K.S. Rangasamy College of Technology

(Autonomous Institution affiliated to Anna University, Chennai)

CURRICULUM AND SYLLABI of

B.E. Computer Science and Engineering
(For the batch admitted in 2024– 25)

R 2022

Courses Accredited by NBA, Accredited by NAAC with 'A^{++}' Grade,
Approved by AICTE, Affiliated to Anna University, Chennai.

KSR Kalvi Nagar, Tiruchengode – 637 215.
Namakkal District, Tamil Nadu, India.

Department of Computer Science and Engineering VISION

To produce competent software professionals, academicians and researchers through Quality Education.

MISSION

- To produce competent software developers, system designers and network programmers through innovative teaching-learning practices.

- To keep abreast of the latest developments and technological transformations in computer science and engineering for social benefits.

Program Educational Objectives (PEOs) for B.E. (CSE) Programme

PEO1: Graduates will provide effective solutions for software and hardware industries by applying the concepts of basic science and engineering fundamentals.

PEO2: Graduates will be professionally competent and successful in their career through life-long learning.

PEO3: Graduates will contribute individually or as member of a team in handling projects and demonstrate social responsibility and professional ethics.

Rev. No.4/w.e.f. 01.06.2024
Passed in BoS Meeting held on 24/05/2024
Approved in Academic Council Meeting held on 25/05/2024

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

PROGRAMME OUTCOMES (POs)

Engineering Graduates will be able to:

PO1: Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2: Problem analysis : Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: Design /development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4: Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5: Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations

PO6: The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7: Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9: Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10: Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11: Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one‘s own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes (PSOs) for B.E.(CSE) Programme

Rev. No.4/w.e.f. 01.06.2024
Passed in BoS Meeting held on 24/05/2024
Approved in Academic Council Meeting held on 25/05/2024

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

Engineering Graduates will be able to:

PSO1: Apply standard Software Engineering practices and strategies in software project development using open-source programming environment and deliver a quality product for business success.

PSO2: Analyze and Interpret data by applying advanced data analytic models for decision making in Complex Problems and facilitate inter disciplinary research.

MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES (PEOs) WITH PROGRAMME OUTCOMES (POs)

The B.E. Computer Science and Engineering Programme outcomes leading to the achievement of the objectives are summarized in the following Table.

Programme Educational Objectives	Programme Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
PEO 1	3	1	3	2	2	1	1	1	2	2	3	1
PEO 2	3	3	3	2	2	1	1	1	2	2	3	1
PEO 3	3	2	3	2	2	1	1	1	3	2	3	1

Contributions: 1- low, 2- medium, 3- high

** End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination and 40 marks for practical End Semester Examination.

60 EN 001	PROFESSIONAL ENGLISH - I	Category	L	T	P	Credit
		HS	1	**0**	**2**	**2**

Objectives

- To help learners improve their vocabulary and to enable them to use words appropriately in different academic and professional contexts
- To help learners develop strategies that could be adopted while reading texts
- To help learners acquire the ability to speak effectively in English in real life and career related situations
- To equip students with effective speaking and listening skills in English
- To facilitate learners to enhance their writing skills with coherence and appropriate format effectively

Pre-requisites

 Basic knowledge of reading and writing in English

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and interpret complex academic texts	Understand
CO2	Recall the denotative and connotative meanings of technical texts	Remember
CO3	Interpret definitions, descriptions, narrations, and essays on various topics	Understand
CO4	Express fluently and accurately in formal and informal communicative contexts	Understand
CO5	Summarize their opinions effectively in both oral and written medium of communication	Understand

Mapping with Programme Outcomes

COs	POs												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1	-	-	-	-	-	-	-	2	3	3	2	3	2	2	-
CO2	-	-	-	-	-	-	-	2	3	3	2	3	2	2	-
CO3	-	-	-	-	-	-	-	2	3	3	2	3	2	2	-
CO4	-	-	-	-	-	-	-	2	3	3	2	3	2	2	-
CO5	-	-	-	-	-	-	-	2	3	3	2	3	2	2	-

3 - Strong; 2 - Medium; 1 - Some

Assessment Pattern

Bloom's Category	Continuous Assessment Tests (Marks)		End Sem Examination (Marks)
	Test 1	Test 2	
	Theory	Theory	Theory
Remember	10	10	20

I	1	0	2	45	2	40	60	100

Introduction to Fundamentals of Communication* **Listening:** General information-specific details-conversation: introduction to classmates – audio / video (formal & informal). **Speaking:** Self Introduction; Introducing a friend; conversation - politeness strategies. **Reading:** Reading brochures (technical context), telephone messages / social media messages relevant to technical contexts and emails. **Writing:** Writing letters – informal and formal – basics and format orientation **Language Focus:** Present Tenses; word formation (affixes); synonyms, antonyms and contranyms, and phrasal verbs; abbreviations & acronyms (as used in technical contexts).	[9]
Narration and Summation* **Listening:** Podcast, anecdotes / stories / event narration; documentaries and interviews with celebrities. **Speaking:** Narrating personal experiences / events; Interviewing a celebrity; reporting / and summarizing of documentaries / podcasts/ interviews. **Reading:** Biographies, travelogues, newspaper reports, excerpts from literature, and travel & technical blogs. **Writing:** Paragraph writing, short report on an event (field trip etc.). **Language Focus:** Past tenses and prepositions; One-word substitution.	[9]
Description of a process / product* **Listening:** Listen to a product and process descriptions; advertisements about products or services **Speaking:** Picture description; giving instruction to use the product; presenting a product. **Reading:** Advertisements, gadget reviews and user manuals. **Writing:** Definitions; instructions; and product /process description. **Language Focus:** Imperatives; comparative adjectives; future tenses. Homonyms; and Homophones, discourse markers (connectives & sequence words)	[9]
Classification and Recommendations* **Listening:** TED Talks; scientific lectures; and educational videos. **Speaking:** Small Talk; Mini presentations **Reading:** Newspaper articles and Journal reports **Writing:** Note-making / Note-taking; recommendations; Transferring information from nonverbal (chart, graph etc, to verbal mode) **Language Focus:** Articles; Pronouns -Possessive & Relative pronouns; subject-verb agreement; collocations.	[9]

60 MA 001	MATRICES AND CALCULUS	Category	L	T	P	Credit
		BS	3	1	0	4

Objectives

- To familiarize the basic concepts in Cayley-Hamilton theorem and orthogonal transformation
- To get exposed to the fundamentals of differentiation
- To acquire skills to understand the concepts involved in Jacobians and maxima and minima
- To solve various linear differential equations and method of variation of parameters To learn various techniques and methods in solving definite and indefinite integrals

