K.S. Rangasamy College of Technology

(Autonomous)

Curriculum & Syllabi
of
B.E. Computer Science and Engineering
(For the batch 2021 – 25)

R2018

Courses Accredited by NBA, Accredited by NAAC "A++" Grade, Approved by AICTE, Affiliated to Anna University, Chennai.

KSR Kalvi Nagar, Tiruchengode – 637 215.

Namakkal District, Tamil Nadu, India.

VISION

To produce competent software professionals, academicians and researchers through Quality Education.

MISSION

- To produce competent software developers, system designers and network programmers.

- To keep abreast of the latest developments and technological transformations in computer science and engineering for social benefits.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: Graduates will provide effective solutions for software and hardware industries by applying the concepts of basic science and engineering fundamentals.

PEO2: Graduates will be professionally competent and successful in their career through lifelong learning.

PEO3: Graduates will contribute individually or as member of a team in handling projects and demonstrate social responsibility and professional ethics.

PROGRAMME OUTCOMES (POs)

Engineering Graduates will be able to:

PO1: **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2: **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: **Design /development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4: **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5: **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations

PO6:
The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7:
Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8:
Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9:
Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10:
Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11:
Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs):

Engineering Graduates will be able to:

PSO1: Apply standard Software Engineering practices and strategies in software project development using open-source programming environment and deliver a quality product for business success.

PSO2: Analyze and Interpret data by applying advanced data analytic models for decision making in Complex Problems and facilitate inter disciplinary research.

MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES (PEOs) WITH PROGRAMMEOUTCOMES (POs)

The B.E. Computer Science and Engineering Programme outcomes leading to the achievement of the objectives are summarized in the following Table.

Programme Educational Objectives	Programme Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
PEO 1	3	1	3	2	2	1	1	1	2	2	3	1
PEO 2	3	3	3	2	2	1	1	1	2	2	3	1
PEO 3	3	2	3	2	2	1	1	1	3	2	3	1

Contributions: 1- low, 2- medium, 3- high

50 EN 001 – Communication Skills I

Common to all Branches

Semester	Hours/Week			Total Hours	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
I	1	1	0	30	2	40	60	100

Objective(s)	• To help learners improve their vocabulary and to enable them to use words appropriately in different academic and professional contexts. • To help learners develop strategies that could be adopted while reading texts. • To help learners acquire the ability to speak effectively in English in real life and career related situations. • To equip students with effective speaking and listening skills in English. • To facilitate learners to enhance their writing skills with coherence and appropriate format effectively
Course Outcomes	**At the end of the course the students will be able to** CO1: Utilize digital literacy tools to develop listening skills & make use of contextual clues to infer meanings of unfamiliar words CO2: Able to select, compile & synthesize information using communication strategies for an effective oral presentation CO3: Skim & Scan the textual content & infer meanings of unfamiliar words to develop reading & vocabulary skills CO4: Generate ideas from sources to develop coherent content and support with relevant details in writing CO5: Recognize the basic phonetic patterns of language & execute it for competent loud reading

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Listening

Listening to Short Audios – Watching Short Videos - answering MCQs and Vocabulary Check- Listening to Short Comprehension Passages – Guided Listening – Listening to songs and cognizing the lyrics   **[4]**

Speaking

Brainstorming – Group Discussion (unstructured) – Self Introduction - Just a Minute (JaM) - Short Narratives – Cue Cards – Picture Cards – Conversational Practices (Preliminary)   **[4]**

Reading

Silent Reading – Scanning and Skimming - Reading short and Medium Passages – Cognition of Theme and Inferential Meaning - Academic and Functional Vocabulary List (350 words) – Word Power Check - Loud Reading – Modulation and Pronunciation Check   [**4**]

Writing

Functional Vocabulary and Word Power – Data Interpretation - Paragraph Writing – Letter Writing –Email Writing – Conversational Fill Ups   **[3]**

K.S.Rangasamy College of Technology – Autonomous R2018								
50 MA 001 - Calculus and Differential Equations								
Common to All Branches								
Semester	Hours / Week			Total	Credit	Maximum Marks		
	L	T	P	hrs	C	CA	ES	Total
I	3	1	0	60	4	40	60	100
Objective(s)	- To familiarize the students with the basic concepts in Cayley - Hamilton theorem and Orthogonal transformation. - To get exposed to the fundamentals in circle of curvature, evolute and envelope of the curves. - To acquire skills to understand the concepts involved in Jacobians and maxima and minima. - To solve various linear differential equations and simultaneous differential equations. - To learn various techniques and methods in solving definite and indefinite integrals.							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Apply Cayley - Hamilton theorem and to reduce quadratic form into canonical form. CO2: Compute the equation of the circle of curvature, evolute and envelope of the curves. CO3: Analyze Jacobian methods and constrained maxima and minima functions. CO4: Apply various methods in differential equations to solve linear and simultaneous differential equations. CO5: Evaluate definite and indefinite integrals using different techniques.							
Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**							

Matrices
Characteristic equation – Eigen values and Eigen vectors of a real matrix – Properties of Eigen values and Eigen vectors – Cayley-Hamilton theorem (without proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by orthogonal transformation - Nature of quadratic form.   [8]

Differential Calculus

Curvature – radius of curvature (Cartesian and polar co-ordinates) – Centre of curvature – Circle of curvature – Involute and evolute – envelope.   [9]

Functions of Several Variables

Partial differentiation – Homogeneous functions and Euler's theorem – Jacobians – Taylor's series for functions of two variables – Maxima and minima of functions of two variables – Constrained maxima and minima : Lagrange's Method of Undetermined Multipliers.   [9]

Passed in BoS Meeting held on 02/12/2023

Passed in Academic Council Meeting held on 23/12/2023   BoS Chairman

Differential Equations

Linear differential equations of second and higher order with constant co-efficient - R.H.S is $e^{\square}$, $\sin \square x$, $\cos \square x$, x^n n $\square$ 0, $e^{\square x} \sin \square x$, $e^{\square x} \cos \square x$, $e^{\square x} x^n$, $x^n \sin \square x$ **and** $x^n \cos \square x$ – Differential equations with variable co-efficients : Cauchy's and Legendre's form of linear equation – Method of variation of parameters– Simultaneous first-order linearequations with constantco-efficients. [9]

Integral Calculus

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.   [10]

50 CH 001 - Applied Chemistry

Common to all Branches

Objective(s)
- To endow with the periodic properties of elements and molecular orbitals variation of orbitals
- To assist the learners to apply the thermodynamic functions to electro chemical reactions and its application
- To help the learners to analyze the hardness of water and its removal techniques
- To endow with various spectroscopy techniques and its applications
- To facilitate the students with the basics of stereochemistry and types of chemical reactions with their mechanism

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023

BoS Chairman

	At the end of the course, the student will be able to
Course Outcomes	CO1: Rationalize the periodic properties of elements and molecular orbitals variation of orbitals
	CO2: Apply the thermodynamic functions to electro chemical reactions and its application
	CO3: Analyse the cause and effects of hardness of water and its removal techniques
	CO4: Interpret the various spectroscopy techniques and its applications
	CO5: Infer the types of stereochemistry and chemical reactions with their mechanism

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Periodic Properties

Effective nuclear charge - atomic and ionic sizes - ionization energies - electron affinity - electronegativity polarizability - oxidation states - penetration of orbitals- variations of s, p, d and f orbital energies of atoms electronic configurations, ionic, dipolar and Vander- waals interactions. Hard soft acids and bases (HSAB). Molecular orbitals of diatomic molecules - plots of the multicentre orbitals. Equations for atomic and molecular orbitals. Energy level diagrams of diatomics. Pi-molecular orbital of butadiene and benzene. [9] **Chemical Equilibria and Corrosion**

Thermodynamic functions - energy - entropy - enthalpy- free energy - Gibbs-Helmholtz equation - Van 't Hoff isotherm. Cell potentials - Nernst equation - applications - EMF series - applications - Poteniometric and Conductometric titrations.

Corrosion- types of corrosion - chemical and electrochemical corrosion - mechanism - Factors influencing corrosion - Corrosion control methods (impressed current and sacrificial anode methods) - Corrosion inhibitors. [9]

Water Chemistry

Sources - Water quality parameters - impurities in water and their effects. Hardness - Estimation of hardness effect of hard water in various industries-Softening of water- zeolite process- ion-exchange process - reverse osmosis - electrodialysis. Boiler troubles - methods of prevention. [9]

Analytical Techniques and Applications

Absorption laws - Ultra violet spectroscopy (UV) - Principle - Instrumentation (Block diagram) - applications. Infra red spectroscopy (IR)- Instrumentation (Block diagram) - selection rule - types of fundamental vibrations applications. Nuclear magnetic resonance spectroscopy (NMR) - Principle - selection rule - Instrumentation (Block diagram) - chemical shift - factors influencing the chemical shift -applications. Atomic absorption spectroscopy (AAS) - Principle - Instrumentation (Block diagram) -applications. [9] **Concepts in Organic Chemistry**

Structural isomerism- types - Stereoisomerism - geometrical (Maleic and Fumaric acids) - optical isomerism (Lactic and Tartaric acids) - symmetry - chirality- enantiomers - diastereomers - optical activity - absolute configurations. Introduction to reactions - substitution - addition - oxidation - reduction - cyclization and ring openings - mechanism. [9]

50 ME 003 – Engineering Mechanics								
Common to all branches								
Semester	Hours / Week			Total	Credit	Maximum Marks		
	L	T	P	hrs	C	CA	ES	Total
I	3	1	0	60	4	40	60	100

Objective(s)	• To learn a process for analysis of static objects, concepts of force, moment, and mechanical equilibrium in two and three dimensions. • To learn the equilibrium of rigid bodies such as frames, trusses, beams. • To identify the properties of surfaces and solids by using different theorem. • To impart basic concept of dynamics of particles. • To acquire the concept of friction and elements of rigid body dynamics.
Course Outcomes	**At the end of the course, the student will be able to:** CO1: Use scalar and vector analytical techniques for analyzing forces in statically determinate structures. CO2: Apply basic knowledge of scientific concepts to solve real-world problems. CO3: Compute the properties of surfaces and solids using various theorems. CO4: Analyze and solve problems on kinematics and kinetics. CO5: Draw a shear force and bending moment diagrams, analysis of rigid body dynamics and calculation of frictional forces on contact surfaces.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Basics and Statics of Particles
Introduction -Units and Dimensions-Laws of Mechanics–Principle of transmissibility-Lame's theorem, Parallelogram and triangular Law of forces–Vectors–Vectorial representation of forces and moments.
Vector Operations
Addition, subtraction, dot product, cross product-Coplanar Forces–Resolution and Composition of forces–Equilibrium of a particle–Forces in space-Equilibrium of a particle in space-Equivalent systems of forces-Single equivalent force.   [12]
Equilibrium of Rigid Bodies
Free body diagram–Types of supports and their reactions–requirements of stable equilibrium–Static determinacy, Moments and Couples–Moment of a force about a point and about an axis–Vectorial representation of moments and couples–Varignon's theorem-Equilibrium of Rigid bodies in two dimensions. **Trusses**: Introduction, axial members, calculation of forces on truss members using method of joints-Method of sections.   [12]

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023   BoS Chairman

Properties of Surfaces and Solids

Determination of Areas and Volumes-Centroid, Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method; T section, I section, Angle section, Hollow section using standard formula) - Parallel axis theorem and perpendicular axis theorem- Polar moment of inertia -Mass moment of inertia of thin rectangular section -Relation between area moment of inertia and mass moment of inertia.   [12] **Dynamics of Particles**

Displacement, Velocity, acceleration and their relationship–Relative motion -Projectile motion in horizontal plane– Newton's law–Work Energy Equation – Impulse and Momentum.   [12]

Elements of Rigid Body Dynamics, friction and Beams

Translation and Rotation of Rigid Bodies: Velocity and acceleration–General Plane motion: Crank and Connecting rod mechanism.

Friction

Frictional force–Laws of Coloumb friction–Simple contact friction–Ladder friction-Rolling resistance–Ratio of tension in belt.

Transverse bending on beams

Types of beams: Supports and loads – Shear force and bending moment in beams – Cantilever, simply supported and overhanging beams.   [12]

Passed in BoS Meeting held on 02/12/2023

Passed in Academic Council Meeting held on 23/12/2023   BoS Chairman

Objective(s)	• To learn the evolution of computers and examines the most fundamental element of the C language • To examine the execution of branching, looping statements, arrays and strings. • To understand the concept of functions , pointers and the techniques of putting them to use • To apply the knowledge of structures and unions to solve basic problems in C language • To enhance the knowledge in file handling functions for storage and retrieval of data
Course Outcomes	**At the end of the course, the student will be able to:** CO1: Infer the evolution, generation, representation of problem and recognize the concepts of data types and expressions CO2: Annotate the concept of console Input and output features and examine the execution of branching, looping statements, arrays and strings CO3: Recognize the concepts of functions, recursion, storage class specifies and pointers with its features CO4: Comprehend basic concepts of structures ,unions ,user defined data types and preprocessor CO5: Interpret the file concepts using proper standard library functions

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction to Computer and Programming

Introduction to Computers - Evolution of computers - Generations of computers and Programming Languages– Introduction to components of a computer system -Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithm: Flowchart–Pseudocode with examples. From algorithms to programs– variables (with data types)– Type Qualifiers - Constants – Operators –expressions and precedence   [9]

Suggested Activities:
Knowing the history of computers
Developing Pseudocodes and flowcharts for real life activities
Developing algorithms for basic mathematical expressions using arithmetic operations.
Suggested Evaluation Methods:
Group Discussion on Introduction to Computers and its generation Assignments
on pseudocodes and flowcharts

I/O ,Branching ,Loops and Arrays

Console I/O– Unformatted and Formatted Console I/O – Conditional Branching and Loops -Writing and evaluation of conditionals and consequent branching -Iteration and loops - Arrays (1-D, 2-D), Character arrays and Strings   [9]
Suggested Activities:
Simple programs using I/O statements, arithmetic operations
Implementation of simple programs using **Branching ,Loops and Arrays**
Performing String operations **Suggested Evaluation Methods:**
Tutorial for the above activities
Group discussion on role of Branching, loop and Arrays in Programming Language

Functions and Pointers

Functions: Scope of a Function – Library Functions and User defined functions - Function Prototypes –Function Categorization - Function Arguments - Arguments to main function - The return Statement - Recursion

- Passing Arrays to Functions– Storage class Specifiers. Introduction to Pointer Variables - The Pointer Operators - Pointer Expressions - Pointers and Arrays - Generating a Pointer to an Array - Indexing Pointers– Dynamic memory allocation [9]

Suggested Activities:
Develop simple applications like Calculator, Various Conversion Process using functions
Develop a simple programs by applying pointer concepts **Suggested Evaluation Methods:**
Tutorial for the above activities
Group discussion on Function and Pointers

Structures, Unions, Enumerations, Typedef and Preprocessors
Structures - Arrays of Structures- Arrays and Structures within Structures - Passing Structures to Functions - Structure Pointers - Unions – BitFields - Enumerations - typedef – The preprocessor and comments. [9]

Suggested Activities:
Develop simple programs using **Structures, Unions, Enumerations, Typedef and Preprocessors Suggested Evaluation Methods:**
Tutorial for the above activities

File
File: Streams –Reading and Writing Characters - Reading and Writing Strings -,File System functions - Random Access Files   [9]
Suggested Activities:
Develop simple applications to apply files operations
Suggested Evaluation Methods:
Tutorial for the above activities
Group discussion on Files Concepts

Objective(s)	- To test the knowledge of theoretical concepts. - To develop the experimental skills of the learners. - To facilitate data interpretation. - To enable the learners to get hands-on experience on the principles discussed in theory sessions. - To expose the learners to various industrial and environmental applications.
Course Outcomes	**At the end of the course the students will be able to** CO1: Calculate the amount of hardness, alkalinity, chloride ion and dissolved oxygen in water sample CO2: Estimate the amount of barium chloride and mixture of acids by conductometry CO3: Infer the amount of acid by pH metry and ferrous ion by potentiometry CO4: Estimate the amount of ferrous ion by spectrophotometry CO5: Determine the percentage of corrosion by weight loss method

LIST OF EXPERIMENTS

1. Estimation of hardness of water by EDTA method.

2. Estimation of alkalinity of water sample.

3. Estimation of chloride content in water sample (Argentometric method).

4. Determination of dissolved oxygen in boiler feed water (Winkler's method).

5. Estimation of barium chloride by conductometric precipitation titration.

6. Estimation of mixture of acids by conductometric titration.

7. Estimation of ferrous ion by potentiometric titration.

8. Estimation of HCl, beverages and other biological samples by pH meter.

9. Estimation of iron content by spectrophotometry method.

10. Determination of corrosion rate and inhibitor efficiency by weight loss method.

Objective(s)	• To enable the students to apply the concepts of C to solve simple problems • To use selection and iterative statements in C programs • To apply the knowledge of library functions in C programming • To implement the concepts of arrays, functions, structures and pointers in C • To implement the file handling operations through C
Course Outcomes	**At the end of the course the students will be able to** CO1: Apply how to read, display basic information and use selection and iterative statements CO2: Demonstrate C program to manage collection of related data CO3: Design and Implement different ways of passing arguments to functions, Recursion and implement pointers concepts CO4: Develop a C program to manage collection of different data using structures, Union, user-defined datatypes and preprocessor directives CO5: Demonstrate C program to store and retrieve data using file concepts

LIST OF EXPERIMENTS

1 Implementation of Simple computational problems using various formulas.

2 Implementation of Problems involving Selection statements.

3 Implementation of Iterative problems e.g., sum of series.

4 Implementation of 1D Array manipulation.

5 Implementation of 2D Array manipulation.

6 Implementation of String operations.

7 Implementation of Simple functions and different ways of passing arguments to functions and Recursive Functions.

8 Implementation of Pointers

9 Implementation of structures and Union.

10 Implementation of Bit Fields, Typedef and Enumeration.

Advanced English Listening Module

Extended Listening to Podcasts – Listen and Watch Video Clips - answering Inferential Multiple Choice Questions and Vocabulary Check- Listening to Lengthy Discourses – Structured Listening – Listening to Songs and Cognizing the Lyrics- Listening to popular speeches, news briefs and stories **[4]**

Oral Communication

Debates – Group Discussion (Structured) and rotate roles – Elevator Speech – Prepared Talk – Extempore – Brief Technical presentations- Spin-a-Yarn – Short Film reviews – talk on silent videos – Dialogues and Role plays (Intermediate & Higher Level) – Interviews **[4]**

Critical Reading Process

Silent Reading – Scanning and Skimming - Reading comprehension with logical reasoning questions – Cognition of Theme and Inferential Meaning – advanced Academic and Functional Vocabulary List (1000 words) – word webs and semantic threads - Loud Reading – Modulation and Pronunciation Check – Mind maps – Note making – Deep Reading Skills **[4]**

Academic Writing Practices

Sentence Equivalence and Text completion tasks – Data Interpretation - Essay Writing – Letter Writing – Business Emails – Conversational Fill Ups-Rewordify (select a text and simplify/enhance the language)- Reports on events **[3]**

Objective(s)	• To provide exposure and ability in handling situations involving multiple integrals, Beta and Gamma functions. • To familiarize the students with the basic concepts in Vector calculus. • To get exposed to the fundamentals in analytic functions, conformal mappings and Bilinear transformation. • To acquire skills to understand the concepts involved in Cauchy's integral formula, Cauchy's residue theorem and Contour integration. • To understand the concepts in Laplace transform techniques and its properties.
Course Outcomes	**At the end of the course, the students will be able to** CO1: Evaluate double and triple integrals and analyze Beta and Gamma functions. CO2: Analyze the basic concepts of vector calculus to verify Green's, Stoke's and Gauss Divergence theorems. CO3: Construct the analytic functions and Bilinear transformation. CO4: Apply Cauchy's integral formula and Cauchy's residue theorem to evaluate the complex integrals. CO5: Apply Laplace transform techniques for solving differential equations.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Multiple Integrals

Double integration – Cartesian and polar coordinates – Change of order of integration – Area between two curves – Area as double integral – Triple integration in Cartesian coordinates.

Beta and Gamma functions**:** Relationship between Beta and Gamma functions – Properties – Problems. [9]

Vector Calculus

Introduction - gradient of a scalar point function - directional derivative - angle of intersection of two surfaces – divergence and curl(excluding vector identities) - solenoidal and irrotational vectors - Green's theorem in the plane - Gauss divergence theorem -Stokes' theorem(without proof)- verification of the above theorems and evaluation of integrals using them.   [9]

Analytic Functions

Analytic functions – Necessary conditions (Cauchy–Riemann equations)- Polar form of Cauchy–Riemann equations

– Sufficient conditions (without proof) – Properties of analytic functions – Harmonic function –Harmonic conjugate

– Construction of analytic functions– Conformal mapping: w = z + a, az, 1/z -Bilinear transformation.   [9]

Complex Integration

Cauchy's Integral theorem (without proof) – Cauchy's integral formula – Taylor's and Laurent's series (without proof) – Classification of singularities – Cauchy's residue theorem – Contour integration – Circular and semicircular contours (excluding poles on real axis).   [8]

Laplace Transforms

Conditions for existence – Transform of elementary functions – Basic properties – Shifting theorems- Derivatives and integrals of transforms –– Transform of unit step function – Dirac's delta function- Initial and final value theorem– Transform of periodic functions. Inverse Laplace transform – Convolution theorem(excluding proof) – Solution of second order ordinary differential equation with constant co-efficients – simultaneous equations of firstorder with constant co-efficients.   [10]

50 PH 003 - Semiconductor Optoelectronics

Common to CS,IT

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
II	3	0	0	45	3	40	60	100

Objective(s)	• To enhance students' knowledge of theoretical and modern technological aspects in semiconductor physics. • To enable the students to correlate the theoretical principles with application oriented studies in optoelectronic materials • To Explain the principles of laser, types of laser and demonstrate the applications of laser • To state the principle of optical fiber and to understand the design and applications of optical fibers. • To introduce advanced materials and nano technology for various engineering applications
Course Outcomes	**At the end of the course, students will be able to** CO1: Analyze the basic ideas of semiconductors and devices CO2: Apply the principles of LCD, photodetectors and optoelectronic devices CO3: Outline the basic ideas about classification of laser and various applications of laser. CO4: Elaborate the propagation of light in fiber optic cables, communication link and applications CO5: Gain broad view on advanced materials, nano technology and their engineering applications

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Semiconductor Physics

Introduction-Elemental and compound semiconductors-Intrinsic and extrinsic semiconductors-Properties-carrier concentration in intrinsic and extrinsic semiconductors (qualitative)-p-n junction diode: characteristics-p-n junction transistors: characteristics (CB and CE)-Bipolar characteristics (Biased and unbiased)-FET: characteristics and applications. [10]

Optoelectronic Materials and Devices

Photoconductive materials – Light Dependent Resistor – Working of LDR – Applications of LDR – Photovoltaic materials – Solar cell – Construction and working of a solar cell – Applications of solar cells – Liquid crystals – Liquid crystal Display (LCD) – Construction and advantages of LCD – Electro optic materials – Optoelectric effect-Electro-Optic Modulation.

[9]

Laser Technology

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversiondifferent types of lasers: gas lasers (CO_2), solid-state lasers (Nd: YAG), dye lasers, Semiconductor laser (Homojunction and Hetero junction)-Properties of laser beams-applications of lasers in science and engineering. [8]

Fiber Optics and Sensors

Principles – cone of acceptance, numerical aperture (derivation)- Modes of propagation –Fabrication of optical fibre: Crucible-crucible technique - Classification: based on materials, modes and refractive index profile– Splicing : types of splicing- Losses in optical fiber – Detectors – Fiber optical communication links (Block diagram) – Advantage of fiber optical cable over copper cables- Fiber optic sensors: liquid level sensors, Temperature and Displacement sensors. [9]

Advanced Materials and Nanotechnology

New Engineering Materials: Metallic glasses – preparation, properties and applications – Shape memory alloys (SMA) – characteristics, properties of NiTi alloy applications – advantages and disadvantages of SMA

Nano Materials: Nanomaterials: Properties- Top-down process: Ball Milling method – Bottom-up process: Vapour Phase Deposition method- Carbon Nano Tube (CNT): Properties, preparation by electric arc method, Applications. [9]

50 EE 001 - Basic Electrical Engineering

Common to all branches

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
II	3	0	0	45	3	40	60	100

Course Objective(s)	• To familiarize the basic DC and AC networks used in electrical circuits • To explain the concepts of electrical machines and their characteristics • To explore the sources of electric power generation and various types of power plant • To identify the various components of low voltage electrical installation • To describe various energy conservation methods useful in industry and commercial purpose
Course Outcomes	**At the end of the course, the students will be able to** CO1: Apply the basic laws of electric circuits to calculate the unknown quantities. CO2: Acquire knowledge about the constructional details and principle of operation of DC machines and AC machines CO3: Impart the knowledge of generation of electricity based on conventional and non-conventional energy sources CO4: Recognize the significance of various components of low voltage electrical installations. CO5: Create awareness of energy conservation and electrical safety

Note: The hours given against each topic are of indicative. The faculty have the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

DC and AC Circuits - Electrical circuit elements (R, L and C), Voltage and current sources - Kirchhoff's current and voltage laws - Serial and parallel circuits - Analysis of simple circuits with DC excitation. Representation of sinusoidal waveforms, Peak and RMS values, Phasor representation, Real power, Reactive power, Apparent power, Power factor. Analysis of single phase AC circuits consisting of R, L, C, RL, RC, RLC combinations. [12]

DC&AC Machines - Construction, Types and Operation-Faraday's laws of electromagnetic induction - Transformers: Construction, Working principle, Types, Losses in transformers, Regulation, Efficiency and applications-Simple Problems - Applications

Generation of rotating magnetic fields - Three phase induction motor: Construction, working principle, Characteristics, Starting - Single phase induction motor: Construction, working principle and applications - Synchronous generators: Construction, Working principle and applications. [14]

Electrical Power Generation Systems - Sources of electrical energy: Renewable and non-renewable - Principles and schematic diagram of Hydroelectric power plant, Thermal power plant, Nuclear power plant, Solar PV system and Wind energy conversion systems. [5]

Electrical Installations and House Wiring - Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB - Types of Batteries, Important Characteristics for Batteries - UPS.

