

K.S. Rangasamy College of Technology

(Autonomous)

Curriculum & Syllabus

of

B.E. Computer Science and Engineering

(For the batch 2020 – 2024)

R 2018

**Courses Accredited by NBA, Accredited by NAAC “A++” Grade,
Approved by AICTE, Affiliated to Anna University, Chennai.**

KSR Kalvi Nagar, Tiruchengode – 637 215.

Namakkal District, Tamil Nadu, India.

VISION

To produce competent software professionals, academicians and researchers through Quality Education.

MISSION

- To produce competent software developers, system designers and network programmers.
- To keep abreast of the latest developments and technological transformations in computer science and engineering for social benefits.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: Graduates will provide effective solutions for software and hardware industries by applying the concepts of basic science and engineering fundamentals.

PEO2: Graduates will be professionally competent and successful in their career through lifelong learning.

PEO3: Graduates will contribute individually or as member of a team in handling projects and demonstrate social responsibility and professional ethics.

PROGRAMME OUTCOMES (POs)

Engineering Graduates will be able to:

PO1: Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2: Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: Design /development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4: Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

- PO5: Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- PO6: The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7: Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8: Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9: Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10: Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- PO11: Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- PO12: Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs):

Engineering Graduates will be able to:

- PSO1:** Apply standard Software Engineering practices and strategies in software project development using open-source programming environment and deliver a quality product for business success.
- PSO2:** Analyze and Interpret data by applying advanced data analytic models for decision making in Complex Problems and facilitate inter disciplinary research.

MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES (PEOs) WITH PROGRAMME OUTCOMES (POs)

The B.E. Computer Science and Engineering Programme outcomes leading to the achievement of the objectives are summarized in the following Table.

Programme Educational Objectives	Programme Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
PEO 1	3	1	3	2	2	1	1	1	2	2	3	1
PEO 2	3	3	3	2	2	1	1	1	2	2	3	1
PEO 3	3	2	3	2	2	1	1	1	3	2	3	1

Contributions: 1- low, 2- medium, 3- high

50 EN 001 – Communication Skills I

Common to all Branches

Semester	Hours/Week			Total Hours	Credit	Maximum Marks		
	L	T	P			C	CA	ES
I	1	1	0	30	2	50	50	100
Objective(s)	<ul style="list-style-type: none"> To help learners improve their vocabulary and to enable them to use words appropriately in different academic and professional contexts. To help learners develop strategies that could be adopted while reading texts. To help learners acquire the ability to speak effectively in English in real life and career related situations. To equip students with effective speaking and listening skills in English. To facilitate learners to enhance their writing skills with coherence and appropriate format effectively 							
Course Outcomes	<p>At the end of the course the students will be able to</p> <p>CO1: Utilize digital literacy tools to develop listening skills & make use of contextual clues to infer meanings of unfamiliar words</p> <p>CO2: Able to select, compile & synthesize information using communication strategies for an effective oral presentation</p> <p>CO3: Skim & Scan the textual content & infer meanings of unfamiliar words to develop reading & vocabulary skills</p> <p>CO4: Generate ideas from sources to develop coherent content and support with relevant details in writing</p> <p>CO5: Recognize the basic phonetic patterns of language & execute it for competent loud reading</p>							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Listening

Listening to Short Audios – Watching Short Videos - answering MCQs and Vocabulary Check- Listening to Short Comprehension Passages – Guided Listening – Listening to songs and cognizing the lyrics **[4]**

Speaking

Brainstorming – Group Discussion (unstructured) – Self Introduction - Just a Minute (JaM) - Short Narratives – Cue Cards – Picture Cards – Conversational Practices (Preliminary) **[4]**

Reading

Silent Reading – Scanning and Skimming - Reading short and Medium Passages – Cognition of Theme and Inferential Meaning - Academic and Functional Vocabulary List (350 words) – Word Power Check - Loud Reading – Modulation and Pronunciation Check **[4]**

Writing

Functional Vocabulary and Word Power – Data Interpretation - Paragraph Writing – Letter Writing –Email Writing – Conversational Fill Ups **[3]**

50 MA 001 - Calculus and Differential Equations								
Common to All Branches								
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
I	3	1	0	60	4	50	50	100
Objective(s)	<ul style="list-style-type: none"> To familiarize the students with the basic concepts in Cayley - Hamilton theorem and Orthogonal transformation. To get exposed to the fundamentals in circle of curvature, evolute and envelope of the curves. To acquire skills to understand the concepts involved in Jacobians and maxima and minima. To solve various linear differential equations and simultaneous differential equations. To learn various techniques and methods in solving definite and indefinite integrals. 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Apply Cayley - Hamilton theorem and to reduce quadratic form into canonical form.</p> <p>CO2: Compute the equation of the circle of curvature, evolute and envelope of the curves.</p> <p>CO3: Analyze Jacobian methods and constrained maxima and minima functions.</p> <p>CO4: Apply various methods in differential equations to solve linear and simultaneous differential equations.</p> <p>CO5: Evaluate definite and indefinite integrals using different techniques.</p>							
<p>Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.</p>								
<p>Matrices Characteristic equation – Eigen values and Eigen vectors of a real matrix – Properties of Eigen values and Eigen vectors – Cayley-Hamilton theorem (without proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by orthogonal transformation - Nature of quadratic form. [8]</p> <p>Differential Calculus Curvature – radius of curvature (Cartesian and polar co-ordinates) – Centre of curvature – Circle of curvature – Involute and evolute – envelope. [9]</p> <p>Functions of Several Variables Partial differentiation – Homogeneous functions and Euler's theorem – Jacobians – Taylor's series for</p>								

functions of two variables – Maxima and minima of functions of two variables – Constrained maxima and minima : Lagrange’s Method of Undetermined Multipliers. [9]

Differential Equations

Linear differential equations of second and higher order with constant co-efficient - R.H.S is $e^{\alpha x}$, $\sin \alpha x$, $\cos \alpha x$, x^n , $n > 0$, $e^{\alpha x} \sin \beta x$, $e^{\alpha x} \cos \beta x$, $e^{\alpha x} x^n$, $x^n \sin \alpha x$ and $x^n \cos \alpha x$ – Differential equations with variable co-efficients : Cauchy’s and Legendre’s form of linear equation – Method of variation of parameters– Simultaneous first-order linearequations with constantco-efficients. [9]

Integral Calculus

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals. [10]

Basics and Statics of Particles

Introduction -Units and Dimensions-Laws of Mechanics–Principle of transmissibility-Lame's theorem, Parallelogram and triangular Law of forces–Vectors–Vectorial representation of forces and moments.

Vector Operations

Addition, subtraction, dot product, cross product-Coplanar Forces–Resolution and Composition of forces–Equilibrium of a particle–Forces in space-Equilibrium of a particle in space-Equivalent systems of forces-Single equivalent force. [12]

Equilibrium of Rigid Bodies

Free body diagram–Types of supports and their reactions–requirements of stable equilibrium–Static determinacy, Moments and Couples–Moment of a force about a point and about an axis–Vectorial representation of moments and couples–Varignon's theorem-Equilibrium of Rigid bodies in two dimensions.

Trusses: Introduction, axial members, calculation of forces on truss members using method of joints-Method of sections. [12]

Properties of Surfaces and Solids

Determination of Areas and Volumes-Centroid, Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method; T section, I section, Angle section, Hollow section using standard formula) - Parallel axis theorem and perpendicular axis theorem- Polar moment of inertia -Mass moment of inertia of thin rectangular section -Relation between area moment of inertia and mass moment of inertia. [12]

Dynamics of Particles

Displacement, Velocity, acceleration and their relationship–Relative motion -Projectile motion in horizontal plane– Newton's law–Work Energy Equation – Impulse and Momentum. [12]

Elements of Rigid Body Dynamics, friction and Beams

Translation and Rotation of Rigid Bodies: Velocity and acceleration–General Plane motion: Crank and Connecting rod mechanism.

Friction

Frictional force–Laws of Coloumb friction–Simple contact friction–Ladder friction-Rolling resistance–Ratio of tension in belt.

Transverse bending on beams

Types of beams: Supports and loads – Shear force and bending moment in beams – Cantilever, simply supported and overhanging beams. [12]

50 MY 006 – Essence of Indian Traditional Knowledge								
Common to all Branches								
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
I	2	0	0	30	0	100	-	100
Objective(s)	<ul style="list-style-type: none"> To imparting basic principles of thought process, reasoning and inferencing. To gain knowledge on sustainability is at the core of Indian Traditional knowledge Systems connecting society and nature. To inculcate holistic life style of yogic science and wisdom capsulesin To know sanskrit literature are also important in modern society with rapid technological advancements and societal disruptions. To gain the knowledge on Indian artistic and its tradition 							
Course Outcomes	<p>At the end of the course, the student will be able to</p> <p>CO1: Know many festivals have religious origins and entwine cultural and religious significance in traditional activities</p> <p>CO2: Know harvest festivals, celebrate seasonal change</p> <p>CO3: Ability to do case studies on philosophical tradition</p> <p>CO4: Perform Indian artistic works</p> <p>CO5: Ability to conduct exhibition and advertisement about artistic</p>							
<p>Note:The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.</p>								
Basic structure of Indian Knowledge System								[6]
Modern Science and Indian Knowledge System								[6]
Yoga and Holistic Healthcare								[6]
Case studies, Philosophical Tradition								[6]
Indian Linguistic Tradition (Phonology, morphology, syntax and semantics), Indian Artistic Tradition								[6]

Common to all Branches

Semester	Hours/Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
I	0	0	4	60	2	60	40	100

Objective(s)	<ul style="list-style-type: none"> • To test the knowledge of theoretical concepts. • To develop the experimental skills of the learners. • To facilitate data interpretation. • To enable the learners to get hands-on experience on the principles discussed in theory sessions. • To expose the learners to various industrial and environmental applications.
--------------	--

Course Outcomes	<p align="center">At the end of the course the students will be able to</p> <p>CO1: Calculate the amount of hardness, alkalinity, chloride ion and dissolved oxygen in water sample</p> <p>CO2: Estimate the amount of barium chloride and mixture of acids by conductometry</p> <p>CO3: Infer the amount of acid by pH metry and ferrous ion by potentiometry</p> <p>CO4: Estimate the amount of ferrous ion by spectrophotometry</p> <p>CO5: Determine the percentage of corrosion by weight loss method</p>
-----------------	---

LIST OF EXPERIMENTS

1. Estimation of hardness of water by EDTA method.
2. Estimation of alkalinity of water sample.
3. Estimation of chloride content in water sample (Argentometric method).
4. Determination of dissolved oxygen in boiler feed water (Winkler's method).
5. Estimation of barium chloride by conductometric precipitation titration.
6. Estimation of mixture of acids by conductometric titration.
7. Estimation of ferrous ion by potentiometric titration.
8. Estimation of HCl, beverages and other biological samples by pH meter.
9. Estimation of iron content by spectrophotometry method.
10. Determination of corrosion rate and inhibitor efficiency by weight loss method.

Objective(s)	<ul style="list-style-type: none"> To provide exposure and ability in handling situations involving multiple integrals, Beta and Gamma functions. To familiarize the students with the basic concepts in Vector calculus. To get exposed to the fundamentals in analytic functions, conformal mappings and Bilinear transformation. To acquire skills to understand the concepts involved in Cauchy's integral formula, Cauchy's residue theorem and Contour integration. To understand the concepts in Laplace transform techniques and its properties.
Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Evaluate double and triple integrals and analyze Beta and Gamma functions.</p> <p>CO2: Analyze the basic concepts of vector calculus to verify Green's, Stoke's and Gauss Divergence theorems.</p> <p>CO3: Construct the analytic functions and Bilinear transformation.</p> <p>CO4: Apply Cauchy's integral formula and Cauchy's residue theorem to evaluate the complex integrals.</p> <p>CO5: Apply Laplace transform techniques for solving differential equations.</p>
<p>Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.</p>	
<p>Multiple Integrals Double integration – Cartesian and polar coordinates – Change of order of integration – Area between two curves – Area as double integral – Triple integration in Cartesian coordinates. Beta and Gamma functions: Relationship between Beta and Gamma functions – Properties – Problems. [9]</p> <p>Vector Calculus Introduction - gradient of a scalar point function - directional derivative - angle of intersection of two surfaces – divergence and curl(excluding vector identities) - solenoidal and irrotational vectors - Green's theorem in the plane - Gauss divergence theorem -Stokes' theorem(without proof)- verification of the above theorems and evaluation of integrals using them. [9]</p> <p>Analytic Functions Analytic functions – Necessary conditions (Cauchy–Riemann equations)- Polar form of Cauchy–Riemann equations – Sufficient conditions (without proof) – Properties of analytic functions – Harmonic function –Harmonic conjugate – Construction of analytic functions– Conformal mapping: $w = z + a$, az, $1/z$-Bilinear transformation. [9]</p> <p>Complex Integration Cauchy's Integral theorem (without proof) – Cauchy's integral formula – Taylor's and Laurent's series (without proof) – Classification of singularities – Cauchy's residue theorem – Contour integration – Circular and semi-circular contours (excluding poles on real axis). [8]</p> <p>Laplace Transforms Conditions for existence – Transform of elementary functions – Basic properties – Shifting theorems- Derivatives and integrals of transforms — Transform of unit step function – Dirac's delta function- Initial and final value theorem– Transform of periodic functions. Inverse Laplace transform – Convolution theorem(excluding proof) – Solution of second order ordinary differential equation with constant co-efficients – simultaneous equations of first order with constant co-efficients. [10]</p>

50 PH 003 - Semiconductor Optoelectronics

Common to CS,IT

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
II	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To enhance students' knowledge of theoretical and modern technological aspects in semiconductor physics. To enable the students to correlate the theoretical principles with application oriented studies in optoelectronic materials To Explain the principles of laser, types of laser and demonstrate the applications of laser To state the principle of optical fiber and to understand the design and applications of optical fibers. To introduce advanced materials and nano technology for various engineering applications 							
Course Outcomes	<p>At the end of the course, students will be able to</p> <p>CO1: Analyze the basic ideas of semiconductors and devices</p> <p>CO2: Apply the principles of LCD, photodetectors and optoelectronic devices</p> <p>CO3: Outline the basic ideas about classification of laser and various applications of laser.</p> <p>CO4: Elaborate the propagation of light in fiber optic cables, communication link and applications</p> <p>CO5: Gain broad view on advanced materials, nano technology and their engineering applications</p>							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Semiconductor Physics

Introduction-Elemental and compound semiconductors-Intrinsic and extrinsic semiconductors-Properties-carrier concentration in intrinsic and extrinsic semiconductors (qualitative)-p-n junction diode: characteristics-p-n junction transistors: characteristics (CB and CE)-Bipolar characteristics (Biased and unbiased)-FET: characteristics and applications. [10]

Optoelectronic Materials and Devices

Photoconductive materials – Light Dependent Resistor – Working of LDR – Applications of LDR – Photovoltaic materials – Solar cell – Construction and working of a solar cell – Applications of solar cells – Liquid crystals – Liquid crystal Display (LCD) – Construction and advantages of LCD – Electro optic materials – Optoelectric effect-Electro-Optic Modulation. [9]

Laser Technology

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion-different types of lasers: gas lasers (CO₂), solid-state lasers (Nd: YAG), dye lasers, Semiconductor laser (Homojunction and Hetero junction)-Properties of laser beams-applications of lasers in science and engineering. [8]

Fiber Optics and Sensors

Principles – cone of acceptance, numerical aperture (derivation)- Modes of propagation –Fabrication of optical fibre: Crucible-crucible technique - Classification: based on materials, modes and refractive index profile– Splicing : types of splicing- Losses in optical fiber – Detectors – Fiber optical communication links (Block diagram) – Advantage of fiber optical cable over copper cables- Fiber optic sensors: liquid level sensors, Temperature and Displacement sensors. [9]

Advanced Materials and Nanotechnology

New Engineering Materials: Metallic glasses – preparation, properties and applications – Shape memory alloys

(SMA) – characteristics, properties of NiTi alloy applications – advantages and disadvantages of SMA

Nano Materials: Nanomaterials: Properties- Top-down process: Ball Milling method – Bottom-up process: Vapour Phase Deposition method- Carbon Nano Tube (CNT): Properties, preparation by electric arc method, Applications. [9]

DC and AC Circuits - Electrical circuit elements (R, L and C), Voltage and current sources - Kirchhoff's current and voltage laws - Serial and parallel circuits - Analysis of simple circuits with DC excitation. Representation of sinusoidal waveforms, Peak and RMS values, Phasor representation, Real power, Reactive power, Apparent power, Power factor. Analysis of single phase AC circuits consisting of R, L, C, RL, RC, RLC combinations. [12]

DC&AC Machines - Construction, Types and Operation-Faraday's laws of electromagnetic induction - Transformers: Construction, Working principle, Types, Losses in transformers, Regulation, Efficiency and applications-Simple Problems - Applications

Generation of rotating magnetic fields - Three phase induction motor: Construction, working principle, Characteristics, Starting - Single phase induction motor: Construction, working principle and applications - Synchronous generators: Construction, Working principle and applications. [14]

Electrical Power Generation Systems - Sources of electrical energy: Renewable and non-renewable - Principles and schematic diagram of Hydroelectric power plant, Thermal power plant, Nuclear power plant, Solar PV system and Wind energy conversion systems. [5]

Electrical Installations and House Wiring - Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB - Types of Batteries, Important Characteristics for Batteries - UPS.