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the concepts of Cayley-hamilton theorem and orthogonal transformation to the matrix	Apply
CO2	Apply the concepts of differentiation in solving various Engineering problems	Apply
CO3	Obtain Jacobians and maxima and minima of functions of two variables	Apply
CO4	Employ various methods in solving differential equations	Apply
CO5	Apply different techniques to evaluate definite and indefinite integrals	Apply

Mapping with Programme Outcomes

I	3	1	0	60	4	40	60	100

Matrices Characteristic equation – Eigen values and Eigen vectors of a real matrix – Properties of Eigen values and Eigen vectors – Cayley-Hamilton theorem – Orthogonal transformation of a symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by an Orthogonal transformation – Nature of quadratic form – Applications: Stretching of an elastic membrane. **Hands-on:** Matrix Operations - Addition, Multiplication, Transpose, Inverse and Rank	[9]
Differentiation Representation of functions – Limit of a function – Continuity – Derivatives – Differentiation rules (sum, product, quotient, chain rules) – Successive Differentiation – Leibnitz's theorem – **Applications: Maxima and Minima of functions of one variable. * Hands-on:** Determine the solution of system of linear equations	[9]
Functions of Several Variables Partial differentiation – Homogeneous functions and Euler's theorem – Jacobians – Taylor's series for functions of two variables – **Applications: Maxima and minima of functions of two variables – Constrained maxima and minima: Lagrange's Method of Undetermined Multipliers.* Hands-on:** Compute the Eigen values and Eigen vectors of a Matrix	[9]
Differential Equations Linear differential equations of second and higher order with constant coefficients – R.H.S is of the form $e^{\alpha x}, sin\ \alpha\ x, cos\ \alpha\ x, x^n, n > 0$ – Differential equations with variable coefficients: Cauchy's and Legendre's form of linear equations – Method of variation of parameters. **Hands-on:** Solve the first and second order ordinary differential equations	[9]
Integration Definite and Indefinite integrals – Substitution rule – Techniques of Integration: Integration by parts, Integration of rational functions by partial fraction, Integration of irrational functions – Improper integrals – Applications: Hydrostatic force and pressure, moments and centres of mass. **Hands-on:** Compute the Maxima and Minima of a function of one variable	[9]

60 ME 002	Engineering Graphics	Category	L	T	P	Credit
		ES	2	0	4	4

Objectives

- To acquire various concepts of dimensioning, conventions and standards
- To impart the graphic skills for converting pictorial views of solids in to orthographic views.
- To learn the concept in projection of solids, section of solids and development of different types of surfaces.
- To learn the concept of isometric projection.
- To learn the geometry and topology of engineered components

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate the Impact of computer technologies on graphical communication.	Apply
CO2	Convert the pictorial views in to orthographic views using drafting software.	Apply
CO3	Draw the projection of simple solids, true shape of sections and development of surfaces.	Apply
CO4	Construct the isometric projections of objects using drafting software.	Apply
CO5	Interpret a design project illustrating engineering graphical skills.	Apply

I	2	0	4	90	4	40	60	100

Introduction to Computer Aided Drafting (CAD) software* Theory of CAD software – Menu System, Tool bars (Standard, Object Properties, Draw, Modify and Dimension) – Drawing Area (Background, Crosshairs, Coordinate System) – Dialog boxes and windows – Shortcut menus (Button Bars) – The Command Line and Status Bar – Different methods of zoom – Select and erase objects.	[6+12]
Orthographic Projection* Theory of projection – Terminology and Methods of projection – first angle and third angle projection – Conversion of pictorial views into orthographic views	[6+12]
Projection of Solids and Sections of Solids* Projections of simple solids: prism, pyramid, cylinder and cone (Axis parallel to one plane and perpendicular to other, axis inclined to one plane and parallel to other). Sections of simple solids: prism, pyramid, cylinder and cone in simple positions (cutting plane is inclined to one of the principal planes and perpendicular to the other) – True shape of sections. **Development of Surfaces*** Principle of development-Methods of development: Parallel line development-Cube, Prism and Cylinder. Radial line development – Pyramid and cone	[6+12]
Isometric Projection Principles of Isometric projection – Isometric scale, Isometric views, Conventions – Isometric views of lines, Planes, Simple and compound Solids – Conversion of Orthographic views in to Isometric view.	[6+12]
Application of Engineering Graphics* Geometry and topology of engineered components: Creation of engineering models and their presentation in standard 2D blueprint form, 3D wire-frame and shaded solids – Geometric dimensioning and Tolerance – Use of solid modeling software for creating associative models – Floor plans: windows, doors, and fixtures such as water closet (WC), bath sink, shower, etc. – Applying colour coding according to building drawing practice – Drawing sectional elevation showing foundation to ceiling – Introduction to Building Information Modelling (BIM).	[6+12]

*SDG 9 – Industry Innovation and Infrastructure

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1	**Introduction to Computer Aided Drafting (CAD) software**	
1.1	Theory of CAD software	1
1.2	Menu System, Tool bars (Standard, Object Properties, Draw, Modify and Dimension)	4
1.3	Drawing Area (Background, Crosshairs, Coordinate System)	4
1.4	Dialog boxes and windows – Shortcut menus	4
1.5	The Command Line and Status Bar	1
1.6	Different methods of zoom – Select and erase objects.	4
2	**Orthographic Projection**	
2.1	Introduction to orthographic projections	2
2.2	Planes of projection	2
2.3	Projection of points	2
2.4	Projection of lines inclined to both planes	2
2.5	Projection of planes	2
2.6	Projection of planes Inclined to both planes	2
2.7	Conversions of pictorial views to orthographic views.	2
2.8	Practice class for pictorial views to orthographic views.	2
2.9	Practice class for pictorial views to orthographic views.	2
3	**Projection of Solids, Sections of solids and Development of surfaces**	
3.1	Projections of simple solids: prism	1
3.2	Projections of simple solids: cylinder	1
3.3	Projections of simple solids: pyramid	1
3.4	Projections of simple solids: Cone	1
3.5	Practice class for Projection of Solids	1
3.6	Axis of solid inclined to both HP and VP	2
3.7	Section of solids for Prism,	1
3.8	Section of solids for Cylinder,	1
3.9	Section of solids for Pyramid,	1
3.10	Section of solids for Cone	1
3.11	Auxiliary Views - Draw the sectional orthographic views of geometrical solids.	2