Single phase and three phase systems: Three phase balanced circuits, Phase sequence, voltage and current relations in star and delta connections - Basic house wiring tools and components - Domestic wiring: Service mains, meter board, distribution board, energy meter. Different types of wiring: staircase, fluorescent lamp and ceiling fan. [8] **Electrical Energy Conservation & Safety -** Elementary calculations for energy consumption - BEE Standards -

Electrical energy conservation - Methods. Electric shock, Precautions against shock, Objectives of earthing, Types of earthing - Basic electrical safety measures at home and industry. [6]

K. S. Rangasamy College of Technology – Autonomous R2018							
50 ME 002– Engineering Graphics							
Common to EE, EC, EI, CS, IT, BT, NST,FT							
Semester	Hours / Week			Total	Credit	Maximum Marks		
	L	T	P	hrs	C	CA	ES	Total
II	2	0	4	90	4	40	60	100
Objective(s)	• To learn Computer Aided Drawing skills to enable graphical communication. • To learn drawing formats and conversion of pictorial views into orthographic views. • To emphasize skills to project simple solids and sectional views. • To impart the knowledge on use of drafting software to draw the isometric projection. • To acquire graphical skills to illustrate design project.							
Course Outcomes	**At the end of the course, the student will be able to:** CO1: Demonstrate the Impact of computer technologies on graphical communication CO2: Convert the pictorial views in to orthographic views using drafting software CO3: Draw the projection of simple solids and true shape of sections CO4: Construct the isometric projections of objects using drafting software CO5: Demonstrate a design project illustrating engineering graphical skills							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Introduction to Computer Aided Drafting (CAD) Software

Theory of CAD software – Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension) – Drawing Area (Background, Crosshairs, Coordinate System) – Dialog boxes and windows – Shortcut menus (Button Bars) – The Command Line and Status Bar – Different methods of zoom as used in CAD – Select and erase objects.   [5+12]

Orthographic Projection

Theory of projection – Terminology and Methods of projection – first angle and third angle projection – Conversion of pictorial views into orthographic views.   [6+12]

Projection of Solids and Sections of Solids

Projections of simple solids: prism, pyramid, cylinder and cone (Axis parallel to one plane and perpendicular to other, axis inclined to one plane and parallel to other).

Sections of simple solids: prism, pyramid, cylinder and cone in simple positions (cutting plane is inclined to one of the principal planes and perpendicular to the other) – True shape of sections. [6+12] **Isometric Projection**
Principles of Isometric projection – Isometric scale, Isometric views, Conventions – Isometric views of lines, Planes, Simple and compound Solids – Conversion of Orthographic views in to Isometric view.   [6+12]

Application of Engineering Graphics

Geometry and topology of engineered components: creation of engineering models and their presentation in standard 2D blueprint form and as 3D wire-frame and shaded solids – Geometric dimensioning and Tolerancing– Use of solid modeling software for creating associative models – Floor plans: windows, doors,

and fixtures such as water closet (WC), bath sink, shower, etc. – Applying colour coding according to building drawing practice – Drawing sectional elevation showing foundation to ceiling – Introduction to Building Information Modelling (BIM).   [7+12]

50 MY 004 - Universal Human Values							
Semester	Hours / Week			Total	Credit	Maximum Marks		
	L	T	P	Hrs	C	CA	ES	Total
II	2	1	0	45	3	40	60	100

Objective(s)	• To identify the essential complementarily between 'values' and 'skills' • To ensure core aspirations of all human beings. • To achieve holistic perspective towards life and profession • To acquire ethical human conduct, trustful and mutually fulfilling human behaviour • To enrich interaction with Nature.
Course Outcomes	**At the end of the course, the students will be able to** CO1: Become more aware of themselves, and their surroundings CO2: Responsible in life, and in handling problems with sustainable solutions CO3: Maintain human relationships and human nature CO4: Committed towards human values, human relationship and human society CO5: Improve critical ability and apply it day-to-day life

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Introduction to value Education [6]

Understanding value Education-Self exploration as the process for value education-Continuous Happiness and prosperity-the basic human aspirations-right understanding-relationship and physical facility –happiness and prosperity - current scenario – method to fulfill the basic human aspirations

Harmony in the Human Being [6]

Understanding Human being as the Co-Existence of the self and the Body-Distinguishing between the needs of the self and the body-the body as an instrument of the self-understanding harmony in the self-harmony of the self with the body – programme to ensure self-regulation and health

Harmony in the Family and Society [6]

Harmony in the Family –the basic unit of human interaction-values in human- to - human relationship –'Trust' the foundation value in relationship –'Respect'- as the right evaluation-understanding harmony in the society – vision for the universal human order.

Harmony in the Nature/Existence [6]

Understanding harmony in the Nature-Interconnectedness, self-regulation and mutual fulfillment among the four orders of nature – realizing existence as co-existence at all levels –the holistic perception of harmony in existence.

Implications of the Holistic Understanding [6]

Natural Acceptance of human values- definitiveness of human conduct- a basis for humanistic education, humanistic constitution and universal human order- competence in professional ethics –holistic technologies, production systems and management models-typical case studies – strategies for transition towards value base life and profession

Semester	**Hours/week**			**Total hrs**	**Credit**	**Maximum marks**			
	L	**T**	**P**		**C**	**CA**	**ES**	**Total**	
II	0	0	4	60	2	60	40	100	

Objectives	• To gain practical knowledge by applying the experimental methods to correlate with the Physics theory. • To demonstrate an ability to make physical measurements and understand the limits of precision in measurements • To introduce different experiments to test basic understanding of physics concepts applied in optics and electronics. • To enable the students to correlate the theoretical principles with application oriented studies. • To analyze the behavior and characteristics of various materials for its optimum utilization
Outcomes	**At the end of the course, the students will be able to** CO1:Find the wavelength of laser and the particle size.(1) CO2:Gain the knowledge of interference to produce Newton rings and air wedge.(2-3) CO3:Apply the knowledge of diffraction property of light through grating and fiber optic cable (4,6) CO4:Obtain the concept of refractive index and dispersion of light by a prism(5) CO5:Realize the knowledge of semiconductor band gap and Hall coefficient, photovoltaic solar cells, Zener diode (7-10)

LIST OF EXPERIMENTS

1. Determination of wavelength of laser and particle size – diffraction.

2. Determination of radius of a plano convex lens – Newton's ring.

3. Determination of a thickness of thin wire – Air wedge method.

4. Determination of wavelength of mercury spectral lines – spectrometer grating.

5. Determination of dispersive power of a prism.

6. Determination of NA, acceptance angle of an optical fiber.

7. Determination of band gap of a semiconductor PN junction diode.

8. V-I characteristics of solar cell.

9. Characteristics of Zener diode.

10. Determination of Hall coefficient of a given semiconductor and its charge carrier density.

K. S. Rangasamy College of Technology – Autonomous R2018								
50 ME 0P1 – Engineering Practices Laboratory								
Common to all branches								
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
II	0	0	4	60	2	60	40	100
Objective(s)	• To acquire skills in basic engineering practices. • To identify the hand tools and instruments. • To provide hands on experience in Fitting, Carpentry, Sheet metal, Welding and lathe shop. • To provide practical training on house hold wiring and electronic circuits. • To offer real time activity on plumbing connections in domestic applications.							
Course Outcomes	**At the end of the course, the student will be able to:** CO1: Perform facing, plain turning, drilling. CO2: Make a model of fitting and carpentry: Square, Dovetail and Cross lap joints. CO3: Fabricate the models of sheet metal and welding joints. CO4: Construct and demonstrate electrical and electronic wiring circuit. CO5: Construct the water pipe line in plumbing shop.							

Machine Shop
Safety aspects in machine shop, Study of Lathe and Radial drilling machine, Turning, Facing and Drilling.

Fitting and Carpentry
Safety aspects in Fitting and Carpentry, Study of tools and equipments, Preparation of models- Square, Dove tail joint, Cross Lap.

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023   BoS Chairman

Sheet Metal and Welding

Safety aspects in Sheet metal and Welding, Study of tools and equipments, Sheet metal models - Scoope, Cone, Tray, Preparation weld joints -Lap, butt, T-joints. Study of Gas Welding and Equipments.

Electrical Wiring & Electronics

Safety aspects of Electrical wiring, Study of Electrical Materials and wiring components, Wiring circuit for a lamp using single and stair case switches. Wiring circuit for fluorescent lamps, Basic electronic circuit.

Plumbing

Study of plumbing tools, assembly of G.I. pipes/ PVC and pipe fittings, Cutting of threads in G.I.Pipes/PVC by thread cutting dies.

Smithy, Plastic Moulding and Glass Cutting

Safety aspects in smithy, plastic moulding and glass cutting, Study of tools and equipments.

Common to CS, IT								
Semester	Hours/Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
III	3	1	0	60	4	40	60	100

Objective(s)	• To acquire skills in the concepts of the probability • To provide exposure and ability in handling situations involving distributions. • To learn basic concepts in descriptive statistics and quantitative variables. • To develop the knowledge with various methods in hypothesis testing. • To get exposed to various statistical methods designed to make scientific judgments.
Course Outcomes	**At the end of the course the student will be able to** CO1: Apply the concepts of one-dimensional random variables to calculate the probability. CO2: Apply discrete and continuous distributions concepts to calculate the probability. CO3: Compute measures of central tendency, measures of dispersion and calculate correlation and regression. CO4: Analyze the concepts in curve fitting methods and test the statistical hypothesis using Student's t test, F test and Chi-square test. CO5: Analyze the design of experiments using CRD, RBD and Latin square.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Probability and Random Variables

Axioms of probability – Conditional probability –Baye's theorem–Random variable – Expectation –Probability mass function – Probability density function – Properties – Moments – Moments generating function and their properties. [9]

Standard Distributions

Discrete Distributions: Binomial, Poisson and Geometric distributions – Continuous Distributions: Uniform, Exponential, Gamma and Normal distributions – Properties – Problems. [9]

Statistics

Measures of Central tendency – Mean, Median and Mode – Moments, Measure of dispersion – Skewness and Kurtosis – Range - Quartile deviation – Karl Pearson's Coefficient of skewness – Bowley's Coefficient of skewness – Correlation and Regression – Rank correlation. [9]

Sampling and Testing

Curve fitting by the method of least squares – Fitting of straight lines: $y = ax + b$, $y = ab^x$ – Second degree Parabola – Test of significance: small samples –Student's t-test, F-test, Chi-square test for goodness of fit and independence of attributes [9]

Design of Analysis

ANOVA – Completely Randomized Designs – One way classification – Randomized Block Design – Two way classification –Latin square design [9]

Semester	Hours / Week			Total hrs	Credit	Maximum Marks			
	L	T	P		C	CA	ES	Total
III	3	0	0	45	3	40	60	100

Objective(s)	• To choose the appropriate data structure for a specified application • To design and implement abstract data types such as linked list, stack, queue and trees • To demonstrate various sorting, searching and graph algorithms • To Learn and implement the hashing techniques • To design a Priority Queue ADT and its applications
Course Outcomes	**At the end of the course, the students will be able to** CO1: Express the concept of Linear data structures, applications and its implementations CO2: Appraise the knowledge of Tress with its operations CO3: Recognize the concept of Sorting ,Searching and its types CO4: Review various implementations and operations of Priority Queue and Hashing Techniques CO5: Apply Shortest Path and Minimum Spanning Tree algorithms and Biconnectivity

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Lists, Stacks And Queues

Abstract Data Type (ADT) – The List ADT – The Stack ADT – The Queue ADT   [12]

Suggested Activities:
 Converting an algorithm from recursive to non-recursive using stack.
 Demonstrating stack for Towers of Hanoi application.
 Developing any application (student's choice) using all the linear data structures.
Suggested Evaluation Methods:
 Tutorials on applications of linear data structures. Checking
 output of programs implemented.

Trees

Preliminaries – Binary Trees – The Search Tree ADT – Binary Search Trees – AVL Trees – Tree Traversals
– B – Trees –B+Trees.   [9]

Suggested Activities:
Implementing binary tree and tree traversals.
Solving expressions using expression trees by determining infix, prefix and postfix expressions. Developing
any application using trees.
Suggested Evaluation Methods:
Tutorials on trees
Check output of programs implemented. Quiz
on various topics of the unit.

Sorting and Searching

Preliminaries – Insertion Sort – Shellsort – Heapsort – Mergesort – Quicksort – External Sorting –Searching:
Sequential search- Binary Search –Hashed list searches. [7]
Suggested Activities:
 External learning - External sorting implementation.
 Implementation of all sorting techniques in C language.
 Demonstration of searching techniques under best and worst case inputs.
Suggested Evaluation Methods:
Tutorials on external sorting.

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023   BoS Chairman

Checking output of programs implemented

Hashing and Priority Queues (Heaps)
Hashing – Hash Function – Separate chaining – Open addressing – Rehashing – Extendible hashing – Priority Queues (Heaps) – Model – Simple Implementations – Binary Heap – Applications of Priority Queues – d –Heaps.
[7]

Suggested Activities:
Implementation of Hashing
Implementation of simple applications of Priority queue
Suggested Evaluation Methods:
Tutorials on hashing
Check output of programs implemented. Quiz
on various topics of the module.

Graphs
Definitions – Topological Sort – Shortest-Path Algorithms – Unweighted Shortest Paths – Dijkstra's Algorithm – Minimum Spanning Tree – Prim's Algorithm, Kruskal's Algorithm – Applications of Depth-First Search – Undirected Graphs – Biconnectivity.
[10]

Suggested Activities:
Implementation of various shortest path algorithms
Implementation of Minimum Spanning Tree
Suggested Evaluation Methods:
Tutorials on various topic of the module Check
output of programs implemented.
Quiz on various topics of the module.

50 CS 003 –Object Oriented Programming							
Common to CS,IT, EE, NST							
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
III / IV	3	0	0	45	3	40	60	100

Objective(s)	• To enable the students to learn how C++ supports object Oriented properties • To create and use classes, objects, constructors and destructors for specific applications • To learn how inheritance and virtual functions implement dynamic binding with polymorphism. • To learn how to design and implement generic classes with C++ templates. • To learn how to use exception handling in C++ programs.
Course Outcomes	**At the end of the course, the students will be able to** CO1: Recognize the principles of object-oriented problem solving and programming CO2: Implement the concept of classes and objects CO3: Analyze the concept of reusability and compile time polymorphism CO4: Recognize the concept of dynamic memory allocation and runtime polymorphism CO5: Identify the uses of generic programming and exception handling

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Introduction to C++ and Functions:

Evolution of C++ - Concepts of OOP – Advantages of OOP, Basics of C++: Structure of a C**++** Program**–** Streams in C++ and Stream Classes – Unformatted Console I/O Operations, C++ Declarations, Functions: Return by Reference –Default Arguments – Const arguments – Inline Functions – Function Overloading.   [9]

Suggested Activities:
Knowing the concepts of OOPS, structure of OOPS.
Developing simple programs in C++ basics,functions and its types
Suggested Evaluation Methods:
Checking output of programs implemented
Group Discussion on OOPS features and difference between C and C++ Quiz
for the above topics.

Classes and Objects, Constructors and Destructors:

Classes in C++ - Declaring Objects- Access Specifiers and their Scope – Defining Member Functions – Static Members – Array of Objects – Object as Function Arguments – Friend Function and Friend Classes, Constructors and Destructors: Characteristics – Parameterized Constructor – Overloading Constructor – Copy Constructor – Dynamic Initialization Constructor – Destructors.   [9]

Suggested Activities:
Simple programs using classes and objects, static members
Implementation of simple programs using constructor and destructor
Implementation of simple programs using friend functions and classes, array of objects
Suggested Evaluation Methods:
Quiz for the above activities.
Checking output of programs implemented
Group Discussion for the above activities

Inheritance, Compile Time Polymorphism and Type Conversion:

Inheritance: Reusability – Types of Inheritance – Abstract Classes – Object as Class Member, Operator Overloading: Rules for Operator Overloading – The Keyword Operator –Unary and Binary Operators Overloading-Overloading using Friend Function – Type Conversion.   [10]

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023   BoS Chairman

Suggested Activities:

Implement inheritance and its types in C++ program

Implement compile time polymorphism and unary, binary operator overloading concept in C++ program.

Suggested Evaluation Methods:

Quiz for the above activities.

Checking output of programs implemented

Group discussion on overloading using friend Function and type conversion

Pointers, Memory Models, Binding and Polymorphism:

Pointers: Pointer to Class – Pointer to Object – void, wild and this Pointers – Pointer to Constant and Constant Pointers, Memory Models: Dynamic Memory Allocation – Heap Consumption – Dynamic Objects, Polymorphism: Binding in C++ - Pointer to Base and Derived class objects – Working with Virtual Functions – Pure Virtual Functions – Object Slicing – Virtual Destructor.   [9]

Suggested Activities:

Develop simple programs using pointers and its types

Develop simple programs using virtual functions **Suggested**

Evaluation Methods:

Quiz for the above activities.

Checking output of programs implemented

Group discussion on pure virtual function and virtual destructor.

Generic Programming with Templates, Exception Handling:

Class Templates – Function Templates – Exception Handling: Principles of Exception Handling – try, throw and catch keywords – Re-throwing Exception – Specifying Exception.   [8]

Suggested Activities:

Develop simple programs on class template and function template. Develop simple programs using exceptional handling and its types.

Suggested Evaluation Methods:

Quiz for the above activities.

Checking output of programs implemented

Group discussion on Exceptional handling Concepts

K.S.Rangasamy College of Technology – Autonomous R 2018						
50 EC 002 - Digital Logic Circuits						
B.E. Common to CS, IT						

	Hours / Week				**Credit**	**Maximum Marks**			
Semester	L	T	P	**Total hrs**	C	CA	ES	Total	
III	3	1	2	60	5	50	50	100	

Objective(s)	• To introduce number systems and codes, basic postulates of Boolean algebra and show the correlation between Boolean expressions. • To design and analyse combinational circuits • To study the concept of sequential circuits. • To analyse the concept of asynchronous sequential circuits. • To introduce the concept of memories and programmable logic devices.
Course Outcomes	**At the end of the course, the students will be able to** CO1: Explain the fundamentals of numbering system and apply Boolean algebra to design digital systems CO2: Analyze digital logic family and design combinational circuits CO3: Design and analyze synchronous sequential logic circuits CO4: Analyze the asynchronous sequentialcircuits. CO5: Explain the various semiconductor memories and implement combinational logic using PLDs
Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**	

Digital Fundamentals

Review of Number Systems –Conversion methods – complements –Binary codes: Weighted and non Weighted codes Boolean postulates and laws – De-Morgan's Theorem - Boolean function - Logic Gates- Implementations of Logic Functions using logic gates, Minimization of Boolean expressions – Sum of Products (SOP) – Product of Sums (POS)- Canonical forms –
– Karnaugh map Minimization – Don't care conditions. [9]

Logic Family And Combinational Circuits

TTL and CMOS Logic families and their characteristics.
COMBINATIONAL CIRCUITS: Design procedure – Adders - Subtractors – Serial,Parallel adder- BCD adder - Magnitude Comparator – Multiplexer / Demultiplexer - encoder / decoder – code converters: binary to gray, gray to binary, BCD to excess 3 code [9]

Sequential Circuits

Flip flops SR, JK, T, D and Master slave – Characteristic table and equation – Application table – Edge triggering – Level Triggering –Ripple counters – Synchronous counters –Modulo – n counter–Design of Synchronous FSM– Analysis of clocked sequential circuits: state equation - State table – State diagram – State reduction & assignment - Register : shift registers - Universal shift register– Shift counters [9]

Asynchronous Sequential Circuits

Analysis procedure – Transition table - Flow table – Race conditions -Design of fundamental mode circuits – Primitive flow table – Reduction of state and flow table – Race free state assignment - Hazards: Static – Dynamic – Essential – Hazards elimination. [9]

Memory Devices

Classification of memories: ROM - PROM – EPROM – EEPROM – EAPROM, RAM. Static RAM Cell- Dynamic RAM cell Bipolar RAM cell – MOSFET RAM cell ——Programmable Logic Devices: Programmable Logic Array (PLA) - Programmable Array Logic (PAL) – Field Programmable Gate Arrays (FPGA) - Implementation of combinational logic circuits using ROM, PLA, and PAL. [9]

Total Hours: 45+15(Tutorial) = 60 hours

Practice:
1. Design and implement combinational circuits using logic gates
2. Design and implement synchronous sequential circuits
3. Construct and simulate combinational circuit using multisim
4. Construct and simulate synchronous & asynchronous sequential circuit using multisim **Tutorials:**
1. Number system, logic gates, K-map reduction
2. Design of combinational circuits
3. Design of sequential and asynchronous sequential circuits
4. Hazards, PLDs Implementation of combinational logic circuit using ROM, PLA, PAL

50 CS 301 – Software Engineering

Semester	Hours / Week			Total Hrs	Credit	Maximum Marks		
	L	T	P	45	C	CA	ES	Total
III	3	0	0		3	40	60	100

Objective(s)	• To understand the phases in a software project • To understand fundamental concepts of requirements engineering and Analysis Modeling. • To understand the various software design methodologies • To learn various testing and maintenance measures • To learn various project cost models and risk management
Course Outcomes	**At the end of the course, the students will be able to** CO1: Identify the key activities in managing a software project, Compare different process models. CO2: Concepts of requirements engineering and Analysis Modeling. CO3: Apply systematic procedure for software design and deployment. CO4: Compare and contrast the various testing and maintenance. CO5: Manage project schedule, estimate project cost and effort required.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Software Process and Agile Development

Introduction to Software Engineering, Software Process, Perspective and Specialized Process Models–Introduction to Agility-Agile process-Extreme programming-XP Process. [8]

Requirements Analysis and Specification

Software Requirements: Functional and Non-Functional, User requirements, System requirements, Software Requirements Document –Requirement Engineering Process: Feasibility Studies, Requirements elicitation and analysis, requirements validation, requirements management-Classical analysis: Structured system Analysis, Petri Nets-Data Dictionary.   [10]

Software Design

Design process–Design Concepts-Design Model–Design Heuristic–Architectural Design-Architectural styles, Architectural Design, Architectural Mapping using Data Flow-User Interface Design: Interface analysis, Interface Design –Component level Design: Designing Class based components, traditional Components.[8] **Testing and Maintenance**

Software testing fundamentals-Internal and external views of Testing-white box testing-basis path testing- control structure testing-black box testing-Regression Testing–Unit Testing –Integration Testing–Validation Testing–System Testing And Debugging–Software Implementation Techniques: Coding practices- RefactoringMaintenance and Reengineering-BPR model-Reengineering process model-Reverse and Forward Engineering.
                                                                                                                          [10]

Project Management

Software Project Management: Estimation–LOC, FP Based Estimation, Make/Buy Decision COCOMO I & II Model–Project Scheduling–Scheduling, Earned Value Analysis Planning–Project Plan, Planning Process, RFP
Risk Management–Identification, Projection-Risk Management-Risk Identification
-RMMM Plan-CASE Tools.   [9]

Course Objectives	• To help the learners to analyze the importance of environment, ecosystem and biodiversity. • To familiarize the learners with the impacts of pollution and control. • To enlighten the learners about waste and disaster management. • To endow with an overview of food resources and human health. • To enlighten awareness and recognize the social responsibility in environmental issues.
Course Outcomes	**At the end of the course, the student will be able to** CO1. Recognize the concepts and importance of environment, ecosystem and biodiversity. CO2. Analyze the source, effects, and control measures of pollution. CO3. Enlighten of solid waste and disaster management. CO4. Alertness about food resources, population and health issues. CO5. Analyze the social issues and civic responsibilities

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Environmental Studies, Ecosystem and Biodiversity

Environmental studies - Scope and multidisciplinary nature - Need for public awareness - Ecosystem - Structure and function. Biodiversity - Values of biodiversity - Endangered and endemic species - Hot spots - India a mega biodiversity nation - Threats - Conservation - In-situ and ex-situ - Case studies. [6] **Environmental Pollution** Pollution - Air, water, soil, noise and nuclear - sources, effects and control measures - Impacts of mining. - Environment protection act - Case studies. [6]

Waste and Disaster Management

Waste –Solid waste - e-waste - sources, effects and control measures. Disaster management - Earth quakes Landslides - Floods - Cyclones - Tsunami - Disaster preparedness - Case studies. [5] **Food Resources, Human Population and Health**

World food problems - over grazing and desertification - effects of modern agriculture. Population - Population explosion and its impacts - HIV/AIDS - Cancer- Role of IT in environment and human health - Case studies. [6]

Social Issues and the Environment

Unsustainable to sustainable development - Use of alternate energy sources - Rain water harvesting - Water shed management - Deforestation – Greenhouse effect - Global warming - Climate change - Acid rain - Ozone layer depletion - Waste land reclamation. Consumerism and waste products - Role of an individual in conservation of natural resources - Case studies. [7]

Objective(s)	• To design various UML diagrams and develop object oriented programs using C++ with associated libraries. • To learn how to implement class, objects, constructors and destructors in C++. • To learn how to overload functions and operators in C++. • To learn how inheritance promote code reuse in C++. • To apply exception handling and use built in classes from STL.
Course Outcomes	**At the end of the course, the students will be able to** CO1: Demonstrate the input/output operations and user defined functions CO2: Implement the concept of class and objects CO3: Demonstrate the concept of reusability and compile time polymorphism CO4: Implement the concept of dynamic objects and runtime polymorphism CO5: Demonstrate the concept of templates and exception handling

The laboratory should be preceded by a tutorial to design UML diagrams.
1. Construct a C++ program to manage the input and output operations using stream classes
2. Construct a C++ program to manage large amount of statements using functions
3. Design a C++ program to implement the concept of class and objects
4. Develop a C++ program to initialize the class members using constructors and destroy the objects by using destructor
5. Design a C++ program for reusability using inheritance
6. Write a C++ program to perform compile time polymorphism
7. Develop a C++ program to implement the concept of dynamic objects
8. Develop a C++ program to implement runtime polymorphism
9. Develop a C++ program to allow functions and classes to operate with generic types using templates.
10. Construct a class in C++ to handle predefined and user defined exceptions

Objective(s)	• To help learners to enrich their grammatical correctness and vocabulary efficacy in the academic and professional contexts. • To help the learners to frame syntactical structures of sentences and comprehend the meaning of reading passages effectively • To help learners to adeptly sequence the information, draft letters and correct usage of foreign words with correct spelling and punctuation. • To help the learners to introduce themselves and involve in situation conversations professionally • To help learners to make various modes of presentations and express their opinion in a conducive way.
Course Outcomes	**At the end of the course, the student will be able to** CO1: Reinforce the essential grammatical correctness and vocabulary efficacy in the academic and professional contexts CO2: Generate syntactical structures and infer the semantics in the reading passages effectively CO3: Reorganize and compose the sequential information, letter drafts, and interpret the appropriate usage of foreign words with correct spelling and punctuation CO4: Demonstrate their introduction and relate to situational conversations adeptly
	CO5: Exhibit various modes of presentations and organize their opinions in an expressive way

Unit – 1	**Written Communication – Part 1**	**Hrs**
Usage of noun, pronoun, adjective (Comparative Forms), Verb, Adjectives, Adverb, Tenses, Articles and Preposition - Change of Voice - Change of Speech - Synonyms & Antonyms - One Word Substitution - Using the Same Word as Different Parts of Speech - Odd Man Out **Materials:** Instructor Manual, Word Power Made Easy Book		8
Unit – 2	**Written Communication – Part 2**	
Analogies - Sentence Formation - Sentence Completion - Sentence Correction - Idioms & Phrases - Jumbled Sentences, Letter Drafting (Formal Letters) - Reading Comprehension(Level 1) - Contextual Usage - **Materials:** Instructor Manual, Word Power Made Easy Book		6
Unit – 3	**Written Communication – Part 3**	
Jumbled Sentences, Letter Drafting (Formal Letters) - Foreign Language Words used in English - - Spelling & Punctuation (Editing) **Materials:** Instructor Manual, News Papers		4
Unit – 4	**Oral Communication – Part 1**	
Self Introduction - Situational Dialogues / Role Play (Telephonic Skills) - Oral Presentations-Prepared -'Just A Minute' Sessions (JAM) **Materials:** Instructor Manual, News Papers		6
Unit – 5	**Oral Communication – Part 2**	
Describing Objects / Situations / People, Information Transfer - Picture Talk - News Paper and Book Review **Materials:** Instructor Manual, News Papers		6
Total		**30**

Evaluation Criteria			
S.No.	**Particular**	**Test Portion**	**Marks**

MATHEMATICAL LOGIC

Propositional logic – Propositional equivalences – Predicates and quantifiers – Rules of inference.   [9]

SET THEORY

Sets – Set Operations – Relations and Their Properties– Representing Relations– Equivalence relations – Functions.   [9]

ALGEBRAIC STRUCTURES

Algebraic systems – Semi groups and monoids - Groups – Subgroups – Homomorphism's –Normal subgroup and cosets – Lagrange's theorem – Definitions and examples of Rings andFields[9]

COMBINATORICS

Permutations and Combinations - Pigeonhole Principle-Mathematical induction – Recurrencerelations– Generating functions.   [9]

GRAPH THEORY

Graphs and graph models – Graph terminology and special types of graphs – Matrixrepresentation of graphs and graph isomorphism – Connectivity – Euler and Hamilton paths.   [9]

Hands on:

1. Introduction to MATLAB.
2. Generate the truth table for mathematical logic.
3. Various functions for set operations like union, intersection etc.
4. Generate Cayley's representation table for algebraic structures.
5. Compute permutations and combinations functions.
6. Solve the problem about isomorphism of two graphs.