Single phase and three phase systems: Three phase balanced circuits, Phase sequence, voltage and current relations in star and delta connections - Basic house wiring tools and components - Domestic wiring: Service mains, meter board, distribution board, energy meter. Different types of wiring: staircase, fluorescent lamp and ceiling fan. [8]

Electrical Energy Conservation & Safety - Elementary calculations for energy consumption - BEE Standards - Electrical energy conservation - Methods. Electric shock, Precautions against shock, Objectives of earthing, Types of earthing - Basic electrical safety measures at home and industry. [6]

To learn drawing formats and conversion of pictorial views into orthographic views. To emphasize skills to project simple solids and sectional views. To impart the knowledge on use of drafting software to draw the isometric projection. To acquire graphical skills to illustrate design project. 							
Course Outcomes	<p>At the end of the course, the student will be able to:</p> <p>CO1: Demonstrate the Impact of computer technologies on graphical communication</p> <p>CO2: Convert the pictorial views in to orthographic views using drafting software</p> <p>CO3: Draw the projection of simple solids and true shape of sections</p> <p>CO4: Construct the isometric projections of objects using drafting software</p> <p>CO5: Demonstrate a design project illustrating engineering graphical skills</p>							
<p>Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.</p>								
<p>Introduction to Computer Aided Drafting (CAD) Software</p> <p>Theory of CAD software – Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension) – Drawing Area (Background, Crosshairs, Coordinate System) – Dialog boxes and windows – Shortcut menus (Button Bars) – The Command Line and Status Bar – Different methods of zoom as used in CAD – Select and erase objects. [5+12]</p> <p>Orthographic Projection</p> <p>Theory of projection – Terminology and Methods of projection – first angle and third angle projection – Conversion of pictorial views into orthographic views. [6+12]</p> <p>Projection of Solids and Sections of Solids</p> <p>Projections of simple solids: prism, pyramid, cylinder and cone (Axis parallel to one plane and perpendicular to other, axis inclined to one plane and parallel to other).</p> <p>Sections of simple solids: prism, pyramid, cylinder and cone in simple positions (cutting plane is inclined to one of the principal planes and perpendicular to the other) – True shape of sections. [6+12]</p> <p>Isometric Projection</p> <p>Principles of Isometric projection – Isometric scale, Isometric views, Conventions – Isometric views of lines, Planes, Simple and compound Solids – Conversion of Orthographic views in to Isometric view. [6+12]</p> <p>Application of Engineering Graphics</p> <p>Geometry and topology of engineered components: creation of engineering models and their presentation in standard 2D blueprint form and as 3D wire-frame and shaded solids – Geometric dimensioning and Tolerancing– Use of solid modeling software for creating associative models – Floor plans: windows, doors, and fixtures such as water closet (WC), bath sink, shower, etc. – Applying colour coding according to building drawing practice – Drawing sectional elevation showing foundation to ceiling – Introduction to Building Information Modelling (BIM). [7+12]</p>

II	0	0	4	60	2	60	40	100
Objectives	<ul style="list-style-type: none"> To gain practical knowledge by applying the experimental methods to correlate with the Physics theory. To demonstrate an ability to make physical measurements and understand the limits of precision in measurements To introduce different experiments to test basic understanding of physics concepts applied in optics and electronics. To enable the students to correlate the theoretical principles with application oriented studies. To analyze the behavior and characteristics of various materials for its optimum utilization 							
Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Find the wavelength of laser and the particle size.(1)</p> <p>CO2: Gain the knowledge of interference to produce Newton rings and air wedge.(2-3)</p> <p>CO3: Apply the knowledge of diffraction property of light through grating and fiber optic cable (4,6)</p> <p>CO4: Obtain the concept of refractive index and dispersion of light by a prism(5)</p> <p>CO5: Realize the knowledge of semiconductor band gap and Hall coefficient, photovoltaic solar cells, Zener diode (7-10)</p>							
LIST OF EXPERIMENTS								
<ol style="list-style-type: none"> Determination of wavelength of laser and particle size – diffraction. Determination of radius of a plano convex lens – Newton’s ring. Determination of a thickness of thin wire – Air wedge method. Determination of wavelength of mercury spectral lines – spectrometer grating. Determination of dispersive power of a prism. Determination of NA, acceptance angle of an optical fiber. Determination of band gap of a semiconductor PN junction diode. V-I characteristics of solar cell. Characteristics of Zener diode. Determination of Hall coefficient of a given semiconductor and its charge carrier density.

50 ME 0P1 – Engineering Practices Laboratory

Common to all branches

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
II	0	0	4	60	2	60	40	100
Objective(s)	<ul style="list-style-type: none"> To acquire skills in basic engineering practices. To identify the hand tools and instruments. To provide hands on experience in Fitting, Carpentry, Sheet metal, Welding and lathe shop. To provide practical training on house hold wiring and electronic circuits. To offer real time activity on plumbing connections in domestic applications. 							
Course Outcomes	<p align="center">At the end of the course, the student will be able to:</p> CO1: Perform facing, plain turning, drilling. CO2: Make a model of fitting and carpentry: Square, Dovetail and Cross lap joints. CO3: Fabricate the models of sheet metal and welding joints. CO4: Construct and demonstrate electrical and electronic wiring circuit. CO5: Construct the water pipe line in plumbing shop.							

Machine Shop

Safety aspects in machine shop, Study of Lathe and Radial drilling machine, Turning, Facing and Drilling.

Fitting and Carpentry

Safety aspects in Fitting and Carpentry, Study of tools and equipments, Preparation of models- Square, Dove tail joint, Cross Lap.

Sheet Metal and Welding

Safety aspects in Sheet metal and Welding, Study of tools and equipments, Sheet metal models - Scoope, Cone, Tray, Preparation weld joints -Lap, butt, T-joints. Study of Gas Welding and Equipments.

Electrical Wiring & Electronics

Safety aspects of Electrical wiring, Study of Electrical Materials and wiring components, Wiring circuit for a lamp using single and stair case switches. Wiring circuit for fluorescent lamps, Basic electronic circuit.

Plumbing

Study of plumbing tools, assembly of G.I. pipes/ PVC and pipe fittings, Cutting of threads in G.I.Pipes/PVC by thread cutting dies.

Smithy, Plastic Moulding and Glass Cutting

Safety aspects in smithy, plastic moulding and glass cutting, Study of tools and equipments.

50 MA 005 - Probability and Statistics

Common to CS, IT

Semester	Hours/Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
III	3	1	0	60	4	50	50	100
Objective(s)	<ul style="list-style-type: none"> To acquire skills in the concepts of the probability To provide exposure and ability in handling situations involving distributions. To learn basic concepts in descriptive statistics and quantitative variables. To develop the knowledge with various methods in hypothesis testing. To get exposed to various statistical methods designed to make scientific judgments. 							
Course Outcomes	<p>At the end of the course the student will be able to</p> <p>CO1: Apply the concepts of one-dimensional random variables to calculate the probability. CO2: Apply discrete and continuous distributions concepts to calculate the probability. CO3: Compute measures of central tendency, measures of dispersion and calculate correlation and regression. CO4: Analyze the concepts in curve fitting methods and test the statistical hypothesis using Student's t test, F test and Chi-square test. CO5: Analyze the design of experiments using CRD, RBD and Latin square.</p>							
<p>Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.</p>								
<p>Probability and Random Variables Axioms of probability – Conditional probability –Baye's theorem–Random variable – Expectation –Probability mass function – Probability density function – Properties – Moments – Moments generating function and their properties. [9]</p> <p>Standard Distributions Discrete Distributions: Binomial, Poisson and Geometric distributions – Continuous Distributions: Uniform, Exponential, Gamma and Normal distributions – Properties – Problems. [9]</p> <p>Statistics Measures of Central tendency – Mean, Median and Mode – Moments, Measure of dispersion – Skewness and Kurtosis – Range - Quartile deviation – Karl Pearson's Coefficient of skewness – Bowley's Coefficient of skewness – Correlation and Regression – Rank correlation. [9]</p> <p>Sampling and Testing Curve fitting by the method of least squares – Fitting of straight lines: $y = ax + b$, $y = ab^x$ – Second degree Parabola – Test of significance: small samples –Student's t-test, F-test, Chi-square test for goodness of fit and independence of attributes [9]</p> <p>Design of Analysis ANOVA – Completely Randomized Designs – One way classification – Randomized Block Design – Two way classification –Latin square design [9]</p>

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
III	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To choose the appropriate data structure for a specified application To design and implement abstract data types such as linked list, stack, queue and trees To demonstrate various sorting, searching and graph algorithms To Learn and implement the hashing techniques To design a Priority Queue ADT and its applications 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Express the concept of Linear data structures, applications and its implementations</p> <p>CO2: Appraise the knowledge of Tress with its operations</p> <p>CO3: Recognize the concept of Sorting ,Searching and its types</p> <p>CO4: Review various implementations and operations of Priority Queue and Hashing Techniques</p> <p>CO5: Apply Shortest Path and Minimum Spanning Tree algorithms and Biconnectivity</p>							
<p>Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.</p>								
<p>Lists, Stacks And Queues</p> <p>Abstract Data Type (ADT) – The List ADT – The Stack ADT – The Queue ADT [12]</p> <p>Suggested Activities:</p> <p>Converting an algorithm from recursive to non-recursive using stack.</p> <p>Demonstrating stack for Towers of Hanoi application.</p> <p>Developing any application (student's choice) using all the linear data structures.</p> <p>Suggested Evaluation Methods:</p> <p>Tutorials on applications of linear data structures.</p> <p>Checking output of programs implemented.</p> <p>Trees</p> <p>Preliminaries – Binary Trees – The Search Tree ADT – Binary Search Trees – AVL Trees – Tree Traversals</p> <p>– B – Trees –B+Trees. [9]</p> <p>Suggested Activities:</p> <p>Implementing binary tree and tree traversals.</p>								

Solving expressions using expression trees by determining infix, prefix and postfix expressions.

Developing any application using trees.

Suggested Evaluation Methods:

Tutorials on trees

Check output of programs implemented.

Quiz on various topics of the unit.

Sorting and Searching

Preliminaries – Insertion Sort – Shellsort – Heapsort – Mergesort – Quicksort – External Sorting – Searching: Sequential search- Binary Search –Hashed list searches. [7]

Suggested Activities:

External learning - External sorting implementation.

Implementation of all sorting techniques in C language.

Demonstration of searching techniques under best and worst case inputs.

Suggested Evaluation Methods:

Tutorials on external sorting.

Checking output of programs implemented

Hashing and Priority Queues (Heaps)

Hashing – Hash Function – Separate chaining – Open addressing – Rehashing – Extendible hashing – Priority Queues (Heaps) – Model – Simple Implementations – Binary Heap – Applications of Priority Queues – d –Heaps. [7]

Suggested Activities:

Implementation of Hashing

Implementation of simple applications of Priority queue

Suggested Evaluation Methods:

Tutorials on hashing

Check output of programs implemented.

Quiz on various topics of the module.

Graphs

Definitions – Topological Sort – Shortest-Path Algorithms – Unweighted Shortest Paths – Dijkstra's Algorithm – Minimum Spanning Tree – Prim's Algorithm, Kruskal's Algorithm – Applications of Depth-First Search – Undirected Graphs – Biconnectivity. [10]

Suggested Activities:

Implementation of various shortest path algorithms

Implementation of Minimum Spanning Tree

Suggested Evaluation Methods:

Tutorials on various topic of the module

Check output of programs implemented.

Quiz on various topics of the module.

Total Hours: 45 hours

K. S. Rangasamy College of Technology – Autonomous R2018								
50 CS 003 –Object Oriented Programming								
Common to CS,IT, EE, NST								
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
III / IV	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To enable the students to learn how C++ supports object Oriented properties To create and use classes, objects, constructors and destructors for specific applications To learn how inheritance and virtual functions implement dynamic binding with polymorphism. To learn how to design and implement generic classes with C++ templates. To learn how to use exception handling in C++ programs. 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Recognize the principles of object-oriented problem solving and programming CO2: Implement the concept of classes and objects</p> <p>CO3: Analyze the concept of reusability and compile time polymorphism</p> <p>CO4: Recognize the concept of dynamic memory allocation and runtime polymorphism</p> <p>CO5: Identify the uses of generic programming and exception handling</p>							
<p>Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.</p>								
<p>Introduction to C++ and Functions: Evolution of C++ - Concepts of OOP – Advantages of OOP, Basics of C++: Structure of a C++ Program– Streams in C++ and Stream Classes – Unformatted Console I/O Operations, C++ Declarations, Functions: Return by Reference –Default Arguments – Const arguments – Inline Functions – Function Overloading. [9]</p>								
<p>Suggested Activities: Knowing the concepts of OOPS, structure of OOPS. Developing simple programs in C++ basics, functions and its types</p>								
<p>Suggested Evaluation Methods: Checking output of programs implemented Group Discussion on OOPS features and difference between C and C++ Quiz for the above topics.</p>								
<p>Classes and Objects, Constructors and Destructors: Classes in C++ - Declaring Objects- Access Specifiers and their Scope – Defining Member Functions – Static Members – Array of Objects – Object as Function Arguments – Friend Function and Friend Classes, Constructors and Destructors: Characteristics – Parameterized Constructor – Overloading Constructor – Copy Constructor – Dynamic Initialization Constructor – Destructors. [9]</p>								

Passed in BoS Meeting held on 02/12/2023
 Approved in Academic Council Meeting held on 23/12/2023

BoS Chairman

Suggested Activities:

Simple programs using classes and objects, static members
 Implementation of simple programs using constructor and destructor
 Implementation of simple programs using friend functions and classes, array of objects

Suggested Evaluation Methods:

Quiz for the above activities.
 Checking output of programs implemented
 Group Discussion for the above activities

Inheritance, Compile Time Polymorphism and Type Conversion:

Inheritance: Reusability – Types of Inheritance – Abstract Classes – Object as Class Member, Operator
 Overloading: Rules for Operator Overloading – The Keyword Operator –Unary and Binary Operators Overloading-
 Overloading using Friend Function – Type Conversion. [10]

Suggested Activities:

Implement inheritance and its types in C++ program
 Implement compile time polymorphism and unary, binary operator overloading concept in C++ program.

Suggested Evaluation Methods:

Quiz for the above activities.
 Checking output of programs implemented
 Group discussion on overloading using friend Function and type conversion

Pointers, Memory Models, Binding and Polymorphism:

Pointers: Pointer to Class – Pointer to Object – void, wild and this Pointers – Pointer to Constant and Constant
 Pointers, Memory Models: Dynamic Memory Allocation – Heap Consumption – Dynamic Objects, Polymorphism:
 Binding in C++ - Pointer to Base and Derived class objects – Working with Virtual Functions – Pure Virtual
 Functions – Object Slicing – Virtual Destructor. [9]

Suggested Activities:

Develop simple programs using pointers and its types
 Develop simple programs using virtual functions

Suggested Evaluation Methods:

Quiz for the above activities.
 Checking output of programs implemented
 Group discussion on pure virtual function and virtual destructor.