Rev. No.4/w.e.f. 01.06.2024
Passed in BoS Meeting held on 24/05/2024
Approved in Academic Council Meeting held on 25/05/2024

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

3.12	Draw the sectional orthographic views of objects from industry.	1
3.13	Development of surfaces of Right solids Prism,	1
3.14	Development of surfaces of Right solids Pyramid	1
3.15	Development of surfaces of Right solids Cylinder and Cone	2
4	**Isometric Projection and Introduction to AutoCAD**	
4.1	Principles of isometric projection	2
4.2	Isometric scale	2
4.3	Isometric projections of simple solids: Prism,	2
4.4	Isometric projections of simple solids: Pyramid,	2
4.5	Isometric projections of simple solids: Cylinder	2
4.6	Isometric projections of simple solids: Cone	2
4.7	Isometric projections of frustum	2
4.8	Isometric projections of truncated solids	2
4.9	Combination of two solid objects in simple vertical positions.	2
5	**Application of Engineering Graphics**	
5.1	Geometry and topology of engineered components:	2
5.2	Creation of engineering models and their presentation in standard 2D blueprint form,	2
5.3	3D wire-frame and shaded solids – Geometric dimensioning and Tolerance – Use of solid modeling software for creating associative models	4
5.4	Floor plans: windows, doors, and fixtures such as water closet (WC), bath sink, shower, etc.	2
5.5	Applying colour coding according to building drawing practice	2
5.6	Drawing sectional elevation showing foundation to ceiling	4
5.7	Introduction to Building Information Modelling (BIM).	2

60 CS 001	C PROGRAMMING	Category	L	T	P	Credit
		ES	3	0	0	3

Objectives

- To learn most fundamental element of the C language and to examine the execution of branching, looping statements,
- To examine the concepts of arrays, its characteristics and types and strings.
- To understand the concept of functions, pointers and the techniques of putting them to use
- To apply the knowledge of structures and unions to solve basic problems in C language
- To enhance the knowledge in file handling functions for storage and retrieval of data

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Construct the fundamental building blocks of structured Programming in C	Apply
CO2	Implement the different operations on arrays and strings	Apply
CO3	Develop simple real world applications utilizing functions, recursion and pointers.	Apply
CO4	Demonstrate the concepts of structures ,unions ,user defined data types and preprocessor	Apply
CO5	Interpret the file concepts using proper standard library functions for a given application	Apply

Mapping with Programme Outcomes

		MC	2	0	0	0

Objectives

- To understand the impact climate changes in ecosystem and biodiversity.
- To analyze the impacts of pollution, control and legislation.
- To explain the importance of sustainable development practices.
- To explore the significance of organic farming.
- To identify the Geo-spatial tools for resource management.

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Interpret the impacts of pollution on climate change	Understand
CO2	Categorize the wastes and its management.	Analyze
CO3	Identify the different types of sustainable practices	Apply
CO4	Classify the organic farming techniques	Apply
CO5	Categorize the Geo-spatial tools for resource management	Analyze

60 CS 0P1	C Programming Laboratory	Category	L	T	P	Credit
		ES	0	0	4	2

Objectives

- To enable the students to apply the concepts of C to solve simple problems
- To use selection and iterative statements in C programs
- To apply the knowledge of library functions in C programming
- To implement the concepts of arrays, functions, structures and pointers in C
- To implement the file handling operations through C

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Implement computational problems using selection and iterative statements.	Apply
CO2	Demonstrate C program to manage collection of related data.	Apply
CO3	Design and Implement different ways of passing arguments to functions, Recursion and implement pointers concepts.	Apply
CO4	Develop a C program to manage collection of different data using structures, Union, user-defined data types and preprocessor directives.	Apply
CO5	Demonstrate C program to store and retrieve data using file concepts.	Apply

Objectives

- To provide hands-on training on Carpentry, Sheet metal, Fitting and Welding.
- To offer real time activity on plumbing connections and power tools in domestic applications.
- To provide hands-on training on CNC Wood Router and 3D Printing
- To provide hands-on training on household wiring and dismantling and assembling the home appliances
- To offer real time activity on embedded programming using Arduino

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Make a wooden model using carpentry, Sheet metal Process	Apply
CO2	Make a model using filing and joining using MS Plate and repair & maintenances of water lines, power tools for home applications	Apply
CO3	Cultivate the skills necessary for developing innovative and desirable products, including the ability to integrate user needs, market trends and technological advancement into the design process	Apply
CO4	Trouble shoot the electrical and electronic circuits, electrical appliances and facilitate the house wiring	Apply
CO5	Acquire practical knowledge on embedded programming using Arduino	Apply

* CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

** End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination and 40 marks for practical End Semester Examination.

60 EN 002	PROFESSIONAL ENGLISH - II	Category	L	T	P	Credit
		HS	1	0	2	2

Objectives

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts
- To help learners develop strategies that could be adopted while reading texts
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations
- Improve listening, observational skills, and problem-solving capabilities
- Develop message generating and delivery skills

Pre-requisites

Basic knowledge of reading and writing in English and should have completed Professional English I.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and contrast products and ideas in technical texts.	Understand
CO2	Illustrate cause and effects in events, industrial processes through technical texts	Understand
CO3	Infer problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Understand
CO4	Relate events and the processes of technical and industrial nature.	Remember

Making Comparisons* **Listening:** Evaluative Listening: Advertisements, Product Descriptions, - Audio / video; filling a graphic organiser (choosing a product or service by comparison) **Speaking:** Marketing a product, persuasive speech techniques. **Reading:** Reading advertisements, user manuals and brochures. **Writing:** Professional emails, Email etiquette - compare and contrast essay. **Language Focus:** mixed tenses, prepositional phrases, same words used in different contexts and discourse markers	[9]