K.S. Rangasamy College of Technology – Autonomous R2018								
51 IT 001 - Design and Analysis of Algorithms								
Common to CS, IT, AD								
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
IV	2	0	2	45	3	50	50	100
Objective(s)	• To design algorithms in both the science and practice of computing. • To choose the appropriate data structure and algorithm design method for a specified application • To understand how the choice of data structures and algorithm design methods impacts the performance of programs. • To solve problems using algorithm design methods such as the greedy method, divide and conquer, dynamic programming, backtracking and branch and bound. • To solve NP-hard and NP-complete problems.							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Classify the problem types and compare orders of growth to represent asymptotic notations. CO2: Apply and inspect recursive and non-recursive algorithms by mathematical notations using sample algorithms. CO3: Apply 'Brute Force' and 'Divide and conquer' design techniques for sorting and searching problems. CO4: Construct analogous algorithms for graph related problems. CO5: Apply 'Backtracking' and 'Branch and bound' techniques to solve NP-hard problems.							
Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.								

Basic Concepts of Algorithms

Introduction - Fundamentals of Algorithmic Problem Solving - Important Problem types -Fundamentals of the analysis of algorithm efficiency - Analysis Framework - Asymptotic Notations and Basic Efficiency Classes - Recurrence relations: Methods for solving recurrence relations.

[9]

Lab Exercise: Implement a Merge Sort algorithm to sort a given set of elements and determine the time required to sort the elements. Repeat the experiment for different values of n, the number of elements in the list to be sorted. The elements can be read from a file or can be generated using the random number generator.

Mathematical Analysis of Algorithms

Mathematical Analysis of Non-recursive Algorithms and Examples - Mathematical Analysis of Recursive [9] Algorithms - Example: Fibonacci numbers - Empirical Analysis of Algorithms.

Lab Exercise: Implementation of Binary search algorithm using Divide & Conquer method.

Brute Force and Divide & Conquer Techniques

Selection Sort and Bubble Sort - Brute-force string matching - Merge sort - Multiplication of Two n-Bit [9] Numbers - Quick Sort - Binary Search - Binary tree Traversal and Related Properties.

Lab Exercise: Implementation of Merge Sort algorithm using Divide & Conquer method.

Algorithm Design Paradigm

Decrease and Conquer Technique: Insertion Sort - Depth first Search and Breadth First Search –
Transform and Conquer Technique: Presorting - Dynamic Programming: Computing a Binomial Coefficient -

[9]

Warshall's and Floyd's Algorithm - The Knapsack Problem and Memory Functions - Optimal Binary Search trees – Greedy Technique**:** Huffman trees.

Lab Exercise: Implement 0/1 Knapsack problem using Dynamic Programming.

NP Hard and NP-Complete Problems

P and NP problems - NP complete problems - Backtracking: N-Queen's Problem - Hamiltonian Circuit

[9]

Problem Branch and Bound Techniques: Traveling salesman problem. **Lab
Exercise:** Implement N Queen's problem using Back Tracking.

Semester	Hours / Week			Total Hrs	Credit	Maximum Marks		
	L	T	P	45	C	CA	ES	Total
IV	3	0	0		3	40	60	100

Objective(s)	• To cram the fundamental element of the Java language • To understand the concept of Collections, Streams, Packages and Exception handling, • To apply the knowledge of threads and to access remote data • To learn about regular expression and streams • To enhance the knowledge in server side programming and javaFx
Course Outcomes	**At the end of the course, the students will be able to** CO1: Express the concept of classes, objects and communicate classes over objects using methods CO2: Prompt the collection classes and observe predefined and user defined Exception handling CO3: Express the concept of thread execution with thread priority and to perform remote data access CO4: Practice the Regex and observe the streams concepts CO5: Design the concept server side programming also enrich the web concepts using JavaFX

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

JAVA FUNDAMENTALS

Fundamentals of OOPs – Java Features – Constants – Variables – Data types - Operators – Arrays – Strings – control statements – Class – object – methods   [8]

COLLECTIONS and EXCEPTION HANDLING

Collections: Set, List, Vector and Map. Interfaces – Packages – Exception Handling. [11] **MULTI THREADING AND JAVA NETWORKING**

Multi threading - Java Thread model – Main thread – creating thread – creating multiple thread – Thread priority – methods – synchronization – IPC, RMI – Basics – RMI Layer – Stub, Skeleton - RMI Implementation. [8] **REGEX and STREAMS**

Regular Expression: Matcher Class, Pattern class and Pattern Syntax Exception class, Regex Character Classes and Quantifiers, Metacharacters. Streams: Generating streams, forEach, map, filter, limit, sorted, parallel processing and collectors.   [9]

SERVLET and JavaFX

Server Side Programming; Servlet Architecture – Servlet Life cycle - Servlet Get and Post Method – Executing servlet. JavaFX: Architecture, 2D &3D Shapes, Animations, Colors, Text, UI Controls   [9]

CS							
Semester	Hours / Week			Total hrs	Credit C	Maximum Marks		
	L	T	P			CA	ES	Total
IV	3	0	0	45	3	40	60	100

Objective(s)	• To gain the knowledge about basic structure ,Instructions and functional units of a digital computer • Discuss in detail the operation of the arithmetic unit including the algorithms and implementation of data manipulation. • To study in detail the different types of control and the concept of pipelining and study the hierarchical memory system, cache memory • Study the different ways of communicating with I/O devices and standard I/O interfaces • To understand the instruction and thread level parallelism concepts and multicore processors.
Course Outcomes	**At the end of the course student will able to** CO1: Describe the basic structure of computer, Instruction sequencing and Addressing modes. CO2: Express the basic design of Addition and subtraction for fixed point numbers, multiplication and division of fixed numbers and basics of floating point numbers CO3: Discuss the concept of Instruction execution, generation of control signals, pipelining and hazards. CO4: Summarize the concept of Cache memory and its performance, interrupts, buses, Direct Memory Access and Standard I/O Interfaces. CO5: Gain Knowledge about Parallelism concepts, compiler techniques, multiprocessor architecture and case studies on Intel's processors.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit in the syllabus depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Basic Structure of Computers

Functional units - Basic operational concepts - Bus structures - Software performance – Memory locations and addresses – Memory operations – Instruction and instruction sequencing – Addressing modes – Assembly language – Basic I/O operations – Stacks and queues.   [9]

Arithmetic Unit

Addition and subtraction of signed numbers – Design of fast adders – Multiplication of positive numbers - Signed operand multiplication and fast multiplication – Integer division – Floating point numbers and operations. [9] **Basic Processing Unit**

Fundamental concepts – Execution of a complete instruction – Multiple bus organization – Hardwired control – Micro programmed control - Pipelining – Basic concepts – Data hazards – Instruction hazards – Influence on Instruction sets – Data path and control consideration – Superscalar operation.   [9]

Memory and I/O Systems

Speed,Size,Cost– Cache memories – Performance considerations – Accessing I/O Devices – Interrupts – Direct Memory Access – Buses– Interface Circuits– PCI,USB.   [8]

Parallelism and Multiprocessors

Instruction Level Parallelism: ILP concepts – Pipelining overview - Compiler Techniques for Exposing ILP – Dynamic Branch Prediction – Dynamic Scheduling -Hardware Based Speculation – Static scheduling - Thread Level Parallelism: Symmetric and Distributed Shared Memory Architectures –Case studies: Intel core i7, Atom Processors   [10]

Common to all Branches								
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
IV	2	0	0	30	-	100	-	100
Objective(s)	• To provides practical proven tools for transforming an idea into a product or service that creates value for others. • To build a winning strategy, how to shape a unique value proposition, prepare a business plan • To impart practical knowledge on business opportunities • To inculcate the habit of becoming entrepreneur • To know the financing, growth and new venture & its problems							
Course Outcomes	**At the end of the course, the student will be able to** CO1: Transform ideas into real products, services and processes, by validating the idea, testing it, and turning it into a growing, profitable and sustainable business. CO2: Identify the major steps and requirements in order to estimate the potential of an innovative idea as the basis of an innovative project. CO3: Reach creative solutions via an iteration of a virtually endless stream of world-changing ideas and strategies, integrating feedback, and learning from failures along the way. CO4: Apply the 10 entrepreneurial tools in creating a business plan for a new innovative venture. CO5: Apply methods and strategies learned from interviews with startup entrepreneurs and innovators.							
Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Introduction to Entrepreneurship & Entrepreneur

Meaning and concept of Entrepreneurship, the history of Entrepreneurship development, Myths of Entrepreneurship, role of Entrepreneurship in Economic Development, Agencies in Entrepreneurship

[6]

Management and Future of Entrepreneurship.
The Entrepreneur: Meaning, the skills required to be an entrepreneur, the entrepreneurial decision process, Role models, Mentors and Support system.

Business Opportunity Identification and Preparing a Business Plan

Business ideas, methods of generating ideas, and opportunity recognition, Idea Generation Process, Feasibility study, preparing a Business Plan: Meaning and significance of a business plan, components of a [6] business plan.

Innovations

Innovation and Creativity - Introduction, Innovation in Current. Environment, Types of Innovation, School of Innovation, Analysing the Current Business Scenario, Challenges of Innovation, Steps of Innovation

[6]

Management, Experimentation in Innovation Management, Participation for Innovation, Co-creation for Innovation, Proto typing to Incubation. Blue Ocean Strategy-I, Blue Ocean Strategy-II. Marketing of Innovation, Technology Innovation Process

Financing & Launching the New Venture

Importance of new venture financing, types of ownership, venture capital, types of debt securities, determining ideal debt-equity mix, and financial institutions and banks. [6]
Launching the New Venture: Choosing the legal form of new venture, protection of intellectual property, and formation of the new venture

Managing Growth & Rewards in New Venture

Characteristics of high growth new ventures, strategies for growth, and building the new ventures.

Managing Rewards: Exit strategies for Entrepreneurs, Mergers and Acquisition, Succession and exit [6] strategy, managing failures – bankruptcy

Objective(s)	- To enable the students to apply and solve the logical program - To apply the knowledge of library functions in java programming - To apply multithreading concepts in Java - To design server side programming - To design various level of graphics using JavaFX								
Course Outcomes	**At the end of the course, the students will be able to** CO1: Demonstrate different operations using string and string buffer CO2: Implement the various classes and interfaces of Collections, packages and exception handling CO3: Demonstrate Inter Process Communication using threads and remote access using RMI CO4: Practice to solve the various scenario using regex and streams CO5: Perform server side programming using servlet and to perform javaFX								

1. Implementation of different operations using string and string buffer

2. Demonstrate various classes and interfaces of Collections

3. Implementation of different applications using packages and to check abnormal conditions using exception handling.

4. Implementation of multi-tasking concepts using threads

5. Implementation of accessing remote data using RMI.

6. Implementation of innumerable tasks using regex and streams

7. Implementation of server programming using servlets.

8. Demonstrate the graphics applications using JavaFX

Objective(s)	• To identify and solve the issues related to Operating System Components. • To learn different programming language in Linux editor environment • To implement different operating system algorithm • To implement the performance of different algorithms like CPU scheduling • To implement the performance of different algorithms like page replacement, deadlock avoidance and detection
Course Outcomes	**At the end of the course, the students will be able to** CO1: Learn the basics of Operating system installation and shell scripts and analyze the System calls for Process and inter process communications CO2: Examine the Steps in process operation and examine the criteria involved in CPU scheduling algorithms. CO3: Analyzing the different deadlock avoidance mechanism and implement Classic problem of Synchronization using semaphores CO4: Classifying the Storage Management and outline the page replacement algorithms CO5: comprehend the File concept and its allocations and understand the factors in disk scheduling algorithms

1. Installation of Operating system and implementation of Basic Shell Programming Concepts like Loops, Functions, Patterns, Substitutions.
2. Familiarization with System calls for Process and inter process communications.
3. Implement the operation on process.
4. Implement and analyze the scheduling criteria's of CPU Scheduling Algorithms.
5. Implement Deadlock avoidance mechanism from deadlock in a real time environment using C.
6. Implement Classic problem of Synchronization using semaphores.
7. Implement Contiguous Memory Allocation.
8. Implement Page replacement algorithm.
9. Implement various file allocation Methods.
10. Implement Disk Scheduling to find the seek time of accessing the required information using different Scheduling algorithm.

IV	**0**	**0**	**2**	**0**	**100**	**00**	**100**
Course Objectives	• To help the learners to paraphrase the reading passages, to draft continuous writing and review texts in the academic and professional contexts • To help the learners to acquire the phonetic skills of the language and express themselves precisely for effective professional presentations • To help the learners to enrich their verbal reasoning and ability to match the employability requirements of the corporates • To help the learners to comprehend the preliminary level of aptitude skills required to attend placement and competitive online exams • To help the learners to comprehend the Pre - Intermediate level of aptitude skills required to attend placement and competitive online exams						
Course Outcomes	**At the end of the course, the student will be able to** CO1: Interpret and infer the meaning in the reading passages, organize continuous writing and review texts both academically and professionally. CO2: Adapt to and demonstrate the phonetic skills accurately for effective presentations professionally. CO3: Interpret the various concepts of verbal reasoning and relate for the concepts to the requirements of the competitive exams and employability CO4: Infer the concepts of preliminary level of aptitude skills pertaining to competitive exams and company recruitments. CO5: Infer the concepts of pre-intermediate level of aptitude skills pertaining to competitive exams and company recruitments.						

Unit – 1	**Written Communication – Part 3**	**Hrs**
Reading Comprehension Level 2 (Paraphrasing Poems) - Letter Drafting - Email Writing - Paragraph Writing - Newspaper and Book Review Writing - Skimming and Scanning - Interpretation of Pictorial Representations. **Practices:** Sentence Completion - Sentence Correction - Jumbled Sentences - Synonyms & Antonyms - Using the Same Word as Different Parts of Speech - Editing **Materials:** Instructor Manual, Word power Made Easy Book, News Papers		6
Unit – 2	**Oral Communication – Part 3**	
Self-Introduction - Miming (Body Language) - Introduction to the Sounds of English - Vowels, Diphthongs & Consonants, Introduction to Stress and Intonation - Extempore - News Paper and Book Review - Technical Paper Presentation. **Material:** Instructor Manual, News Papers		4
Unit – 3	**Verbal Reasoning – Part 1**	8
Analogies - Alphabet Test - Theme Detection - Family Tree - Blood Relations (Identifying relationships among group of people) - Coding & Decoding - Situation Reaction Test - Statement & Conclusions **Material:** Instructor Manual, Verbal Reasoning by R.S.Aggarwal		
Unit – 4	**Quantitative Aptitude – Part 1**	6
Problem on Ages - Percentages - Profit and Loss - Simple & Compound Interest - Averages - Ratio, Proportion **Material:** Instructor Manual, Aptitude Book		
Unit – 5	**Quantitative Aptitude – Part 2**	

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023   BoS Chairman

Speed, Time & Work and Distance - Pipes and Cisterns - Mixtures and Allegations - Races - Problem on Trains - Boats and Streams

Practices : Puzzles, Sudoku, Series Completion, Problem on Numbers **Material:** Instructor Manual, Aptitude Book

				6
			Total	**30**

Evaluation Criteria

S.No.	Particular	Test Portion	Marks
1	Evaluation 1 - Written Test	15 Questions Each from Unit 1, 3, 4 & 5(External Evaluation)	50
2	Evaluation 2 - Oral Communication	Extempore & Miming – Unit 2 (External Evaluation by English, MBA Dept.)	30
3	Evaluation 3 - Technical Paper Presentation	Internal Evaluation by the Dept.	20
		Total	**100**

Passed in Academic Council Meeting held on 23/12/2023

BoS Chairman

	• To understand the computer networking basics and concepts of data communications, functions of different layers, IEEE
Objective(s)	• To Know the standards employed in computer networking
	• To make the students to get familiarized with different protocols and network components.
	• To develop an understanding of different components of computer networks, various protocols, modern technologies and their applications.
	• To understand the application layer and its applications
Course Outcomes	**At the end of the course student will able to** CO1:Know the concept of components, categories and ISO/OSI model of networks CO2: Describe the Concept of various error detection techniques and Flow, Error control. CO3: Compare the concept of Circuit switching and Packet switching. CO4: Gain the knowledge of Congestion control and QoS Techniques. CO5: Identify the Purpose of Domain Name Space, Email and FTP.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Data Communications

Networks – Components and Categories –Line Configuration – Topologies –Protocols and Standards – ISO / OSI model – Transmission Media – Coaxial Cable – Fiber Optics –Interfaces(RS232 Standard) and Modems   [9]

Data Link Layer

Error – detection and correction – Parity – LRC – CRC – Hamming code – Flow Control and Error control –Stop and wait – go back-N ARQ – selective repeat ARQ- sliding window – HDLC. - LAN - Ethernet IEEE 802.3 – Connecting devices-Repeaters-Hubs-Bridges   [9]

Network Layer

Internetworks – Circuit Switching – Packet Switching– IP addressing methods – Sub netting –Super netting– Routers- Routing Algorithms – Distance Vector Routing – Link State Routing- ICMP / Frame format, Query Messages.   [9]

Transport Layer

Duties of transport layer – Multiplexing – Demultiplexing – Sockets – User Datagram Protocol (UDP) – Transmission Control Protocol (TCP) – Congestion Control – Quality of services (QOS)-Techniques   [9]

Application Layer

Domain Name Space (DNS) – Email (SMTP)-File Transfer protocol (FTP) – HTTP – HTTPS-World Wide Web.

Case Study: Structural Health Monitoring, Traffic Control, Health Care, Pipeline Monitoring, Precision Agriculture.   **[9]**

Objective(s)	• To familiarize the students with various data models and query language. • Gain knowledge on data storage and indexing concepts. • To expose the fundamentals of transaction processing and recovery concepts. • To make the students aware of the various current trends in database system. • To know the current trends of various databases
Course Outcomes	**At the end of the course student will able to** CO1: Express the knowledge of data base systems and analyze the various data models CO2: Employ the concept of Data Definition Language and Data Manipulation Language and apply the various Normal Forms in database design CO3: Express the knowledge of secondary storage device andthe concepts of hashing, B Tree,B+ Tree in indexing to retrieve the data CO4: Apply the various concurrency control techniques in database transactions and recovery techniques CO5: Classify the recent databases such and Express the knowledge of data warehousing and data mining

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Introduction and Conceptual Modeling
Introduction Database systems – DBMS Applications – Purpose of DBMS – Views of Data - Database System Architecture –Data Storage and Querying – DB Users and Administrators - Data Models – ER model – Relational Model – Relational Algebra and Calculus. [9]

Relational Model
Introduction to SQL – Intermediate SQL – Advanced SQL– Triggers – Functions and Procedures –Embedded SQL - Normalization for Relational Databases (up to 5NF). [9]

Data Storage and Indexing Concepts
Record storage and Primary file organization –RAID – Operations on Files- Heap File- Sorted Files- Hashing Techniques – Index Structure for files –Different types of Indexes- B-Tree - B+Tree. [9]

Transaction Management Transaction – Transaction Concepts- Transaction Model- Desirable properties of Transaction- Schedule and Recoverability- Serializability – Concurrency Control – Types of Locks- Two Phase locking- Time stamp based concurrency control – Recovery Techniques – Concepts- Immediate Update- Deferred Update. [9]

Current Trends Object Oriented Databases –Distributed databases- Homogenous and Heterogeneous-Distributed data Storage –Distributed Transaction – Commit Protocols - Data Mining– Data Mining Applications – Data Warehousing. [9]

CS								
Semester	Hours / Week			Total Hrs	Credit C	Maximum Marks		
	L	T	P			CA	ES	Total
V	3	1	0	60	4	40	60	100
Objective(s)	• To understand the types of finite automata and the relationship between finite automata. • To understand regular expressions, push down automata and context free grammar • To understand the properties of context free language • To learn the programming techniques of Turing machine and undecidable problems. • To learn the concepts of Undecidability and interactable Problems.							
Course Outcomes	**At the end of the course student will able to** CO1: Comprehend the formal proofs, Inductive proofs and Finite Automata CO2: Understand regular expressions and the properties of regular languages CO3: Construction of context-free grammar and Push-down automata CO4: Interpret the uses of Turing machine and properties of Context-Free Languages CO5: Recognize the undecidability, and Interactable problems							
Note: The hours given against each topic are of indicative. The faculty have the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.								

Introduction to Automata

Introduction to formal proof – Additional forms of proof – Inductive proofs –Finite Automata (FA): Deterministic Finite Automata (DFA)– Non-deterministic Finite Automata (NFA) – Finite Automata with Epsilon transitions.   [6]

Regular Expressions and Languages

Regular Expression – Finite Automata and Regular Expressions – Properties of regular languages: Proving languages not to be regular – Closure properties of regular languages – Equivalence and minimization of Automata.   [7]

Context-Free Grammar and Languages

Context-Free Grammar (CFG) – Parse Trees – Ambiguity in grammars and languages   [5] **Pushdown Automata** Definition of the Pushdown automata – Languages of a Pushdown Automata – Equivalence of Pushdown automata and Context Free Grammars - Deterministic Pushdown Automata.   [7]

Properties of Context-Free Languages

Normal forms for Context Free Grammars – Pumping Lemma for Context Free Languages - Closure Properties of Context Free Languages   [5]

Turing Machines

The Turing Machines – Programming Techniques for Turing Machine.   [6]

Undecidability

A language that is not Recursively Enumerable (RE) – An undecidable problem that is RE – Undecidable problems about Turing Machine – Post's Correspondence Problem   [5]

Interactable Problems

The classes Polynomial Time (P) and Nondeterministic Polynomial Time(NP).   [4]

Objective(s)	• Enable the students to learn basic web concepts • To learn the concepts of scripting languages and server side programming • To apply the features of XML and JDBC Connectivity • To Write scripts in PERL and JSP • To make aware of the students about development in web technologies
Course Outcomes	**At the end of the course, the students will be able to** CO1: Express the features of HTML and Employ various style sheet concepts in HTML CO2: Describe the basics concepts of JavaScript and express various types events CO3: Analyzing the concepts of XML and JDBC CO4: Describe the purpose of PERL language and Gain the knowledge of JSP in server side programming CO5: Express the various types of applications

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

INTRODUCTION

Internet Basic - Introduction to HTML - List - Creating Table - Linking document - Frames - Graphics to HTML Doc - Style sheet - Style sheet basic - Add style to document - Creating Style sheet rules - Style sheet properties - Font - Text - List - Color and background color - Box - Display properties. [9]

JAVASCRIPT

introduction to Javascript - Advantage of Javascript - Javascript Syntax - Datatype - Variable - Array - Operator and Expression - Looping Constructor - Function - Dialog box – Events [9] **XML and JDBC** Features of XML, The XML Declaration, Element Tags- Nesting and structure, XML text and text formatting element, Table element, Mark-up Element and Attributes, Document Type Definition (DTD),.XML Schema-Introduction-JDBC Architecture-Types of Drivers-Statement-Result Set-Prepared Statement-Connection Modes-SavePoint-Batch Updations-Callable Statement [10]

PERL AND JSP

Programming CGI Scripts – PERL-Introduction-JSP LifeCycle-JSP Implicit Objects & ScopesJSP Directives: page, include, taglib-Jsp Scripting Elements: declaratives, scriptlets, expressions-JSP Actions: Standard Action, Custom Actions-Databases Connectivity in JSP [10] **APPLICATIONS**

e- Business Models – Building an e-Business – e-Marketing – Database connectivity – Online Payments – Security - XML and e-Commerce – m-Business. [9]

Practice:

1. Design a personal web page using CSS
2. Write a Java Script program which makes use of Java Script's inbuilt objects
3. Design web page for employee details using XML with database connectivity
4. A web page using PERL
5. Write a JSP program to implement Students mark Statements with database connectivity

Objective(s)	• To learn and use network commands. • To learn socket programming. • To implement and analyze various network protocols • To learn and use simulation tools. • To use simulation tools to analyze the performance of various network protocols
Course Outcomes	**At the end of the course, the students will be able to** **CO1:** Implement various protocols using TCP and UDP. **CO2:** Compare the performance of different transport layer protocols. **CO3:** Use simulation tools to analyze the performance of various network protocols. **CO4:** Analyze various routing algorithms. **CO5:** Implement error correction codes.

