definitions - Fuzziness and Fuzzy Resolution - Fuzzy Relations - Composition and Inference - Projection - Consideration of Fuzzy Decision Making. [9]

Fundamentals of Artificial Neural Networks

Learning and Acquisition of Knowledge - Features of Artificial Neural Networks - Fundamentals of Connectionist Modeling-Major Classes of Neural Networks - Multilayer Perceptron-Radial Basis Function Networks-Kohonen's Self-Organizing Network-The Hopfield Network-Industrial and Commercial Applications of ANN – Introduction to deep learning.

Neuro-Fuzy Systems

Background - Architectures of Neuro Fuzzy Systems - Cooperative Neuro Fuzzy Systems - Neural Network Driven.Fuzzy Reasoning - Hybrid Neuro Fuzzy Systems - Construction of Neuro Fuzzy Systems - Structure Identification Phase - Parameter Learning Phase. [9]

Evolutionary Computing

Overview of Evolutionary Computing - Genetic Algorithms and Optimization - The Schema Theorem - The Fundamental Theorem of Genetic Algorithms - Genetic Algorithm Operators - Integration of Genetic Algorithms with Neural Networks - Integration of Genetic Algorithms with Fuzzy Logic - Known Issues in GAs - Population-Based Incremental Learning - Evolutionary Strategies - ES Applications - Case study on the application of genetic algorithm. [9]

Introduction: Learning Problems - Designing a Learning System - Perspectives and Issues in Machine Learning -Concept Learning - task - search - finding maximally specific Hypotheses - version spaces and candidate elimination algorithm-inductive bias

Decision Tree Learning and Artificial Neural Networks: Decision Tree Representation - Problems - basic decision tree learning algorithms - hypotheses search - Issues - Artificial Neural Networks: Introduction -Representations – Problems – Perceptrons – Multilayer networks and Back Propagation Algorithm – example. [9]

Bayesian Learning: Bayes Theorem - Concept Learning - Maximum Likelihood and Least-Squared Error Hypothesis - Maximum Likelihood Hypotheses for Predicting Probabilities - Bayes Optimal Classifier - Gibbs Algorithm - Naïve Bayes Classifier – Example. [9]

Instance Based Learning and Cluster Analysis: Introduction – k-Nearest Neighbour Learning – Locally Weighted Regression - Radial Basis Functions - Case-Based Reasoning. Cluster Analysis- Introduction - Types - A Categorization of Major clustering methods - partitioning methods - Hierarchical methods - Density-Based Methods. [9]

Learning Sets of Rules: Learning sets of rules: Introduction - sequential covering algorithms - Learning Rule Sets-First order rules - FOIL - Induction as Inverted deduction - inverting resolution - Rough Set Theory: Conceptsof rough sets-Feature selection and rule induction-Theory and its applications - Reinforcement learning -Introduction – Learning task – Q learning-Nondeterministic Rewards and Action, Temporal Difference Learning-Generalizing from Examples. [9]

Hands on:

- 1. Write a python program to import and export data using Pandas library functions.
- 2. Demonstrate various data pre-processing techniques for a given dataset.
- 3. Implement Simple and Multiple Linear Regression Models.
- 4. Develop Decision Tree Classification model for a given dataset and use it to classify a new sample.
- 5. Implement Naïve Bayes Classification in Python.
- 6. Build KNN Classification model for a given dataset.
- 7. Build Artificial Neural Network model with back propagation on a given dataset.
- 8. Write a python program to implement K-Means clustering Algorithm.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Basics

Distributed Database, Two General Problem, Byzantine General problem and Fault Tolerance, Hadoop Distributed File System, Distributed Hash Table, ASIC resistance, Turing Complete.

Cryptography: Hash function, Digital Signature - ECDSA, Memory Hard Algorithm, Zero Knowledge Proof.

Blockchain

Introduction, Advantage over conventional distributed database, Blockchain Network, Mining Mechanism, Distributed Consensus, Merkle Patricia Tree, Gas Limit, Transactions and Fee, Anonymity, Reward, Chain Policy, Life of Blockchain application, Soft & Hard Fork, Private and Public blockchain. Blockchain Technology for IoT **Applications**

[9]

[9]

Distributed Consensus

Nakamoto consensus, Proof of Work, Proof of Stake, Proof of Burn, Difficulty Level, Sybil Attack, Energy utilization and alternate.

[8]

Cryptocurrency

History, Distributed Ledger, Bitcoin protocols - Mining strategy and rewards, Ethereum - Construction, DAO, Smart Contract, Truffle -Design and issue Crypto currency, Mining, DApps, GHOST, Vulnerability, Attacks, Sidechain, Namecoin.

[9]

Cryptocurrency Regulation and Applications

Stakeholders, Roots of Bit coin, Legal Aspects-Crypto currency Exchange, Black Market and Global Economy. Applications: Internet of Things, E-Governance, Land Registration, Medical Record Management System, Domain Name Service and future of Blockchain-Naive Blockchain construction - Hashcash implementation, Smart

Contract Construction, AWS Blockchain Templates.