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

Expressing Causal Relations in Speaking and Writing* **Listening:** Listening to longer technical talks and completing– gap filling exercises. Listening technical information from podcasts – Listening to process/event descriptions to identify cause & effects. **Speaking:** Describing and discussing the reasons of accidents or disasters based on news reports. **Reading:** longer technical texts– cause and effect essays, and letters / emails of complaint, **Writing:** Writing responses to complaints **Language Focus:** Active Passive Voice transformations, Infinitive and Gerunds – Word Formation (Noun-Verb-Adj-Adv), Adverbs.	[9]
Problem Solving* **Listening:** Listening to / watching movie scenes/ documentaries depicting a technical problem and suggesting solutions. **Speaking:** Group Discussion (based on case studies), - techniques and Strategies. **Reading:** Case Studies, excerpts from literary texts, news reports etc. **Writing:** Letter to the Editor, Checklists, Problem solution essay / Argumentative Essay **Language Focus:** Error correction; If conditional sentences - Compound Words, Sentence Completion.	[9]
Reporting of Events and Research * **Listening:** Listening Comprehension based on new report and documentaries – **Speaking:** Interviewing, presenting oral reports, Mini presentations on select topics. **Reading:** Newspaper articles. **Writing:** Recommendations, Transcoding, Accident Report, Precis writing and Summarising and Plagiarism **Language Focus:** Reported Speech – Modals - Conjunctions- use of Prepositions	[9]
The Ability to put Ideas or Information Coherently* **Listening:** Listening to TED Talks, Presentations, Formal job interviews, (analysis of the interview performance). **Speaking:** Participating in role plays, virtual interviews, making presentations with visual aids **Reading:** excerpts of interview with professionals **Writing:** Job / Internship application – Cover letter & Résumé **Language Focus:** Numerical Adjectives, question types: Wh/ Yes or No/ and Tags; Relative Clauses - Idioms.	[9]

Tiruchengode - 637 215, Namakkal-Dt.

1.4	Reading advertisements, user manuals and brochures	1
1.5	Writing professional emails	1
1.6	Compare and contrast essay	1
1.7	mixed tenses and prepositional phrases	1
1.8	Same words used in different contexts	1
2	**Expressing Causal Relations in Speaking and Writing**	
2.1	Listening to longer technical talks	1
2.2	Listening to process/event descriptions	1
2.3	Describing and discussing the reasons of accidents or disasters	1
2.4	Reading longer technical texts– cause and effect essays	1
2.5	Writing responses to complaints	1
2.6	Active Passive Voice transformations	2
2.7	Infinitive and Gerunds	1
2.8	Word Formation (Noun-Verb-Adj-Adv), Adverbs.	1
3	**Problem Solving**	
3.1	Listening to documentaries and suggesting solutions	1
3.2	Group Discussion (based on case studies)	2
3.3	Reading Case Studies, excerpts from literary texts and news reports	1
3.4	Letter to the Editor	1
3.5	Checklists	1
3.6	Problem solution and argumentative essays	1
3.7	Error correction and Sentence Completion	1
3.8	If conditional sentences	1
4	**Reporting of Events and Research**	
4.1	Listening Comprehension	1
4.2	Interviewing and presenting oral reports	1
4.3	Mini presentations on select topics	1
4.4	Reading newspaper articles	1
4.5	Recommendations	1
4.6	Transcoding	1
4.7	Precis writing and Summarising	1
4.8	Reported Speech, Modals	1
4.9	Conjunctions	1
5	**The Ability to put Ideas or Information Coherently**	
5.1	Listening to Formal job interviews	1
5.2	Role plays	2
5.3	Virtual interviews	1
5.4	Reading Company profiles	1
5.5	Writing Statement of Purpose (SoPs)	1
5.6	Writing Résumé	1
5.7	Numerical Adjectives and Relative Clauses - Idioms	1
5.8	question types: Wh/ Yes or No/ and Tags	1

60 MA 003	Integrals, Partial Differential Equations and Laplace Transform	Category	L	T	P	Credit
		BS	3	1	0	4

Objectives

- To acquire the knowledge about multiple integrals
- To familiarize the basic concepts in Vector calculus To get exposed to the fundamentals of analytic functions To solve various types of partial differential equations.
- To familiarize the concepts of Laplace transform.

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Interpret the basic concepts of double and triple integrals.	Apply
CO2	Interpret the basic concepts of vector calculus.	Apply
CO3	Construct the analytic functions and evaluate complex integrals.	Apply
CO4	Compute the solution of partial differential equations using different methods.	Apply
CO5	Apply Laplace transform techniques for solving differential equations.	Apply

MULTIPLE INTEGRALS Double integration – Cartesian and polar co-ordinates – Change of order of integration – Area as double integral – Triple integration in Cartesian co-ordinates – Change of variables - Cartesian to polar co-ordinates and Cartesian to Cylindrical co-ordinates. **Hands - on:** Evaluating double integrals, triple integrals, area as double integrals and volume as triple integrals.	[9]
VECTOR CALCULUS* Introduction - Gradient of a scalar point function –Directional derivative – Angle of intersection of two surfaces – Divergence and curl (excluding vector identities) – Solenoidal and irrotational vectors – Application: Green's theorem in the plane – Gauss divergence theorem -Stokes' theorem (statement only). **Hands - on:** Evaluating Gradient, divergence and curls.	[9]
ANALYTIC FUNCTIONS AND INTEGRALS Analytic function – Necessary and Sufficient conditions (statement only)-Properties – Harmonic function – Construction of an analytic function – Cauchy's Integral theorem (statement only) – Cauchy's integral formula – Classification of singularities – Application: Cauchy's residue theorem. **Hands - on:** Plotting and visualizing functions of single variable, two and three variables	[9]
PARTIAL DIFFERENTIAL EQUATIONS* Formation of partial differential equations by eliminating arbitrary constants and arbitrary functions – Non- Linear partial differential equations of first order – Lagrange's linear equations – Application: Homogeneous Linear partial differential equations with constant coefficients. **Hands - on:** Calculate homogeneous linear partial differential equations.	[9]
LAPLACE TRANSFORM Conditions for existence – Transforms of elementary functions – Basic properties - Derivatives and integrals of transforms - Initial and final value theorem – Transform of periodic functions. Inverse Laplace transform – Convolution theorem (excluding proof) – Application: Solution of second order ordinary differential equations with constant co-efficients. **Hands - on:** Evaluating laplace, Inverse laplace transforms and solve differential equations.	[9]

60 PH 004	PHYSICS FOR COMPUTER TECHNOLOGY	Category	L	T	P	Credit
		BS	3	0	0	3

Objectives

- To instil knowledge on physics of semiconductors, determination of charge carriers and device applications
- To enable the students to correlate the theoretical principles with application oriented studies in optoelectroni materials
- To introduce the basics of laser, optical fiber and its applications in information science
- To understand the basic concepts of magnetic materials and its applications
- To inculcate an idea of significance of nano structures, ensuing nano device applications and quantum computing