1. Learn to use commands like tcp dump ,netstat, ifconfig, nslookup and trace route Capture ping and trace route PDU using a network protocol analyze rand examine.
2. Write a HTTP web client program to download a webpage using TCP sockets.
3. Applications using TCP sockets like:
   i) Echo client and echo server ii) Chat iii) File Transfer
4. Simulation of DNS using UDP sockets.
5. Write a code simulating ARP /RARP protocols.
6. Study of Network simulator(NS)and Simulation of Congestion Control Algorithms using NS2 7. Study of TCP/UDP performance using Simulation tool.
8. Simulation of Distance Vector/Link State Routing algorithm.
9. Performance evaluation of Routing protocols using Simulation tool.
10. Simulation of error correction code (like CRC).

Objectives	- To present SQL and procedural interfaces to SQL comprehensively - To perform various commands in RDBMS - To Perform PL/SQL programming using concept of Cursor Management, Error Handling, Package and Triggers - To design the applications like payroll - To apply procedures and functions in PL/SQL
Course Outcomes	**At the end of the course, the students will be able to** CO1: Implement the Data Definition Language, Data Manipulation Language and Data Control Language commands in RDBMS CO2: Employ the Sub queries to retrieve data from multiple tables CO3: Implement the High-level language extension with Cursors and Triggers CO4: Implement the Procedures and Functions in PL/SQL CO5: Demonstrate the views, joins and Embedded SQL in RDBMS

List of Experiments

1. Data Definition Language (DDL) commands in RDBMS.
2. Data Manipulation Language (DML), Data Control Language (DCL) and Transaction Control Language (TCL) commands in RDBMS.
3. Implementation of Sub queries.
4. Creation of views and joins.
5. High-level language extension with Cursors. 6. High level language extension with Triggers
7. Procedures and Functions.
8. Embedded SQL.
9. Design and implementation of Payroll Processing System.
10. Design and implementation of Banking System.
11. Design and implementation of Railway Reservation System.

CS

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023   BoS Chairman

Semester	Hours / Week			Total	Credit	Maximum Marks		
	L	T	P	hrs	C	CA	ES	Total
VI	3	0	0	45	3	40	60	100

Objective(s)	• To know basic programming in Python • To understand modular design along with exception handling • To apply object-oriented programming concepts and working with python packages • To develop the ability to write database programming and network programming in python • To develop the skill of designing Graphical user Interfaces in Python
Course Outcomes	**At the end of the course, the students will be able to** CO1: Apprehend the basics of Python programming CO2: Expel modules and functions with various types of message passing and handling exceptions CO3: Acquire and implement OOP concepts and working with python packages CO4: Understand DB connectivity and network programming using Python CO5: Understand GUI toolkits like Tkinter and configure various widgets in layout

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

INTRODUCTION TO PYTHON

Introduction to Python –Strings –List–Tuples –Dictionaries–Basic Operators–Decision Making statements –Looping statements -File Input and Output   [09]

MODULAR DESIGN AND EXCEPTION HANDLING

Modules in Python –Creation of modules -Namespaces –Importing modules –Loading and Execution ; Program Routine –Functions –Parameter Passing -Types –Recursion ; Exceptions –Types –Handling Exceptions-User Defined Exceptions   [09]

OBJECT ORIENTED PROGRAMMING

Object Oriented Programming–Class and Objects–Data Abstraction-Encapsulation–Inheritance–Polymorphism –Implementation - **Packages:** NumPy – Pandas - Data Wrangling   [09]

DATABASE CONNECTIVITY AND NETWORK PROGRAMMING

Introduction to database –Relational Databases : Writing SQL statements; Defining tables; Setting up a Database – Python database APIs –Network Protocols –Socket Programming –Client Server Program –Chat Application.   [09]

GUI PROGRAMMING AND GRAPHICS

GUI Programming toolkits –Introduction to Tkinter –Creating GUI widgets –Resizing –Configuring widget options – Creating Layouts –Radio buttons –Check boxes –Dialog boxes –Drawing using Turtle.   [09]

50 CS 602 - Principles of Compiler Design								
CS								
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
VI	3	1	0	60	4	40	60	100

Objective(s)	- Understand the fundamentals of lexical analysis phase of compiler - Discuss syntactic analysis functionalities of compiler - Identify the processes involved in intermediate code generation - Explain issues code generation phase of compiler - Describe optimization techniques
Course Outcomes	**At the end of the course, the students will be able to** CO1: Understand the basics of compilers and describe phases of compilers CO2: Interpret the major role played by syntax analysis CO3: Explain the processes involved in intermediate code generation CO4: Summarize the major processes involved in code generation. CO5: Illustrate the features of code optimization.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

LEXICAL ANALYSIS

Introduction to Compilers-Structure of compiler -The phases of compiler – Cousins of compiler -The grouping of phases-Compiler construction tools. The role of the lexical analyzer- Input Buffering –Specification of Tokens – Recognition of Tokens   [9]

SYNTAX ANALYSIS

The role of the parser-Context-free grammars-Writing a grammar-Top down parsing- Recursive Descent Parser Predictive Parser-LL(1) Parser-Bottom-up Parsing- Shift Reduce Parser-LR parsers-SLR parser – Canonical LR parser –LALR Parser.   [9]

INTERMEDIATE CODE GENERATION

Intermediate languages –Three-Address Code –Types and Declarations –Translation of Expressions –Rules for Type Checking and Type Conversions –Control Flow –Backpatching –Switch Statements –Procedures.[9]

CODE GENERATION

Issues in the Design of a Code Generator –Target Language –Addresses in the Target Code –Basic Blocks and Flow Graphs –Optimization of Basic Blocks –A Simple Code Generator.   [9] **CODE OPTIMIZATION**

Code Optimization –Principal Sources of Optimization-Peephole Optimization-Introduction to Data Flow Analysis –Run Time Environments –Storage Organization –Stack Allocation of Space –Access to Non-Local Data on the Stack.   [9]

CS								
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
VI	3	0	0	45	3	40	60	100
Objective(s)	- To explain the basics of software testing. - To highlight the strategies for software testing. - To stress the need and conduct of testing levels. To identify the issues in testing management. - To bring out the ways and means of controlling and monitoring testing activity • To study about Automation testing and tools							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Interpret the basic concepts of Software testing, defects, verification and validation CO2:Analyze the functional requirements of the system and the use of conducting the review CO3: Infer the need of testing techniques for White box, Basis path, Black box and Control structure testing. CO4: Classify different strategic approaches and types in software testing. CO5: Learn about Automation Testing tools and implement the guidelines to generate test cases design.							
Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.								

Introduction to Testing

Software Testing – Definition of Software Testing – Objective and Limits of Testing –**Principles of Software Testing**- Software Testing Life Cycle- Testing Strategy – Roles and Responsibilities of a Software Tester in Organizations –Origins of Defects – Cost of Defects – Independent Verification and Validation.   [8]

Software testing Requirements

Software Testing Requirements - Analyzing the requirements -**Classifying the Functional and Non Functional Requirements with their types**. Software Testing Review Process - Objective of Software Testing Review Types of Reviews - Peer Review, Walkthrough, Inspection - Checklists of Review Process - Review Log.   [9] **Testing Techniques**

White Box Testing Techniques – Static and Dynamic Testing – Statement Coverage – Decision Coverage – Basic Path Testing – Control Flow Graph Coverage – Branch Coverage – Conditional Coverage – McCabe's Cyclomatic Complexity – Mutation Testing. Black Box Test Techniques – Boundary Value Analysis – Equivalent Class Partition – Error Guessing – Decision Table – State Transition Table – Pair Wise Testing – Use Case Testing.
[9]

Testing Types

Unit Testing – Smoke Testing – Functional Testing and its Types – Integration, System Testing, User Acceptance Testing (Alpha and Beta)- Non Functional Testing and its Types – Performance Testing (Load, Volume and Stress)-Recovery Testing, Browser Compatibility Testing – Security Testing – Scalability Testing – Usability Testing – Ad Hoc Testing – Internationalization Testing – Configuration Testing - Data warehouse Testing and

VI	0	0	4	60	2	60	40	100

Objective(s)	• To gain the fundamental skills in Python programming Language • To understand the concepts of modular design • To implement the object oriented programming and working with python packages • To enhance the knowledge in database connectivity • To develop the programs in GUI
Course Outcomes	**At the end of the course, the students will be able to** CO1: Know the basic concepts of Python CO2: Understand the modular design and exception handling CO3: Ability to develop programs on object oriented concepts and working with python packages CO4: Implement the data base connectivity CO5: Integrate the concept of GUI programming and Graphics

LIST OF EXPERIMENTS

1. Implement the basic concepts of Python

2. Implement List, string and Tuples

3. Implement the concept of Decision making and looping statements.

4. Implement File operations

5. Build models using object oriented concepts

6. Working with data using pandas

7. Perform various numpy operations and special functions

8. Build models using database connectivity

9. Build model using GUI

10. Drawing using Turtle

11. Mini project to predict the time taken to solve a problem given the current status of the user.

Objective(s)	• To study the basic concepts of MYSQL. • To discover the PHP operators and functions. • To apply the knowledge of string handling functions in PHP. • To expand knowledge of MYSQL database connectivity and file handling functions in PHP.
Course Outcomes	**At the end of the course, the students will be able to** CO1: Interpret the concepts of MYSQL and its record selection technologies. CO2: Demonstrate the basic concepts and developing a simple application using PHP operators and Functions. CO3: Exhibit the string handling functions in PHP. CO4: Demonstrate the MYSQL database connectivity. CO5: Demonstrate the file handling functions in PHP.

1. Connecting the MYSQL database and perform the following
   a. Creating and Deleting Database.
   b. Creating a Table.
   c. Examining the Results.
   d. Inserting / Retrieving Data into / from Tables.

2. a. Selecting Specific Rows and Columns.
   b. Deleting and Updating Rows.
   c. Loading a Database from a File.

3. PHP script implements string handling functions.

4. PHP Script that implements the database connectivity.

5. PHP scripts that implement the following file handling operations
   i. Reading data from the
   file ii. Writing data to the
   file iii. Printing all the
   records.

6. Write a PHP script to add the Rollno, name, six subjects' marks into Mark table in MySQL and display the average and result

7. Design a form with proper controls to read Employee Name, Basic Pay, Loan Amount, PF and Insurance of an Employee. Write a PHP code to prepare pay slip for employees of an organization by applying the following criteria:

Basic Pay	DA	HRA
Upto 20,000	38% of Basic pay	500
20001 to 30000	30% of Basic pay	250
>30,000	25% of Basic pay	150

   Gross pay = Basic pay + DA + HRA , Net pay = Gross pay – Deductions, Deductions are Loan, PF & Insurance.

   Display the Pay slip as PDF Report.

Course Objectives	• To help the learners to enrich the advanced written and oral communication skills in the academic and professional contexts • To help the learners to augment their advanced verbal and logical reasoning ability to meet out the employability requirements of the companies • To help the learners to comprehend the advanced level of aptitude skills in the concepts of Geometry • To help the learners to enhance the data interpretation and analytical skills in varied methods. • To help the learners to enrich the technical and programming skills to be focused on better employability, codeathons and hackathons
Course Outcomes	**At the end of the course, the student will be able to** CO1: Examine and correlate the written and oral communication skills in the academic and professional contexts CO2: Predict and discriminate advanced verbal and logical reasoning ability to meet out the employability requirements of the companies CO3: Infer the concepts of advanced level of aptitude skills on Geometry pertaining to competitive exams and company recruitments. CO4: Illustrate the data interpretation and analytical skills in varied methods. CO5: Formulate the technical and programming skills to be focused on better employability, codeathons and hackathons

Unit – 1	Written and Oral Communication – Part 2	Hrs
Self-Introduction – GD – Personal Interview Skills **Practices** on Reading Comprehension Level 2 – Paragraph Writing – Newspaper and Book Review Writing – Skimming and Scanning – Interpretation of Pictorial Representations – Sentence Completion-Sentence Correction – Jumbled Sentences – Synonyms & Antonyms – Using the Same Word as Different Parts of Speech – Editing. **Materials:** Instructor Manual, Word power Made Easy Book, News Papers		4
Unit – 2	Verbal & Logical Reasoning – Part 2	
Analogies – Blood Relations – Seating Arrangements – Syllogism – Statements and Conclusions, Cause and Effect – Deriving Conclusions from Passages – Series Completion (Numbers, Alphabets & Figures) – Analytical Reasoning – Classification – Critical Reasoning **Practices**: Analogies – Blood Relations – Statement & Conclusions. **Materials:** Instructor Manual, Verbal Reasoning by R.S.Aggarwal		8
Unit – 3	Quantitative Aptitude – Part – 5	
Geometry – Straight Line – Triangles – Quadrilaterals – Circles – Co-ordinate Geometry – Cube – Cone – Sphere. **Materials:** Instructor Manual, Aptitude book		6
Unit – 4	Data Interpretation and Analysis	
Data Interpretation based on Text – Data Interpretation based on Graphs and Tables. Graphs can be ColumnGraphs, Bar Graphs, Line Charts, Pie Chart, Graphs representing Area, Venn Diagram & Flow Charts. **Materials:** Instructor Manual, Aptitude Book		6
Unit – 5	Technical & Programming Skills – Part 2	
Core Subject – 4, 5, 6 **Practices:** Questions from Gate Material. **Materials:** Text Book, Gate Material		6

Course Objective(s)	• To make the Engineering student to know about the basic of economics & how to organize a business • To know the financial aspects related to business. • To know about functions of banks. • To understand the different methods of appraisal of projects and • To know about the pricing & capital techniques.
Course Outcome s	**At the end of the course, the students will be able to** CO1: Identify suitable demand forecasting techniques and prevailing market structure CO2: Describe the forms of business and differentiate between proprietorship and partnership CO3: Explain the kinds of banks and illustrate the Balance sheet with suitable example CO4: Interpret fixed cost and variable cost and technical feasibility and economicfeasibility CO5: Apply break even analysis and summarize the managerial uses of breakevenanalysis

Basic Economics

Definition of economics – nature and scope of economics – basic concepts of economics – factors of production – demand analysis – definition of demand – Law of demand – Exception to law of demand – Factors affecting demand – elasticity of demand – demand forecasting – definition of supply – factors affecting supply – elasticity of supply – market structure – perfect competition – imperfect competition - monopoly – duopoly – oligopoly and bilateral

monopoly .   [9]

Organization and Business Financing

Forms of business – proprietorship – partnership - joint stock company - cooperative organization – state Enterprise mixed economy - Money and banking – kinds of banking - commercial banks - central banking functions - control of credit - monetary policy - credit instrument – Types of financing - Short term borrowing - Long term borrowing Internal generation of funds - External commercial borrowings - Assistance from government budgeting support and international finance corporations- analysis of financial statement- Balance sheet-profit and loss account- Funds flow

statement- Examples in all members   [9]

Financial Accounting and Capital Budgeting

The balance Sheet and related concepts – The profit and loss statement and related concepts – Financial ratio analysis – Cash flow analysis – fund flow analysis – Capital budgeting– Average rate of return – Payback period – Net present value and internal rate of return.   [9]

Cost Analysis

Types of costing – traditional costing approach - activity based costing - Fixed Cost – variable cost – marginal cost – cost output relationship in the short run and in long run – pricing practice – full cost pricing – marginal cost pricing – going rate pricing – bid pricing – pricing for a rate of return – appraising project profitability - cost benefit analysis – feasibility reports – appraisal process – technical feasibility - economic feasibility – financial feasibility. [9]

Break Even Analysis

Basic assumptions –break even chart – managerial uses of break even analysis - applications of break even analysis

in engineering projects.   [9]

CS

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
VII	3	0	2	75	4	50	50	100

Objective(s)	• The objective of this course is to impart necessary knowledge of the mathematical foundations needed for data science and develop programming skills required to build data science applications
Pre-requisites	Fundamentals in linear algebra / statistics / probability

Course Outcomes	**At the end of the course, the students will be able to** CO1: Understand the basics of Data Sciences CO2: To know the mathematical foundations needed for data Science and perform Exploratory Data Analysis. CO3: Implement models such as k-nearest Neighbors, Naive Bayes, linear and logistic Regression, decision trees, neural networks and clustering. CO4: Create effective visualization of given data CO5: Build data science applications.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Introduction to core concepts and technologies: Introduction, Terminology, Data-Properties of Data, Types of data, Why Data Science? Computer Science, Data Science, and Real Science, data science process, Data Acquisition and Data Science Life Cycle, Ethics in Data Science, data science toolkit, Example applications. Data wrangling: Sources of data, Data collection and API, Working with data: Reading Files, Cleaning Data.   [8]

Statistical Inference, Exploratory Data Analysis:
Statistical thinking in Data Science, Statistical Inference, Statistical Analysis-Mean, Median, Mode, Standard Deviation, Range, Percentile, Modeling, Exploratory Data Analysis: Philosophy of Exploratory Data Analysis, Data visualization, Missing value analysis, The correction matrix, Outlier detection analysis [9]

Basic Machine Learning Algorithms: Brief introduction, Linear / Polynomial Regression, Logistic Regression, Classification, Regularization, Support vector machines, Naive Bayes, Cross Validation, Label Encoding, Random Forests, Decision Trees, Clustering, Dimensionality reduction, Manifold learning, Introduction to Neural Networks, Confusion Matrix - Evaluation Metrics – Recall, Precision, F-measure, Accuracy.   [10]

Data visualization: Introduction, Types of data visualization, Data Visualization - Basic principles, ideas and tools for basic data visualization tools (plots, graphs and summary statistics)- various visualization techniques used in Data Science. Data visualization Tool: Working with Tableau, Creating charts, Mapping data in Tableau. create your own visualization of a complex dataset [10]

Applications of Data Science, Case Studies of Data Science Application, Recommender Systems on Real-World Data Sets, Weather forecasting, Stock market prediction, Object recognition.   [8]

Laboratory:
[30]
1. Perform Data exploration and preprocessing

2. Implement Linear and Logistic regression

3. Implement Naive Bayes classifier for dataset stored as CSV file.

4. Implement regularized logistic regression

5. Build models using different Ensembling techniques

6. Build models using Decision trees

7. Build model using SVM with different kernels

8. Implement K-NN algorithm to classify a dataset.

9. Build model to perform Clustering using K-means after applying PCA and determining the value of K using Elbow method.

10. Simulate Singular Value Decomposition

Mini project to predict the time taken to solve a problem given the current status of the user.

Objective(s)	• To learn the basics of Wireless voice and data communications technologies. • To build working knowledge on various telephone and satellite networks. • To study the working principles of wireless LAN and its standards. • To build knowledge on various Mobile Computing Algorithms. • To build skills in working with Wireless Application Protocols to develop mobile content applications.							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Acquire the knowledge in fundamentals of wireless communication CO2: Recognize the concept of digital cellular network and unidirectional broadcast systems CO3: Observe various WLAN products , its system and protocol architecture CO4: Identify the requirements of Mobile IP for Ipv4 and Ipv6 and various types of routing protocols CO5: Acquire the knowledge of TCP for mobility and WAP

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Wireless Communication Fundamentals

Introduction – Wireless transmission – Frequencies for radio transmission – Signals – Antennas – Signal Propagation – Multiplexing – Modulations – Spread spectrum – MAC – SDMA – FDMA – TDMA – CDMA – Cellular Wireless Networks [10]

Telecommunication Networks

Telecommunication systems – GSM – GPRS –Satellite Systems - Broadcast Systems – DAB - DVB. [9]

Wireless Lan

Wireless LAN – IEEE 802.11 - Architecture – services – MAC – Physical layer – IEEE 802.11a - 802.11b standards – Hiperlan – Blue Tooth. [9]

Mobile Network Layer

Mobile IP – Dynamic Host Configuration Protocol - Routing – DSDV – DSR –Least Interference Routing- Hierarchical-Geographic Position Assisted Ad Hoc Routing . [9]

Transport and Application Layers

Traditional TCP – Classical TCP improvements – WAP [8]

Objective(s)	1. To provide students with the fundamentals and essentials of Cloud Computing 2. To provide students a sound foundation of the Cloud Computing so that they can start using and adopting Cloud Computing services and tools in their real-life scenarios 3. To enable students exploring some important cloud computing driven commercial systems and applications 4. An understanding of when and where to use it using the appropriate industry models 5. To expose the students to frontier areas of Cloud Computing and information systems, while providing sufficient foundations to enable further study and research							
Course outcomes	**At the end of the course, the students will be able to** CO1:Know the Characteristics of Cloud computing CO2:To illustrate the Cloud service models and Cloud Deployment Models CO3:Develop an application using Paas Application frameworks CO4:Reveal the major security and privacy problems in the Cloud with security mechanism CO5:To use Open Source & Commercial Clouds							

Introduction

Introduction to Cloud Computing, History of Cloud Computing, Cloud service providers, Benefits of Cloud Computing, Cloud computing - Cluster computing, Grid computing, Assessing the role of Open Standards, Measuring the cloud's value, Cloud Architecture - Exploring the cloud computing stack

Cloud Computing Architecture & Infrastructure as a Service

Cloud computing stack, Service Models (XaaS) - Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Software as a Service (SaaS), Deployment Models - Public, Private, Hybrid and Community Cloud, Infrastructure as a Service (IaaS), Resource Virtualization - Server, Storage, Network

Platform as a Service & Software as a Service

Introduction to PaaS, Cloud Platform and Management - Computation, Storage, Software as a Service (PaaS) Introduction, Web Services, Web 2.0, Web OS, Service Management in Cloud Computing - Service Level Agreements (SLAs), Billing & Accounting, Comparing Scaling Hardware: Traditional vs. Cloud, Managing Data in Cloud

Cloud Security

Infrastructure Security, Data security and Storage - Data privacy and security Issues, Jurisdictional issues, Identity & Access Management, Access Control, Trust, Reputation, Risk, Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations

Cloud Storage and Case Studies

Cloud Storage - Cloud Array, Shared Cloud Storage, Cloud Storage Gateway-Sync, Case Studies - Creating private IaaS in Eucalyptus, Creating virtual server in Microsoft Azure, Creating virtual sever in Amazon EC2, Hosting application in Google Google Cloud.

Objective(s)	• To learn about the effective usage of power point presentation • To prepare presentation with various effects • To visualize the data in the presentation • To acquire knowledge about data sources • To investigate the research articles based on various applications							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Develop presentation with visual effects CO2: Prepare a presentation with supporting data CO3: Attain the importance of research and data collection CO4: Analyze the various sources of research articles CO5: Interpret the tools and methods in preparing manuscript							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Preparing a Presentation (3)

Presenting data using Power Point- Power Point preparation and presentation, Design principles for creating effective Power Point slides with visuals displaying data. - Profile, - Problem, and a set of basic Excel charts, use to create a presentation.

Creating effective slides using PowerPoint (2)

Create effective slides using PowerPoint. Tools within Power Point, structure story line, create story boards, identify primary elements of slide design, display data and finalize slide presentation.

Research Designs and Data Sources (3)

Overview of the topics: process of data collection and analysis. Starting with a research question - Review of existing data sources- Survey data collection techniques- Importance of data collection- Basic features affect data analysis when dealing with sample data. Issues of data access and resources for access.

Measurements and Analysis Plan (2)

Importance of well-specified research question and analysis plan: various data collection strategies - Variety of available modes for data collection – review of literature - Tools at hand for simple analysis and interpretation.

Objective(s)	• Be exposed to tool kits for grid and cloud environment. • Be familiar with developing web services/Applications in grid framework • Learn to run virtual machines of different configuration • Capability to develop cloud architecture and model • Learn to configure and use Hadoop
Course Outcomes	CO1: Ability to use the relevant tools necessary for cloud computing. CO2: Demonstrate the use of cloud computing in various applications. CO3: Apply different cloud programming model as per need. CO4: Ability to develop cloud architecture and model. CO5: Analyze and implement the best practice model to deploy cloud architecture and configure Hadoop file system and framework in multi node cluster
	1. Find procedure to run the virtual machine of different configuration. Check how many virtual machines can be utilized at particular timein host machine. (Virtual Box or VM Ware or Hyper-V) 2. Install a C compiler in the virtual machine and execute a sample program. 3. Develop a web application to provide Storage as a Service hat offers a simple interface which allows users to manage file systems quickly and easily. 4. Configure IaaS architecture for installing guest operating system using Eucalyptus. 5. Configure IaaS architecture in Eucalyptus for installing multiple operating systems in same host machine by sharing different core in the same processor. To set up the single and multi node Hadoop cluster in guest operating systems. Demonstrate the use of Map and Reduce tasks using word count program.