Generic Programming with Templates, Exception Handling:

Class Templates – Function Templates – Exception Handling: Principles of Exception Handling – try, throw and
 catch keywords – Re-throwing Exception – Specifying Exception. [8]

Suggested Activities:

Develop simple programs on class template and function template.
 Develop simple programs using exceptional handling and its types.

Suggested Evaluation Methods:

Quiz for the above activities.
 Checking output of programs implemented
 Group discussion on Exceptional handling Concepts

Approved in Academic Council Meeting held on 23/12/2023

BoS Chairman

Asynchronous Sequential Circuits

Analysis procedure – Transition table - Flow table – Race conditions -Design of fundamental mode circuits – Primitive flow table – Reduction of state and flow table – Race free state assignment - Hazards: Static – Dynamic – Essential – Hazards elimination. [9]

Memory Devices

Classification of memories: ROM - PROM – EPROM – EEPROM – EAPROM, RAM. Static RAM Cell- Dynamic RAM cell Bipolar RAM cell – MOSFET RAM cell —Programmable Logic Devices: Programmable Logic Array (PLA) - Programmable Array Logic (PAL) – Field Programmable Gate Arrays (FPGA) - Implementation of combinational logic circuits using ROM, PLA, and PAL.[9]

Practice:

1. Design and implement combinational circuits using logic gates
2. Design and implement synchronous sequential circuits
3. Construct and simulate combinational circuit using multisim
4. Construct and simulate synchronous & asynchronous sequential circuit using multisim

Tutorials:

1. Number system, logic gates, K-map reduction
2. Design of combinational circuits
3. Design of sequential and asynchronous sequential circuits
4. Hazards, PLDs Implementation of combinational logic circuit using ROM, PLA, PAL

50 CS 301 – Software Engineering

CS

Semester	Hours / Week			Total Hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
III	3	0	0	45	3	50	50	100

Objective(s)

- To understand the phases in a software project
- To understand fundamental concepts of requirements engineering and Analysis Modeling.
- To understand the various software design methodologies
- To learn various testing and maintenance measures
- To learn various project cost models and risk management

Course Outcomes

At the end of the course, the students will be able to

CO1: Identify the key activities in managing a software project, Compare different process models.

CO2: Concepts of requirements engineering and Analysis Modeling. CO3: Apply systematic procedure for software design and deployment. CO4: Compare and contrast the various testing and maintenance.

CO5: Manage project schedule, estimate project cost and effort required.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Software Process and Agile Development
Introduction to Software Engineering, Software Process, Perspective and Specialized Process Models– Introduction to Agility-Agile process-Extreme programming-XP Process. [8]

Requirements Analysis and Specification
Software Requirements: Functional and Non-Functional, User requirements, System requirements, Software Requirements Document –Requirement Engineering Process: Feasibility Studies, Requirements elicitation and analysis, requirements validation, requirements management-Classical analysis: Structured system Analysis, Petri Nets-Data Dictionary. [10]

Software Design
Design process–Design Concepts–Design Model–Design Heuristic–Architectural Design-Architectural styles, Architectural Design, Architectural Mapping using Data Flow-User Interface Design: Interface analysis, Interface Design –Component level Design: Designing Class based components, traditional Components. [8]

Testing and Maintenance
Software testing fundamentals-Internal and external views of Testing-white box testing-basis path testing- control structure testing-black box testing-Regression Testing–Unit Testing –Integration Testing–Validation Testing– System Testing And Debugging–Software Implementation Techniques: Coding practices- Refactoring- Maintenance and Reengineering-BPR model-Reengineering process model-Reverse and Forward Engineering. [10]

Project Management
Software Project Management: Estimation–LOC, FP Based Estimation, Make/Buy Decision COCOMO I & II Model–Project Scheduling–Scheduling, Earned Value Analysis Planning–Project Plan, Planning Process, RFP Risk Management–Identification, Projection-Risk Management-Risk Identification -RMMM Plan-CASE Tools. [9]

50 IT 001 - Design and Analysis of Algorithms

Common to CS, IT, AD

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
IV	3	0	0	45	3	50	50	100

Objective(s)

- To design algorithms in both the science and practice of computing.
- To choose the appropriate data structure and algorithm design method for a specified Application
- To understand how the choice of data structures and algorithm design methods impacts the performance of programs.
- To solve problems using algorithm design methods such as the greedy method, divide and conquer, dynamic programming, backtracking and branch and bound.
- To solve NP-hard and NP-complete problems.

Course Outcomes

At the end of the course, the students will be able to

- CO1: Classify the problem types and compare orders of growth to represent asymptotic notations.
 CO2: Apply and inspect recursive and non-recursive algorithms by mathematical notations using sample algorithms.
 CO3: Apply 'Brute Force' and 'Divide and conquer' design techniques for sorting and searching problems.
 CO4: Construct analogous algorithms for graph related problems.
 CO5: Apply 'Backtracking' and 'Branch and bound' techniques to solve NP-hard problems.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Basic Concepts of Algorithms

Introduction - Fundamentals of Algorithmic Problem Solving - Important Problem types -Fundamentals of the analysis of algorithm efficiency - Analysis Framework - Asymptotic Notations and Basic Efficiency Classes - Recurrence relations: Methods for solving recurrence relations [9]

Mathematical Analysis of Algorithms

Mathematical Analysis of Non-recursive Algorithms and Examples - Mathematical Analysis of Recursive Algorithms - Example: Fibonacci numbers - Empirical Analysis of Algorithms [9]

Brute Force and Divide & Conquer Techniques

Selection Sort and Bubble Sort - Brute-force string matching - Merge sort - Multiplication of Two n-Bit Numbers - Quick Sort - Binary Search - Binary tree Traversal and Related Properties [9]

Algorithm Design Paradigm

Decrease and Conquer Technique: Insertion Sort - Depth first Search and Breadth First Search – Transform and Conquer Technique: Presorting - Dynamic Programming: Computing a Binomial Coefficient - Warshall's and Floyd's Algorithm - The Knapsack Problem and Memory Functions - Optimal Binary Search trees – Greedy Technique: Huffman trees [9]

NP Hard and NP-Complete Problems

P and NP problems - NP complete problems - Backtracking: N-Queen's Problem - Hamiltonian Circuit problem Branch and Bound Techniques: Traveling salesman problem [9]

Objective(s)	<ul style="list-style-type: none"> To cram the fundamental element of the Java language To understand the concept of Collections, Streams, Packages and Exception handling, To apply the knowledge of threads and to access remote data To learn about regular expression and streams To enhance the knowledge in server side programming and javaFx 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Express the concept of classes, objects and communicate classes over objects using methods</p> <p>CO2: Prompt the collection classes and observe predefined and user defined Exception handling</p> <p>CO3: Express the concept of thread execution with thread priority and to perform remote data access</p> <p>CO4: Practice the Regex and observe the streams concepts</p> <p>CO5: Design the concept server side programming also enrich the web concepts using JavaFX</p>							
<p>Note:Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.</p>								
<p>JAVA FUNDAMENTALS Fundamentals of OOPs – Java Features – Constants – Variables – Data types - Operators – Arrays – Strings – control statements – Class – object – methods [8]</p> <p>COLLECTIONS and EXCEPTION HANDLING Collections: Set, List, Vector and Map. Interfaces – Packages – Exception Handling. [11]</p> <p>MULTI THREADING AND JAVA NETWORKING Multi threading - Java Thread model – Main thread – creating thread – creating multiple thread – Thread priority – methods – synchronization – IPC, RMI – Basics – RMI Layer – Stub, Skeleton - RMI Implementation. [8]</p> <p>REGEX and STREAMS Regular Expression: Matcher Class, Pattern class and Pattern Syntax Exception class, Regex Character Classes and Quantifiers, Metacharacters. Streams: Generating streams, forEach, map, filter, limit, sorted, parallel processing and collectors. [9]</p> <p>SERVLET and JavaFX Server Side Programming; Servlet Architecture – Servlet Life cycle - Servlet Get and Post Method – Executing servlet. JavaFX: Architecture, 2D &3D Shapes, Animations, Colors, Text, UI Controls [9]</p>

CS

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
IV	3	0	0	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> To gain the knowledge about basic structure ,Instructions and functional units of a digital computer Discuss in detail the operation of the arithmetic unit including the algorithms and implementation of data manipulation. To study in detail the different types of control and the concept of pipelining and study the hierarchical memory system, cache memory Study the different ways of communicating with I/O devices and standard I/O interfaces To understand the instruction and thread level parallelism concepts and multicore processors.
---------------------	---

Course Outcomes	<p>At the end of the course student will able to</p> <p>CO1: Describe the basic structure of computer, Instruction sequencing and Addressing modes.</p> <p>CO2: Express the basic design of Addition and subtraction for fixed point numbers, multiplication and division of fixed numbers and basics of floating point numbers</p> <p>CO3: Discuss the concept of Instruction execution, generation of control signals, pipelining and hazards.</p> <p>CO4: Summarize the concept of Cache memory and its performance, interrupts, buses, Direct Memory Access and Standard I/O Interfaces.</p> <p>CO5: Gain Knowledge about Parallelism concepts ,compiler techniques, multiprocessor architecture and case studies on Intel's processors.</p>
------------------------	---

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Basic Structure of Computers

Functional units - Basic operational concepts - Bus structures - Software performance – Memory locations and addresses – Memory operations – Instruction and instruction sequencing – Addressing modes – Assembly language – Basic I/O operations – Stacks and queues. [9]

Arithmetic Unit

Addition and subtraction of signed numbers – Design of fast adders – Multiplication of positive numbers - Signed operand multiplication and fast multiplication – Integer division – Floating point numbers and operations. [9]

Basic Processing Unit

Fundamental concepts – Execution of a complete instruction – Multiple bus organization – Hardwired control – Micro programmed control - Pipelining – Basic concepts – Data hazards – Instruction hazards – Influence on Instruction sets – Data path and control consideration – Superscalar operation. [9]

Memory and I/O Systems

Speed,Size,Cost– Cache memories – Performance considerations – Accessing I/O Devices – Interrupts – Direct Memory Access – Buses– Interface Circuits– PCI,USB. [8]

Parallelism and Multiprocessors

Instruction Level Parallelism: ILP concepts – Pipelining overview - Compiler Techniques for Exposing ILP – Dynamic Branch Prediction – Dynamic Scheduling -Hardware Based Speculation – Static scheduling - Thread Level Parallelism: Symmetric and Distributed Shared Memory Architectures –Case studies: Intel core i7, Atom Processors [10]

Common to all Branches

Semester	Hours / Week			Total Hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
IV	2	0	2	45	3	50	50	100

Objective(s)

- Develop character , camaraderie,
- Inculcate discipline, secular outlook
- Enrich the spirit of adventure, sportsman spirit
- Ideals of selfless service amongst cadets by working in teams
- Improve qualities such as self-discipline, self-confidence, self-reliance and dignity of labour in the cadets.

Course Outcomes

At the end of the course, the students will be able to
 CO1: Display sense of patriotism, secular values and shall be transformed into motivated youth who will carry out nation building through national unity and social cohesion.
 CO2: Demonstrate the sense of discipline with smartness and have basic knowledge of weapons and their use and handling
 CO3: Illustrate various forces and moments acting on aircraft
 CO4: Outline the concepts of aircraft engine and rocket propulsion
 CO5: Design, build and fly chuck gliders/model airplanes and display static models

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

NCC Organization & National Integration [9]

NCC Organization – History of NCC- NCC Organization- NCC Training- NCC Uniform – Promotion of NCC cadets – Aim and advantages of NCC Training- NCC badges of Rank- Honors’ and Awards – Incentives for NCC cadets by central and state govt. History and Organization of IAF-Indo-Pak War-1971-Operation Safed Sagar. National Integration- Unity in diversity- contribution of youth in nation building- national integration council- Images and Slogans on National Integration.

Drill & Weapon Training [9]

Drill- Words of commands- position and commands- sizing and forming- saluting- marching- turning on the march and wheeling- saluting on the march- side pace, pace forward and to the rear- marking time- Drill with arms- ceremonial drill- guard mounting.(WITH DEMONSTRATION). Main Parts of a Rifle- Characteristics of .22 rifle- loading and unloading – position and holding- safety precautions – range procedure- MPI and Elevation- Group and Snap shooting- Long/Short range firing (WITH PRACTICE SESSION)

Principles of Flight [9]

Laws of motion-Forces acting on aircraft–Bernoulli’s theorem-Stalling-Primary control surfaces – secondary control surfaces-Aircraft recognition.

Aero Engines [9]

Introduction of Aero engine-Types of engine-piston engine-jet engines-Turboprop engines-Basic Flight Instruments- Modern trends.

Aero Modeling [9]

History of aero modeling-Materials used in Aero-modeling-Types of Aero-models – Static Models-Gliders-Control line models-Radio Control Models-Building and Flying of Aero-models.

Reading Comprehension Level 2 (Paraphrasing Poems) - Letter Drafting - Email Writing - Paragraph Writing - Newspaper and Book Review Writing - Skimming and Scanning - Interpretation of Pictorial Representations. Practices: Sentence Completion - Sentence Correction - Jumbled Sentences - Synonyms & Antonyms - Using the Same Word as Different Parts of Speech - Editing Materials: Instructor Manual, Word power Made Easy Book, News Papers							6
Unit – 2	Oral Communication – Part 3						
Self-Introduction - Miming (Body Language) - Introduction to the Sounds of English - Vowels, Diphthongs & Consonants, Introduction to Stress and Intonation - Extempore - News Paper and Book Review - Technical Paper Presentation. Material: Instructor Manual, News Papers							4
Unit – 3	Verbal Reasoning – Part 1						
Analogies - Alphabet Test - Theme Detection - Family Tree - Blood Relations (Identifying relationships among group of people) - Coding & Decoding - Situation Reaction Test - Statement & Conclusions Material: Instructor Manual, Verbal Reasoning by R.S.Agarwal							8
Unit – 4	Quantitative Aptitude – Part 1						
Problem on Ages - Percentages - Profit and Loss - Simple & Compound Interest - Averages - Ratio, Proportion Material: Instructor Manual, Aptitude Book							6
Unit – 5	Quantitative Aptitude – Part 2						
Speed, Time & Work and Distance - Pipes and Cisterns - Mixtures and Allegations - Races - Problem on Trains - Boats and Streams Practices : Puzzles, Sudoku, Series Completion, Problem on Numbers Material: Instructor Manual, Aptitude Book							6
Total							30

Passed in BoS Meeting held on 02/12/2023
Approved in Academic Council Meeting held on 23/12/2023

50 CS 501 - Computer Networks

CS

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
V	3	0	0	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> To understand the computer networking basics and concepts of data communications, functions of different layers, IEEE To Know the standards employed in computer networking To make the students to get familiarized with different protocols and network components. To develop an understanding of different components of computer networks, various protocols, modern technologies and their applications. To understand the application layer and its applications
---------------------	---

Course Outcomes	<p>At the end of the course student will able to</p> <p>CO1: Know the concept of components, categories and ISO/OSI model of networks</p> <p>CO2: Describe the Concept of various error detection techniques and Flow, Error control.</p> <p>CO3: Compare the concept of Circuit switching and Packet switching.</p> <p>CO4: Gain the knowledge of Congestion control and QoS Techniques.</p> <p>CO5: Identify the Purpose of Domain Name Space, Email and FTP.</p>
------------------------	--

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Data Communications

Networks – Components and Categories –Line Configuration – Topologies –Protocols and Standards – ISO / OSI model – Transmission Media – Coaxial Cable – Fiber Optics –Interfaces(RS232 Standard) and Modems [9]

Data Link Layer

Error – detection and correction – Parity – LRC – CRC – Hamming code – Flow Control and Error control –Stop and wait – go back-N ARQ – selective repeat ARQ- sliding window – HDLC. - LAN - Ethernet IEEE 802.3 – Connecting devices-Repeaters-Hubs-Bridges [9]

Network Layer

Internetworks – Circuit Switching – Packet Switching– IP addressing methods – Sub netting –Super netting– Routers- Routing Algorithms – Distance Vector Routing – Link State Routing- ICMP / Frame format, Query Messages. [9]

Transport Layer

Duties of transport layer – Multiplexing – Demultiplexing – Sockets – User Datagram Protocol (UDP) – Transmission Control Protocol (TCP) – Congestion Control – Quality of services (QOS)-Techniques [9]

Application Layer

Domain Name Space (DNS) – Email (SMTP)-File Transfer protocol (FTP) – HTTP – HTTPS-World Wide Web.