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Acquire knowledge on basics of semiconductor physics and its applications in various devices	Apply
CO2	Apply the principles of LCD, photo detectors and optoelectronic devices for various engineering applications	Understand
CO3	Realize a strong foundational knowledge in lasers and fiber optics.	Understand
CO4	Impart knowledge on magnetic properties of materials and their applications in data storage.	Understand
CO5	Recognize the basics of quantum structures and their applications and basics of quantum computing	Understand

WATER TECHNOLOGY* Introduction – Commercial and industrial uses of water - hardness - types – estimation of hardness by EDTA method- Internal conditioning (colloidal, phosphate, calgon and carbonate conditioning methods) – external conditioning (Zeolite process, demineralization process) - Desalination methods (Reverse Osmosis and Electro dialysis). Flash evaporation.	[7]
ELECTROCHEMISTRY** Electrode potential - Nernst Equation - derivation and problems - reversible and irreversible cells - Types of Electrodes and its applications - reference electrodes - pH, conductometric and Potentiometric titrations - Principles of electro plating and electro less plating- fabrication process of Printed Circuit Board.	[9]
CHEMICAL SENSORS** Sensors – Chemical Sensors – Characteristics – Elements and Characterization - Potentiometric Sensors - Amperometric Sensors – Sensors Based on Electrochemical Methods – Electrochemical Biosensors – Optical Biosensors : Enzyme Sensors – Bio affinity Sensors - DNA Sensors. Chemical Sensors as Detectors and Indicators: Indicators for Titration Processes – Separation Methods. Nano technology in chemical sensors.	[10]
SMART MATERIALS** Liquid crystal polymers - Organic Light Emitting Diode (OLED) - [polythiopene] - working and applications – Conductive polymers and Semi conducting polymers: principle and applications- organic: Organic dielectric material [Polystyrene, PMMA]. Smart screen materials: Inorganic Rare earth metals [yttrium, lanthanum, cerium] - Conductive components: Indium tin oxide [properties and applications] - touch screen [resistive and capacitive] - magnetic storage [Iron oxide, cobalt alloy] – optical storage [photo chromic materials] - solid storage	[9]
CHEMINFORMATICS** Definition – coordinate –bonds –bond length – bond angles – torsional angles – chemical structure – definition - conformation – representation of structural information – linear format – SMILEYF notation – MOL format – PDB format – storage of structural data in a database - structural keys – finger print -canonical structure using chemdraw – similarity search –sub structure search - application of chem-informatics in drugs designing. 60 IT 001	Python Programming	Category	L	T	P	Credit
		PC	3	1	0	4

Objectives

- To know the basics of programming in Python
- To understand modules and functions
- To study files and exception handling
- To recognize the basic concepts of NumPy
- To create layouts using graphical tools

Pre-requisites

Basic Knowledge of mathematics and programming

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the basics of Python Programming for problem-solving	Apply
CO2	Develop programs using modules and functions	Apply
CO3	Implement programs using file and exception handling	Apply
CO4	Create a solution for real world problems using NumPy arrays	Apply
CO5	Design layouts with GUI toolkits using Tkinter	Apply

Mapping with Programme Outcomes

60 CP 0P2	Engineering Physics and Chemistry Laboratory	Category	L	T	P	Credit
		BS	0	0	4	2

Objectives

- To infer the practical knowledge by applying the experimental methods to correlate with the Physics theory.
- To demonstrate an ability to make physical measurements and understand the limits of precision in measurements
- To analyze the behavior and characteristics of various materials for its optimum utilization Test the knowledge of theoretical concepts and develop the experimental skills of the learners.
- To facilitate data interpretation and expose the learners to various industrial and environmental applications

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Analyze the properties of semiconducting materials for its potential applications	Apply
CO2	Realize the interference and diffraction phenomena by Air wedge and laser experiments	Apply
CO3	Recognize the magnetic properties by experimental verification	Apply
CO4	Apply different techniques of qualitative and quantitative chemical analysis to generate experimental skills and apply these skills to various analyses	Apply
CO5	Explain and analyze instrumental techniques for chemical analysis	Analyze

List of Experiments (Physics)*:

1. Determination of Hall coefficient of a given semiconductor and its charge carrier density
2. V-I Characteristics of Zener diode and Solar cell
3. Air wedge - Determination of thickness of a thin sheet/wire
4. a) Laser- Determination of the wave length of the laser using grating
   b) Optical fibre -Determination of numerical aperture and acceptance angle
5. Magnetic field along the axis of current carrying coil – Stewart and Gee

*** SDG: 4- Quality Education**

List of Experiments (Chemistry)*:

1. Estimation of HCl by pH meter.
2. Estimation of mixture of acids by conductivity meter 3. Determination of ferrous ion by Potentiometric titration.
4. Determination of corrosion by weight loss method.
5. Estimation of ferrous ion by spectrophotometer.

*** SDG 6: Improve Clean Water and Sanitation**
*** SDG 9: Industry, Innovation, and Infrastructure**
*** SDG 8: Decent Work and Economic Growth**

Case studies/Activity report

1. Activity using chemdraw software.
2. Activity report on cheminformatic structure.
3. Case study on ion selective electrodes.
4. Assembling of cell or battery.

60 IT 0P1	Python Programming Laboratory	Category	L	T	P	Credit
		PC	0	0	4	2

Objectives

- To gain the knowledge in Python Programming Language
- To understand the concepts decision making and looping statements
- To implement functions with the aid of modules using exception handling
- To implement the concepts of NumPy Arrays
- To create layouts using graphical modules such as Tkinter and Turtle

Pre-requisites

Basic knowledge of mathematics and programming

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Implement the basics and data structures of Python programming	Apply
CO2	Implement the concepts of decision making and looping statements	Apply
CO3	Develop programs using functions and modules with exception handling	Apply
CO4	Create programs using NumPy arrays	Apply
CO5	Design layouts with GUI toolkits using Tkinter	Apply

* CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

** End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination, 50 marks for theory cum practical End Semester Examination and 40 marks for practical End Semester Examination.