Objective(s)	Imparting the practical knowledge to the students and also to make them to carry out the technical procedures in their project work. To provide an exposure to the students to refer, read and review the research articles, journals and conference proceedings relevant to their project work and placing this as their beginning stage for their final presentation.						
Course outcomes	CO1: Identify a problem in the domain of interest CO2: Perform literature survey and identify the existing issues CO3: Identify the possible solutions CO4: Identify tools and techniques to implement the project CO5: Prepare technical report						

1. Three reviews have to be conducted by the committee of minimum of three members one of which should be the guide
2. Problem should be selected
3. Students have to collect about 20 papers related to their work
4. Reports has to be prepared by the students as per the format in Annexure – 1
5. Preliminary implementation can be done if possible
6. Internal evaluation has to be done for 100 Marks`

Objective(s)	• To identify the ethics in preparing research paper • To organize manuscript for submission • To attain knowledge for filing Patent • To apply for copy right • To develop and deploy Mobile App. in play store							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Prepare a manuscript for journal publication. CO2: Apply the manuscript for publication CO3: Interpret the process of obtaining copyright and patent CO4:Analyze the various provisions to share the application CO5:Create and publish the mobile application in the digital store							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Preparation of Manuscript (3)

Data necessary before writing a paper: the context in which the scientist is publishing. Learning and identification of research community - advantages of scientific journal publication and manuscript preparation ethical values in publishing.

Writing the paper (2)

Writing research paper - structure of the paper - usage of bibliographical tools - abstract preparation and to do a peer review for the abstract of the others, as in real academic life. Plagiarism of the prepared manuscript.

Copyright (2)

Copyright law in India-Meaning of copyright-Classes of works for copyright protection -Ownership of Copyright-Assignment of copyright-Intellectual Property Rights (IPR) of Computer Software-Copyright Infringements-Procedure for registration

Patents (3)

Patent System In India -Types of Patent Applications-patentable invention - Not patentable-Appropriate office for filing -Documents required Publication and Examination of Patent Applications -Grant of Patent-Infringement of Patents -E-filing of Patent applications

Deploying Mobile App. in play store (5)

Introduction to Application Stores – Play Store, App Store, Microsoft Store, Creating App – Android, iOS, UWP, Defining Manifest, Certifying App, Create Store Listing, Sharing Screenshots, Sharing App Credentials for Testing.

Introduction to C++ and Functions:
Evolution of C++ - Concepts of OOP - Advantages of OOP, Basics of C++: Structure of a C**++** Program **-** Streams in C++ and Stream Classes - Unformatted Console I/O Operations, C++ Declarations, Functions: Return by Reference -Default Arguments - Const arguments - Inline Functions - Function Overloading. [9]

Classes and Objects, Constructors and Destructors:
Classes in C++ - Declaring Objects- Access Specifiers and their Scope - Defining Member Functions - Static Members - Array of Objects - Object as Function Arguments - Friend Function and Friend Classes, Constructors and Destructors: Characteristics - Parameterized Constructor - Overloading Constructor - Copy Constructor - Dynamic Initialization Constructor – Destructors. [9]

Inheritance, Compile Time Polymorphism and Type Conversion:
Inheritance: Reusability - Types of Inheritance - Abstract Classes - Object as Class Member, Operator Overloading: Rules for Operator Overloading – The Keyword Operator –Unary and Binary Operators Overloading-Overloading using Friend Function - Type Conversion. [10]

Pointers, Memory Models, Binding and Polymorphism:
Pointers: Pointer to Class - Pointer to Object – void, wild and this Pointers – Pointer to Constant and Constant Pointers, Memory Models: Dynamic Memory Allocation - Heap Consumption - Dynamic Objects, Polymorphism: Binding in C++ - Pointer to Base and Derived class objects - Working with Virtual Functions - Pure Virtual Functions - Object Slicing - Virtual Destructor. [9]

Generic Programming with Templates, Exception Handling:
Class Templates - Function Templates - Exception Handling: Principles of Exception Handling - try, throw and catch keywords - Re-throwing Exception - Specifying Exception. [8]
Hands on:
1.   Construct a C++ program to manage the input and output operations using stream classes
2.   Construct a C++ program to manage large amount of statements using functions
3.   Design a C++ program to implement the concept of class and objects
4.   Develop a C++ program to initialize the class members using constructors and destroy the objects by using destructor
5.   Design a C++ program for reusability using inheritance
6.   Develop a C++ program to handle function overriding by using virtual function.
7.   Develop a C++ program to allow functions and classes to operate with generic types using templates

	2	**0**	**2**	**45**	**3**	**50**	**50**	**100**

Objective(s)	• To understand the design of single-page applications and how Angular JS facilitates their development • To properly separate the model, view, and controller layers of your application and implement them using Angular JS • To master Angular JS expressions, filters, and scopes • To build Angular forms • To elegantly implement Ajax in your Angular JS applications
Course Outcomes	**At the end of the course, the students will be able to** CO1: Recall the concepts of HTML and JavaScript and express the features of AngularJS CO2: Rephrase the purpose of binding and template and the various effects of elements and events CO3: Gain the knowledge of scopes and controllers and various features of directives CO4: Identify the several services and its works and Design the applications using AJAX CO5: Comprehend the concepts of animation services and the various actions of provision and injection services

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Introduction

Introduction to AngularJS: HTML and Bootstrap CSS Primer - JavaScript Primer - Single Page Application – MVC Architecture – first Application of AngularJS.   [9]

Working with AngularJS

Binding – Template Directives – Elements – Events   [9]

Working with Forms

Forms – Controllers – Scopes – Filters - Custom & Complex Directives   [9]

Working with Services

Modules – Services – Global objects – Errors and Expressions – AJAX and Promises   [9]

Advanced Services

REST – Views – Animation – Touch – Provision – Injection   [9]

Hands on:

1. Create an Angular Application. Build a component inside the application in order to implement a simple log in form.
2. Create an Angular Application. Build a component to implement two-way binding which is combination of both property binding and event binding.
3. Create an Angular Application. Build a component to define the switch structural directive.
4. Write a program to show the Responses while the Form is in the Submitted State and provide an Edit Button.
5. Create an Angular Application. Build a component to inject service into it. The component will also display the data provided by the service. The service will provide an array of Employee Details.

51 CS L03 / 51 CS E12 C# and .NET Core

Open Elective

Semester	Hours / Week			Total hrs.	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
	2	0	2	45	3	50	50	100

Objective(s)	• To gain the fundamental skills in C# programming Language • To gain knowledge in object-oriented concepts in C# • To understand the concepts of the .NET Core and its platform • To implement data manipulation using Razor pages • To enhance the knowledge in Model-View-Controller architecture

Course Outcomes	**At the end of the course, the students will be able to** CO1: Know the basic concepts of C# CO2: Understand the Object-Oriented concepts in C# CO3: Ability to develop web pages using ASP.NET Core platform CO4: Implement the data manipulation concept using Razor Pages CO5: Integrate the concept of MVC in ASP.NET Core platform

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Introduction to C#:
Introducing C# – Understanding .NET – Overview of C# – Literals – Variables – Data Types – Operators – Expressions – Branching – Looping – Methods – Arrays – Strings – Structures – Enumerations.   [8]

Object-Oriented Programming in C#:
Classes – Objects – Inheritance – Methods – Polymorphism – Interfaces – Operator Overloading – Delegates – Events – Errors – Exceptions – Collections – Managing Filesystem.   [8]

ASP.NET Core Web Application using Razor Pages:
Introduction to ASP.NET Core Web Application – Environment Setup – Project Layout – Static and Default Files - Enabling and Defining Razor Pages – Shared Layouts – Using code-behind files.   [10]

Data Manipulation using Razor Pages:
Introduction to ADO.NET – Connection Class with Authentication – Command Class – DataReader Class – DataAdapter Class – DataSet – OnGet –OnPost – OnPostDelete – OnPostEdit – OnPostView – REST API – Model and Controller for REST API.   [10]

Model-View-Controller (MVC) in ASP.NET Core:
Introduction to MVC – Setting up an ASP.NET Core MVC Website – MVC Routing – Controllers and Actions – Model – Views – Parameters Passing – View Helpers – Model Validation.   [9]
Hands on:
1. Develop simple application using C#.
2. Implement inheritance and Operator overloading using C#.
3. Design an ASP.NET Webpage to work with Dropdown list and ListBox controls.
4. Create a ADO.NET application in C# to verify if the connection is established with OLEDB and MS-ACCESS.
5. Develop a Registration Form with all Validation Controls.
6. Create a Web Service for all Arithmetic operations

Introduction

Introduction to packet tracer: key features, benefits. Recognize the purpose and functions of various network devices such as routers, switches, bridges and hubs. Identify common applications and their impact on the network. Identify the appropriate media, cables, ports, and connectors to connect network devices to other network devices and hosts in a LAN.   [9]

LAN Switching Technologies

Packet tracer: create the topology, configure and verify initial switch configuration including remote access management. Configure switch IOS basics – hostnames, console, privilege password and telnet password. [9]

IP Addressing

IPv4 address - necessity of using private and public IP addresses for IPv4 addressing, IPv4 addressing scheme using VLSM and summarization to satisfy addressing requirements in a LAN environment. Subnet mask and DNS lookup.   [9]

IP Routing Technologies

Basic routing concepts - boot process of IOS routers - configure and verify utilizing the CLI to set basic router configuration - configure and verify operation status of a device interface, both serial and Ethernet - verify router configuration and network connectivity. [9]

Firewall and Network Security

Firewall configuration strategies-packet filtering-firewall configuration and administration - working with proxies and application - level firewalls-authenticating users- setting up a virtual private network- building your own firewall   [9]

Hands on:
1. Linux commands
2. Shell Scripts
3. Linux Server Installation
4. Windows Server Installation

Objective(s)	• To introduce basic concepts, tasks, methods, and techniques in data mining. • To emphasis is on various data mining problems and their solutions. • To understand the data mining process and issues, learn various data mining techniques • To apply the techniques in solving data mining problems using data mining tools and systems • To apply the clustering analysis and statistical approach
Course Outcomes	**At the end of the course student will able to** CO1: Explain the basic concept and issues of Data Mining CO2: Explore the multidimensional model and cube operations CO3: Interpret the steps of data preprocessing and multidimensional association rules CO4: Implement different classification techniques and association rule mining and its applications CO5: Apply different clustering techniques and outlier analysis in real time applications

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Introduction to Data Mining

Motivation and importance - What is Data Mining - Relational Databases - Data Warehouses - Transactional Databases Advanced Database Systems - Data Mining Functionalities - Interestingness of a pattern Classification of Data Mining Systems - Major issues in Data Mining. [7]

Data Warehouse and OLAP Technology for Data Mining

What is a Data Warehouse - Multi-Dimensional Data Model - Data Warehouse Architecture – Data Warehouse Implementation - Development of Data Cube Technology - Data Warehousing to Data Mining. [9] **Data Preprocessing**

Why Pre-process the Data? - Data Cleaning - Data Integration and Transformation Data Reduction - Discretization and Concept Hierarchy Generation - Data Mining Primitives: Mining Association rule in large Databases - Association Rule Mining - Mining Single-dimensional Boolean Association rules from Transactional Databases - Mining Multi-dimensional Association rules from relational databases & Data Warehouses. [10]

Classification and Prediction

Concepts and Issues regarding Classification and Prediction - Classification by Decision Tree Induction – Bayesian Classification - Classification by SVM - Classification by Random Forest - Classification by K nearest neighbor - Classification Based on Concepts from Association Rule Mining. [10]

Cluster Analysis

What is Cluster Analysis? - Types of Data in Cluster Analysis - A Categorization of Major clustering methods - partitioning methods - Hierarchial methods - Density-Based Methods: DBSCAN - Grid-based Method: STING - Model-based Clustering Method: Statistical approach - Outlier analysis [9] Hands On:
1. Implementation of exploratory data analysis
2. Implementation of preprocessing phase
3. Implementation of feature selection techniques
4. Implementation of Association rule mining
5. Implementation of classification algorithm
6. Implementation of clustering mechanism

Open Elective

Semester	Hours / Week			Total	Credit	Maximum Marks		
	L	T	P	Hrs	C	CA	ES	Total
	2	0	2	45	3	50	50	100

Objective(s)	• To introduce basic concepts in R programming • To emphasis is on various data structures in R • To understand the R programming fundamentals • To work with data in R programming • To work with strings and Dates
Course Outcomes	**At the end of the course student will able to** CO1: Elucidate the history and overview of R Programming CO2: Explore data structures in R Programming CO3: Implement the R program using loops and functions CO4: Manipulate the information using file CO5: Implement string operations and dates in R

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

History and Overview of R

What is R? - What is S? - The S Philosophy - Back to R - Basic Features of R - Free Software - Design of the R System - Limitations of R - R Resources . [9]

R – Basics and Data structures in R

Math, Variables, and Strings - Vectors and Factors - Vector operations - Arrays & Matrices – Lists – Dataframes – Missing Values – Names [9]

R Programming Fundamentals

Conditions and loops - Functions in R - Objects and Classes – Debugging [9]

Working with Data in R

Reading CSV and Excel Files - Reading text files -Writing and saving data objects to file in R [9] **Strings and Dates in R**

String operations in R - Regular Expressions - Dates in R -Times in R- Operations on Dates and Times [9] Hands On:

1. Working with Vectors, Matrices, List and DataFrames
2. Implementation of Control flow, Loops and Functions,
3. Reading, Writing and manipulating Data
4. Implementation of String operations and extracting data using Regular Expression
5. Operations on Dates and Times in R
6. Descriptive statistics and handling missing values in R
7. Visualization in R
8. Mini Project

	2	0	2	45	3	50	50	100

Objective(s)	• Understand the fundamentals of problem solving. • Interpret the knowledge and reasoning in propositional logic and first order logic. • Gain knowledge on Planning and acting in the real world. • Learn to represent uncertain knowledge in solving AI problems • Understand the different forms of learning.
Course Outcomes	**At the end of the course, the students will be able to** CO1: Understand the concepts of intelligent agents and problem solving aspects. CO2: Interpret the knowledge of propositional logic and FOL. CO3: Understand the issues of planning problems. CO4: Describe the Uncertainty and probabilistic reasoning. CO5: Summarize the types of learning methods and AI applications.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Problem Solving

Introduction - What is Artificial Intelligence? – Structure of Intelligent Agents –Problem formulation – Uninformed search strategies – Informed search strategies – Constraint satisfaction problems   [9] **Knowledge and Reasoning**

Logical agents – Propositional logic – First-order logic – Inference in first order logic – Unification - Forward Chaining – Backward Chaining – Resolution   [9]

Planning

Planning Problem - Planning with state-space search – Partial-order planning – Planning graphs - Planning and acting in the real world - Conditional planning - Multi agent planning.   [9] **Uncertain Knowledge and Reasoning**

Uncertainty – Notations and Axioms of Probability - Probabilistic Reasoning – Bayesian networks (Semantics, Exact Inference, Approximate Inference) – Inference in Temporal models – Hidden Markov models   [9] **Learning and Applications**

Learning from observation -Inductive learning –Decision trees – Ensemble Learning - Explanation based learning – Statistical Learning methods. Applications of Artificial intelligence.   [9]

Hands On:

1. Develop PEAS descriptions for given AI tasks
2. Implement Hill climbing algorithm
3. Write a program to generate the output for A* algorithm
4. Write a program to show the Tic Tac Toe game for 0 and X
5. Implementation of Bayesian Belief networks
6. Approximate inferences in Bayesian network
7. Implementation of decision problems for various real-world applications
8. To learn various Bayesian parameters
9. Implementation of Hidden Markov Models
10. Implement propositional logic inferences for AI tasks

Python Concepts

Interpreter – Program Execution – Statements – Expressions – Flow Controls – Functions - Numeric Types – Sequences - Strings, Tuples, Lists and - Class Definition – Constructors – Inheritance – Overloading – Text & Binary Files - Reading and Writing.   [9]

Data Wrangling

Combining and Merging DataSets – Reshaping and Pivoting – Data Transformation – String Manipulation, Regular Expressions.   [9]

Data Aggregation, Group Operations ,Timeseries

GoupBy Mechanics – Data Aggregation – Groupwise Operations and Transformations – Pivot Tables and Cross Tabulations – Date and Time Date Type tools – Time Series Basics – Data Ranges, Frequencies and Shifting.   [9]

Web Scraping

Data Acquisition by Scraping web applications –Submitting a form - Fetching web pages – Downloading web pages through form submission – CSS Selectors.   [9]

Visualization In Python

Matplotlib package – Plotting Graphs – Controlling Graph – Adding Text – More Graph Types – Getting and setting values – Patches.   [9]

Hands On:

1. Basic Python Programs
2. Program using String Operations
3. Program on python Data structures
4. Working with data in python using pandas
5. Design a personal web page using CSS
6. Visualization in python using matplotlib

50 CS L09 – Java Programming

Open Elective

Semester	Hours / Week			Total Hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
	2	0	2	60	3	50	50	100

Objective(s)	• To cram the fundamental element of the Java language. • To communicate classes over objects using methods • To implement Packages, Interfaces and Exception handling. • To understand the concept of Collections. • To apply the knowledge of threads and to access remote data.
Course Outcomes	**At the end of the course, the students will be able to** CO1: Understand the need of Platform independency by acquiring knowledge in architecture, Language basics and implementing Character and String Class CO2: Express the concept of classes, objects and communicate classes over objects using methods CO3: Implement Packages, Interfaces and handle various Checked and Unchecked Exceptions CO4: Prompt the collection classes to implement various data structures CO5: Express the concept of thread execution with thread priority and to perform remote data access

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023

BoS Chairman

JAVA FUNDAMENTALS

Fundamentals of OOPs – Java Features – Java Architecture-Language Basics: set PATH, set CLASSPATH, Executing your first Java Program-Constants – Variables – Data types - Operators – Arrays –control statements – Character Class-Strings : String class, String Buffer class, String Builder Class and String handling methods

[9]

CLASS and OBJECTS

 Class – Object– Methods-Method overloading-Constructor-Constructor Overloading-Wrapper Class - Inheritance-Method Overriding-super-final-Garbage Collection   [8]

PACKAGES, INTERFACES AND EXCEPTION HANDLING

 Packages-Access specifiers -Built-in Packages, User defined Packages-Interfaces-Abstract Class-Exception Handling-try-catch-throw-throws-finally-finalize-Managing Predefined Exceptions- Creating and handling User defined Exceptions   [11]

COLLECTIONS

 Collections: Iterator, Enumerator, List, Set, Queue Vector and Map.   [8] **MULTI THREADING AND JAVA NETWORKING**

 Multi threading - Java Thread model – Main thread – creating thread – creating multiple thread – Thread priority – methods – synchronization – IPC, RMI – Basics – RMI Layer – Stub, Skeleton - RMI Implementation.   [9]

Hands On:
1. Implementation of Simple Java Programs
2. Implementation of Array based Logical Programs
3. Implementation of Character, String class
4. Demonstration of communication of classes over objects using getter, setter, constructor, methods 5. Implementation of various inheritance
6. Implementation of various data structures using Collections

---

7. Implementation of different applications using packages, interfaces and to check abnormal conditions using exception handling.
8. Implementation of multi-tasking concepts using threads
9. Implementation of accessing remote data using RMI.
10. Mini – Project

	2	0	2	45	3	50	50	100

Objective(s)	• To know the basics of Linux OS, Linux environment and file system • To understand and make effective use of the UNIX commands • To learn and understand the use of process fundamentals in Linux • To enhance the skills needed for the shell scripting and shell programming • To develop the writing skills for system programming
Course Outcomes	**At the end of the course, the students will be able to** CO1: Apprehend the basics of Linux environment and file system CO2: Demonstrate and execute the files and directories commands to store in directories CO3: Interpret the uses of commands for the processes in Linux CO4: Analyze and implement the programs using shell programming CO5: Design and execute the filter commands using regular expressions to match a string of text

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction

Linux Introduction and File System - Basic Features, Advantages, Installing Requirement, Basic Architecture of Unix/Linux System, Kernel, Shell, Linux File System - Boot Block, Super Block, Inode Table, Data Blocks, How Linux Access Files, Storage Files, Linux Standard Directories. [09]

Files and Directories Commands

Files and Directories Commands - cd, ls, cp, md, rm, mkdir, rmdir, pwd, file, more and less, Creating and Viewing Files Command - cat, File Comparisons Commands - cmp and comm, View files, Disk Related Commands, Checking Disk Free Spaces, System Startup and Shut - Down Process, init and Run Levels. [09]

Essential Linux Commands

Understanding Shells, Processes in Linux - Process Fundamentals, Connecting Processes Commands - pipes and tee, Input/Output Redirecting, Manual Help, Background Processing, Managing Multiple Processes, Changing Process Priority with nice Command, Scheduling of Processes Commands - at, cron, batch, kill, ps, who and sleep, Printing Commands - find, sort, touch and file, File Related Commands - ws, sat, cut and dd, Mathematical Commands - bc, expr, factor and units, Creating and Editing Files Commands - vi and vim. [09]

Shell Programming

Shell Programming - Basic of Shell Programming, Various Types of Shell Available in Linux, Comparisons Between Various Shells, Shell Programming in Bash - read Command, Conditional and Looping Statements, Case Statements, Parameter Passing and Arguments, Shell Variables, System Shell Variables, Shell Keywords, Creating Shell Programs. [09]

Filtering Commands

Filtering Commands - pr, head, tail, cut, paste, sort, uniq and tr, Filter using Regular Expressions - grep, egrep, and sed; AWK Programming – Report Printing with AWK. [09]

Hands On:
1. Execution of files and directory commands to list all files or directories in the current directory.
2. Execution of scheduling of processes commands to schedule one-time jobs for a specific time and date
3. Implementation of Shell script to perform operations on files and strings.
4. Implementation of Shell programming concepts such as conditional and looping statements, and functions.
5. Implement and execute the C program in Linux.
6. Implementation of inter process communication between two unrelated processes.
7. Execution of filtering commands for filtering text for effective file operations.

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023   BoS
Chairman

8.	Execution of filters and regular expressions commands grep, awk and sed that use all of its features.

Salesforce Fundamentals

Introduction to CRM-   CRM Use Cases - Why Salesforce? - Overview of Salesforce platform and its Architecture - Advantage of Salesforce, Salesforce editions and licenses - Salesforce user interface and navigation - Salesforce Mobile App and Salesforce Lightning Experience -Signing up Developer Edition - Standard Objects - Creating Custom Objects - Fields and data types - Apps Creation.   [08]

Salesforce Data Management and Customization Essentials

Relationships and junction objects, Roll up Summary- Creating Formula Fields, Schema Builder. Data Validation - Validation rules. Working with Record Types and Page Layouts - Compact Layout- Lightning Record Pages – Home Page Customization -Path Settings. - List Views - Data import and data management tools.   [10]

Security and Data Access

Organization Security Controls - Passwords, IP restrictions, Network Settings. User Setup and Security - User Creation- Security Model: Meta Data - Profile settings and permissions - Permission set-   Salesforce Sharing model -Organization Wide Defaults (OWD) -   Role Hierarchy- Sharing Rules- Manual Sharing - Sharing rules and public groups.   [10]

Business Process Automation

Introduction to WorkFlow and Process Builder - Work flow rules – Work flow action - Flows: Types of Flow Screen Flow- Record Trigrrered Flow- Scheduled Trigger Flow- Auto Launched Flow. uses cases of Process Automation. Email Alerts and Field Updates - Approval Processes.   [10]

Reports, Dashboards, and Analytics

Creating or customizing a report - Summarizing data, report formats and filtering data, scheduling, Report Charts and Dashboard Components. Creating and modifying dashboards-custom report types - **Summary Report- Tabular Report- matrix Report- Dash Boards: Standard DashBoards & Dynamic DashBoards.**   [07]

Hands On:

1. Create Objects, Fields and App
2. Explore Data Types
3. Create Field Relationships
4. Create Record Types(create), Page Layout (adding section, field property settings), Page Layout Assignment (assign page layout based on Record types)
5. Create Lightning Record Page, List View, Path Settings
6. Validation Rule

Objective(s)	• Understand the concept of DevOps • Understand the Continuous Integration in Automated Testing and Reporting • Explore Configuration Management, Continuous Delivery and Deployment • Know the concept of Containerization and Orchestration • Analyse the Security and Compliance							
Course Outcomes	**At the end of the course, the student will be able to** CO1: Recognize the concept of DevOps CO2: Apply Continuous Integration in Automated Testing and Reporting CO3: Analyze Configuration Management, Continuous Delivery and Deployment CO4: Understand the Containerization and Orchestration CO5: Evaluate the Security and Compliance							

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Introduction to DevOps:
What is DevOps? - Benefits of DevOps - DevOps Principles - DevOps Culture and Collaboration **Version**
Control and Collaboration Tools:
- Introduction to Version Control (Git) - Git Basics: Clone, Commit, Push, Pull - Branching and Merging - Collaborative Development with Git - Introduction to Git Hub/ Git Lab/ Bi bucket   [9]

Continuous Integration (CI)
CI/CD Pipeline Overview - Building and Testing Code Automatically - Introduction to Jenkins or other CI tools - Configuring Jenkins Jobs - Integration with Version Control - Automated Testing and Reporting.   [8]

Configuration Management
Infrastructure as Code (IaC) concepts - Introduction to Configuration Management Tools (e.g., Ansible) - Creating Playbooks/Roles for Automated Deployment - Managing Configuration Drift
Continuous Delivery and Deployment
Understanding Continuous Delivery vs. Continuous Deployment - Blue-Green Deployments - Canary Deployments - Release Orchestration   [10]

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023   BoS
Chairman

Containerization and Orchestration
Introduction to Containers (Docker) - Creating Docker Images - Container Registries (Docker Hub, AWS ECR) - Introduction to Kubernetes - Deploying Containers with Kubernetes **Monitoring and Logging**
Importance of Monitoring and Observability - Monitoring Tools (Prometheus, Grafana) - Application Logging and Log Management
[10]

Security and Compliance

Security Principles in DevOps - Incorporating Security in CI/CD - Compliance and Auditing in Dev Ops **Cloud Services and Dev Ops**

Cloud Computing Overview - Infrastructure Automation in the Cloud - Serverless Architectures

DevOps Best Practices and Case Studies

Industry Best Practices - Case Studies of Successful DevOps Implementations   [8]

Hands On:

- Applying DevOps Concepts to a Sample Project
- Setting Up a CI/CD Pipeline
- Deploying and Monitoring the Application

Total Hours: 45 hours

	2	0	2	45	3	50	50	100
Objectives	• To become familiar with the advanced features of Java Language • To discover how to write Java applications this can communicate with Relational Databases • To understand the possible actions can be performed using JSP • To develop Web Applications using Servlets / JSP • To understand the process of deploying JSP pages in popular servers like Tomcat							
Course Outcomes	CO1: Interpret the java fundamentals and essentials of inheritance CO2: Execute the various commands in RDBMS for data management CO3: Apply the elements available in JSP for web page design CO4: Explore the various JSP actions in web application development CO5: Demonstrate the process of developing and consuming API in JSP							

Java Fundamentals

Java Architecture, Language basics, OOPS, Garbage collection, String, String buffer, Collection Framework, Packages, Exception Handling, Abstract, Interfaces. [9]

RDBMS and JDBC

RDBMS/SQL/PL/SQL: Introduction to RDBMS, DML, DDL, Select statement, Restricting and Sorting data, Single row functions, Group functions, Joins, JDBC: Introduction, Establishing Connection, Execute query process results, Meta Data and Prepared Statement, Callable Statement and Transactions. [9]

JSP Elements

Scripting Elements: Scriptlets, Expression, Declarations, Data Types, Variables, Operators, JSP Directive Elements: Page, Include and Taglib. [9]

JSP Actions and Expression Language

JSP Actions: Standard Actions, forward, include, param, useBean, setProperty, getProperty, element, attribute, body, EL Expression, JSP Standard Tag Library, Core Library. [9]

AJAX

HTML: Introduction, Forms, JavaScript: Introduction to JavaScript, JavaScript objects, JavaScript validations, JSON, JSP GET and POST, JSP API, AJAX: Introduction, AJAX application, AJAX database application. [9]

K.S. Rangasamy College of Technology – Autonomous R2018							
51 CS E11– Node.js and React.js							
Elective – I							
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
V	2	0	2	45	3	50	50	100
Objective(s)	• To learn the runtime web development for easily building fast and scalable network applications. • To enhance the knowledge in event-driven and real-time applications that run across distributed devices. • To learn the streams and file systems in Node Js • To acquire the knowledge on web development and database connectivity • To Acquire the knowledge of MVC template on user interfaces using React JS							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Examine the fundamental structure of Node.js platform CO2: Affirm the concepts of NPM CO3: Interpret the concepts of streams and file systems CO4: Gain the knowledge of web content using node.js CO5: Annotate the various features of React js							
Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Introduction to Node.js

The environment of Node.js - Benefits and Features - Install Node.js on Windows - Console and Web programs - Node.js REPL Commands [8]

NPM

Node.js Package Manager - Installing modules using NPM - Node.js Command Line Options - Node.js Errors - Node.js DNS - Node.js Net [9]

Streams and File Systems

Node.js Creating Buffers - Node.js Streams - Node.js Piping Streams - Node.js Chaining Streams - Node.js File Systems [11]

Web Development

Node.js Web Module - Node.js html form handling - Node.js Database Connectivity [9]

Introduction to React.js

The environment of React.js - Benefits and Features – components – state – lifecycle – events – forms – CSS [8] **Hands on:**
1. Read the text file and print the content using file system module
2. Design the employee web page using html. Using node js program call the HTML file which display the output in browser.
3. Sample buffer program for different operations
   - Creating buffer
   - Concatenating the buffer
   - Copying buffer
   - Buffer length
   - Compare
   - Slice
   - Converting buffer to JSON file
4. Read the data from one text file and write the content to another text file using readerStream, writerStream.
5. Sample Node JS program using pipe and chaining using streams
6. Node JS program for various file operation using File System
   - Reading the file
   - Writing the file
   - Truncating the file • Deleting the file
7. Design the sample student registration form using html and call these html file using node.js, which will display output in browser.
8. Sample program using functional and class component in react.js
9. React Js program to style the html component using CSS Style sheet, Inline styling and CSS module.
10. Mini Project
    - Node JS database connectivity
    - React JS controlled Or Uncontrolled form design

	Total Hours: 45 hours

K. S. Rangasamy College of Technology – Autonomous R2018							
51 CS L03 / 51 CS E12 C# and .NET Core							
Elective – I							
Semester	Hours / Week				Credit	Maximum Marks		
	L	T	P	Total hrs.	C	CA	ES	Total
	2	0	2	45	3	50	50	100
Objective(s)	• To gain the fundamental skills in C# programming Language • To gain knowledge in object-oriented concepts in C# • To understand the concepts of the .NET Core and its platform • To implement data manipulation using Razor pages • To enhance the knowledge in Model-View-Controller architecture							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Know the basic concepts of C# CO2: Understand the Object-Oriented concepts in C# CO3: Ability to develop web pages using ASP.NET Core platform CO4: Implement the data manipulation concept using Razor Pages CO5: Integrate the concept of MVC in ASP.NET Core platform							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Introduction to C#:
Introducing C# – Understanding .NET – Overview of C# – Literals – Variables – Data Types – Operators – Expressions – Branching – Looping – Methods – Arrays – Strings – Structures – Enumerations.   [8]

Object-Oriented Programming in C#:
Classes – Objects – Inheritance – Methods – Polymorphism – Interfaces – Operator Overloading – Delegates – Events – Errors – Exceptions – Collections – Managing File system.   [8]

ASP.NET Core Web Application using Razor Pages:
Introduction to ASP.NET Core Web Application – Environment Setup – Project Layout – Static and Default Files - Enabling and Defining Razor Pages – Shared Layouts – Using code-behind files.   [10]

Data Manipulation using Razor Pages:
Introduction to ADO.NET – Connection Class with Authentication – Command Class – DataReader Class – DataAdapter Class – DataSet – OnGet –OnPost – OnPostDelete – OnPostEdit – OnPostView – REST API – Model and Controller for REST API.   [10]

Model-View-Controller (MVC) in ASP.NET Core:
Introduction to MVC – Setting up an ASP.NET Core MVC Website – MVC Routing – Controllers and Actions – Model – Views – Parameters Passing – View Helpers – Model Validation.   [9]
Hands on:
1. Develop simple application using C#.
2. Implement inheritance and Operator overloading using C#.
3. Design an ASP.NET Webpage to work with Dropdown list and ListBox controls.
4. Create a ADO.NET application in C# to verify if the connection is established with OLEDB and MS-ACCESS.
5. Develop a Registration Form with all Validation Controls.
6. Create a Web Service for all Arithmetic operations

	Total Hours: 45 hours

History and Overview of R
What is R? - What is S? - The S Philosophy - Back to R - Basic Features of R - Free Software - Design of the R System - Limitations of R - R Resources .   [9]

R – Basics and Data structures in R
Math, Variables, and Strings - Vectors and Factors - Vector operations - Arrays & Matrices – Lists – DataFrames – Missing Values – Names   [9]

R Programming Fundamentals
Conditions and loops - Functions in R - Objects and Classes – Debugging   [9]

Working with Data in R
Reading CSV and Excel Files - Reading text files -Writing and saving data objects to file in R   [9]

Strings and Dates in R
String operations in R - Regular Expressions - Dates in R -Times in R- Operations on Dates and Times   [9]

Hans On:
1. Working with Vectors, Matrices, List and DataFrames
2. Implementation of Control flow, Loops and Functions,
3. Reading, Writing and manipulating Data
4. Implementation of String operations and extracting data using Regular Expression
5. Operations on Dates and Times in R
6. Descriptive statistics and handling missing values in R
7. Visualization in R
8. Mini Project

51 CS E14 – PHP programming

Elective – I

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
V	2	0	2	45	3	50	50	100

Objective(s)	• To get an overview of what's possible with PHP programs • To learn language fundamentals, including data types, variables, operators, and flow control statements • To recognize functions and strings. • To work single and multidimensional arrays • To interact with relational databases like MySQL or NoSQL databases such as MongoDB
Course Outcomes	**At the end of the course, the students will be able to** CO1: Comprehend the PHP, installation of PHP and language basics. CO2: Recognize the concept of functions and its types CO3: Grasp the concept of strings and regular expressions CO4: Recognize the concept of arrays and its types **CO5:** Comprehend the accessing of a database and various relational databases

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Introduction to PHP and Language Basics
What Does PHP Do?-A Brief History of PHP-Installing PHP-A Walk Through PHP
Language Basics: Lexical Structure-Data Types-Variables-Expressions and Operators-Flow-Control Statements-Including Code-Embedding PHP in Web Pages   [11]
Functions
Calling a Function-Defining a Function-Variable Scope-Function Parameters-Return Values-Variable Functions-Anonymous Functions   [7]
Strings
Quoting String Constants-Printing Strings-Accessing Individual Characters-Cleaning Strings-Encoding and Escaping-Comparing Strings-Manipulating and Searching Strings-Regular Expressions   [8]
Arrays
Indexed Versus Associative Arrays-Identifying Elements of an Array-Storing Data in Arrays-Multidimensional Arrays-Extracting Multiple Values-Converting Between Arrays and Variables-Traversing Arrays-Sorting-Acting on Entire Arrays-Using Arrays-Iterator Interface   [11]
Databases
Using PHP to Access a Database-Relational Databases and SQL-MySQLi Object Interface-SQLite-Direct File-Level Manipulation-MongoDB   [8]
Hands on:
1. Basic programs using PHP.
2. Built-in Functions in PHP.
3. User Defined Functions in PHP.
4. String handling in PHP.
5. Implementation of arrays in PHP.
6. Implementation of database connectivity in PHP.

Elective – I

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
V	3	0	0	45	3	40	60	100

Objective(s)	• To understand the need and fundamentals of parallel computing paradigms • To learn the nuances of parallel algorithm design • To understand the programming principles in parallel computing architectures • To learn few problems that are solved using parallel algorithms • To learn fault tolerant techniques and various algorithms
Course Outcomes	**At the end of the course, the students will be able to** CO1: Understanding the requirements of Parallel Computing CO2: Apply the knowledge of different types of methodologies like mapping techniques CO3: Recognize the concept of message passing and shared address space CO4: Review the concepts of distributed computing paradigm with applications CO5: Apply the knowledge of fault tolerant techniques

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

INTRODUCTION TO PARALLEL COMPUTING

Scope of Parallel Computing – Parallel Programming Platforms – Implicit Parallelism – Limitations of Memory System Performance – Control Structure of Parallel Platforms – Communication Model of Parallel Platforms – Physical Organization of Parallel Platforms – Communication Costs in Parallel Machines – Impact of Process - Processor Mapping and Mapping Techniques. [9]

PARALLEL ALGORITHM DESIGN

Preliminaries – Decomposition Techniques – Characteristics of Tasks and Interactions – Mapping Techniques for Load Balancing – Methods for Containing Interaction Overheads – Parallel Algorithm Models – Basic Communication Operations – One-to-All Broadcast and All-to-One Reduction – All-to-All Broadcast and Reduction – All-Reduce and Prefix Sum Operations – Scatter and Gather – All-to-All Personalized Communication- Circular Shift – Improving the Speed of some Communication Operations. [9]

PROGRAMMING USING MESSAGE PASSING AND SHARED ADDRESS SPACE

Principles of Message Passing Programming – Building Blocks – Send and Receive Operations – MPI – Message Passing Interface – Topologies and Embedding – Overlapping Communication with Computation – Collective Communication and Computation Operations – Groups and Communicators – POSIX thread API – OpenMP: a Standard for Directive based Parallel Programming – Applications of Parallel Programming - Matrix-Matrix Multiplication – Solving Systems of Equations – Sorting Networks - Bubble Sort Variations – Parallel Depth First Search [9]

Passed in BoS Meeting held on 02/12/2023

Course Outcomes	**At the end of the course student will able to**
	CO1: Explain the basic concept and issues of Data Mining
	CO2: Explore the multidimensional model and cube operations
	CO3: Interpret the steps of data preprocessing and multidimensional association rules
	CO4: Implement different classification techniques and association rule mining and its applications
	CO5: Apply different clustering techniques and outlier analysis in real time applications

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Introduction to Data Mining

Motivation and importance - What is Data Mining - Relational Databases - Data Warehouses - Transactional Databases Advanced Database Systems - Data Mining Functionalities - Interestingness of a pattern Classification of Data Mining Systems - Major issues in Data Mining. [7]

Data Warehouse and OLAP Technology for Data Mining

What is a Data Warehouse - Multi-Dimensional Data Model - Data Warehouse Architecture – Data Warehouse Implementation - Development of Data Cube Technology - Data Warehousing to Data Mining. [9] **Data Preprocessing**

Why Pre-process the Data? - Data Cleaning - Data Integration and Transformation Data Reduction - Discretization and Concept Hierarchy Generation - Data Mining Primitives: Mining Association rule in large Databases - Association Rule Mining - Mining Single-dimensional Boolean Association rules from Transactional Databases - Mining Multi-dimensional Association rules from relational databases & Data Warehouses. [10]

Classification and Prediction

Concepts and Issues regarding Classification and Prediction - Classification by Decision Tree Induction – Bayesian Classification - Classification by SVM - Classification by Random Forest - Classification by K nearest neighbor - Classification Based on Concepts from Association Rule Mining. [10]

Cluster Analysis

What is Cluster Analysis? - Types of Data in Cluster Analysis - A Categorization of Major clustering methods - partitioning methods - Hierarchial methods - Density-Based Methods: DBSCAN - Grid-based Method: STING - Model-based Clustering Method: Statistical approach - Outlier analysis [9] Hands On:
1. Implementation of exploratory data analysis
2. Implementation of preprocessing phase
3. Implementation of feature selection techniques
4. Implementation of Association rule mining
5. Implementation of classification algorithm
6. Implementation of clustering mechanism

Number Theory and Public key cryptography

Finite Fields and Number Theory- Groups, Rings, Fields-Modular arithmetic-Euclid's algorithm-Finite fieldsPolynomial Arithmetic –Prime numbers-Fermat's and Euler's theorem-Testing for primality -The Chinese remainder theorem- Discrete logarithms-Key management - Diffie-hellman key exchange- Elliptic Curve Arithmetic and Cryptography- Key distribution- Public Key Cryptography and RSA. **[10] Authentication and hash function**

Authentication requirement – Authentication function – MAC – Hash function – Security of hash function and MAC –MD5 – SHA – HMAC – CMAC – Digital signature and authentication protocols – DSS – EI Gamal – Schnorr. **[9]**

Network Security

Kerberos – X.509 Authentication services- E-mail Security -Pretty Good Privacy-S/MIME-IPSecurity -Web Security **[9]**

System level security

Intrusion Detection System – Virus and related threats – Countermeasures – Firewalls and types- design principles – Practical implementation of cryptography and security. **[8]**

Hands on:

1. Implement a program that contains a string (char pointer) with a value \HelloWorld'. The program should XOR each character in this string with 0 and display the result.
2. Implementation of encryption and decryption using the following algorithms: i) Ceaser Cipher ii) Substitution Cipher iii) Hill Cipher
3. Implementation of DES algorithm logic.
4. Implementation of RSA Algorithm.
5. Implementation of Diffie-Hellman Key Exchange mechanism.
6. Calculate the message digest of a text using the MD5 algorithm.
7. Calculate the message digest of a text using the SHA-1 algorithm.

51 CS E22 - Mobile Application Development								
Elective – II								
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
VI	2	0	2	45	3	50	50	100
Objective(s)	• To impart knowledge in Android Application Development • Understand the app idea and design user interface/wireframes of mobile app and set up the mobile app development environment • Develop and debug mobile app components –User interface, services, notifications, broadcast receivers, data components • Using emulator to deploy and run mobile apps • Testing mobile app -unit testing, black box test							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Understand the Mobility landscape and platforms CO2: Demonstrate the interactive and feature-rich Android applications to address realworld challenges. CO3: Develop Android apps using native data handling, background tasks, and location awareness. CO4: Utilize graphics, animation, and multimedia to enhance the visual appeal and overall engagement of Android apps. CO5: Apply testing, signing, packaging, and distribution processes to successfully release and update Android apps.							
Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

GETTING STARTED WITH MOBILITY [06]

Mobility landscape, Mobile platforms, Mobile apps development, Overview of Android platform, setting up the mobile app development environment along with an emulator, a case study on Mobile app development

BUILDING BLOCKS OF MOBILE APPS [14]

App user interface designing –mobile UI resources (Layout, UI elements, Draw-able, Menu), Activitystates and life cycle, interaction amongst activities. App functionality beyond user interface -Threads, Async task, Services –states and lifecycle, Notifications, Broadcast receivers, Telephony and SMS APIs Native data handling –on-device file I/O, shared preferences, mobile databases such as SQLite, and enterprise data access (via Internet/Intranet)

SPRUCING UP MOBILE APPS [10]

Graphics and animation –custom views, canvas, animation APIs, multimedia –audio/video playback and record, location awareness, and native hardware access (sensors such as accelerometer and gyroscope)

TESTING MOBILE APPS [09]

 Debugging mobile apps, White box testing, Black box testing, and test automation of mobile apps, JUnit for Android, Robotium, MonkeyTalk

TAKING APPSTO MARKET [06]

Versioning, signing and packaging mobile apps, distributing apps on mobile market place

Hands on:
1. Create a simple Android app with a simple user interface.
2. Create a mobile app with various GUI components like buttons, text fields, and labels
3. Design an application that uses Layout Managers and event listeners.
4. Create a mobile app that allows users to draw basic shapes (lines, circles, rectangles) on the screen using touch or mouse input.
5. Implement an application that uses Multi-threading.
6. Implement an application that creates an alert upon receiving a message
7. Develop an application that makes use of databases.
8. Integrate audio/video playback using Android's animation APIs.
9. Write automated test cases for a mobile app using Robotium.
10. Write a mobile application that makes use of RSS feed
11. Develop a mobile application to send an email.

* Develop a Mobile application for simple needs and publish the app on a mobile marketplace (Mini Project)

Elective – II								
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
VI	3	0	0	45	3	40	60	100

Objective(s)	• To learn various scripting languages • To understand the basic of JQuery • To learn Ruby and working with web • To learn the basics of TCL • To learn the advanced concepts of TCL
Course Outcomes	**At the end of the course, the students will be able to** CO1: Understand the concept Scripting and JavaScript CO2: Explore the concept of JQuery CO3: Understanding use of Ruby CO4: Analyze the structure of TCL CO5: Explore the commands and issues in TCL

Note: The hours given against each topic are of indicative. The faculty have the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Introduction to Scripting and JavaScript

Scripts and Programs, Origin of Scripting, Scripting Today, Characteristics of Scripting languages, Web Scripting, and the universe of Scripting Languages, what is JavaScript – Object models – Design philosophy – Versions of JavaScript – The JavaScript core language – System objects – Advanced facilities – JavaScript and Java – JavaScript operators and precedence. [**9**]

JQuery Introduction to jQuery -Using jQuery Core -jQuery Events – jQuery Effects - AJAX and JQuery - HTML5 Forms and JQuery UI   [**10**]

Ruby Introduction: Ruby, Rails, the structure and Execution of Ruby Programs, Package Management with RUBYGEMS, Ruby and web: Writing CGI scripts, cookies, Choice of Webservers, SOAP and web services, RubyTk – Simple Tk Application, widgets, Binding events, Canvas, scrolling. **[8]**

Introduction to TCL   TCL structure, syntax, variables and data in TCL, control flow, data structures, input/output, procedures, strings, patterns, files.   [**8**]

Advanced TCL Eval, source, exec and up level commands, Name spaces, trapping errors, event driven programs, making applications internet aware, Nuts and Bolts internet programming, Security issues, C interface, Java interface.   **[10]**

K.S.Rangasamy College of Technology –Autonomous – R2018								
50 CS E25 – High Speed Networks								
Elective – II								
Semester	Hours / Week			Total	Credit	Maximum Marks		
	L	T	P	hrs	C	CA	ES	Total
VI	3	0	0	45	3	40	60	100
Objective(s)	• To highlight the features of different technologies involved in High Speed Networking and their performance. • To acquire the knowledge of congestion and traffic management • To study about performance of TCP and ATM congestion control • To learn integrated and differentiated services in high speed networks • To understand the working principles of various protocols							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Gain the Knowledge about introduction about ATM and Frame relay CO2: Understanding and an up-to-date survey of developments in High Speed Networks CO3: Analyze the techniques involved to support real-time traffic and congestion control CO4: Exploring integrated and differentiated services CO5: Exploring different levels of quality of service (Q.S) to different applications							

High Speed Networks
Frame Relay Networks – Asynchronous transfer mode – ATM Protocol Architecture, ATM logical Connection, ATM Cell – ATM Service Categories – AAL. High Speed LANs: Fast Ethernet– Wireless LANs: applications, requirements – Architecture of 802.11. [9]

Congestion and Traffic Management
Queuing Analysis- Queuing Models – Single Server Queues – Effects of Congestion – Congestion Control – Traffic Management – Congestion Control in Packet Switching Networks**.** [8]

TCP and ATM congestion control
 TCP Flow control – TCP Congestion Control – Retransmission – Timer Management – Exponential RTO back off – KARN's Algorithm – Window management – Performance of TCP over ATM Traffic and Congestion control in ATM – Requirements – Attributes – Traffic Management Frame work, Traffic Control – ABR traffic Management – ABR rate control, RM cell formats, ABR Capacity allocations. [11]

Integrated and Differentiated Services
Integrated Services -Architecture – Approach, Components, Services- Queuing Discipline, FQ, PS, BRFQ, GPS, WFQ – Random Early Detection. [8]

Protocols for QoS Support
RSVP – Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms – Multiprotocol Label Switching – Operations, Label Stacking, Protocol details – RTP – Protocol Architecture, Data Transfer Protocol. [9]

VI	2	0	2	45	3	50	50	100
Objective(s)	• Understand the fundamentals of problem solving. • Interpret the knowledge and reasoning in propositional logic and first order logic. • Gain knowledge on Planning and acting in the real world. • Learn to represent uncertain knowledge in solving AI problems • Understand the different forms of learning.							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Understand the concepts of intelligent agents and problem solving aspects. CO2: Interpret the knowledge of propositional logic and FOL. CO3: Understand the issues of planning problems. CO4: Describe the Uncertainty and probabilistic reasoning. CO5: Summarize the types of learning methods and AI applications.							
Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**								

Problem Solving

Introduction - What is Artificial Intelligence? – Structure of Intelligent Agents –Problem formulation – Uninformed search strategies – Informed search strategies – Constraint satisfaction problems [9] **Knowledge and Reasoning**

Logical agents – Propositional logic – First-order logic – Inference in first order logic – Unification - Forward Chaining – Backward Chaining – Resolution [9]

Planning

Planning Problem - Planning with state-space search – Partial-order planning – Planning graphs - Planning and acting in the real world - Conditional planning - Multi agent planning. [9] **Uncertain Knowledge and Reasoning**

Uncertainty – Notations and Axioms of Probability - Probabilistic Reasoning – Bayesian networks (Semantics, Exact Inference, Approximate Inference) – Inference in Temporal models – Hidden Markov models [9]

Learning and Applications

Learning from observation -Inductive learning –Decision trees – Ensemble Learning - Explanation based learning – Statistical Learning methods. Applications of Artificial intelligence. [9] Hands On:

1. Develop PEAS descriptions for given AI tasks
2. Implement Hill climbing algorithm
3. Write a program to generate the output for A* algorithm
4. Write a program to show the Tic Tac Toe game for 0 and X
5. Implementation of Bayesian Belief networks
6. Approximate inferences in Bayesian network
7. Implementation of decision problems for various real-world applications
8. To learn various Bayesian parameters
9. Implementation of Hidden Markov Models
10. Implement propositional logic inferences for AI tasks

K.S.Rangasamy College of Technology – Autonomous R2018
51 CS E32- Semantic Web
Elective – III

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
VI	2	0	2	45	3	50	50	100

Objective(s)	• Introducing basic concepts, tasks, methods, and techniques in semantic web • To understand the concept of RDF and its schemas • To learn the ontology and semantic web architecture • To construct logic and inference and rule markup in XML • Understanding of the semantic web process and issues.
Course Outcomes	**At the end of the course, the students will be able to** CO1: Gain knowledge in Semantic Web and its Technologies CO2: Construct the RDF data model and defining the vocabularies used in RDF data model CO3: Identify the requirements of Ontology and know the sublanguages CO4: Write the Monotonic and Non monotonic Rules CO5: Realize the applications of semantic web technologies

Introduction

History – Semantic Web Layers –Semantic Web technologies – Semantics in Semantic Web – XML**:** Structuring – Namespaces – Addressing – Querying – Processing   [9]

RDF

RDF and Semantic Web – Basic Ideas - RDF Specification – RDF Syntax: XML and Non- XML - RDF elements – RDF relationship: Reification, Container, and collaboration – RDF Schema –Editing, Parsing, and Browsing RDF/XML-RQL-RDQL   [9]

Ontology

Why Ontology – Ontology movement – OWL – OWL Specification - OWL Elements –OWL constructs: Simple and Complex – Ontology Engineering : Introduction –Constructing ontologies – Reusing ontologies – On-To-Knowledge Semantic Web architecture   [9]

Logic and Inference

Logic – Description Logics - Rules – Monotonic Rules: Syntax, Semantics and examples – Non- onotonic Rules – Motivation, Syntax, and Examples – Rule Markup in XML: Monotonic Rules, and Non-Monotonic Rules [9]

Applications of Semantic Web Technologies

RDF Uses: Commercial and Non-Commercial use – Sample Ontology – e-Learning –Web Services – Web mining – Horizontal information – Data Integration – Future of Semantic Web   [9]

Hands on:

1. Working with XML
2. Design of Ontology using RDF
3. Design RDF document with different Serialization format (e.g. tutle,N-triple)
4. Design Of Ontology using OWL
5. Design of Ontology using RDFS

51 CS E33- Big Data Security								
Elective – III								
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
VI	2	0	2	45	3	50	50	100
Objective(s)	• To know the fundamentals of big data security and organizational security. • To analyses the security, Compliance, Auditing and Protection. • To know the steps to construct big data and classification of big data • To study the Hadoop security design and configuration • To study about data security and event logging							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Know the fundamental of Big data privacy, ethics and security CO2: Analyses the security, Compliance, Auditing and Protection. CO3: Construct security design using Hadoop CO4: Configuring Hadoop ecosystem security CO5: Analyze data security and event logging.							