Case Study: Structural Health Monitoring, Traffic Control, Health Care, Pipeline Monitoring, Precision Agriculture. [9]

CS

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
V	3	0	0	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> To familiarize the students with various data models and query language. Gain knowledge on data storage and indexing concepts. To expose the fundamentals of transaction processing and recovery concepts. To make the students aware of the various current trends in database system. To know the current trends of various databases
---------------------	---

Course Outcomes	<p>At the end of the course student will able to</p> <p>CO1: Express the knowledge of data base systems and analyze the various data models</p> <p>CO2: Employ the concept of Data Definition Language and Data Manipulation Language and apply the various Normal Forms in database design</p> <p>CO3: Express the knowledge of secondary storage device andthe concepts of hashing, B Tree,B+ Tree in indexing to retrieve the data</p> <p>CO4: Apply the various concurrency control techniques in database transactions and recovery techniques</p> <p>CO5: Classify the recent databases such and Express the knowledge of data warehousing and data mining</p>
------------------------	---

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction and Conceptual Modeling

Introduction Database systems – DBMS Applications – Purpose of DBMS – Views of Data - Database System Architecture –Data Storage and Querying – DB Users and Administrators - Data Models – ER model – Relational Model – Relational Algebra and Calculus. [9]

Relational Model

Introduction to SQL – Intermediate SQL – Advanced SQL– Triggers – Functions and Procedures –Embedded SQL - Normalization for Relational Databases (up to 5NF). [9]

Data Storage and Indexing Concepts

Record storage and Primary file organization –RAID – Operations on Files- Heap File- Sorted Files- Hashing Techniques – Index Structure for files –Different types of Indexes- B-Tree - B+Tree. [9]

Transaction Management Transaction – Transaction Concepts- Transaction Model- Desirable properties of Transaction- Schedule and Recoverability- Serializability – Concurrency Control – Types of Locks- Two Phase locking- Time stamp based concurrency control – Recovery Techniques – Concepts- Immediate Update- Deferred Update. [9]

Current Trends Object Oriented Databases –Distributed databases- Homogenous and Heterogeneous- Distributed data Storage –Distributed Transaction – Commit Protocols - Data Mining– Data Mining Applications – Data Warehousing. [9]

50 CS 503 - Formal Language and Automata Theory

CS

Semester	Hours / Week			Total Hrs	Credit C	Maximum Marks		
	L	T	P			CA	ES	Total
V	3	1	0	60	4	50	50	100

Objective(s)	<ul style="list-style-type: none"> To understand the types of finite automata and the relationship between finite automata. To understand regular expressions, push down automata and context free grammar To understand the properties of context free language To learn the programming techniques of Turing machine and undecidable problems. To learn the concepts of Undecidability and interactable Problems.
---------------------	--

Course Outcomes	<p>At the end of the course student will able to</p> <p>CO1: Comprehend the formal proofs, Inductive proofs and Finite Automata</p> <p>CO2: Understand regular expressions and the properties of regular languages</p> <p>CO3: Construction of context-free grammar and Push-down automata</p> <p>CO4: Interpret the uses of Turing machine and properties of Context-Free Languages</p> <p>CO5: Recognize the undecidability, and Interactable problems</p>
------------------------	---

Note: The hours given against each topic are of indicative. The faculty have the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Introduction to Automata

Introduction to formal proof – Additional forms of proof – Inductive proofs –Finite Automata (FA): Deterministic Finite Automata (DFA)– Non-deterministic Finite Automata (NFA) – Finite Automata with Epsilon transitions. [6]

Regular Expressions and Languages

Regular Expression – Finite Automata and Regular Expressions – Properties of regular languages: Proving languages not to be regular – Closure properties of regular languages – Equivalence and minimization of Automata. [7]

Context-Free Grammar and Languages

Context-Free Grammar (CFG) – Parse Trees – Ambiguity in grammars and languages [5]

Pushdown Automata

Definition of the Pushdown automata – Languages of a Pushdown Automata – Equivalence of Pushdown automata and Context Free Grammars - Deterministic Pushdown Automata. [7]

Properties of Context-Free Languages

Normal forms for Context Free Grammars – Pumping Lemma for Context Free Languages - Closure Properties of Context Free Languages [5]

Turing Machines

The Turing Machines – Programming Techniques for Turing Machine. [6]

Undecidability

A language that is not Recursively Enumerable (RE) – An undecidable problem that is RE – Undecidable problems about Turing Machine – Post’s Correspondence Problem [5]

Interactable Problems

The classes Polynomial Time (P) and Nondeterministic Polynomial Time(NP). [4]

CS

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
V	3	0	2	75	4	50	50	100

Objective(s)	<ul style="list-style-type: none"> • Enable the students to learn basic web concepts • To learn the concepts of scripting languages and server side programming • To apply the features of XML and JDBC Connectivity • To Write scripts in PERL and JSP • To make aware of the students about development in web technologies
---------------------	--

Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Express the features of HTML and Employ various style sheet concepts in HTML</p> <p>CO2: Describe the basics concepts of JavaScript and express various types events</p> <p>CO3: Analyzing the concepts of XML and JDBC</p> <p>CO4: Describe the purpose of PERL language and Gain the knowledge of JSP in server side programming</p> <p>CO5: Express the various types of applications</p>
------------------------	---

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

INTRODUCTION

Internet Basic - Introduction to HTML - List - Creating Table - Linking document - Frames - Graphics to HTML Doc - Style sheet - Style sheet basic - Add style to document - Creating Style sheet rules - Style sheet properties - Font - Text - List - Color and background color - Box - Display properties. [9]

JAVASCRIPT

introduction to Javascript - Advantage of Javascript - Javascript Syntax - Datatype - Variable - Array - Operator and Expression - Looping Constructor - Function - Dialog box – Events [9]

XML and JDBC

Features of XML, The XML Declaration, Element Tags- Nesting and structure, XML text and text formatting element, Table element, Mark-up Element and Attributes, Document Type Definition (DTD), XML Schema-Introduction-Jdbc Architecture-Types of Drivers-Statement-ResultSet-PreparedStatement-Connection Modes-SavePoint-Batch Updates-CallableStatement [10]

PERL AND JSP

Programming CGI Scripts – PERL-Introduction-JspLifeCycle-Jsp Implicit Objects & Scopes- Jsp Directives:page ,include,taglib-Jsp Scripting Elements:declaratives,scriptlets,expressions- JspActions:StandardAction ,Custom Actions-DataBase Connectivity in JSP [10]

APPLICATIONS

e-Business Models – Building an e-Business – e-Marketing – Database connectivity – Online Payments – Security - XML and e-Commerce – m-Business. [9]

Practice:

1. Design a personal web page using CSS
2. Write a Java Script program which makes use of Java Script's inbuilt objects
3. Design web page for employee details using XML with database connectivity
4. A web page using PERL
5. Write a JSP program to implement Students mark Statements with database connectivity

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

INTRODUCTION TO PYTHON

Introduction to Python –Strings –List–Tuples –Dictionaries–Basic Operators–Decision Making statements –Looping statements -File Input and Output [09]

MODULAR DESIGN AND EXCEPTION HANDLING

Modules in Python –Creation of modules -Namespaces –Importing modules –Loading and Execution ; Program Routine –Functions –Parameter Passing -Types –Recursion ; Exceptions –Types –Handling Exceptions-User Defined Exceptions-Pandas [09]

OBJECT ORIENTED PROGRAMMING

ObjectOrientedProgramming–ClassandObjects–DataAbstraction-Encapsulation–Inheritance–Polymorphism –Implementation - **Packages:** NumPy – Pandas - Data Wrangling [09]

DATABASE CONNECTIVITY AND NETWORK PROGRAMMING

Introduction to database –Relational Databases : Writing SQL statements; Defining tables; Setting up a Database – Python database APIs –Network Protocols –Socket Programming –Client Server Program –Chat Application. [09]

GUI PROGRAMMING AND GRAPHICS

GUI Programming toolkits –Introduction to Tkinter –Creating GUI widgets –Resizing –Configuring widget options – Creating Layouts –Radio buttons –Check boxes –Dialog boxes –Drawing using Turtle. [09]

50 CS 602 - Principles of Compiler Design

CS

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
VI	3	1	0	60	4	50	50	100

Objective(s)	<ul style="list-style-type: none"> • Understand the fundamentals of lexical analysis phase of compiler • Discuss syntactic analysis functionalities of compiler • Identify the processes involved in intermediate code generation • Explain issues code generation phase of compiler • Describe optimization techniques
---------------------	--

Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Understand the basics of compilers and describe phases of compilers CO2: Interpret the major role played by syntax analysis</p> <p>CO3: Explain the processes involved in intermediate code generation</p> <p>CO4: Summarize the major processes involved in code generation. CO5: Illustrate the features of code optimization.</p>
------------------------	---

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

LEXICAL ANALYSIS

Introduction to Compilers-Structure of compiler -The phases of compiler – Cousins of compiler -The grouping of phases-Compiler construction tools. The role of the lexical analyzer- Input Buffering –Specification of Tokens – Recognition of Tokens [9]

SYNTAX ANALYSIS

The role of the parser-Context-free grammars-Writing a grammar-Top down parsing- Recursive Descent Parser - Predictive Parser-LL(1) Parser-Bottom-up Parsing- Shift Reduce Parser-LR parsers-SLR parser – Canonical LR parser –LALR Parser. [9]

INTERMEDIATE CODE GENERATION

Intermediate languages –Three-Address Code –Types and Declarations –Translation of Expressions –Rules for Type Checking and Type Conversions –Control Flow –Back patching –Switch Statements –Procedures.[9]

CODE GENERATION

Issues in the Design of a Code Generator –Target Language –Addresses in the Target Code –Basic Blocks and Flow Graphs –Optimization of Basic Blocks –A Simple Code Generator. [9]

CODEOPTIMIZATION

Code Optimization –Principal Sources of Optimization-Peepphole Optimization-Introduction to Data Flow Analysis –Run Time Environments –Storage Organization –Stack Allocation of Space –Access to Non-Local Data on the Stack.[9]

51 CS 603 – Software Testing									
CS									
Semester	Hours / Week			Total hrs	Credit	Maximum Marks			
	L	T	P			C	CA	ES	Total
VI	3	0	0	45	3	50	50	100	
Objective(s)	<ul style="list-style-type: none"> To explain the basics of software testing. To highlight the strategies for software testing. To stress the need and conduct of testing levels. To identify the issues in testing management. To bring out the ways and means of controlling and monitoring testing activity To study about Automation testing and tools 								
Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Interpret the basic concepts of Software testing, defects, verification and validation</p> <p>CO2: Analyze the functional requirements of the system and the use of conducting the review</p> <p>CO3: Infer the need of testing techniques for White box, Basis path, Black box and Control structure testing</p> <p>CO4: Classify different strategic approaches and types in software testing</p> <p>CO5: Learn about Automation Testing tools and implement the guidelines to generate test cases design.</p>								
<p>Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.</p>									
<p>Introduction to Testing</p> <p>Software Testing – Definition of Software Testing – Objective and Limits of Testing –Principles of Software Testing- Software Testing Life Cycle- Testing Strategy – Roles and Responsibilities of a Software Tester in Organizations –Origins of Defects – Cost of Defects – Independent Verification and Validation. [9]</p> <p>Software testing Requirements</p> <p>Software Testing Requirements - Analyzing the requirements -Classifying the Functional and Non Functional Requirements with their types. Software Testing Review Process - Objective of Software Testing Review - Types of Reviews - Peer Review, Walkthrough, Inspection - Checklists of Review Process - Review Log. [9]</p> <p>Testing Techniques</p> <p>White Box Testing Techniques – Static and Dynamic Testing – Statement Coverage – Decision Coverage –Basic Path Testing – Control Flow Graph Coverage – Branch Coverage – Conditional Coverage – McCabe's Cyclomatic Complexity – Mutation Testing. Black Box Test Techniques – Boundary Value Analysis – Equivalent Class Partition – Error Guessing – Decision Table – State Transition Table – Pair Wise Testing – UseCase Testing. [9]</p> <p>Testing Types</p>									

Unit Testing – Smoke Testing – Functional Testing and its Types – Integration, System Testing, User Acceptance Testing (Alpha and Beta)- Non Functional Testing and its Types – Performance Testing (Load, Volume and Stress)-Recovery Testing, Browser Compatibility Testing – Security Testing – Scalability Testing – Usability Testing – Ad Hoc Testing – Internationalization Testing – Configuration Testing - Data warehouse Testing and Business Intelligence Testing –Mobile Testing. [9]

Automation Tools and Test Cases

Software Test Automation – Scope of Automation - Design and Architecture for Automation – Automation Testing using Selenium Tool – Definition of Test Case – Standard, Guidelines and Naming Conventions for Test Case Design – Characteristics of Good Test Cases and its templates – Creation of Test Case Requirement Coverage – Traceability Matrix – Test Case Review Process – Test Execution – Test Log – Reporting of Test Execution – Risk Based Testing Approach. [9]

51 CS 6P1–Python Programming Laboratory

CS

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
VI	0	0	4	60	2	60	40	100

Objective(s)	<ul style="list-style-type: none"> • To gain the fundamental skills in Python programming Language • To understand the concepts of modular design • To implement the object oriented programming and working with python packages • To enhance the knowledge in database connectivity • To develop the programs in GUI
---------------------	---

Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Know the basic concepts of Python CO2: Understand the modular design and exception handling CO3: Ability to develop programs on object oriented concepts and working with python packages CO4: Implement the data base connectivity CO5: Integrate the concept of GUI programming and Graphics</p>
------------------------	---

LIST OF EXPERIMENTS

1. Implement the basic concepts of Python
2. Implement List, string and Tuples
3. Implement the concept of Decision making and looping statements.
4. Implement File operations
5. Build models using object oriented concepts
6. Working with data using pandas
7. Perform various numpy operations and special functions
8. Build models using database connectivity
9. Build model using GUI
10. Drawing using Turtle
11. Mini project to predict the time taken to solve a problem given the current status of the user.