60 MA 010	MATHEMATICAL STATISTICS AND NUMERICAL METHODS	Category	L	T	P	Credit
		BS	3	1	0	4

Objectives

- To learn basic concepts of descriptive statistics
- To familiarize various methods in hypothesis testing
- To get exposed to the fundamentals of analysis of variances
- To get exposed to various techniques to solve equations numerically
- To understand the concepts of interpolation and numerical integration

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compute measures of central tendency, measures of dispersion and correlation coefficient.	Apply
CO2	Apply Student's t test, F test and Chi-square test for testing the statistical hypothesis.	Apply

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

CO3	Apply the concepts of ANOVA to test the equality of means for more than two populations.	Apply
CO4	Employ the various iteration techniques for solving algebraic, transcendental and system of linear equations.	Apply
CO5	Apply different techniques to find the intermediate values and to evaluate definite integrals.	Apply

Empirical Statistics **Measures of central tendency***: Mean, Median and Mode – Measures of dispersion: Range, Quartile deviation and Standard deviation – Measures of skewness: Bowley's co-efficient of skewness and Pearson's co-efficient of skewness – Karl Pearson's coefficient of correlation. **Hands - on:** Calculate mean, median, mode and range for discrete frequency distribution	[9]
Testing of Hypothesis* Type I and Type II errors - Test of significance of small samples : Student's 't' test for single mean - Difference of means – F- test – Chi-square test - Goodness of fit - Independence of attributes. **Hands - on:** Apply Student's t - test, F- test and Chi-square test to real dataset	[9]
Design of Experiments* Analysis of variance: One way classification – Completely randomized design – Two way classification – Randomized block design – Latin square design. **Hands - on:** Perform One-Way ANOVA	[9]
Solution of Equations and Eigen Value Problems Algebraic and Transcendental equations - Newton Raphson method –Regula Falsi method- Gauss elimination method – GaussJordan method– Iterative methods: GaussJacobi method – GaussSeidel method – Eigen value of a matrix by Power method. **Hands - on:** Visualize the iterative methods for solving linear system of equations	[9]
Interpolation and Numerical Integration **Lagrange's and Newton's divided difference interpolation (unequal intervals)- Newton's forward and backward interpolation (equal intervals)** **- Numerical integration: Two point and three point Gaussian quadrature –Trapezoidal, Simpson's1/3 and 3/8 rule (single integral). **Hands - on:** Numerical integration by Trapezoidal and Simpson's rules	[9]

60 CS 003	Data Structures	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To choose the appropriate data structure for a specified application
- To design and implement abstract datatypes such as Linked List, Stack, Queue and Trees
- To Learn and implement the Hashing techniques
- To design a Priority Queue ADT and its applications
- To demonstrate various Sorting, Searching and Graph algorithms

Pre-requisites

Basic knowledge of mathematics and programming language in C

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply linear data structures to solve real time applications.	Apply
CO2	Experiment with trees and its operations.	Apply
CO3	Apply algorithm for solving problems like Sorting and Searching.	Apply
CO4	Implement Priority Queue with its operations and Hashing Techniques.	Apply
CO5	Analyse Shortest Path and Minimum Spanning Tree algorithms and Biconnectivity.	Analyse

Mapping with Programme Outcomes

60 CS 004	Java Programming	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To learn object oriented programming concepts
- To understand Java fundamentals and String Methods
- To implement code reduction through packages and collection methods
- To apply the knowledge of Threads and IO streams
- To build applications with JDBC technology for real world problems

Pre-requisites

Basic knowledge of any programming language with ability to solve logical problems

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply Java fundamentals to construct functional programs to solve real-world problems	Apply
CO2	Implement object-oriented principles, exception handling and string operations to solve real world problems	Apply
CO3	Design packages and utilize collections to achieve reusability	Apply
CO4	Apply multithreading concepts and IO Streams in various real world scenario	Apply
CO5	Explore database using regular expression with JDBC	Analyse

61 EC 001	Digital Logic and Microprocessor	Category	L	T	P	Credit
		ES	2	0	2	3

Objectives

- To learn Boolean algebra and simplification of Boolean functions
- To design and analyze different combinational circuits
- To study the basics of synchronous sequential logic, analyze and design sequential circuits
- To introduce the architecture and programming of 8086 microprocessors
- To perform the interfacing of peripheral devices with 8086 microprocessors

Pre-requisites

- Basic knowledge of Electrical and Electronics Engineering

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Simplify complex Boolean functions and design digital systems	Understand
CO2	Design and analyze combinational logic circuits	Analyze
CO3	Design and analyze synchronous sequential logic circuits	Analyze
CO4	Illustrate the architecture of 8086 microprocessor	Understand
CO5	Explain the interfacing techniques of various peripheral devices	Apply

60 CS 301	Computer Networks	Category	L	T	P	Credit
		PC	3	0	2	4

Objectives

- To understand the computer networking basics and concepts of data communications, functions of different layers
- To Know the standards employed in computer networking
- To make the students to get familiarized with different protocols and network components
- To develop an understanding of different components of computer networks, various protocols, modern technologies and their applications
- To understand the application layer and its applications

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the concept of components, categories and ISO/OSI model of networks	Understand
CO2	Analyse the various error detection techniques and Flow, Error control	Analyse
CO3	Compare the concept of Circuit switching and Packet switching	Apply
CO4	Apply the knowledge of Congestion control and QoS Techniques	Apply
CO5	Analyse the Purpose of Domain Name Space, Email and FTP	Analyse

60 MY 002	Universal Human Values	Category	L	T	P	Credit
		MC	3	0	0	3*

Objectives

- To identify the essential complementarily between 'values' and 'skills' □ To ensure core aspirations of all human beings.
- To acquire ethical human conduct, trustful and mutually fulfilling human behaviour
- To enrich interaction with Nature
- To achieve holistic perspective towards life and profession

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the significance of value inputs in formal education and start applying them in their life and profession	Understand
CO2	Evaluate coexistence of the “I” with the body.	Analyze
CO3	Identify and evaluate the role of harmony in family, society and universal order.	Analyze
CO4	Classify and associate the holistic perception of harmony at all levels of existence and Nature	Analyze
CO5	Develop appropriate human conduct and management patterns to create harmony in professional and personal lives.	Create

**SDG 3 – Good Health and Well Being

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1	**INTRODUCTION TO VALUE EDUCATION**	
1.1	Discussion on Present Education System and Skill Based Education	1
1.2	Understanding Value Education	1
1.3	Self exploration as the process for value education	1
1.4	Basic Human Aspirations - Continuous Happiness and Prosperity	1
1.5	Basic requirements to fulfill Human Aspirations - Right understanding, Relationship and Physical facility	1
1.6	Transformation from Animal Consciousness to Human Consciousness	1
1.7	Sources of Happiness and Prosperity – Harmony and Disharmony	1
1.8	Current Scenario and Role of Education	1
1.9	Outcome of Human Education and Method to fulfill the basic human aspirations	1
2	**HARMONY IN THE HUMAN BEING**	
2.1	Understanding Human being - As Co-Existence of the self and the Body – The Needs of the Self and the Body	1
2.2	Understanding Human being - As Co-Existence of the self and the Body - The Activities and Response of the Self and the Body	2
2.3	The body as an instrument of the self	1
2.4	Understanding harmony in the self	1
2.5	Harmony of the self with the body	2
2.6	Programme to ensure self-regulation and health	1
2.7	My Participation (Value) regarding Self and my Body - Correct Appraisal of our Physical needs	1
3	**HARMONY IN THE FAMILY AND SOCIETY**	
3.1	Harmony in the Family - Understanding Values in Human Relationships	1
3.2	Family as the basic Unit of Human Interaction	1
3.3	Values in human Relationships	1
3.4	Trust - the foundation value in relationship	1