Big Data Privacy, Ethics and Security

Privacy – Re-identification of Anonymous People – Why Big Data Privacy is self-regulating? – Ethics – Ownership – Ethical Guidelines – Big Data Security – Organizational Security. [9]

Security, Compliance, Auditing, and Protection

Steps to secure big data – Classifying Data – Protecting – Big Data Compliance – Intellectual Property Challenge – Research Questions in Cloud Security – Open Problems. [9]

Hadoop Security Design

Kerberos – Default Hadoop Model without security - Hadoop Kerberos Security Implementation & Configuration. [9]

Hadoop Ecosystem Security

Configuring Kerberos for Hadoop ecosystem components – Pig, Hive, Oozie, Flume, HBase, Sqoop. [9] **Data Security & Event Logging**

Integrating Hadoop with Enterprise Security Systems - Securing Sensitive Data in Hadoop – SIEM system – Setting up audit logging in hadoop cluster [9]

Hands on:
1. Install, configure and run Hadoop and HDFS.
2. Visualize data using basic plotting techniques in Python.
3. Implement NoSQL Database Operations: CRUD operations, Arrays using MongoDB.
4. Implement Functions: Count – Sort – Limit – Skip – Aggregate using MongoDB.
5. Implement word count / frequency programs using MapReduce.
6. Implement a MapReduce program that processes a dataset.
7. Implement clustering techniques using SPARK.
8. Implement an application that stores big data in MongoDB / Pig using Hadoop / R

50 CS E34 - XML and Web Services							
Elective – III							
Semester	Hours / Week			Total	Credit	Maximum Marks		
	L	T	P	hrs	C	CA	ES	Total
VI	3	0	0	45	3	40	60	100
Objective(s)	• To provide an in-depth knowledge of XML and Web Services. • To understand the fundamental concepts of Web services. • To understand the fundamental concepts of XML Technology. • To design Web service Architecture. • To Study Building Blocks of Web services and content management using XML							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Know the fundamental elements in XML and XML Technologies and schemes CO2: Design and analysis the Architecture of Web Services. CO3: Construct building blocks of Web services CO4: Design XML web service in E-Business and implement xml in E-Business CO5: Analyze Content Management in XML.							

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023   BoS Chairman

Xml Technology Family
XML – benefits – Advantages of XML over HTML – EDL –Databases – XML based standards – DTD –XML Schemas – X- Files – XML processing – DOM –SAX- presentation technologies – XSL – XFORMS – XHTML – voice XML – Transformation – XSLT – XLINK – XPATH –XQ   [9]

Architecting Web Services
Business motivations for web services – B2B – B2C- Technical motivations – limitations of CORBA and DCOM – Service – oriented Architecture (SOA) – Architecting web services – Implementation view – web services technology stack – logical view – composition of web services – deployment view – from application server to peer to peer – process view – life in the runtime   [9]

Web Services Building Block
Transport protocols for web services – messaging with web services – protocols – SOAP – describing web services – WSDL – Anatomy of WSDL – manipulating WSDL – web service policy – Discovering web services – UDDI – Anatomy of UDDI- Web service inspection – Ad- Hoc Discovery – Securing web services.   [9]

Implementing Xml In E-Business
B2B – B2C Applications – Different types of B2B interaction – Components of e-business XML systems – ebXML – Rosetta Net Applied XML in vertical industry – Web services for mobile devices.   [9]

Xml and Content Management
Semantic Web – Role of Meta data in web content – Resource Description Framework – RDF schema – Architecture of semantic web – content management workflow – XLANG –WSFL.   [9]

K.S.Rangasamy College of Technology – Autonomous R2018							
50 CS E35 - Information Storage and Management							
Elective – III							
Semester	Hours / Week			Total	Credit	Maximum Marks		
	L	T	P	hrs	C	CA	ES	Total
VI	3	0	0	45	3	40	60	100
Objective(s)	• To study the concepts of storage architecture and architecture • To learn about various storage networking technologies • To understand NAS and object based and unified storage • To study backup and archives and business impact analysis • To provide comprehensive learning of storage technology, allow to make more informed decisions in an increasingly complex IT environment.							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Understand the origin of storage systems and observe the virtualization CO2: Classify the connectivity between the storage devices and servers CO3: Apprehend the network attached storage in sharing environment CO4: Revise the data backup the data archive in the event of data loss CO5: Analyze the concept of local replication technologies							

Introduction To Information Storage

Information Storage – evolution of storage architecture – data center infrastructure – virtualization and cloud computing. Data Center Environment: host – connectivity – disk dive performance – DAS benefits and limitations – flash drives. Intelligent Storage Systems: components – storage provisioning – types of Intelligent storage system[9]

Storage Networking Technologies

Fibre Channel Storage Area Networks: components – FC connectivity – switched fabric ports – FC architecture – fabric services – switched fabric login types – zoning – FC SAN topologies – virtualization in SAN. IP SAN and FcoE: iSCSI – FCIP – FcoE   [9]

Network Attached Storage

NAS: Benefits – file sharing and network file sharing – components – I/O operations – implementations – file sharing protocols – factors affecting NAS performance – file level virtualization. Object-Based and Unified Storage: Object-Based storage devices – content-addressed storage – CAS use case – Unified storage. [9] **Backup and Archive**

Introduction to Business Continuity: Information Availability – BC: terminologies – planning life cycle – failure analysis – business impact analysis – technology solutions. Backup: Purpose – considerations – granularity – methods – architecture – operations – topologies – backup in NAS environments – targets – data duplication for backup – Data Archive.   [9]

Replication

Local replication: terminology – uses – replica consistency – technologies – restore and restart considerations – virtualization environment. Remote replication: modes – technologies – migration in virtualization environment. [9]

K.S.Rangasamy College of Technology – Autonomous R2018
50 CS E36 - Professional Readiness for Innovation, Employability And Entrepreneurship
Common to all Branches

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
VI	0	0	6	45	3	40	60	100

Objective(s)	• To empower students with overall Professional and Technical skills required to solve a real world problem. • To mentor the students to approach a solution through various stages of Ideathon, Research , Design Thinking , workflows , architecture and building a prototype in keeping with the end user and client needs. • To provide experiential learning to enhance the Entrepreneurship and employability skills of the students.
Course Outcomes	**At the end of the course, the students will be able to** CO1: Upskill In emerging technologies and apply to real industry-level use cases CO2: Understand agile development process CO3: Develop career readiness competencies, Team Skills/leadership qualities CO4: Develop Time management, Project management skills and Communication Skills CO5: Use Critical Thinking for Innovative Problem Solving CO6: Develop entrepreneurship skills to independently work on products

The course will involve 40-50 hours of technical training, and 40-50 hours of project development. The activities involved in the project along with duration are given in table 1.

Table 1: Activities

Activity Name	Activity Description	Time(Weeks)
Choosing a Project	Selecting projects from the list of projects categorized various technologies & business domains	2
Team Formation	Students shall form a team of 4 members before enrolling to a project. Team members shall distribute the project activities among themselves.	1

Hands on training	Students will be provided with hands-on training on selected technology in which they are going to develop the project.	2	
Project Development	Project shall be developed in agile mode. The status of the project shall be updated to the mentors via appropriate platform.	6	
Code submission, project Doc and Demo	Project deliverable must include the working code, project document and demonstration video. All the project deliverables are to be uploaded to cloud based repository such as GitHub.	3	
Mentor review and Approval	Mentor will be reviewing the project deliverable as per the milestone schedule and the feedback will be provided to the team.	1	
Evaluation and Scoring	Evaluators will be assigned to the team to evaluate the project deliverable, and the scoring will be provided based on the evaluation metrics	1	
Total		16 weeks	

lly, it involves 15 weeks of learning and doing, and one week for evaluation. The evaluation will be
sess technical and soft skills as given in table 2.

Table 2: Evaluation Schema

		Skills	Weightage
I	Technical Skills		
	1	Technical Training & Assignments	20%
	2	Project Planning	5%
	3	Requirements Analysis	5%
	4	Project Design	5%
	5	Innovation	5%

50 CS E41–MOBILE AD HOC NETWORKS							
Elective – IV							
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
VII	2	0	2	45	3	50	50	100
Objective(s)	• To compare the differences between cellular and ad hoc networks and the analyse the challenges at various layers and applications • To summarize the protocols used at the MAC layer and scheduling mechanisms • To examine the network security solution and routing mechanism • To evaluate the energy management schemes and Quality of service solution in ad hoc networks • To understand the architecture and protocols used in Wireless Sensor Networks.							
Course Outcomes	**At the end of the course, the students will be able to** CO1.Understand the principles of mobile ad-hoc networks and their impact on protocol design. CO2. Recognize the classifications and features of different Ad Hoc Routing Protocols. CO3. Analyze the concept of different transport layer and security protocols in Mobile Ad-Hoc Networks. CO4. Acquire the knowledge of different QoS protocols in Mobile Ad-Hoc Networks. CO5. Gain the knowledge of Issues in the wireless Sensor Networks and their solutions.							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Introduction

Introduction-Issues–Ad hoc wireless Internet-MAC protocols for Ad hoc wireless networks-Classification of MAC protocols-Contention-Based protocols: MACAW-MACA -Contention-Based protocols with Reservation Mechanisms-D-PRMA–CATA–HRMA-SRMA/PA-Contention-Based protocols with Scheduling Mechanisms: DPS-DWOP.

[9]

Ad Hoc Routing Protocols

Introduction-Classifications of Routing Protocols-Table-Driven Routing Protocols–On-Demand Routing ProtocolsDSR-AODV-TORA–LAR–ABR–Hybrid Routing Protocols-Implementation of routing protocols using NS2 Simulator.

[9]

Transport Layer And Security Protocols For Ad Hoc Wireless Networks

Classification of Transport Layer Solutions-TCP Over Ad Hoc Wireless Networks: Feedback-Based TCP-TCP with Explicit Link Failure Notification-Split TCP-Security in Ad Hoc Wireless Networks-Network Security Requirements-Network Security Attacks-Key Management-Secure Routing in AdHoc Wireless Networks.   [9] **Quality Of Service In Ad Hoc Wireless Networks**

Introduction–Issues-Classifications of QoS Solutions-MAC Layer Solutions: Cluster TDMA-IEEE 801.11e-Network Layer Solutions–QoS Routing Protocols–Ticket-Based QoS Routing Protocol-PLBQR–TDR-QoSFrameworks for Ad Hoc Wireless Networks: QoS Model-QoS Resource reservation signalling-SWAN.

[9] **Wireless Sensor Networks**

Introduction–Sensor Network Architecture–Data Dissemination-Data Gathering–MAC Protocols for Sensor Networks–Location Discovery–Quality of a Sensor Network.   [9]

Hands on:

1. Create a sample wireless topology using Simulation Tool.
2. Create a mobile Ad-hoc networks using Simulation Tool.
3. Implement an Ad-hoc On-demand Distance Vector protocol using Simulation Tool.
4. Implement a Transmission Control Protocol using Simulation Tool.
5. Implement an User Datagram Protocol using Simulation Tool.
6. Implement a Low Energy Adaptive Hierarchy protocol using Simulation Tool

Elective – IV								
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
VII	2	0	2	45	3	50	50	100
Objective(s)	• To adapt existing testing experience and knowledge to Agile values and principles. • To choose the appropriate agile approaches for a specified application. • To realize the importance of interacting with business stakeholders in determining the requirements for a software system. • To develop the techniques and tools for improving team collaboration and software quality. • To examine their applications in the real world and addresses their impacts on developing software							
Course Outcomes	**At the end of the course, the students will be able to** CO1 : Review the knowledge on Techniques and Tools used for Agile Methodology. CO2 : Apply the various Agile Flavors based on the nature of the Project. CO3 : Apply knowledge & recognize the impact of Social Aspects on Software Development Success and Migration to Agile CO4: Recognize the importance of interacting with Business Stakeholders in determining the requirements for a Software System. CO5 : Recognize Software Process improvement as an ongoing Task for Development Teams and how Agile approaches can be scaled up to the Enterprise level.							

Passed in BoS Meeting held on 02/12/2023

AGILE METHODOLOGY

Theories for Agile Management – Agile Software Development – Traditional Model vs. Agile Model – Classification of Agile Methods – Agile Manifesto and Principles – Agile Project Management – Agile Team Interactions – Ethics in Agile Teams – Agility in Design, Testing – Agile Documentations – Agile Drivers, Capabilities and Values. [9]

AGILE PROCESSES

Lean Production – SCRUM, Crystal, Feature Driven Development- Adaptive Software Development – Extreme Programming: Method Overview – Lifecycle – Work Products, Roles and Practices. [9]

AGILITY AND KNOWLEDGE MANAGEMENT

Agile Information Systems – Agile Decision Making – Earl`S Schools of KM – Institutional Knowledge Evolution Cycle – Development, Acquisition, Refinement, Distribution, Deployment , Leveraging – KM in Software Engineering – Managing Software Knowledge – Challenges of Migrating to Agile Methodologies – Agile Knowledge Sharing – Role of Story-Cards – Story-Card Maturity Model (SMM), Role and Skill of Tester in Agile Team. [9]

AGILITY AND REQUIREMENTS

Impact of Agile Processes in RE–Current Agile Practices – Variance – Overview of RE Using Agile – Managing Unstable Requirements – Requirements Elicitation – Agile Requirements Abstraction Model – Requirements Management in Agile Environment, Agile Requirements Prioritization – Agile Requirements Modeling and Generation – Concurrency in Agile Requirements Generation.

[9]

AGILITY AND QUALITY ASSURANCE

Agile Product Development – Agile Metrics – Feature Driven Development (FDD) – Financial and Production Metrics in FDD – Agile Approach to Quality Assurance – Test Driven Development – Agile Approach in Global Software Development. [9]

Hands on:

1. Understand the background and driving forces for taking an Agile Approach to Software Development 2. Understand the business value of adopting agile approach
3. Understand agile development practices
4. Drive Development with Unit Test using Test Driven Development 5. Apply Design
principle and Refactoring to achieve agility
6. Study automated build tool.
7. Study version control tool.
8. Study Continuous Integration tool.
9. Perform Testing activities within an agile project.

Objective(s)	• To learn basic concept of software forensics • To study Player-Hackers, Crackers, Phreaks, and other Doodz, Avanced tools, Law and Ethics-Software forensics in court, Computer Virus and Malware Concepts and Background, Programming Cultures and Indicators, Stylistic Analysis and Linguistic Forensics, Nalysauthorship AIS.
Course Outcomes	At the end of the course, the students will be able to CO1 : Realize basics of Software Forensics technologies and practices CO2 : Comprehend the knowledge on players and various basic software forensics tools CO3 : Comprehend the law and ethics of forensics CO4: Identify various computer viruses and malware and Attain knowledge on programming cultures CO5 : Perform stylistic analysis and linguistic forensics

Introduction To Software Forensics, Software Code and Analysis Tools

Motivations and Rationales - General Characteristics - Black hat Products - Other Products - Summary - The Programming Process Digital Forensic Definitions - Software Forensics - Objectives and Objects of Software Forensics - Identity - Other Object of Study - Software Forensic Tools -The Process - The Products - Finally, Already, the Tools - Software Forensic Technologies and Practices - Content Analysis - Legal Considerations - Presentation in Court [9] **The Player-Hackers, Crackers, Phreaks, and Other Doodz**

Terminology -Types of Black hats -The Products -The Resulting Objects -The Analytical Tools -Forensic Tools [9]

Advanced Tools, Law and Ethics-Software Forensics In Court

Decompilation -Desquirr -Dcc Boomerang -Plagiarism -JPlag -YAP -Other Approaches -summary -Legal Systems Differences Within Common Law -Jurisdiction -Evidence -Types of Evidence - Rules of Evidence -Providing Expert Testimony -Ethics -Disclosure - Blackhat motivations as a Defense [9]

Computer Virus and Malware Concepts and Background, Programming Cultures and Indicators

History of Computer viruses and Worms -Malware Definition and Structure -Virus Structure -Trojan structure -Logic Bomb Structure -Remote Access Trojan (RAT) Structure -Distributed Denial of Service (DDoS) Structure Detection and Antidetection Techniques -Detection Technologies -tealth and Antidetection Measures -Summary -User Interface -Cultural Features and "Help" -Functions -Programming Style -Program structure -Programmer Skill and Objectives -Developmental Strictures -Technological Change –Summary. [9]

Stylistic Analysis and Linguistic Forensics, Nalysauthorship Ais

Biblical Criticism -Shakespeare and Other Literature -Individual Identification and Authentication -Content Analysis Noncontent Analysis -The Content/Noncontent Debate -Noncontent Metrics as Evidence of Authorship -Additional Indicators - Summary -Problems - Plagiarism Detection Versus Authorship Analysis -How Can It Work? - Source Code Indicators - More General Indicators - Is It Reliable? [9]

Hands On:

1. Implement the command line statement to recover lost files on SD/USB/HB in windows.
2. Implement and show the result of Safe Back tool for the suspect drive to create backup.
3. Implement and show the result of JPLAG plagiarism to find pairs of similar programs among a given set of programs.
4. Design the steps to capture TCP packets in Wireshark tool.
5. Design the content analysis for the given paragraph using grammar checker.

Objective(s)	Learning Concepts of Multimedia Tools, Multimedia Operating Systems, Multimedia Communication Systems, Data Compression and Multimedia Applications							
Course Outcomes	CO1:Examine different elements of multimedia system, storage media for multimedia systems and animation CO2:Comprehend multimedia editing tools for audio, video, image and analyse linking multimedia objects CO3:Outline Real-time, process, resource management and examine different Database management system for multimedia CO4:Predict multimedia communication subsystems and generate multimedia synchronization reference model **CO5:** Compare different data compression techniques and gain knowledge about Multimedia application							

Introduction to Multimedia

Elements of multimedia system – Need and aspects of multimedia - Information units. Sound - Audio file formats – MIDI – Images - Computer Image Processing - Principles of animation - Animation techniques - Creating animated scenes – Video Basic concepts - Video Capture - Recording format - Storage for multimedia - CD Technologies - Multimedia Workstations [9]

Multimedia Tools

Basic tools - Image-editing tool - Painting and drawing tools –Sound editing programs - Video formats - Linking multimedia objects – OLE -presentation tools - authoring tools. [9]

Multimedia Operating Systems

Introduction - Real Time - Resource Management - Process Management - File Systems - Database Systems - Multimedia Database Management System - Characteristics of an MDBMS - Data Analysis - Data Structure - Operations on Data - Integration in a Database Model. [9]

Multimedia Communication Systems

Application Subsystem - Transport Subsystem – Synchronization - Introduction - Notion of Synchronization - Presentation Requirements - A Reference Model for Multimedia Synchronization - Synchronization in distributed environment. [9]

Data Compression and Multimedia Applications

Source entropy and hybrid coding – JPEG – MPEG - H.261 - DVI. Video conferencing - Tele conferencing – Tele services – messaging services – retrieval services – Tele action services. [9]

VIII	2	0	2	45	3	50	50	100
Objective(s)	1. To understand the basic concepts of machine learning 2. To have a thorough understanding of the Tree learning learning and Neural Networks 3. To learn the theoretical aspects of Bayesian Learning 4. To understand the principles of instance based learning and Cluster Analysis 5. To have a thorough understanding of the Learning sets of rules							
Course Outcomes	**At the end of the course, the students will be able to** CO1: identify the perspectives of machine learning CO2: apply decision tree and Artificial neural networks for real world problems CO3: design a Bayesian classifier for solving a problem CO4: illustrate the principles of instance based learning and Cluster Analysis CO5: describe the algorithms for rule and reinforcement learning							

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023   BoS Chairman

Introduction: Learning Problems - Designing a Learning System - Perspectives and Issues in Machine Learning – Concept Learning – task – search – finding maximally specific Hypotheses – version spaces and candidate elimination algorithm-inductive bias[9]

Decision Tree Learning and Artificial Neural Networks: Decision Tree Representation – Problems – basic decision tree learning algorithms – hypotheses search – Issues – Artificial Neural Networks: Introduction – Representations – Problems – Perceptrons – Multilayer networks and Back Propagation Algorithm – example. [9]

Bayesian Learning: Bayes Theorem – Concept Learning – Maximum Likelihood and Least-Squared Error Hypothesis - Maximum Likelihood Hypotheses for Predicting Probabilities - Bayes Optimal Classifier - Gibbs Algorithm - Naïve Bayes Classifier – Example.   [9]

Instance Based Learning and Cluster Analysis: Introduction – k-Nearest Neighbour Learning – Locally Weighted Regression - Radial Basis Functions - Case-Based Reasoning. Cluster Analysis- Introduction - Types
- A Categorization of Major clustering methods -partitioning methods - Hierarchical methods - Density-Based Methods.   [9]

Learning Sets of Rules: Learning sets of rules: Introduction – sequential covering algorithms – Learning Rule Sets- First order rules – FOIL – Induction as Inverted deduction – inverting resolution – **Rough Set Theory: Concepts- of rough sets-Feature selection and rule induction-Theory and its applications -** Reinforcement learning – Introduction – Learning task – Q learning-Nondeterministic Rewards and Action, Temporal Difference Learning-Generalizing from Examples.   [9]

Hands on:
1. Write a python program to import and export data using Pandas library functions.
2. Demonstrate various data pre-processing techniques for a given dataset.
3. Implement Simple and Multiple Linear Regression Models.
4. Develop Decision Tree Classification model for a given dataset and use it to classify a new sample.
5. Implement Naïve Bayes Classification in Python.
6. Build KNN Classification model for a given dataset.
7. Build Artificial Neural Network model with back propagation on a given dataset.
8. Write a python program to implement K-Means clustering Algorithm.

Total Hours: 45 hours

K.S. Rangasamy College of Technology – Autonomous R2018							
50 CS E52 – Foundations of Block Chain Technology							
Elective – V							
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
VIII	2	0	2	45	3	50	50	100
Objective(s)	• Understand the basic concepts of Distributed systems and Cryptography • Understand emerging abstract models for Block chain Technology. • Identify the challenges and technical gaps existing between theory and practice in cryptocurrency domain • Design, build, and deploy smart contracts and distributed applications. • Develop Block chain based applications and games						
Course Outcomes	**At the end of the course, the students will be able to** CO1: Explore the basic concepts of Distributed database, Cryptography algorithms and functions. CO2: Interpret the design principles of Blockchain and Mining concepts. CO3: Investigate the techniques of distributed consensus. CO4: Recognize the concepts of cryptocurrency and learn Ethereum development CO5:Design and develop projects, smart contracts using Block-chain technology						
Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**							

Basics

Distributed Database, Two General Problem, Byzantine General problem and Fault Tolerance, Hadoop Distributed File System, Distributed Hash Table, ASIC resistance, Turing Complete.

Cryptography: Hash function, Digital Signature - ECDSA, Memory Hard Algorithm, Zero Knowledge Proof.   [9]

Blockchain

Introduction, Advantage over conventional distributed database, Blockchain Network, Mining Mechanism, Distributed Consensus, Merkle Patricia Tree, Gas Limit, Transactions and Fee, Anonymity, Reward, Chain Policy, Life of Blockchain application, Soft & Hard Fork, Private and Public blockchain. Blockchain Technology for IoT Applications.

[9]

Distributed Consensus

Nakamoto consensus, Proof of Work, Proof of Stake, Proof of Burn, Difficulty Level, Sybil Attack, Energy utilization and alternate.   [8]

Cryptocurrency

History, Distributed Ledger, Bitcoin protocols - Mining strategy and rewards, Ethereum - Construction, DAO, Smart Contract, Truffle -Design and issue Crypto currency, Mining, DApps, GHOST, Vulnerability, Attacks, Sidechain, Namecoin.   [9]

Cryptocurrency Regulation and Applications

Stakeholders, Roots of Bit coin, Legal Aspects-Crypto currency Exchange, Black Market andGlobal Economy. Applications: Internet of Things, E-Governance, Land Registration, Medical Record Management System, Domain Name Service and future of Blockchain-Naive Blockchain construction - Hashcash implementation, Smart Contract Construction, AWS Blockchain Templates.

[10]

Hands on:
1. Creating Merkle tree
2. Creation of Block
3. Blockchain implementation
4. Creating ERC20 token
5. Blockchain implementation using Merkle Trees
6. Mining in Blockchain
7. Peer-to-Peer implementation using Blockchain
8. Creating Crypto-currency Wallet

Objective(s)	1. To understand the basic issues and types of text mining 2. To appreciate the different aspects of text extraction and clustering 3. To understand classification techniques of text 4. To know in detail about text streams 5. To appreciate the current trends in text mining
Course Outcomes	**At the end of the course, the students will be able to** CO1: Identify the different features that can be mined from text and web documents and appraise the knowledge of trees with its operations CO2: Apply the concept of Text Extraction and Clustering CO3: Review various Classification Techniques CO4: Appraise the knowledge in text streams CO5: Practice visualization methodologies using tools

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

INTRODUCTION
Overview of text mining-Definition-General Architecture–Pre-processing–Types of Problems- Collecting documents-document standardization-tokenization-lemmatization-vector generation for prediction-sentence boundary determination -evaluation performance   [08]

TEXT EXTRACTION AND CLUSTERING
Text Extraction: Introduction, Rapid automatic keyword extraction: candidate keywords, keyword scores, adjoining keywords, extracted keywords, Benchmark evaluation: precision and recall, efficiency, stoplist generation, Evaluation on new articles.
Clustering: Multilingual document clustering: Multilingual LSA, Tucker1 method, PARAFAC2 method.   [10]

CLASSIFICATION
Content-based spam email classification using machine-learning algorithms, Utilizing nonnegative matrix factorization for email classification problems, Constrained clustering with k-means type algorithms. [08]

TEXT STREAMS
 Introduction, Text streams, Feature extraction and data reduction, Event detection, Trend detection, Event and trend descriptions, Embedding semantics in LDA topic models: Introduction, vector space modeling, latent semantic analysis, probabilistic latent semantic analysis, Latent Dirichlet allocation, embedding external semantics from Wikipedia, data-driven semantic embedding. [10]

RECENT TRENDS
Visualization Approaches -Architectural Considerations -Visualization Techniques in Link Analysis - ExampleMining Text Streams -Text Mining in Multimedia -Text Analytics in Social Media -Opinion Mining and Sentiment Analysis -Document Sentiment Classification -Opinion Lexicon Expansion -Aspect-Based Sentiment Analysis -Opinion Spam Detection –Text Mining Applications and Case studies(Vector Representations of Words - Word Embeddings for the digital humanities)-Implementing Recommender System in Python   [09]
Hands on:
    1. Implement methods for Text Preprocessing.