[10]

Hands on:

- 1. Creating Merkle tree
- 2. Creation of Block
- 3. Blockchain implementation
- 4. Creating ERC20 token
- 5. Blockchain implementation using Merkle Trees
- 6. Mining in Blockchain
- 7. Peer-to-Peer implementation using Blockchain
- 8. Creating Crypto-currency Wallet

INTRODUCTION

Overview of text mining-Definition-General Architecture-Pre-processing-Types of Problems- Collecting documents-document standardization-tokenization-lemmatization-vector generation for prediction-sentence boundary determination -evaluation performance [80]

TEXT EXTRACTION AND CLUSTERING

Text Extraction: Introduction, Rapid automatic keyword extraction: candidate keywords, keyword scores, adjoining keywords, extracted keywords, Benchmark evaluation: precision and recall, efficiency, stoplist generation, Evaluation on new articles.

Clustering: Multilingual document clustering: Multilingual LSA, Tucker1 method, PARAFAC2 method. [10]

CLASSIFICATION

Content-based spam email classification using machine-learning algorithms, Utilizing nonnegative matrix factorization for email classification problems, Constrained clustering with k-means type algorithms. [80]

TEXT STREAMS

Introduction, Text streams, Feature extraction and data reduction, Event detection, Trend detection, Event and trend descriptions, Embedding semantics in LDA topic models: Introduction, vector space modeling, latent semantic analysis, probabilistic latent semantic analysis, Latent Dirichlet allocation, embedding external semantics from Wikipedia, data-driven semantic embedding. [10]

RECENT TRENDS

Visualization Approaches -Architectural Considerations -Visualization Techniques in Link Analysis -Example-Mining Text Streams -Text Mining in Multimedia -Text Analytics in Social Media -Opinion Mining and Sentiment Analysis -Document Sentiment Classification -Opinion Lexicon Expansion -Aspect-Based Sentiment Analysis -Opinion Spam Detection -Text Mining Applications and Case studies (Vector Representations of Words - Word Embeddings for the digital humanities)-Implementing Recommender System in Python. [09]

Hands on:

- 1. Implement methods for Text Preprocessing.
- 2. Implement methods for word relationship analysis

- Implement methods for topic analysis.
- 4. Implement methods for text classification.
- 5. Implement methods for text clustering.
- 6. Implement methods for sentiment analysis.

Objective(s)	 To understand the basic concepts and challenges in cyber security To impart the knowledge on modern tools to resolve the security issues To provide an ability to use basic security tools to enhance system security and can develop basic security enhancements in stand-alone applications. 													

	At the end of the course, the student will be able to
	CO1: Recognize the concept of cybercrime in mobile devices
0	CO2: Enumerate the cyber security challenges in the modern devices.
Course	CO3: Analyze the working principle of cyber security tools and methods
Outcomes	CO4: Understand the state of the art of Mobile platform security models
	CO5: Evaluate the various testing strategies in Mobile Security

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

INTRODUCTION TO CYBERCRIME

Cybercrime- definition and origins of the word- Cybercrime and information security - Classifications [9] of cybercrime- Cybercrime and the Indian ITA 2000 - A Global Perspective on cybercrimes- Cloud Computing-Proliferation of Mobile and Wireless Devices- Trends in Mobility, Credit Card Frauds in Mobile and Wireless Computing Era.

CYBER SECURITY CHALLENGES IN MODERN DEVICES

Security Challenges Posed by Mobile Devices- Registry Settings for Mobile Devices - Authentication Service Security- Attacks on Mobile/Cell Phones - Mobile Devices: Security Implications [9] for Organizations-Organizational Measures for Handling Mobile-Devices-Related Security Issues - Organizational Security Policies and Measures in Mobile Computing Era, Laptops.

TOOLS AND METHODS

Tools and Methods Used in Cybercrime, Proxy Servers and Anonymizers- Phishing -Password [9] Cracking - Key loggers and Spywares, - Virus and Worms - Steganography - DoS and DDoS Attacks -SQL Injection, Buffer Over Flow - Attacks on Wireless Networks - Phishing, Identity Theft (ID Theft) - The Legal Perspectives - Cyberlaw: The Indian Context - The Indian IT Act. Introduction to Security Audit.

Mobile platform security models

Android - iOSMobile platform security models - Detecting Android malware in Android markets

[9]

Mobile Security Testing

Mobile platform internals – Security testing in the mobile app development lifecycle – Basic static and dynamic security testing – Mobile app reverse engineering and tampering – Assessing software protections

Hands on:

- 1. Study of steps to protect your personal computer system by creating User Accounts with Passwords and types of User Accounts for safety and security.
- 2. Study the steps to protect a Microsoft Word Document of different version with different operating system.
- 3. Study the steps to remove Passwords from Microsoft Word
- 4. Study various methods of protecting and securing databases.
- 5. Study "How to make strong passwords" and "passwords cracking techniques".
- 6. Study the steps to hack a strong password.