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

3.5	Respect as the right evaluation, the Basis for Respect, Assumed Bases for Respect today	1
3.6	Harmony from Family to World Family: Undivided Society	1
3.7	Extending Relationship from family to society , Identification of the Comprehensive Human Goal	1
3.8	Programs needed to achieve the Comprehensive Human Goal: The Five Dimensions of Human Endeavour	1
3.9	Harmony from Family Order to World Family Order – Universal Human Order	1
4	**HARMONY IN THE NATURE / EXISTENCE**	
4.1	The Four Orders in Nature	1
4.2	Participation of Human Being in Entire Nature	1
4.3	Natural Characteristics - Tendency of Human Living with Animal Consciousness / The Holistic Perception of Harmony in Existence	1
4.4	Present day Problems	1
4.5	Recyclability and self-regulation in Nature	1
4.6	Relationship of Mutual Fulfillment	1
4.7	An Introduction to space, Co-existence of Units in Space	1
4.8	Harmony in Existence – Understanding Existence as Co- Existence	1
4.9	Natural Characteristic of Human Living with Human Consciousness	1
5	**IMPLICATIONS OF THE HOLISTIC UNDERSTANDING**	
5.1	Natural Acceptance of human values	1
5.2	Definitiveness of Ethical Human Conduct - Development of Human Consciousness	1
5.3	Identification of Comprehensive Human Goal	1
5.4	Basis for Humanistic Education and Humanistic Constitution	1
5.5	Ensuring Competence in professional Ethics	1
5.6	Issues in Professional Ethics-The Current Scenario	1
5.7	Holistic Technologies and Production Systems and management models -Typical Case Studies	2
5.8	Strategies for transition towards value based life and profession	1

61 CS 0P3	Data Structures Laboratory	Category	L	T	P	Credit
		PC	0	0	4	2

Objectives

- To design and implement simple linear and nonlinear data structures
- To strengthen the ability to identify and apply the suitable data structure for the given real world problem
- To program for storing data as tree structure and implementation of various traversal techniques
- To implement sorting and searching techniques
- To gain knowledge of hashing techniques and graph applications

Pre-requisites

Programming knowledge in C language

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate the implementation of Linear Data structures and its applications	Apply
CO2	Investigate Balanced Parenthesis and Postfix expressions with the help of Stack ADT	Apply
CO3	Implement Non-Linear Data Structure	Apply
CO4	Implement sorting and searching techniques	Apply
CO5	Implement Hashing Techniques, Shortest Path and Minimum Spanning Tree Algorithm	Analyse

60 CS 0P4	Java Programming Laboratory	Category	L	T	P	Credit
		PC	0	0	4	2

Objectives

- To apply core Java concepts to solve real-world problems
- To implement object-oriented programming (OOP) principles
- To apply exception Handling, Strings, and Collections to manipulate strings and data efficiently
- To apply the knowledge of Threads and IO streams
- To create a JDBC-integrated mini project that applies a wide range of Java concepts

Pre-requisites

Basic knowledge of any programming language with ability to solve logical problems

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate Java fundamentals to solve real world problems	Apply

Rev. No.4/w.e.f. 01.06.2024

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

Objectives

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts.
- To help learners develop strategies that could be adopted while reading texts.
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations.
- Improve listening, observational skills, and problem-solving capabilities
- Develop message generating and delivery skills

Pre-requisites

Basic knowledge of reading and writing in English.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and contrast products and ideas in technical texts.	Analyze
CO2	Identify cause and effects in events, industrial processes through technical texts	Analyze
CO3	Analyze problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Analyze
CO4	Report events and the processes of technical and industrial nature.	Apply
CO5	Articulate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Apply

1.1	Evaluative Listening: Advertisements, Product Descriptions	1
1.2	Listening to longer technical talks and completing– gap filling exercises.	1
1.3	Listening technical information from podcasts	1
1.4	Listening to process/event descriptions to identify cause & effects and documentaries depicting a technical problem and suggesting solutions	2
1.5	Listening to TED Talks	1
2	**Speaking**	
2.1	Marketing a product, persuasive speech techniques	1
2.2	Describing and discussing the reasons of accidents or disasters based on news reports,	2
2.3	Group Discussion (based on case studies)	1
2.4	Presenting oral reports, Mini presentations on select topics with visual aids	1
2.5	participating in role plays and virtual interviews	1
3	**Reading**	
3.1	Reading advertisements, user manuals and brochures	1
3.2	Reading - longer technical texts– cause and effect essays, and letters / emails of complaint	2
3.3	Case Studies, excerpts from literary texts, news reports etc.	1
3.4	Company profiles	1
3.5	Statement of Purpose (SoPs)	1
4	**Writing**	
4.1	Professional emails, Email etiquette	1
4.2	Compare and contrast essay	1
4.3	Writing responses to complaints	1
4.4	Precis writing, Summarizing and Plagiarism	2
4.5	Job / Internship application – Cover letter & Résumé	1
5	**Verbal Ability II**	
5.1	Reading Comprehension (Inferential fillups) and Theme Detection	2
5.2	Spotting Errors	1
5.3	Verbal Analogies	1
5.4	Change of Voice and Change of Speech	1

* CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

** End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination, 50 marks for theory cum practical End Semester Examination and 40 marks for practical End Semester Examination.