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023   BoS Chairman

2. Implement methods for word relationship analysis 3. Implement methods for topic analysis.
4. Implement methods for text classification.

	5. Implement methods for text clustering.
	6. Implement methods for sentiment analysis.

INTRODUCTION TO CYBERCRIME

Cybercrime- definition and origins of the word- Cybercrime and information security - Classifications [9] of cybercrime- Cybercrime and the Indian ITA 2000 - A Global Perspective on cybercrimes- Cloud Computing- Proliferation of Mobile and Wireless Devices- Trends in Mobility, Credit Card Frauds in Mobile and Wireless Computing Era.

CYBER SECURITY CHALLENGES IN MODERN DEVICES

Security Challenges Posed by Mobile Devices- Registry Settings for Mobile Devices - Authentication [9] Service Security- Attacks on Mobile/Cell Phones - Mobile Devices: Security Implications for Organizations- Organizational Measures for Handling Mobile-Devices-Related Security Issues - Organizational Security Policies and Measures in Mobile Computing Era, Laptops.

TOOLS AND METHODS

Tools and Methods Used in Cybercrime, Proxy Servers and Anonymizers- Phishing -Password [9] Cracking - Key loggers and Spywares, - Virus and Worms - Steganography – DoS and DDoS Attacks - SQL Injection, Buffer Over Flow - Attacks on Wireless Networks - Phishing, Identity Theft (ID Theft) - The Legal Perspectives - Cyberlaw: The Indian Context - The Indian IT Act. Introduction to Security Audit.

Mobile platform security models

Android – iOSMobile platform security models – Detecting Android malware in Android markets [9]

Mobile Security Testing

Mobile platform internals – Security testing in the mobile app development lifecycle – Basic static and dynamic security testing – Mobile app reverse engineering and tampering– Assessing software protections [9]
Hands on:
1. Study of steps to protect your personal computer system by creating User Accounts with Passwords and types of User Accounts for safety and security.
2. Study the steps to protect a Microsoft Word Document of different version with different operating system.
3. Study the steps to remove Passwords from Microsoft Word
4. Study various methods of protecting and securing databases.
5. Study "How to make strong passwords" and "passwords cracking techniques".
6. Study the steps to hack a strong password.

Objective(s)	• To understand the concept of social network data and graphs to represent social relations. • To gain the knowledge of social influence and its structure representation. • To understand the information networks in social web and related applications. • To describe the trust network analysis. • To use software to simulate the dynamics of networks.
Course outcomes	At the end of the course, the students will be able to: CO1:Explore Social network data and social relations. CO2:Model social network data and understand its logical relationships. CO3:Analyze complex network structure of web for information retrieval. CO4:Mine the behavior of the users in the social networks. CO5:Simulate the dynamics of networks based on social network models.

INTRODUCTION [8]

Social network data-Formal methods- Paths and Connectivity-Graphs to represent social relations-Working with network data- Network Datasets-Strong and weak ties - Closure, Structural.

SOCIAL INFLUENCE [9]

Homophily- Mechanisms Underlying Homophily, Selection and Social Influence, Affiliation, Tracking Link Formation in On-Line Data, Spatial Model of Segregation - Positive and Negative Relationships - Structural Balance - Applications of Structural Balance, Weaker Form of Structural Balance..

INFORMATION NETWORKS AND THE WORLDWIDE WEB [10]

The Structure of the Web- World Wide Web- Information Networks, Hypertext, and Associative Memory- Web as a Directed Graph, Bow-Tie Structure of the Web- Link Analysis and Web Search Searching the Web: Ranking, Link Analysis using Hubs and Authorities- Page Rank- Link Analysis in Modern Web Search, Applications, Spectral Analysis, Random Walks, and Web Search..

SOCIALNETWORK MINING [9]

Clustering of Social Network graphs: Betweenness, Girvan Newman Algorithm-Discovery of communitiesCliques and Bipartite Graphs-Graph Partitioning Methods-Matrices-Eigen values Sim-rank.

NETWORK DYNAMICS [9]

Cascading Behaviour in Networks: Diffusion in Networks, Modelling Diffusion - Cascades and Cluster, Thresholds, Extensions of the Basic Cascade Model- Six Degrees of Separation-Structure and Randomness, Decentralized Search Empirical Analysis and Generalized Models- Analysis of Decentralized Search.

Objective(s)	- Equip participants with a comprehensive understanding of cloud computing principles, AWS services, and security fundamentals to confidently initiate their cloud journey. - Enable participants to grasp fundamental concepts of cloud-based compute resources, specifically focusing on Amazon Elastic Compute Cloud (Amazon EC2) and related services, including containerization and orchestration, fostering a solid foundation for practical application. - Provide a concise understanding of OSI model layers, foundational AWS networking and security services, and proactive vulnerability prevention within the AWS cloud environment. - Immerse learners in the realm of AWS storage solutions, covering the diverse offerings of block storage, object storage, and database services, while facilitating practical skills in hosting websites through Amazon S3. - Equip participants with a comprehensive understanding of AWS monitoring and cost management tools, specifically focusing on CloudTrail, CloudWatch, and effective cloud cost optimization strategies.								

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023   BoS Chairman

Course outcomes	**At the end of the course, the students will be able to** CO1: possess a clear grasp of cloud computing concepts, the advantages of cloud adoption, the significance of AWS, and the foundational knowledge to utilize key AWS services effectively, while also demonstrating an understanding of cloud security essentials and initial steps to set up an AWS account and explore its service offerings. CO2: Understand the benefits of Amazon EC2 and its various instance types, distinguishing among billing options, comprehending dynamic scaling through features like Amazon EC2 Auto Scaling and Elastic Load Balancing, grasping containerization history and technologies, explaining AWS container offerings like Fargate and Amazon EKS, and practically creating an EC2 instance using a t2.micro instance type. CO3: Gain the knowledge of OSI model's structure, AWS networking services including subnetting, Virtual Private Cloud (VPC), security essentials like Security Groups and Network Access Control Lists (NACLs), AWS's comprehensive security measures and global infrastructure, strategies to prevent and detect vulnerabilities, and practical skills to create a VPC with multiple subnets across different availability zones. CO4: Understand the Amazon Elastic Block Store (EBS) and its volume types, performance distinctions, and EC2 instance store applications. They will also be adept in comprehending Amazon S3's object storage services, storage classes, tiering options, data protection, AWS database options including RDBMS and

| | NoSQL (DynamoDB), and will have the practical ability to create an S3 bucket and host a static website |
| | CO5: Understand CloudTrail operations, application scenarios, cost structures, and benefits. They will also gain an understanding of Amazon CloudWatch, CloudWatch Logs, and Log Insights, along with the ability to query logs from CloudWatch Logs. Additionally, participants will become proficient in cloud financial management, cost optimization considerations, and practical skills such as sending CloudTrail logs to CloudWatch, running Log Insights queries, and validating their results |

Overview of Cloud Computing: Exploring the Concept of Cloud Computing, Understanding the Benefits of Cloud Adoption - Selecting AWS: Reasons and Advantages - Initiating Your Journey: Getting Started with Cloud and AWS - **Introduction to AWS:** Getting Started in the AWS Cloud, Understanding the AWS Global Infrastructure - **Core Services Part I:** Explore AWS Cloud Computing Fundamentals, Delve into AWS Cloud Storage Essentials, Gain Insight into AWS Cloud Database Services - **Core Services Part II:** Understand Networking in Core AWS Services, Explore Security Aspects in Core AWS Services, Grasp Pricing Essentials of Core AWS Services - **Security Basics:** Identity and Access Management**.**
Case Study: A Kick Start - Cloud Journey: Open AWS Cloud Account - Review the Services Offerings from Compute, Storage, Database, Networking, Security   [9]

Compute in the Cloud: Benefits of Amazon Elastic Compute Cloud (Amazon EC2) at a basic level, Identify the different Amazon EC2 instance types, Differentiate between the various billing options for Amazon EC2, Benefits of Amazon EC2 Auto Scaling - **Dynamic Scaling and Hosting in the Cloud:** Summarize the benefits of Elastic Load Balancing, Give an example of the uses for Elastic Load Balancing, Summarize additional AWS compute options - **Learn Container Concepts:** History of Containerization, Container Technologies, Microservices and Management - **Learn AWS Container Offerings:** Explain the functioning of Fargate, What is Container Orchestration Environment, Learn the fundamentals of AWS EKS.
Case Study: Create EC2 Instance - t2. Micro   [9]

Introduction to OSI Layer: OSI Model Overview, Physical and Data Link Layers, Network and Transport Layers
Session, Presentation, and Application Layers - **AWS Networking Services Fundamentals:** Learn the concept of Subnetting, Amazon Virtual Private Cloud, Security Group, NACL - **AWS Security Services Fundamentals:** Cloud Security Measures, The Worldwide Infrastructure of AWS, Ensuring Data Center Security, Adhering to Compliance and Governance, Countering DDoS Attacks - **Prevention and Detection Vulenarabities in AWS Cloud:** Introduction to AWS Entry Points, Identity and Access Management in AWS, Exploring Detective Controls, Securing Infrastructure in Cloud, Ensuring Data Protection in AWS, Incident Response Strategies in Cloud Environment
Case Study: Create a VPC and 2 Subnets in Different Availability Zone   [9]

AWS Block Storage: Amazon EBS Block Storage Service, Amazon EBS Volume Types, Performance Differentiation of Amazon EBS Volume Types, Uses for Amazon EC2 Instance Stores, Retention Options for EBS Volumes - **AWS Object Storage Basic:** Amazon S3 Object Storage Services, Amazon S3 Storage Classes
Distinguishing Amazon S3 Glacier Storage Classes, Storage Class Data Tiering Options, Data Protection for Amazon S3 - **AWS Database offerings – RDBMS:** Discerning Among AWS Database Options, Exploring Amazon Relational Database Service (RDS) Value, Unveiling Amazon Aurora Architecture, Achieving High Performance with Amazon Aurora - **AWS Database offerings - NoSQL – DynamoDB:** What is NoSQL and why we need it, Amazon DynamoDB Fundamentals, Terminology and Technology Concepts
Case Study: Host Website in S3 Bucket: Create a S3 Bucket and Host a Static Website   [9]

Learn the CloudTrail: CloudTrail Operation Understanding, Surveying CloudTrail Application Scenarios, CloudTrail Cost Structure Explanation, Recognizing CloudTrail Advantages - **Understand the Cloudwatch, Cloudwatch Logs and Log Insights:** Introduction to Amazon CloudWatch, Log files from Amazon Elastic Compute Cloud (Amazon EC2) instances, AWS CloudTrail, Query the logs from Cloudwatch Logs - **Cloud Cost Management:** Understand Cloud Financial Management, Six capabilities to have to be successful in your Cloud Financial Management journey - **Cost Optimization:** Cloud Usage with Cost Consideration, Enhance Cloud Utilization, Purchase Choices Based on Commitment.
Case Study: Explore CloudTrail and CloudWatch: Send the Logs from CloudTrail to Cloudwatch, Run LogInsights query and Validate it   [9]

Semester	Hours/Week			Total hrs	Credit	Maximum Marks			
	L	T	P		C	C	CA	ES	Total
V	3	0	0	45	3		40	60	100
Objective(s)	• Understand the concept of DevOps • Understand the Continuous Integration in Automated Testing and Reporting • Explore Configuration Management, Continuous Delivery and Deployment • Know the concept of Containerization and Orchestration • Analyse the Security and Compliance								

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023

BoS Chairman

Course Outcomes	**At the end of the course, the student will be able to**
	CO1: Recognize the concept of DevOps
	CO2: Apply Continuous Integration in Automated Testing and Reporting
	CO3: Analyze Configuration Management, Continuous Delivery and Deployment
	CO4: Understand the Containerization and Orchestration
	CO5: Evaluate the Security and Compliance

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023   BoS Chairman

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Introduction to DevOps:
What is DevOps? - Benefits of DevOps - DevOps Principles - DevOps Culture and Collaboration **Version Control and Collaboration Tools:**
- Introduction to Version Control (Git) - Git Basics: Clone, Commit, Push, Pull - Branching and Merging - Collaborative Development with Git - Introduction to Git Hub/ Git Lab/ Bi bucket   [9]

Continuous Integration (CI)
CI/CD Pipeline Overview - Building and Testing Code Automatically - Introduction to Jenkins or other CI tools - Configuring Jenkins Jobs - Integration with Version Control - Automated Testing and Reporting.   [8]

Configuration Management
Infrastructure as Code (IaC) concepts - Introduction to Configuration Management Tools (e.g., Ansible) - Creating Playbooks/Roles for Automated Deployment - Managing Configuration Drift
Continuous Delivery and Deployment
Understanding Continuous Delivery vs. Continuous Deployment - Blue-Green Deployments - Canary Deployments - Release Orchestration   [10]

Containerization and Orchestration
Introduction to Containers (Docker) - Creating Docker Images - Container Registries (Docker Hub, AWS ECR) - Introduction to Kubernetes - Deploying Containers with Kubernetes **Monitoring and Logging**
Importance of Monitoring and Observability - Monitoring Tools (Prometheus, Grafana) - Application Logging and Log Management
[10]

Security and Compliance
 Security Principles in DevOps - Incorporating Security in CI/CD - Compliance and Auditing in Dev Ops **Cloud Services and Dev Ops**
Cloud Computing Overview - Infrastructure Automation in the Cloud - Serverless Architectures
DevOps Best Practices and Case Studies
Industry Best Practices - Case Studies of Successful DevOps Implementations   [8]

Hands On:
- Applying DevOps Concepts to a Sample Project
- Setting Up a CI/CD Pipeline
- Deploying and Monitoring the Application

Objective(s)	• To enable the students to learn Java Collections Framework • To understand the Collections Utility and Concurrent Collections in Java • To create and use Spring Framework and Enterprise JavaBeans (EJB) • To understand Java 8 Features • To understand Web Services and Design Patterns
Course Outcomes	**At the end of the course, the students will be able to** CO1: Recognize the principles of Java Collections Framework CO2: Implement Collections Utility and Concurrent Collections in Java. CO3: Create and use Spring Framework and Enterprise JavaBeans (EJB) CO4: Analyzing the Java 8 Features CO5: Implement the concept of Web Services and Design Patterns

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus**.**

Java Collections Framework
Introduction to Collections, Overview of the Java Collections Framework (JCF), Importance of collections in Java programming, Core Interfaces- List, Set, and Map interfaces, hierarchy of collection interfaces, Lists and their Implementations - ArrayList and LinkedList, Sets and their Implementations - HashSet, LinkedHashSet, and TreeSet, Maps and their Implementations- HashMap, LinkedHashMap, and TreeMap, Key-value pairs, ordering, and special features.   [9]

Collections Utility and Concurrent Collections
Common utility methods- Sorting, searching, and synchronization, Custom Objects in Collections- Implementing Comparable and Comparator interfaces, customizing sorting for user-defined classes, Concurrent Collections - ConcurrentHashMap and CopyOnWriteArrayList, Collections Best Practices - Guidelines for choosing the right collection, Performance considerations and best coding practices.   [9]

Spring Framework and Enterprise JavaBeans (EJB)
Overview of the Spring framework - Dependency injection and Inversion of Control (IoC), Spring MVC - Building web applications, Controllers, views, and forms, Spring Data and Hibernate Integration, Integrating Spring with Hibernate, Spring Data. Introduction to EJB - Session beans, entity beans, and message-driven beans, EJB 3.x Features - Annotations and simplifications.   [9]

Java 8 Features
Lambda expressions, Method references, Functional interfaces, Stream API, Default methods, Base64 Encode Decode, Static methods in interface, Optional class, Collectors class, ForEach() method, Nashorn JavaScript Engine, Parallel Array Sorting, Type and Repeating Annotations, IO Enhancements, Concurrency Enhancements, JDBC Enhancements.   [9]

Web Services and Design Patterns
Web Services - SOAP and RESTful web services, JAX-RS and JAX-WS for Java web services. Design Patterns in Java - Overview of Design Patterns – Categories, Creational Design Patterns - Singleton, Factory, Builder, Prototype. Structural Design Patterns – Adapter, Bridge, Composite, Decorator. Behavioral Design Patterns – Observer, Strategy, Command. Additional Design Patterns and Best Practices - Chain of Responsibility Pattern, Visitor and Template Method patterns.   [9]

Introduction

Overview of Data Analytics - Business Intelligence- Pattern Recognition- Data Processing Chain- BI for Better Decisions- Decision Types- BI Tools - BI Applications - Introduction to Big Data - Data analysis life cycle - Overview of popular programming tools (Python, R, SQL) for data analysis - Introduction to data visualization tools (Tableau, Power BI) and their significance - Understand the statistical concepts: descriptive and inferential statistics - summary statistics: mean, median, mode, range, standard deviation,

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023   BoS Chairman

quartiles and correlation. [9]

Data Collection and Preprocessing
Introduction to Data Sources - Data Cleaning - Data Transformation - Normalization/Scaling- Log Transformation - Handling Categorical Data- One-Hot Encoding- Label Encoding- Dealing with Imbalanced Data - Handling Date and Time Data- Feature Engineering- Removing Redundant Features - Data Integration- Handling Duplicate Data- Data Splitting - Data Standardization. [9]

Exploratory Data Analytics (EDA)
Introduction, Data Visualization Techniques -Univariate, Bivariate, and Multivariate Plots - Selection of Appropriate Charts (Histograms, Box Plots, Scatter Plots) - Data Distribution Analysis: Normality Testing,

Skewness and Kurtosis, Correlation and Covariance - Handling Outliers in EDA - Data Patterns and Trends: Time Series Analysis, Seasonality and Trends - Exploring Relationships: Heatmaps for Correlation, Pair Plots - Hypothesis Testing: Formulating Hypotheses and Selecting the Right Test (T-Tests, ANOVA) - Interactive EDA Tools: Use Tools like Tableau Power BI and create interactive Dashboards. [9]

Statistical Data Analytics
Linear Regression - Logistic Regression - Multinomial Logistic Regression - Poisson Regression - Generalized Linear Models (GLM) - Time Series Models. [9]

Distributed File Systems
Hadoop Distributed File System (HDFS) and Google File System (GFS). - NoSQL Databases: Explore distributed databases like Apache Cassandra, MongoDB, or Amazon DynamoDB. Distributed Processing - MapReduce programming model for distributed processing. Apache Spark framework for in-memory data processing [9]

K.S.Rangasamy College of Technology – Autonomous R2018							
50 CS M01 - Java Programming							
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
V	3	0	0	45	3	40	60	100
Objective(s)	• To learn the fundamental element of the Java language • To understand the concept of Array and Strings • To apply the knowledge of Collections and Generics • To learn about Exception and Threads • To enhance the knowledge in Java Database Connectivity							
Course outcomes	CO 1: Illustrate the concept of classes, objects and communicate classes over objects using methods CO2: Apply the concepts of Arrays and String CO3: Express the Collections and Generics CO4: Practice the concept of Exception Handling and Threads CO5: Develop an application to enrich the knowledge in database Connectivity							

Java Fundamentals

Java Fundamentals: Java Architecture, Language basics, conditional statements, Flow Control Statements, OOPS / Inheritance: Classes and Objects, Encapsulation and Abstraction, Inheritance, Overriding and overloading, Garbage collection. [9]

Arrays and String

Arrays: One Dimensional Array and Multi-dimensional Array, String: Immutable String, Substring, String Comparison, String methods, String Buffer and String Builder. [9]

Collections and Generics

Collection Framework: Introduction to collection, Set, List, Map and Generics, Vector, Stack, Priority Queue, Iterator and Collection Interface. [9]

Exception Handling and Threads

Exception Handling: Introduction, Exception Types, Keywords: Try, catch, finally, throw and throws. Threads: Creating threads by Thread class and Runnable Interface, Thread lifecycle, Thread priorities. [9]

RDBMS and JDBC

RDBMS **:** Introduction to SQL,DDL,DML,DCL,TCL Commands, JDBC: Introduction, Establishing Connection and Transactions [9]

Total Hours: 45 hours

Text Books :	
1	Herbert Schildt, " The Java 2: Complete Reference", Fifth edition, TMH, 2002.
2	Jim Keogh, " J2EE: The Complete Reference", First edition, TMH, 2002.

V	3	0	0	45	3	40	60	100
Objective(s)	• To understand the communication between web browsers and servers • To enhance the knowledge of how hierarchy of objects are used in HTML • To design a web page by utilizing CSS components • To Incorporate JavaScript variables, operators and functions in web pages • To design of single-page applications and how Angular JS facilitates their development							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Understand and create interactive web pages CO2: Analyze different types of HTML tags, their functionality and attributes and learn the basics of web services CO3: Implement CSS to control the appearance of web pages and denote the background elements and media types CO4: Interpret JavaScript variables, operators and functions in web pages and manipulate HTML forms to validate user inputs CO5: Express the features of AngularJS with the various effects of elements and events							
Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.								

Passed in BoS Meeting held on 02/12/2023
Passed in Academic Council Meeting held on 23/12/2023

BoS Chairman

Introduction to Web Essentials

History of Web and Internet Basic – HTTP Request and Response Message – Introduction to Front end technology- Client – Server Computing: Web Client – Web Servers.
[9]

HTML

Traditional HTML and XHTML: History – Basic HTML Syntax and Semantics – Some Fundamental HTML Elements – Lists – Creating Table - Linking document - Frames - Graphics to HTML- Forms – HTML5 Document Structure Changes.
[9] **CSS**

Basics of CSS, CSS properties for manipulating texts, background, colors, Gradients, Shadow Effects, borders, margins, paddings, transformations, transitions and animations, etc., CSS box modal and CSS Flex, Positioning systems of CSS, CSS media queries.   [9]

JavaScript

Basics of JavaScript and Client-side scripting language, JavaScript syntaxes for variables, functions, branches and repetitions. JavaScript alert, prompt and confirm. Objects in JavaScript, Access/Manipulate web browser elements using DOM Structure, forms and validations, JavaScript events.   [9]

Angular JS

Introduction to AngularJS: HTML and Bootstrap CSS Primer - JavaScript Primer - Single Page Application – MVC Architecture – first Application of AngularJS- Binding – Template Directives – Elements – Events.   [9]

Practice:
1. Create a static webpage using table tags of HTML.
2. Develop and demonstrate the usage of inline, internal and external style sheet using CSS
3. Design a HTML code to create a frameset having header, navigation and Content sections with CSS.
4. Design a Java Script program which makes use of Java Script's inbuilt objects
5. Design HTML form for keeping student record and validate it using Java script. 6. Develop a fully functional website using Angular JS

		Total Hours: 45 hours

Introduction and Conceptual Modeling

Introduction Database systems – DBMS Applications – Purpose of DBMS – Views of Data - Database System Architecture –Data Storage and Querying – DB Users and Administrators - Data Models – ER model – Relational Model – Relational Algebra and Calculus. [9]

Relational Model

Introduction to SQL – Intermediate SQL – Advanced SQL– Triggers – Functions and Procedures –Embedded SQL - Normalization for Relational Databases (up to 5NF). [9]

Data Storage and Indexing Concepts

Record storage and Primary file organization –RAID – Operations on Files- Heap File- Sorted Files- Hashing Techniques – Index Structure for files –Different types of Indexes- B-Tree - B+Tree. [9]

Transaction Management Transaction – Transaction Concepts- Transaction Model- Desirable properties of Transaction- Schedule and Recoverability- Serializability – Concurrency Control – Types of Locks- Two Phase locking- Time stamp based concurrency control – Recovery Techniques – Concepts- Immediate Update- Deferred Update. [9]

Current Trends Object Oriented Databases –Distributed databases- Homogenous and Heterogeneous-Distributed data Storage –Distributed Transaction – Commit Protocols - Data Mining– Data Mining Applications – Data Warehousing. [9]

VI	3	0	0	45	3	40	60	100
Objective(s)	• To learn the runtime web development for easily building fast and scalable network applications. • To enhance the knowledge in event-driven and real-time applications that run across distributed devices. • To learn the streams and file systems in Node Js • To acquire the knowledge on web development and database connectivity • To Acquire the knowledge of various file operations using file systems							
Course Outcomes	**At the end of the course, the students will be able to** CO1: Examine the fundamental structure of Node.js platform CO2: Affirm the concepts of NPM CO3: Interpret the concepts of streams and file systems CO4: Gain the knowledge of web content using node.js CO5: Annotate the various file operations using file systems							
Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction to Node.js

The environment of Node.js - Benefits and Features - Install Node.js on Windows - Console and Web programs - Node.js REPL Commands   [8]

NPM

Node.js Package Manager - Installing modules using NPM - Node.js Command Line Options - Node.js Errors - Node.js DNS - Node.js Net   [9]

Streams and File Systems

Node.js Creating Buffers - Node.js Streams - Node.js Piping Streams - Node.js Chaining Streams - Node.js File Systems   [11]

Web Development

Node.js Web Module - Node.js html form handling - Node.js Database Connectivity   [9]

File System

Fs.readFile - Writing a File - Writing a file asynchronously - Opening a file - Deleting a file - Other IO Operations

                                                                                    [8]

Hands on:

1. Read the text file and print the content using file system module
2. Design the employee web page using html. Using node js program call the HTML file which display the output in browser.
3. Sample buffer program for different operations
   • Creating buffer
   • Concatenating the buffer
   • Copying buffer
   • Buffer length
   • Compare
   • Slice
   • Converting buffer to JSON file
4. Read the data from one text file and write the content to another text file using readerStream, writerStream.
5. Sample Node.js program using pipe and chaining using streams
6. Node.js program for various file operation using File System •   Reading the file

   • Writing the file
   • Truncating the file •   Deleting the file
7. Design the sample student registration form using html and call these html file using node.js, which will display output in browser.
8. Mini Project with Node.js database connectivity.

	Total Hours: 45 hours