	L	T	P			C	CA	ES
VI	1	0	2	45	2	60	40	100

Objective(s)	<ul style="list-style-type: none"> • To study the basic concepts of MYSQL. • To discover the PHP operators and functions. • To apply the knowledge of string handling functions in PHP. • To expand knowledge of MYSQL database connectivity and file handling functions in PHP.
---------------------	--

Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Interpret the concepts of MYSQL and its record selection technologies.</p> <p>CO2: Demonstrate the basic concepts and developing a simple application using PHP operators and Functions.</p> <p>CO3: Exhibit the string handling functions in PHP.</p> <p>CO4: Demonstrate the MYSQL database connectivity.</p> <p>CO5: Demonstrate the file handling functions in PHP.</p>
------------------------	--

1. Connecting the MYSQL database and perform the following
 - a. Creating and Deleting Database.
 - b. Creating a Table.
 - c. Examining the Results.
 - d. Inserting / Retrieving Data into / from Tables.
2.
 - a. Selecting Specific Rows and Columns.
 - b. Deleting and Updating Rows.
 - c. Loading a Database from a File.
3. PHP program that displays a welcome message
4. PHP program to implement Simple data storage, operators and Functions.
5. PHP script implements string handling functions.
6. PHP Script that implements the database connectivity.
7. PHP scripts that implement the following file handling operations
 - i. Reading data from the file
 - ii. Writing data to the file
 - iii. Printing all the records.
8. Write a PHP script to add the Rollno, name, six subjects' marks into Mark table in MySQL and display the average and result

50 HS 001 - Engineering Economics and Financial Accounting

Common to all Branches

Semester	Hours / Week			Total Hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
VII	3	0	0	45	3	50	50	100

Course Objective(s)	<ul style="list-style-type: none"> • To make the Engineering student to know about the basic of economics & how to organize a business • To know the financial aspects related to business. • To know about functions of banks. • To understand the different methods of appraisal of projects and • To know about the pricing & capital techniques.
----------------------------	---

Course Outcome s	<p>At the end of the course, the students will be able to</p> <p>CO1: Identify suitable demand forecasting techniques and prevailing market structure</p> <p>CO2: Describe the forms of business and differentiate between proprietorship and partnership</p> <p>CO3: Explain the kinds of banks and illustrate the Balance sheet with suitable example</p> <p>CO4: Interpret fixed cost and variable cost and technical feasibility and economic feasibility</p> <p>CO5: Apply break even analysis and summarize the managerial uses of breakeven analysis</p>
-------------------------	--

Basic Economics

Definition of economics – nature and scope of economics – basic concepts of economics – factors of production – demand analysis – definition of demand – Law of demand – Exception to law of demand – Factors affecting demand – elasticity of demand – demand forecasting – definition of supply – factors affecting supply – elasticity of supply – market structure – perfect competition – imperfect competition - monopoly – duopoly – oligopoly and bilateral monopoly . [9]

Organization and Business Financing

Forms of business – proprietorship – partnership - joint stock company - cooperative organization – state Enterprise -mixed economy - Money and banking – kinds of banking - commercial banks - central banking functions - control of credit - monetary policy - credit instrument – Types of financing - Short term borrowing - Long term borrowing - Internal generation of funds - External commercial borrowings - Assistance from government budgeting support and international finance corporations- analysis of financial statement- Balance sheet-profit and loss account- Funds flow statement- Examples in all members [9]

Financial Accounting and Capital Budgeting

The balance Sheet and related concepts – The profit and loss statement and related concepts – Financial ratio analysis – Cash flow analysis – fund flow analysis – Capital budgeting– Average rate of return – Payback period – Net present value and internal rate of return. [9]

Cost Analysis

Types of costing – traditional costing approach - activity based costing - Fixed Cost – variable cost – marginal cost – cost output relationship in the short run and in long run – pricing practice – full cost pricing – marginal cost pricing – going rate pricing – bid pricing – pricing for a rate of return – appraising project profitability - cost benefit analysis – feasibility reports – appraisal process – technical feasibility - economic feasibility – financial feasibility. [9]

Break Even Analysis

Basic assumptions –break even chart – managerial uses of break even analysis - applications of break even analysis in engineering projects. [9]

Objective(s)	<ul style="list-style-type: none"> The objective of this course is to impart necessary knowledge of the mathematical foundations needed for data science and develop programming skills required to build data science applications 							
Pre-requisites	Fundamentals in linear algebra / statistics / probability							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Understand the basics of Data Sciences</p> <p>CO2: To know the mathematical foundations needed for data Science and perform Exploratory Data Analysis.</p> <p>CO3: Implement models such as k-nearest Neighbors, Naive Bayes, linear and logistic Regression, decision trees, neural networks and clustering.</p> <p>CO4: Create effective visualization of given data</p> <p>CO5: Build data science applications.</p>							
<p>Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.</p>								
<p>Introduction to core concepts and technologies: Introduction, Terminology, Data-Properties of Data, Types of data, Why Data Science? Computer Science, Data Science, and Real Science, data science process, Data Acquisition and Data Science Life Cycle, Ethics in Data Science, data science toolkit, Example applications. Data wrangling: Sources of data, Data collection and API, Working with data: Reading Files, Cleaning Data. [8]</p>								
<p>Statistical Inference, Exploratory Data Analysis:</p> <p>Statistical thinking in Data Science, Statistical Inference, Statistical Analysis-Mean, Median, Mode, Standard Deviation, Range, Percentile, Modeling, Exploratory Data Analysis: Philosophy of Exploratory Data Analysis, Data</p>								

Passed in BoS Meeting held on 02/12/2023
 Approved in Academic Council Meeting held on 23/12/2023

BoS Chairman

visualization, Missing value analysis, The correction matrix, Outlier detection analysis [9]

Basic Machine Learning Algorithms: Brief introduction, Linear / Polynomial Regression, Logistic Regression, Classification, Regularization, Support vector machines, Naive Bayes, Cross Validation, Label Encoding, Random Forests, Decision Trees, Clustering, Dimensionality reduction, Manifold learning, Introduction to Neural Networks, Confusion Matrix - Evaluation Metrics – Recall, Precision, F-measure, Accuracy. [10]

Data visualization: Introduction, Types of data visualization, Data Visualization - Basic principles, ideas and tools for basic data visualization tools (plots, graphs and summary statistics)- various visualization techniques used in Data Science. Data visualization Tool: Working with Tableau, Creating charts, Mapping data in Tableau. create your own visualization of a complex dataset [10]

Applications of Data Science, Case Studies of Data Science Application , Recommender Systems on Real-World Data Sets, Weather forecasting, Stock market prediction, Object recognition. [8]

Laboratory:

1. Perform Data exploration and preprocessing
2. Implement Linear and Logistic regression
3. Implement Naive Bayes classifier for dataset stored as CSV file.
4. Implement regularized logistic regression
5. Build models using different Ensembling techniques
6. Build models using Decision trees
7. Build model using SVM with different kernels
8. Implement K-NN algorithm to classify a dataset.
9. Build model to perform Clustering using K-means after applying PCA and determining the value of K using Elbow method.
10. Simulate Singular Value Decomposition

Mini project to predict the time taken to solve a problem given the current status of the user.

Total Hours : 45+15=60 hours

- Objective(s)**
- To learn about the effective usage of power point presentation
 - To prepare presentation with various effects
 - To visualize the data in the presentation
 - To acquire knowledge about data sources
 - To investigate the research articles based on various applications

Course Outcomes

At the end of the course, the students will be able to
 CO1: Develop presentation with visual effects
 CO2: Prepare a presentation with supporting data
 CO3: Attain the importance of research and data collection
 CO4: Analyze the various sources of research articles
 CO5: Interpret the tools and methods in preparing manuscript

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Preparing a Presentation (3)
 Presenting data using Power Point- Power Point preparation and presentation, Design principles for creating effective Power Point slides with visuals displaying data. - Profile, - Problem, and a set of basic Excel charts, use to create a presentation.

Creating effective slides using PowerPoint (2)
 Create effective slides using PowerPoint. Tools within Power Point, structure story line, create story boards, identify primary elements of slide design, display data and finalize slide presentation.

Research Designs and Data Sources (3)
 Overview of the topics: process of data collection and analysis. Starting with a research question - Review of existing data sources- Survey data collection techniques- Importance of data collection- Basic features affect data analysis when dealing with sample data. Issues of data access and resources for access.

Measurements and Analysis Plan (2)
 Importance of well-specified research question and analysis plan: various data collection strategies - Variety of available modes for data collection – review of literature - Tools at hand for simple analysis and interpretation.

VII	0	0	4	60	2	100	00	100
Objective(s)	Imparting the practical knowledge to the students and also to make them to carry out the technical procedures in their project work. To provide an exposure to the students to refer, read and review the research articles, journals and conference proceedings relevant to their project work and placing this as their beginning stage for their final presentation.							
Course outcomes	CO1: Identify a problem in the domain of interest CO2: Perform literature survey and identify the existing issues CO3: Identify the possible solutions CO4: Identify tools and techniques to implement the project CO5: Prepare technical report							
1. Three reviews have to be conducted by the committee of minimum of three members one of which should be the guide 2. Problem should be selected 3. Students have to collect about 20 papers related to their work 4. Reports has to be prepared by the students as per the format in Annexure – 1 5. Preliminary implementation can be done if possible 6. Internal evaluation has to be done for 100 Marks`

Preparation of Manuscript

(3)

Data necessary before writing a paper: the context in which the scientist is publishing. Learning and identification of research community - advantages of scientific journal publication and manuscript preparation - ethical values in publishing.

Writing the paper

(2)

Writing research paper - structure of the paper - usage of bibliographical tools - abstract preparation and to do a peer review for the abstract of the others, as in real academic life. Plagiarism of the prepared manuscript.

Copyright

(2)

Copyright law in India-Meaning of copyright-Classes of works for copyright protection -Ownership of Copyright-Assignment of copyright-Intellectual Property Rights (IPR) of Computer Software-Copyright Infringements-Procedure for registration

Patents

(3)

Patent System In India -Types of Patent Applications-patentable invention - Not patentable-Appropriate office for filing -Documents required Publication and Examination of Patent Applications -Grant of Patent-Infringement of Patents -E-filing of Patent applications

Deploying Mobile App. in play store

(5)

Introduction to Application Stores – Play Store, App Store, Microsoft Store, Creating App – Android, iOS, UWP, Defining Manifest, Certifying App, Create Store Listing, Sharing Screenshots, Sharing App Credentials for Testing.

51 CS L01 –Object Oriented Programming

Open Elective

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
	2	0	2	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> To enable the students to learn how C++ supports object Oriented properties To create and use classes, objects, constructors and destructors for specific applications To learn how inheritance and virtual functions implement dynamic binding with polymorphism. To learn how to design and implement generic classes with C++ templates. To learn how to use exception handling in C++ programs.
---------------------	---

Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Recognize the principles of object-oriented problem solving and programming</p> <p>CO2: Implement the concept of classes and objects</p> <p>CO3: Analyze the concept of reusability and compile time polymorphism</p> <p>CO4: Recognize the concept of dynamic memory allocation and runtime polymorphism</p> <p>CO5: Identify the uses of generic programming and exception handling</p>
------------------------	--

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction to C++ and Functions:

Evolution of C++ - Concepts of OOP - Advantages of OOP, Basics of C++: Structure of a C++ Program - Streams in C++ and Stream Classes - Unformatted Console I/O Operations, C++ Declarations, Functions: Return by Reference -Default Arguments - Const arguments - Inline Functions - Function Overloading. [9]

Classes and Objects, Constructors and Destructors:

Classes in C++ - Declaring Objects- Access Specifiers and their Scope - Defining Member Functions - Static Members - Array of Objects - Object as Function Arguments - Friend Function and Friend Classes, Constructors and Destructors: Characteristics - Parameterized Constructor - Overloading Constructor - Copy Constructor - Dynamic Initialization Constructor – Destructors. [9]

Inheritance, Compile Time Polymorphism and Type Conversion:

Inheritance: Reusability - Types of Inheritance - Abstract Classes - Object as Class Member, Operator Overloading: Rules for Operator Overloading – The Keyword Operator –Unary and Binary Operators Overloading-Overloading using Friend Function - Type Conversion. [10]

Pointers, Memory Models, Binding and Polymorphism:

Pointers: Pointer to Class - Pointer to Object – void, wild and this Pointers – Pointer to Constant and Constant Pointers, Memory Models: Dynamic Memory Allocation - Heap Consumption - Dynamic Objects, Polymorphism: Binding in C++ - Pointer to Base and Derived class objects - Working with Virtual Functions - Pure Virtual Functions - Object Slicing - Virtual Destructor. [9]

Generic Programming with Templates, Exception Handling:

Class Templates - Function Templates - Exception Handling: Principles of Exception Handling - try, throw and catch keywords - Re-throwing Exception - Specifying Exception. [8]

Total Hours : 45

Introduction

Introduction to packet tracer: key features, benefits. Recognize the purpose and functions of various network devices such as routers, switches, bridges and hubs. Identify common applications and their impact on the network. Identify the appropriate media, cables, ports, and connectors to connect network devices to other network devices and hosts in a LAN. [9]

LAN Switching Technologies

Packet tracer: create the topology, configure and verify initial switch configuration including remote access management. Configure switch IOS basics – hostnames, console, privilege password and telnet password. [9]

IP Addressing

IPv4 address - necessity of using private and public IP addresses for IPv4 addressing, IPv4 addressing scheme using VLSM and summarization to satisfy addressing requirements in a LAN environment. Subnet mask and DNS lookup. [9]

IP Routing Technologies

Basic routing concepts - boot process of IOS routers - configure and verify utilizing the CLI to set basic router configuration - configure and verify operation status of a device interface, both serial and Ethernet - verify router configuration and network connectivity. [9]

Firewall and Network Security

Firewall configuration strategies-packet filtering-firewall configuration and administration - working with proxies and application - level firewalls-authenticating users- setting up a virtual private network- building your own firewall [9]

Open Elective

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
	2	0	2	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> • Understand the fundamentals of problem solving. • Interpret the knowledge and reasoning in propositional logic and first order logic. • Gain knowledge on Planning and acting in the real world. • Learn to represent uncertain knowledge in solving AI problems • Understand the different forms of learning. 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Understand the concepts of intelligent agents and problem solving aspects. CO2: Interpret the knowledge of propositional logic and FOL. CO3: Understand the issues of planning problems. CO4: Describe the Uncertainty and probabilistic reasoning. CO5: Summarize the types of learning methods and AI applications.</p>							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Problem Solving

Introduction - What is Artificial Intelligence? – Structure of Intelligent Agents –Problem formulation – Uninformed search strategies – Informed search strategies – Constraint satisfaction problems [9]

Knowledge and Reasoning

Logical agents – Propositional logic – First-order logic – Inference in first order logic – Unification - Forward Chaining – Backward Chaining – Resolution [9]

Planning

Planning Problem - Planning with state-space search – Partial-order planning – Planning graphs - Planning and acting in the real world - Conditional planning - Multi agent planning. [9]

Uncertain Knowledge and Reasoning

Uncertainty – Notations and Axioms of Probability - Probabilistic Reasoning – Bayesian networks (Semantics, Exact Inference, Approximate Inference) – Inference in Temporal models – Hidden Markov models [9]

Learning and Applications

Learning from observation -Inductive learning –Decision trees – Ensemble Learning - Explanation based learning – Statistical Learning methods. Applications of Artificial intelligence. [9]

Hands On:

1. Develop PEAS descriptions for given AI tasks
2. Implement Hill climbing algorithm
3. Write a program to generate the output for A* algorithm
4. Write a program to show the Tic Tac Toe game for 0 and X
5. Implementation of Bayesian Belief networks
6. Approximate inferences in Bayesian network
7. Implementation of decision problems for various real-world applications
8. To learn various Bayesian parameters
9. Implementation of Hidden Markov Models
10. Implement propositional logic inferences for AI tasks

51 CS L08 Python Programming for Data Analytics

Open Elective

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			CA	ES	Total
	2	0	2	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> To know the basic python concepts To understand the data wrangling and string manipulation To understand data aggregation, group operation and time series To learn web scrapping and CSS selectors To visualize the data using packages in python
---------------------	--

Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Understanding the basic concepts of Python and data structures</p> <p>CO2: Understand the concept of data wrangling and various ways of combining and merging datasets</p> <p>CO3: Implement data aggregation and group operations and time series basics</p> <p>CO4: Gain the knowledge for Preparing and pre-processing of data, data aggregation and grouping concepts</p> <p>CO5: Leveraging web scraping and visualizing the results of analytics effectively</p>
------------------------	---

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Python Concepts

Interpreter – Program Execution – Statements – Expressions – Flow Controls – Functions - Numeric Types – Sequences - Strings, Tuples, Lists and - Class Definition – Constructors – Inheritance – Overloading – Text & Binary Files - Reading and Writing. [9]

Data Wrangling

Combining and Merging DataSets – Reshaping and Pivoting – Data Transformation – String Manipulation, Regular Expressions. [9]

Data Aggregation, Group Operations, Timeseries

GoupBy Mechanics – Data Aggregation – Groupwise Operations and Transformations – Pivot Tables and Cross Tabulations – Date and Time Date Type tools – Time Series Basics – Data Ranges, Frequencies and Shifting. [9]

Web Scraping

Data Acquisition by Scraping web applications – Submitting a form - Fetching web pages – Downloading web pages through form submission – CSS Selectors. [9]

Visualization In Python

Matplotlib package – Plotting Graphs – Controlling Graph – Adding Text – More Graph Types – Getting and setting values – Patches. [9]

Hands On:

1. Basic Python Programs
2. Program using String Operations
3. Program on python Data structures
4. Working with data in python using pandas
5. Design a personal web page using CSS
6. Visualization in python using matplotlib

50 CS L09 – Java Programming									
Open Elective									
Semester	Hours / Week			Total Hrs	Credit	Maximum Marks			
	L	T	P			C	CA	ES	Total
	2	0	2	60	3	50	50	100	
Objective(s)	<ul style="list-style-type: none"> To cram the fundamental element of the Java language. To communicate classes over objects using methods To implement Packages, Interfaces and Exception handling. To understand the concept of Collections. To apply the knowledge of threads and to access remote data. 								
Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Understand the need of Platform independency by acquiring knowledge in architecture, Language basics and implementing Character and String Class</p> <p>CO2: Express the concept of classes, objects and communicate classes over objects using methods</p> <p>CO3: Implement Packages, Interfaces and handle various Checked and Unchecked Exceptions</p> <p>CO4: Prompt the collection classes to implement various data structures</p> <p>CO5: Express the concept of thread execution with thread priority and to perform remote data access</p>								
<p>Note:Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.</p>									
<p>JAVA FUNDAMENTALS</p> <p>Fundamentals of OOPs – Java Features – Java Architecture-Language Basics: set PATH, set CLASSPATH, Executing your first Java Program-Constants – Variables – Data types - Operators – Arrays –control statements – Character Class-Strings : String class, String Buffer class, String Builder Class and String handling methods [9]</p>									
<p>CLASS and OBJECTS</p> <p>Class – Object– Methods-Method overloading-Constructor-Constructor Overloading-Wrapper Class - Inheritance-Method Overriding-super-final-Garbage Collection [8]</p>									
<p>PACKAGES, INTERFACES AND EXCEPTION HANDLING</p> <p>Packages-Access specifiers -Built-in Packages, User defined Packages-Interfaces-Abstract Class-Exception Handling-try-catch-throw-throws-finally-finalize-Managing Predefined Exceptions- Creating and handling User</p>									

defined Exceptions	[11]
COLLECTIONS	
Collections: Iterator, Enumerator, List, Set, Queue Vector and Map.	[8]
MULTI THREADING AND JAVA NETWORKING	
Multi threading - Java Thread model – Main thread – creating thread – creating multiple thread – Thread priority – methods – synchronization – IPC, RMI – Basics – RMI Layer – Stub, Skeleton - RMI Implementation.	[9]
Practice:	
1. Implementation of Simple Java Programs	
2. Implementation of Array based Logical Programs	
3. Implementation of Character, String class	
4. Demonstration of communication of classes over objects using getter, setter, constructor, methods	
5. Implementation of various inheritance	
6. Implementation of various data structures using Collections	
7. Implementation of different applications using packages, interfaces and to check abnormal conditions using exception handling.	
8. Implementation of multi-tasking concepts using threads	
9. Implementation of accessing remote data using RMI.	
10. Mini – Project

50 CS L12 – Linux and Shell Programming

Open Elective

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
	2	0	2	45	3	50	50	100

Objective(s)

- To know the basics of Linux OS, Linux environment and file system
- To understand and make effective use of the UNIX commands
- To learn and understand the use of process fundamentals in Linux
- To enhance the skills needed for the shell scripting and shell programming
- To develop the writing skills for system programming

Course Outcomes

At the end of the course, the students will be able to
 CO1: Apprehend the basics of Linux environment and file system
 CO2: Demonstrate and execute the files and directories commands to store in directories
 CO3: Interpret the uses of commands for the processes in Linux
 CO4: Analyze and implement the programs using shell programming
 CO5: Design and execute the filter commands using regular expressions to match a string of text

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction

Linux Introduction and File System - Basic Features, Advantages, Installing Requirement, Basic Architecture of Unix/Linux System, Kernel, Shell, Linux File System - Boot Block, Super Block, Inode Table, Data Blocks, How Linux Access Files, Storage Files, Linux Standard Directories. [09]

Files and Directories Commands

Files and Directories Commands - cd, ls, cp, md, rm, mkdir, rmdir, pwd, file, more and less, Creating and Viewing Files Command - cat, File Comparisons Commands - cmp and comm, View files, Disk Related Commands, Checking Disk Free Spaces, System Startup and Shut - Down Process, init and Run Levels. [09]

Essential Linux Commands

Understanding Shells, Processes in Linux - Process Fundamentals, Connecting Processes Commands - pipes and tee, Input/Output Redirecting, Manual Help, Background Processing, Managing Multiple Processes, Changing Process Priority with nice Command, Scheduling of Processes Commands - at, cron, batch, kill, ps, who and sleep, Printing Commands - find, sort, touch and file, File Related Commands - ws, sat, cut and dd, Mathematical Commands - bc, expr, factor and units, Creating and Editing Files Commands - vi and vim. [09]

Shell Programming

Shell Programming - Basic of Shell Programming, Various Types of Shell Available in Linux, Comparisons Between Various Shells, Shell Programming in Bash - read Command, Conditional and Looping Statements, Case Statements, Parameter Passing and Arguments, Shell Variables, System Shell Variables, Shell Keywords, Creating Shell Programs. [09]

Filtering Commands

Filtering Commands - pr, head, tail, cut, paste, sort, uniq and tr, Filter using Regular Expressions - grep, egrep, and sed; AWK Programming – Report Printing with AWK. [09]

Hands On:

1. Execution of files and directory commands to list all files or directories in the current directory.
2. Execution of scheduling of processes commands to schedule one-time jobs for a specific time and date

3. Implementation of Shell script to perform operations on files and strings.
4. Implementation of Shell programming concepts such as conditional and looping statements, and functions.
5. Implement and execute the C program in Linux.
6. Implementation of inter process communication between two unrelated processes.
7. Execution of filtering commands for filtering text for effective file operations.
8. Execution of filters and regular expressions commands grep, awk and sed that use all of its features.

Total Hours: 45

Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Apply data modeling techniques to design and configure custom objects, fields, and relationships in Salesforce.</p> <p>CO2: Apply advanced data management and customization techniques in Salesforce to enhance data organization and user experience.</p> <p>CO3: Evaluate and recommend appropriate Salesforce user setup and security settings to control access and permissions.</p> <p>CO4: Develop advanced automation solutions using Process Builder and Visual Workflow to meet complex business requirements.</p> <p>CO5: Evaluate and recommend appropriate reporting and analytics strategies based on business requirements.</p>
------------------------	---

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Salesforce Fundamentals
 Introduction to CRM- CRM Use Cases - Why Salesforce? - Overview of Salesforce platform and its Architecture - Advantage of Salesforce, Salesforce editions and licenses - Salesforce user interface and navigation - Salesforce Mobile App and Salesforce Lightning Experience -Signing up Developer Edition - Standard Objects - Creating Custom Objects - Fields and data types - Apps Creation. [08]

Salesforce Data Management and Customization Essentials
 Relationships and junction objects, Roll up Summary- Creating Formula Fields, Schema Builder. Data Validation - Validation rules. Working with Record Types and Page Layouts - Compact Layout- Lightning Record Pages – Home Page Customization -Path Settings. - List Views - Data import and data management tools. [10]

Security and Data Access
 Organization Security Controls - Passwords, IP restrictions, Network Settings. User Setup and Security - User Creation- Security Model: Meta Data - Profile settings and permissions - Permission set- Salesforce Sharing model -Organization Wide Defaults (OWD) - Role Hierarchy- Sharing Rules- Manual Sharing - Sharing rules and public groups. [10]

Business Process Automation
 Introduction to WorkFlow and Process Builder - Work flow rules – Work flow action - Flows: Types of Flow Screen Flow- Record Triggerrered Flow- Scheduled Trigger Flow- Auto Launched Flow. uses cases of Process Automation. Email Alerts and Field Updates - Approval Processes. [10]

Reports, Dashboards, and Analytics
 Creating or customizing a report - Summarizing data, report formats and filtering data, scheduling, Report Charts and Dashboard Components. Creating and modifying dashboards-custom report types - **Summary Report- Tabular Report- matrix Report- Dash Boards: Standard DashBoards & Dynamic DashBoards.** [07]

- Hands On:**
1. Create Objects, Fields and App
 2. Explore Data Types
 3. Create Field Relationships
 4. Create Record Types(create), Page Layout (adding section, field property settings), Page Layout Assignment (assign page layout based on Record types)
 5. Create Lightning Record Page, List View, Path Settings
 6. Validation Rule
 7. Automation I
 - a. Screen Flow
 - b. Auto Launched Flow
 8. Automation II
 - a. Record Trigger Flow

Open Elective

Semester	Hours / Week			Total Hrs.	Credit	Maximum Marks		
	L	T	P			C	CA	ES
	2	0	2	45	3	50	50	100

- Objectives**
- To become familiar with the advanced features of Java Language
 - To discover how to write Java applications this can communicate with Relational Databases
 - To understand the possible actions can be performed using JSP
 - To develop Web Applications using Servlets / JSP
 - To understand the process of deploying JSP pages in popular servers like Tomcat

- Course Outcomes**
- CO1: Interpret the java fundamentals and essentials of inheritance
 CO2: Execute the various commands in RDBMS for data management
 CO3: Apply the elements available in JSP for web page design
 CO4: Explore the various JSP actions in web application development
 CO5: Demonstrate the process of developing and consuming API in JSP

Java Fundamentals

Java Architecture, Language basics, OOPS, Garbage collection, String, String buffer, Collection Framework, Packages, Exception Handling, Abstract, Interfaces. [9]

RDBMS and JDBC

RDBMS/SQL/PL/SQL: Introduction to RDBMS, DML, DDL, Select statement, Restricting and Sorting data, Single row functions, Group functions, Joins, JDBC: Introduction, Establishing Connection, Execute query process results, Meta Data and Prepared Statement, Callable Statement and Transactions. [9]

JSP Elements

Scripting Elements: Scriptlets, Expression, Declarations, Data Types, Variables, Operators, JSP Directive Elements: Page, Include and Taglib. [9]

JSP Actions and Expression Language

JSP Actions: Standard Actions, forward, include, param, useBean, setProperty, getProperty, element, attribute, body, EL Expression, JSP Standard Tag Library, Core Library. [9]

AJAX

HTML: Introduction, Forms, JavaScript: Introduction to JavaScript, JavaScript objects, JavaScript validations, JSON, JSP GET and POST, JSP API, AJAX: Introduction, AJAX application, AJAX database application. [9]

51 CS L03 / 51 CS E12 C# and .NET Core

Elective – I

Semester	Hours / Week			Total hrs.	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
	2	0	2	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To gain the fundamental skills in C# programming Language To gain knowledge in object-oriented concepts in C# To understand the concepts of the .NET Core and its platform To implement data manipulation using Razor pages To enhance the knowledge in Model-View-Controller architecture 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Know the basic concepts of C#</p> <p>CO2: Understand the Object-Oriented concepts in C#</p> <p>CO3: Ability to develop web pages using ASP.NET Core platform</p> <p>CO4: Implement the data manipulation concept using Razor Pages</p> <p>CO5: Integrate the concept of MVC in ASP.NET Core platform</p>							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction to C#:

Introducing C# – Understanding .NET – Overview of C# – Literals – Variables – Data Types – Operators – Expressions – Branching – Looping – Methods – Arrays – Strings – Structures – Enumerations. [8]

Object-Oriented Programming in C#:

Classes – Objects – Inheritance – Methods – Polymorphism – Interfaces – Operator Overloading – Delegates – Events – Errors – Exceptions – Collections – Managing File system. [8]

ASP.NET Core Web Application using Razor Pages:

Introduction to ASP.NET Core Web Application – Environment Setup – Project Layout – Static and Default Files - Enabling and Defining Razor Pages – Shared Layouts – Using code-behind files. [10]

Data Manipulation using Razor Pages:

Introduction to ADO.NET – Connection Class with Authentication – Command Class – DataReader Class – DataAdapter Class – DataSet – OnGet – OnPost – OnPostDelete – OnPostEdit – OnPostView – REST API – Model and Controller for REST API. [10]

Model-View-Controller (MVC) in ASP.NET Core:

Introduction to MVC – Setting up an ASP.NET Core MVC Website – MVC Routing – Controllers and Actions – Model – Views – Parameters Passing – View Helpers – Model Validation. [9]

Total Hours: 45 hours

51 CS E13 \ 51 CS L06 R Programming

Elective – I

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
V	2	0	2	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> • To introduce basic concepts in R programming • To emphasis is on various data structures in R • To understand the R programming fundamentals • To work with data in R programming • To work with strings and dates in R Programming
---------------------	---

Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Elucidate the history and overview of R Programming</p> <p>CO2: Explore data structures in R Programming</p> <p>CO3: Implement the R program using loops and functions</p> <p>CO4: Manipulate the information using file</p> <p>CO5: Implement string operations and dates in R</p>
------------------------	--

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

History and Overview of R

What is R? - What is S? - The S Philosophy - Back to R - Basic Features of R - Free Software - Design of the R System - Limitations of R - R Resources . [9]

R – Basics and Data structures in R

Math, Variables, and Strings - Vectors and Factors - Vector operations - Arrays & Matrices – Lists – Dataframes – Missing Values – Names [9]

R Programming Fundamentals

Conditions and loops - Functions in R - Objects and Classes – Debugging [9]

Working with Data in R

Reading CSV and Excel Files - Reading text files -Writing and saving data objects to file in R [9]

Strings and Dates in R

String operations in R - Regular Expressions - Dates in R -Times in R- Operations on Dates and Times[9]

Total Hours: 45 hours

51 CS E14 – PHP programming

Elective – I

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
V	2	0	2	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> • To get an overview of what's possible with PHP programs • To learn language fundamentals, including data types, variables, operators, and flow control statements • To recognize functions and strings. • To work single and multidimensional arrays • To interact with relational databases like MySQL or NoSQL databases such as MongoDB
---------------------	--

Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Comprehend the PHP, installation of PHP and language basics. CO2: Recognize the concept of functions and its types CO3: Grasp the concept of strings and regular expressions CO4: Recognize the concept of arrays and its types CO5: Comprehend the accessing of a database and various relational databases</p>
------------------------	--

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction to PHP and Language Basics

What Does PHP Do?-A Brief History of PHP-Installing PHP-A Walk Through PHP Language Basics: Lexical Structure-Data Types-Variables-Expressions and Operators-Flow-Control Statements-Including Code-Embedding PHP in Web Pages	[11]
Functions Calling a Function-Defining a Function-Variable Scope-Function Parameters-Return Values-Variable Functions-Anonymous Functions	[7]
Strings Quoting String Constants-Printing Strings-Accessing Individual Characters-Cleaning Strings-Encoding and Escaping-Comparing Strings-Manipulating and Searching Strings-Regular Expressions	[8]
Arrays Indexed Versus Associative Arrays-Identifying Elements of an Array-Storing Data in Arrays-Multidimensional Arrays-Extracting Multiple Values-Converting Between Arrays and Variables-Traversing Arrays-Sorting-Acting on Entire Arrays-Using Arrays-Iterator Interface	[11]
Databases Using PHP to Access a Database-Relational Databases and SQL-MySQLi Object Interface-SQLite-Direct File-Level Manipulation-MongoDB	[8]

50 CS E15-Parallel and Distributed Computing

Elective – I

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
V	3	0	0	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> To understand the need and fundamentals of parallel computing paradigms To learn the nuances of parallel algorithm design To understand the programming principles in parallel computing architectures To learn few problems that are solved using parallel algorithms To learn fault tolerant techniques and various algorithms
---------------------	--

Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Understanding the requirements of Parallel Computing</p> <p>CO2: Apply the knowledge of different types of methodologies like mapping techniques</p> <p>CO3: Recognize the concept of message passing and shared address space</p> <p>CO4: Review the concepts of distributed computing paradigm with applications</p> <p>CO5: Apply the knowledge of fault tolerant techniques</p>
------------------------	--

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

INTRODUCTION TO PARALLEL COMPUTING

Scope of Parallel Computing – Parallel Programming Platforms – Implicit Parallelism – Limitations of Memory System Performance – Control Structure of Parallel Platforms – Communication Model of Parallel Platforms – Physical Organization of Parallel Platforms – Communication Costs in Parallel Machines – Impact of Process - Processor Mapping and Mapping Techniques. [9]

PARALLEL ALGORITHM DESIGN

Preliminaries – Decomposition Techniques – Characteristics of Tasks and Interactions – Mapping Techniques for Load Balancing – Methods for Containing Interaction Overheads – Parallel Algorithm Models – Basic Communication Operations – One-to-All Broadcast and All-to-One Reduction – All-to-All Broadcast and Reduction – All-Reduce and Prefix Sum Operations – Scatter and Gather – All-to-All Personalized Communication- Circular Shift – Improving the Speed of some Communication Operations . [9]

PROGRAMMING USING MESSAGE PASSING AND SHARED ADDRESS SPACE

Principles of Message Passing Programming – Building Blocks – Send and Receive Operations – MPI – Message Passing Interface – Topologies and Embedding – Overlapping Communication with Computation – Collective Communication and Computation Operations – Groups and Communicators – POSIX thread API – OpenMP: a Standard for Directive based Parallel Programming – Applications of Parallel Programming - Matrix-Matrix Multiplication – Solving Systems of Equations – Sorting Networks - Bubble Sort Variations – Parallel Depth First Search [9]

DISTRIBUTED COMPUTING PARADIGM

Paradigms for Distributed applications – Basic algorithms in Message passing Systems – Leader Election in Rings – Mutual Exclusion in Shared Memory. [9]

FAULT TOLERANT DESIGN

Synchronous Systems with Crash Failures – Byzantine Failures – Impossibility in Asynchronous Systems - Formal Model for Simulation – Broadcast and Multicast – Specification of a Broadcast Service – Implementing a Broadcast Service – Multicast in Groups – Distributed Shared Memory – Linearizable – Sequentially Consistent Shared Memory – Algorithms [9]

51 CS E21 -Cryptography and Network Security

Elective – II

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
VI	2	0	2	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To know about various encryption techniques. To understand the concept of Public key cryptography and number theory. To study about message authentication and hash functions To impart knowledge on Network security and web security To impart knowledge on System level security and practical implementation 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Understand the concept of classical and modern encryption techniques</p> <p>CO2: Explore the concept of public key cryptography by understanding various concept of number theory</p> <p>CO3: Recognize the various authentication and hash functions</p> <p>CO4: Analyze the E-mail, Web and IP Security principles</p> <p>CO5: Managing the intrusion detection, attacks of viruses by applying the principles of firewalls and performing the practical implementation of cryptography and network security</p>							

Note: The hours given against each topic are of indicative. The faculty have the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Introduction

OSI Security Architecture-Classical Encryption Techniques-Cipher Principles-Data Encryption Standard-Cipher Design Principles and Modes of Operation -Double DES-Triple DES-AES - Blowfish-RC5 algorithm [9]

Number Theory and Public key cryptography

Finite Fields and Number Theory- Groups, Rings, Fields-Modular arithmetic-Euclid's algorithm-Finite fields-Polynomial Arithmetic –Prime numbers-Fermat's and Euler's theorem-Testing for primality -The Chinese remainder theorem- Discrete logarithms-Key management - Diffie-hellman key exchange- Elliptic Curve Arithmetic and Cryptography- Key distribution- Public Key Cryptography and RSA. [10]

Authentication and hash function

Authentication requirement – Authentication function – MAC – Hash function – Security of hash function and MAC –MD5 – SHA – HMAC – CMAC – Digital signature and authentication protocols – DSS – El Gamal – Schnorr. [9]

Network Security

Kerberos – X.509 Authentication services- E-mail Security -Pretty Good Privacy-S/MIME-IPSecurity -Web Security [9]

System level security

Intrusion Detection System – Virus and related threats – Countermeasures – Firewalls and types- design principles – Practical implementation of cryptography and security. [8]

50 CS E25 – High Speed Networks

Elective – II

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
VI	3	0	0	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> • To highlight the features of different technologies involved in High Speed Networking and their performance. • To acquire the knowledge of congestion and traffic management • To study about performance of TCP and ATM congestion control • To learn integrated and differentiated services in high speed networks • To understand the working principles of various protocols
---------------------	--

Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Gain the Knowledge about introduction about ATM and Frame relay</p> <p>CO2: Understanding and an up-to-date survey of developments in High Speed Networks</p> <p>CO3: Analyze the techniques involved to support real-time traffic and congestion control</p> <p>CO4: Exploring integrated and differentiated services</p> <p>CO5: Exploring different levels of quality of service (Q.S) to different applications</p>
------------------------	--

High Speed Networks	<p>Frame Relay Networks – Asynchronous transfer mode – ATM Protocol Architecture, ATM logical Connection, ATM Cell – ATM Service Categories – AAL. High Speed LANs: Fast Ethernet– WirelessLANs: applications, requirements – Architecture of 802.11. [9]</p>
Congestion and Traffic Management	<p>Queuing Analysis- Queuing Models – Single Server Queues – Effects of Congestion – Congestion Control – Traffic Management – Congestion Control in Packet Switching Networks. [8]</p>
TCP and ATM congestion control	<p>TCP Flow control – TCP Congestion Control – Retransmission – Timer Management – Exponential RTO back off – KARN's Algorithm – Window management – Performance of TCP over ATM Traffic and Congestion control in ATM – Requirements – Attributes – Traffic Management Frame work, Traffic Control – ABR traffic Management – ABR rate control, RM cell formats, ABR Capacity allocations. [11]</p>
Integrated and Differentiated Services	<p>Integrated Services -Architecture – Approach, Components, Services- Queuing Discipline, FQ, PS, BRfq, GPS, WFQ – Random Early Detection. [8]</p>
Protocols for QoS Support	<p>RSVP – Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms – Multiprotocol Label Switching – Operations, Label Stacking, Protocol details – RTP – Protocol Architecture, Data Transfer Protocol. [9]</p>

51 CS E31/51 CS L07 Artificial Intelligence

Elective – III

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
VI	2	0	2	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> Understand the fundamentals of problem solving. Interpret the knowledge and reasoning in propositional logic and first order logic. Gain knowledge on Planning and acting in the real world. Learn to represent uncertain knowledge in solving AI problems Understand the different forms of learning. 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Understand the concepts of intelligent agents and problem solving aspects. CO2: Interpret the knowledge of propositional logic and FOL. CO3: Understand the issues of planning problems. CO4: Describe the Uncertainty and probabilistic reasoning. CO5: Summarize the types of learning methods and AI applications.</p>							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Problem Solving

Introduction - What is Artificial Intelligence? – Structure of Intelligent Agents –Problem formulation – Uninformed search strategies – Informed search strategies – Constraint satisfaction problems [9]

Knowledge and Reasoning

Logical agents – Propositional logic – First-order logic – Inference in first order logic – Unification - Forward Chaining – Backward Chaining – Resolution [9]

Planning

Planning Problem - Planning with state-space search – Partial-order planning – Planning graphs - Planning and acting in the real world - Conditional planning - Multi agent planning. [9]

Uncertain Knowledge and Reasoning

Uncertainty – Notations and Axioms of Probability - Probabilistic Reasoning – Bayesian networks (Semantics, Exact Inference, Approximate Inference) – Inference in Temporal models – Hidden Markov models [9]

Learning and Applications

Learning from observation -Inductive learning –Decision trees – Ensemble Learning - Explanation based learning – Statistical Learning methods. Applications of Artificial intelligence. [9]

Hands On:

1. Develop PEAS descriptions for given AI tasks
2. Implement Hill climbing algorithm
3. Write a program to generate the output for A* algorithm
4. Write a program to show the Tic Tac Toe game for 0 and X
5. Implementation of Bayesian Belief networks
6. Approximate inferences in Bayesian network
7. Implementation of decision problems for various real-world applications
8. To learn various Bayesian parameters
9. Implementation of Hidden Markov Models

10. Implement propositional logic inferences for AI tasks

51 CS E32- Semantic Web

Elective – III

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
VI	2	0	2	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> Introducing basic concepts, tasks, methods, and techniques in semantic web To understand the concept of RDF and its schemas To learn the ontology and semantic web architecture To construct logic and inference and rule markup in XML Understanding of the semantic web process and issues.
---------------------	---

Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Gain knowledge in Semantic Web and its Technologies</p> <p>CO2: Construct the RDF data model and defining the vocabularies used in RDF data model</p> <p>CO3: Identify the requirements of Ontology and know the sublanguages</p> <p>CO4: Write the Monotonic and Non monotonic Rules</p> <p>CO5: Realize the applications of semantic web technologies</p>
------------------------	--

Introduction
 History – Semantic Web Layers –Semantic Web technologies – Semantics in Semantic Web – XML: Structuring – Namespaces – Addressing – Querying – Processing [9]

RDF
 RDF and Semantic Web – Basic Ideas - RDF Specification – RDF Syntax: XML and Non- XML - RDF elements – RDF relationship: Reification, Container, and collaboration – RDF Schema –Editing, Parsing, and Browsing RDF/XML-RQL-RDQL [9]

Ontology
 Why Ontology – Ontology movement – OWL – OWL Specification - OWL Elements –OWL constructs: Simple and Complex – Ontology Engineering : Introduction –Constructing ontologies – Reusing ontologies – On-To-Knowledge Semantic Web architecture [9]

Logic and Inference
 Logic – Description Logics - Rules – Monotonic Rules: Syntax, Semantics and examples – Non- onotonic Rules – Motivation, Syntax, and Examples – Rule Markup in XML: Monotonic Rules, and Non-Monotonic Rules [9]

Applications of Semantic Web Technologies
 RDF Uses: Commercial and Non-Commercial use – Sample Ontology – e-Learning –Web Services – Web mining – Horizontal information – Data Integration – Future of Semantic Web [9]

51 CS E33- Big Data Security

Elective – III

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
VI	2	0	2	45	3	50	50	100

Objective(s)

- To know the fundamentals of big data security and organizational security.
- To analyses the security, Compliance, Auditing and Protection.
- To know the steps to construct big data and classification of big data
- To study the Hadoop security design and configuration
- To study about data security and event logging

Course Outcomes

At the end of the course, the students will be able to
 CO1: Know the fundamental of Big data privacy, ethics and security
 CO2: Analyses the security, Compliance, Auditing and Protection.
 CO3: Construct security design using Hadoop
 CO4: Configuring Hadoop ecosystem security
 CO5: Analyze data security and event logging.

Big Data Privacy, Ethics and Security

Privacy – Re-identification of Anonymous People – Why Big Data Privacy is self-regulating? – Ethics – Ownership – Ethical Guidelines – Big Data Security – Organizational Security. [9]

Security, Compliance, Auditing, and Protection

Steps to secure big data – Classifying Data – Protecting – Big Data Compliance – Intellectual Property Challenge – Research Questions in Cloud Security – Open Problems. [9]

Hadoop Security Design

Kerberos – Default Hadoop Model without security - Hadoop Kerberos Security Implementation & Configuration. [9]

Hadoop Ecosystem Security

Configuring Kerberos for Hadoop ecosystem components – Pig, Hive, Oozie, Flume, HBase, Sqoop. [9]

Data Security & Event Logging

Integrating Hadoop with Enterprise Security Systems - Securing Sensitive Data in Hadoop – SIEM system – Setting up audit logging in hadoop cluster [9]

50 CS E34 - XML and Web Services

Elective – III

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
VI	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To provide an in-depth knowledge of XML and Web Services. To understand the fundamental concepts of Web services. To understand the fundamental concepts of XML Technology. To design Web service Architecture. To Study Building Blocks of Web services and content management using XML 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Know the fundamental elements in XML and XML Technologies and schemes</p> <p>CO2: Design and analysis the Architecture of Web Services.</p> <p>CO3: Construct building blocks of Web services</p> <p>CO4: Design XML web service in E-Business and implement xml in E-Business</p> <p>CO5: Analyze Content Management in XML.</p>							

Xml Technology Family

XML – benefits – Advantages of XML over HTML – EDL –Databases – XML based standards – DTD –XML Schemas – X- Files – XML processing – DOM –SAX- presentation technologies – XSL – XFORMS – XHTML – voice XML – Transformation – XSLT – XLINK – XPATH –XQ [9]

Architecting Web Services

Business motivations for web services – B2B – B2C- Technical motivations – limitations of CORBA and DCOM – Service – oriented Architecture (SOA) – Architecting web services – Implementation view – web services technology stack – logical view – composition of web services – deployment view – from application server to peer to peer – process view – life in the runtime [9]

Web Services Building Block

Transport protocols for web services – messaging with web services – protocols – SOAP – describing web services – WSDL – Anatomy of WSDL – manipulating WSDL – web service policy – Discovering web services – UDDI – Anatomy of UDDI- Web service inspection – Ad- Hoc Discovery – Securing web services. [9]

Implementing Xml In E-Business

B2B – B2C Applications – Different types of B2B interaction – Components of e-business XML systems – ebXML – Rosetta Net Applied XML in vertical industry – Web services for mobile devices. [9]

Xml And Content Management

Semantic Web – Role of Meta data in web content – Resource Description Framework – RDF schema – Architecture of semantic web – content management workflow – XLANG –WSFL. [9]

50 CS E35 - Information Storage and Management

Elective – III

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
VI	3	0	0	45	3	50	50	100

Objective(s)

- To study the concepts of storage architecture and architecture
- To learn about various storage networking technologies
- To understand NAS and object based and unified storage
- To study backup and archives and business impact analysis
- To provide comprehensive learning of storage technology, allow to make more informed decisions in an increasingly complex IT environment.

Course Outcomes

At the end of the course, the students will be able to

CO1: Understand the origin of storage systems and observe the virtualization
 CO2: Classify the connectivity between the storage devices and servers
 CO3: Apprehend the network attached storage in sharing environment
 CO4: Revise the data backup the data archive in the event of data loss
 CO5: Analyze the concept of local replication technologies

Introduction To Information Storage

Information Storage – evolution of storage architecture – data center infrastructure – virtualization and cloud computing. Data Center Environment: host – connectivity – disk dive performance – DAS benefits and limitations – flash drives. Intelligent Storage Systems: components – storage provisioning – types of Intelligent storage syste[9]

Storage Networking Technologies

Fibre Channel Storage Area Networks: components – FC connectivity – switched fabric ports – FC architecture – fabric services – switched fabric login types – zoning – FC SAN topologies – virtualization in SAN. IP SAN and FcoE: iSCSI – FCIP – FcoE [9]

Network Attached Storage

NAS: Benefits – file sharing and network file sharing – components – I/O operations – implementations – file sharing protocols – factors affecting NAS performance – file level virtualization. Object-Based and Unified Storage: Object-Based storage devices – content-addressed storage – CAS use case – Unified storage. [9]

Backup and Archive

Introduction to Business Continuity: Information Availability – BC: terminologies – planning life cycle – failure analysis – business impact analysis – technology solutions. Backup: Purpose – considerations – granularity – methods – architecture – operations – topologies – backup in NAS environments – targets – data duplication for backup – Data Archive. [9]

Replication

Local replication: terminology – uses – replica consistency – technologies – restore and restart considerations – virtualization environment. Remote replication: modes – technologies – migration in virtualization environment. [9]

50 CS E42 – AGILE METHODOLOGY

Elective – IV

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
VII	2	0	2	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> To adapt existing testing experience and knowledge to Agile values and principles. To choose the appropriate agile approaches for a specified application. To realize the importance of interacting with business stakeholders in determining the requirements for a software system. To develop the techniques and tools for improving team collaboration and software quality. To examine their applications in the real world and addresses their impacts on developing software
---------------------	---

Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1 : Review the knowledge on Techniques and Tools used for Agile Methodology.</p> <p>CO2 : Apply the various Agile Flavors based on the nature of the Project.</p> <p>CO3 : Apply knowledge & recognize the impact of Social Aspects on Software Development Success and Migration to Agile</p> <p>CO4: Recognize the importance of interacting with Business Stakeholders in determining the requirements for a Software System.</p> <p>CO5 : Recognize Software Process improvement as an ongoing Task for Development Teams and how Agile approaches can be scaled up to the Enterprise level.</p>
------------------------	--

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

AGILE METHODOLOGY

Theories for Agile Management – Agile Software Development – Traditional Model vs. Agile Model – Classification of Agile Methods – Agile Manifesto and Principles – Agile Project Management – Agile Team Interactions – Ethics in Agile Teams – Agility in Design, Testing – Agile Documentations – Agile Drivers, Capabilities and Values. [9]

AGILE PROCESSES

Lean Production – SCRUM, Crystal, Feature Driven Development- Adaptive Software Development – Extreme Programming: Method Overview – Lifecycle – Work Products, Roles and Practices. [9]

AGILITY AND KNOWLEDGE MANAGEMENT

Agile Information Systems – Agile Decision Making – Earl’S Schools of KM – Institutional Knowledge Evolution Cycle – Development, Acquisition, Refinement, Distribution, Deployment , Leveraging – KM in Software Engineering – Managing Software Knowledge – Challenges of Migrating to Agile Methodologies – Agile Knowledge Sharing – Role of Story-Cards – Story-Card Maturity Model (SMM), Role and Skill of Tester in Agile Team. [9]

AGILITY AND REQUIREMENTS

Impact of Agile Processes in RE–Current Agile Practices – Variance – Overview of RE Using Agile – Managing Unstable Requirements – Requirements Elicitation – Agile Requirements Abstraction Model – Requirements Management in Agile Environment, Agile Requirements Prioritization – Agile Requirements Modeling and Generation – Concurrency in Agile Requirements Generation. [9]

AGILITY AND QUALITY ASSURANCE

Agile Product Development – Agile Metrics – Feature Driven Development (FDD) – Financial and Production

Metrics in FDD – Agile Approach to Quality Assurance – Test Driven Development – Agile Approach in Global Software Development. [9]

50 CS E43 - Software Forensics

Elective – IV

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			CA	ES	Total
VII	2	0	2	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> To learn basic concept of software forensics To study Player-Hackers, Crackers, Phreaks, and other Doodz, Avanced tools, Law and Ethics-Software forensics in court, Computer Virus and Malware Concepts and Background, Programming Cultures and Indicators, Stylistic Analysis and Linguistic Forensics, Nalysauthorship AIS.
---------------------	--

Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1 : Realize basics of Software Forensics technologies and practices</p> <p>CO2 : Comprehend the knowledge on players and various basic software forensics tools</p> <p>CO3 : Comprehend the law and ethics of forensics</p> <p>CO4: Identify various computer viruses and malware and Attain knowledge on programming cultures</p> <p>CO5 : Perform stylistic analysis and linguistic forensics</p>
------------------------	--

Introduction To Software Forensics, Software Code and Analysis Tools

Motivations and Rationales - General Characteristics - Black hat Products - Other Products - Summary - The Programming Process Digital Forensic Definitions - Software Forensics - Objectives and Objects of Software Forensics - Identity - Other Object of Study - Software Forensic Tools -The Process - The Products - Finally, Already, the Tools - Software Forensic Technologies and Practices - Content Analysis - Legal Considerations - Presentation in Court [9]

The Player-Hackers, Crackers, Phreaks, and Other Doodz

Terminology -Types of Black hats -The Products -The Resulting Objects -The Analytical Tools -Forensic Tools [4]

Advanced Tools, Law and Ethics-Software Forensics In Court

Decompilation -Desquirr -Dcc Boomerang -Plagiarism -JPlag -YAP -Other Approaches -summary -Legal Systems - Differences Within Common Law -Jurisdiction -Evidence -Types of Evidence - Rules of Evidence -Providing Expert Testimony -Ethics -Disclosure - Blackhat motivations as a Defense [9]

Computer Virus and Malware Concepts and Background, Programming Cultures and Indicators

History of Computer viruses and Worms -Malware Definition and Structure -Virus Structure -Trojan structure -Logic Bomb Structure -Remote Access Trojan (RAT) Structure -Distributed Denial of Service (DDoS) Structure Detection and Antidetection Techniques -Detection Technologies -tealth and Antidetection Measures -Summary -User Interface -Cultural Features and “Help” -Functions -Programming Style -Program structure -Programmer Skill and Objectives -Developmental Strictures -Technological Change –Summary. [9]

Stylistic Analysis and Linguistic Forensics, Nalysauthorship Ais

Biblical Criticism -Shakespeare and Other Literature -Individual Identification and Authentication -Content Analysis Noncontent Analysis -The Content/Noncontent Debate -Noncontent Metrics as Evidence of Authorship -Additional Indicators - Summary -Problems - Plagiarism Detection Versus Authorship Analysis -How Can It Work? - Source Code Indicators - More General Indicators - Is It Reliable? [9]

Hands On:

1. Implement the command line statement to recover lost files on SD/USB/HB in windows.
2. Implement and show the result of Safe Back tool for the suspect drive to create backup.
3. Implement and show the result of JPLAG plagiarism to find pairs of similar programs among a given set of programs.
4. Design the steps to capture TCP packets in Wireshark tool.

Design the content analysis for the given paragraph using grammar checker.

50 CS E44 - Multimedia Computing

Elective – IV

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			CA	ES	Total
VII	3	0	0	45	3	50	50	100

Objective(s)	Learning Concepts of Multimedia Tools, Multimedia Operating Systems, Multimedia Communication Systems, Data Compression and Multimedia Applications
Course Outcomes	<p>CO1: Examine different elements of multimedia system, storage media for multimedia systems and animation</p> <p>CO2: Comprehend multimedia editing tools for audio, video, image and analyse linking multimedia objects</p> <p>CO3: Outline Real-time, process, resource management and examine different Database management system for multimedia</p> <p>CO4: Predict multimedia communication subsystems and generate multimedia synchronization reference model</p> <p>CO5: Compare different data compression techniques and gain knowledge about Multimedia application</p>

Introduction to Multimedia

Elements of multimedia system – Need and aspects of multimedia - Information units. Sound - Audio file formats – MIDI – Images - Computer Image Processing - Principles of animation - Animation techniques - Creating animated scenes – Video - Basic concepts - Video Capture - Recording format - Storage for multimedia - CD Technologies - Multimedia Workstations [9]

Multimedia Tools

Basic tools - Image-editing tool - Painting and drawing tools –Sound editing programs - Video formats - Linking multimedia objects – OLE -presentation tools - authoring tools. [9]

Multimedia Operating Systems

Introduction - Real Time - Resource Management - Process Management - File Systems - Database Systems - Multimedia Database Management System - Characteristics of an MDBMS - Data Analysis - Data Structure - Operations on Data - Integration in a Database Model [9]

Multimedia Communication Systems

Application Subsystem - Transport Subsystem – Synchronization - Introduction - Notion of Synchronization - Presentation Requirements - A Reference Model for Multimedia Synchronization - Synchronization in distributed environment. [9]

Data Compression and Multimedia Applications

Source entropy and hybrid coding – JPEG – MPEG – H.261 - DVI. Video conferencing - Tele conferencing – Tele services – messaging services – retrieval services – Tele action services. [9]

50 CS E51 - Machine Learning								
Elective – V								
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
VIII	2	0	2	45	3	50	50	100
Objective(s)	1. To understand the basic concepts of machine learning 2. To have a thorough understanding of the Tree learning learning and Neural Networks 3. To learn the theoretical aspects of Bayesian Learning 4. To understand the principles of instance based learning and Cluster Analysis 5. To have a thorough understanding of the Learning sets of rules							
Course Outcomes	At the end of the course, the students will be able to CO1: identify the perspectives of machine learning CO2: apply decision tree and Artificial neural networks for real world problems CO3: design a Bayesian classifier for solving a problem CO4: illustrate the principles of instance based learning and Cluster Analysis CO5: describe the algorithms for rule and reinforcement learning							
Introduction: Learning Problems - Designing a Learning System - Perspectives and Issues in Machine Learning – Concept Learning – task – search – finding maximally specific Hypotheses – version spaces and candidate elimination algorithm-inductive bias [9]								
Decision Tree Learning and Artificial Neural Networks: Decision Tree Representation – Problems – basic decision tree learning algorithms – hypotheses search – Issues – Artificial Neural Networks: Introduction – Representations – Problems – Perceptrons – Multilayer networks and Back Propagation Algorithm – example. [9]								
Bayesian Learning: Bayes Theorem – Concept Learning – Maximum Likelihood and Least-Squared Error Hypothesis - Maximum Likelihood Hypotheses for Predicting Probabilities - Bayes Optimal Classifier - Gibbs Algorithm - Naïve Bayes Classifier – Example. [9]								
Instance Based Learning and Cluster Analysis: Introduction – k-Nearest Neighbour Learning – Locally Weighted Regression - Radial Basis Functions - Case-Based Reasoning. Cluster Analysis- Introduction - Types - A Categorization of Major clustering methods -partitioning methods - Hierarchical methods - Density-Based Methods. [9]								
Learning Sets of Rules: Learning sets of rules: Introduction – sequential covering algorithms – Learning Rule Sets-First order rules – FOIL – Induction as Inverted deduction – inverting resolution – Rough Set Theory: Concepts-of rough sets-Feature selection and rule induction-Theory and its applications - Reinforcement learning – Introduction – Learning task – Q learning-Nondeterministic Rewards and Action, Temporal Difference Learning-Generalizing from Examples. [9]								
Hands on: <ol style="list-style-type: none"> 1. Write a python program to import and export data using Pandas library functions. 2. Demonstrate various data pre-processing techniques for a given dataset. 3. Implement Simple and Multiple Linear Regression Models. 4. Develop Decision Tree Classification model for a given dataset and use it to classify a new sample. 5. Implement Naïve Bayes Classification in Python. 6. Build KNN Classification model for a given dataset. 7. Build Artificial Neural Network model with back propagation on a given dataset. 8. Write a python program to implement K-Means clustering Algorithm.

50 CS E52 – Foundations of Block Chain Technology

Elective – V

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
VIII	2	0	2	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> • Understand the basic concepts of Distributed systems and Cryptography • Understand emerging abstract models for Block chain Technology. • Identify the challenges and technical gaps existing between theory and practice in cryptocurrency domain • Design, build, and deploy smart contracts and distributed applications. • Develop Block chain based applications and games 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <p>CO1: Explore the basic concepts of Distributed database, Cryptography algorithms and functions.</p> <p>CO2: Interpret the design principles of Blockchain and Mining concepts.</p> <p>CO3: Investigate the techniques of distributed consensus.</p> <p>CO4: Recognize the concepts of cryptocurrency and learn Ethereum development</p> <p>CO5: Design and develop projects, smart contracts using Block-chain technology</p>							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Basics

Distributed Database, Two General Problem, Byzantine General problem and Fault Tolerance, Hadoop Distributed File System, Distributed Hash Table, ASIC resistance, Turing Complete.

Cryptography: Hash function, Digital Signature - ECDSA, Memory Hard Algorithm, Zero Knowledge Proof.

[9]

Blockchain

Introduction, Advantage over conventional distributed database, Blockchain Network, Mining Mechanism, Distributed Consensus, Merkle Patricia Tree, Gas Limit, Transactions and Fee, Anonymity, Reward, Chain Policy, Life of Blockchain application, Soft & Hard Fork, Private and Public blockchain. Blockchain Technology for IoT Applications

[9]

Distributed Consensus

Nakamoto consensus, Proof of Work, Proof of Stake, Proof of Burn, Difficulty Level, Sybil Attack, Energy utilization and alternate.

[8]

Cryptocurrency

History, Distributed Ledger, Bitcoin protocols - Mining strategy and rewards, Ethereum - Construction, DAO, Smart Contract, Truffle -Design and issue Crypto currency, Mining, DApps, GHOST, Vulnerability, Attacks, Sidechain, Namecoin.

[9]

Cryptocurrency Regulation and Applications

Stakeholders, Roots of Bit coin, Legal Aspects-Crypto currency Exchange, Black Market and Global Economy. Applications: Internet of Things, E-Governance, Land Registration, Medical Record Management System, Domain Name Service and future of Blockchain-Naive Blockchain construction - Hashcash implementation, Smart Contract Construction, AWS Blockchain Templates.

[10]

Hands on:

1. Creating Merkle tree
2. Creation of Block
3. Blockchain implementation
4. Creating ERC20 token
5. Blockchain implementation using Merkle Trees
6. Mining in Blockchain
7. Peer-to-Peer implementation using Blockchain
8. Creating Crypto-currency Wallet

50 CS E54 - Cyber Security

Elective – V

Semester	Hours/Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
VIII	2	0	2	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To understand the basic concepts and challenges in cyber security To impart the knowledge on modern tools to resolve the security issues To provide an ability to use basic security tools to enhance system security and can develop basic security enhancements in stand-alone applications. 							
Course Outcomes	<p>At the end of the course, the student will be able to</p> <p>CO1: Recognize the concept of cybercrime in mobile devices CO2: Enumerate the cyber security challenges in the modern devices. CO3: Analyze the working principle of cyber security tools and methods CO4: Understand the state of the art of Mobile platform security models CO5: Evaluate the various testing strategies in Mobile Security</p>							

Note:The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

INTRODUCTION TO CYBERCRIME

Cybercrime- definition and origins of the word- Cybercrime and information security - Classifications of cybercrime- Cybercrime and the Indian ITA 2000 - A Global Perspective on cybercrimes- Cloud Computing-Proliferation of Mobile and Wireless Devices- Trends in Mobility, Credit Card Frauds in Mobile and Wireless Computing Era. [9]

CYBER SECURITY CHALLENGES IN MODERN DEVICES

Security Challenges Posed by Mobile Devices- Registry Settings for Mobile Devices - Authentication Service Security- Attacks on Mobile/Cell Phones - Mobile Devices: Security Implications for Organizations- Organizational Measures for Handling Mobile-Devices-Related Security Issues - Organizational Security Policies and Measures in Mobile Computing Era, Laptops. [9]

TOOLS AND METHODS

Tools and Methods Used in Cybercrime, Proxy Servers and Anonymizers- Phishing -Password Cracking - Key loggers and Spywares, - Virus and Worms - Steganography – DoS and DDoS Attacks -SQL Injection, Buffer Over Flow - Attacks on Wireless Networks - Phishing, Identity Theft (ID Theft) - The Legal Perspectives - Cyberlaw: The Indian Context - The Indian IT Act. Introduction to Security Audit. [9]

Mobile platform security models

Android – iOS Mobile platform security models – Detecting Android malware in Android markets [9]

Mobile Security Testing

Mobile platform internals – Security testing in the mobile app development lifecycle – Basic static and dynamic security testing – Mobile app reverse engineering and tampering– Assessing software protections

Hands on:

1. Study of steps to protect your personal computer system by creating User Accounts with Passwords and types of User Accounts for safety and security.
2. Study the steps to protect a Microsoft Word Document of different version with different operating system.
3. Study the steps to remove Passwords from Microsoft Word
4. Study various methods of protecting and securing databases.

5. Study "How to make strong passwords" and "passwords cracking techniques".
6. Study the steps to hack a strong password.

Total Hours 45

50 CS E55 – Social Network Analysis

Elective – V

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
VIII	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To understand the concept of social network data and graphs to represent social relations. To gain the knowledge of social influence and its structure representation. To understand the information networks in social web and related applications. To describe the trust network analysis. To use software to simulate the dynamics of networks. 							
Course outcomes	At the end of the course, the students will be able to: CO1: Explore Social network data and social relations. CO2: Model social network data and understand its logical relationships. CO3: Analyze complex network structure of web for information retrieval. CO4: Mine the behavior of the users in the social networks. CO5: Simulate the dynamics of networks based on social network models.

INTRODUCTION	[8]
Social network data-Formal methods- Paths and Connectivity-Graphs to represent social relations-Working with network data- Network Datasets-Strong and weak ties - Closure, Structural.	
SOCIAL INFLUENCE	[9]
Homophily- Mechanisms Underlying Homophily, Selection and Social Influence, Affiliation, Tracking Link Formation in On-Line Data, Spatial Model of Segregation - Positive and Negative Relationships - Structural Balance - Applications of Structural Balance, Weaker Form of Structural Balance..	
INFORMATION NETWORKS AND THE WORLDWIDE WEB	[10]
The Structure of the Web- World Wide Web- Information Networks, Hypertext, and Associative Memory- Web as a Directed Graph, Bow-Tie Structure of the Web- Link Analysis and Web Search Searching the Web: Ranking, Link Analysis using Hubs and Authorities- Page Rank- Link Analysis in Modern Web Search, Applications, Spectral Analysis, Random Walks, and Web Search..	
SOCIAL NETWORK MINING	[9]
Clustering of Social Network graphs: Betweenness, Girvan Newman Algorithm-Discovery of communities- Cliques and Bipartite Graphs-Graph Partitioning Methods-Matrices-Eigen values Sim-rank.	
NETWORK DYNAMICS	[9]
Cascading Behaviour in Networks: Diffusion in Networks, Modelling Diffusion - Cascades and Cluster, Thresholds, Extensions of the Basic Cascade Model- Six Degrees of Separation-Structure and Randomness, Decentralized Search Empirical Analysis and Generalized Models- Analysis of Decentralized Search..