60 MA 017	Discrete Mathematics	Category	L	T	P	Credit
		BS	3	1	0	4

Objectives

- To get exposed to logical arguments and construct simple mathematical statements
- To familiarize the basic concepts of set theory
- To get exposed to different types of functions
- To provide fundamental principles of combinatorial counting techniques
- To familiarize the basic concepts of graph theory

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Describe the logical arguments and construct simple mathematical statements	Apply
CO2	Apply the basics of set theory to the situations involving inclusion and exclusion.	Apply
CO3	Describe the concepts of different types of functions.	Apply
CO4	Apply permutation and combination in real time situations and solve recurrence relations.	Apply

CHAIRMAN
Board of Studies

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

Objectives

- To design algorithms in both the science and practice of computing.
- To choose the appropriate data structure and algorithm design method for a specified Application
- To understand how the choice of data structures and algorithm design methods impacts the performance of programs.
- To solve problems using algorithm design methods such as the greedy method, divide and conquer, dynamic programming, backtracking and branch and bound.
- To solve NP-hard and NP-complete problems.

Pre-requisites

Basic knowledge of Data Structures and Computer programming

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Classify the problem types and compare orders of growth to represent asymptotic notations	Understand
CO2	Apply and inspect recursive and non-recursive algorithms by mathematical notations using sample algorithms.	Analyze
CO3	Apply 'Brute Force' and 'Divide and conquer' design techniques for sorting and searching problems	Analyze
CO4	Construct analogous algorithms for graph related problems.	Understand
CO5	Apply 'Backtracking' and 'Branch and bound' techniques to solve NPhard problems.	Apply

Introduction and Conceptual Modeling* Introduction Database systems – DBMS Applications – Purpose of DBMS – Views of Data - Database System Architecture–Data Storage and Querying– DB Users and Administrators –Data Models–ER model–Relational Model – Relational Algebra and Calculus.	[9]
Relational Model* Introduction to SQL – Intermediate SQL – Advanced SQL – Triggers – Functions and Procedures – Embedded SQL - Normalization for Relational Databases (upto5NF) - Introduction to MongoDB.	[9]
Data Storage and Indexing Concepts* Record storage and Primary file organization – RAID – Operations on Files - Heap File - Sorted Files - Hashing Techniques – Index Structure for files –Different types of Indexes- B-Tree - B+Tree.	[9]
Transaction Management * Transaction – Transaction Concepts- Transaction Model- Desirable properties of Transaction- Schedule and Recoverability- Serializability – Concurrency Control – Types of Locks- Two Phase locking -Time stamp based concurrency control – Recovery Techniques – Concepts - Immediate Update - Deferred Update.	[9]
Current Trends* Object Oriented Databases –Distributed databases- Homogenous and Heterogeneous-Distributed data Storage – Distributed Transaction–Commit Protocols - Data Mining–Data Mining Applications–Data Warehousing.	[9]

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1	**Introduction and Conceptual Modeling**	
1.1	Introduction to database, Applications of DBMS.	1
1.2	Different Views of Data, Database System Architecture	1
1.3	Database Administrator	1
1.4	Entity Relationship Model	1
1.5	Relational Model	1
1.6	Tuple and Domain Relational Calculus	1
1.7	E-R Diagram Banking application	1
1.8	Hierarchical Model	1
1.9	Network Model	1
2	**Relational Model**	
2.1	Structure Query Language introduction - Data Definition Language	1
2.2	Data Manipulation Language – Select with where and order by	1
2.3	Select using aggregate function	1
2.4	Select using group by and having clause	1
2.5	Sub query and Views	1
2.6	Triggers	1
2.7	Function and Procedures	1
2.8	Normalization	1
2.9	Introduction to MongoDB	1
3	**Data Storage and Indexing Concepts**	
3.1	Fixed and Variable length record structure	1
3.2	File Organization	1
3.3	RAID	2
3.4	Static and Dynamic Hashing	1
3.5	Indexing- Single, Multilevel and Mutable	1
3.6	Dense and Sparse Index	1
3.7	B and B+ Tree Index	1
3.8	Heap Organization	1
4	**Transaction Management**	
4.1	Transaction Concept and ACID properties	1
4.2	Transaction States and schedule	1
4.3	Conflict and View serializable schedule	1
4.4	Recoverability	1
4.5	Concurrency Control introduction- Share Lock, Exclusive Lock, Compatibility matrix, upgrade and downgrade	2
4.6	Two-Phase and Time stamp based locking protocol	1
4.7	Recovery Technique – Immediate Update	1

60 CS 403	Software Engineering	Category	L	T	P	Credit
		PC	2	0	2	3

Objectives

- To understand the phases and process in a software Development
- To understand fundamental concepts of requirements engineering and Analysis Modeling.
- To understand the various software design methodologies
- To learn various testing and maintenance measures
- To learn various project metrics and risk management

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Describe the key activities in managing a software process and project	Understand
CO2	Explain the concepts of requirements engineering and Modeling.	Understand
CO3	Apply systematic procedure for software design and deployment.	Apply
CO4	Compare and contrast the various testing and maintenance.	Analyze
CO5	Manage project schedule, estimate project cost and Identify Risk	Analyze

Objectives

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

- To present SQL and procedural interfaces to SQL comprehensively
- To perform various commands in RDBMS
- To Perform PL/SQL programming using concept of Cursor Management, Error Handling, Package and Triggers
- To design the applications using MongoDB
- To apply procedures and functions in PL/SQL

Pre-requisites

Data Structures

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Implement the Data Definition Language, Data Manipulation Language and Data Control Language commands in RDBMS	Apply
CO2	Employ the Sub queries, Views and Joins to retrieve data from multiple tables	Apply
CO3	Implement the High-level language extension with Cursors and Triggers	Apply
CO4	Implement the Procedures and Functions in PL/SQL	Apply
CO5	Demonstrate the working of MongoDB	Apply

60 CG 0P3	CAREER SKILL DEVELOPMENT - III	Category	L	T	P	Credit
		CG	0	0	2	1

Objectives

- To help learners improve their logical reasoning skills at different academic and professional contexts.
- To help learners relate basic quantitative problems and solve them.
- To help learners Infer critically the statements with optimal conclusions and assumptions.
- To Solve the quantitative problems pertaining to calculations of averages, ratio and proportions, and profit and loss effectively
- To compute quantitative problems related to time and work, speed and distance, and simple and compound interest

Pre-requisites

Basic knowledge of Arithmetic and Logical Reasoning

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Deduce the topics in logical reasoning at the preliminary and intermediate level.	Analyze
CO2	Relate basic quantitative problems and solve them effectively at the preliminary level	Apply
CO3	Infer critically the statements with optimal conclusions and assumptions with the data and information given.	Analyze
CO4	Solve the quantitative problems pertaining to calculations of averages, ratio and proportions, and profit and loss effectively at the preintermediate level.	Apply
CO5	Compute quantitative problems related to time and work, speed and distance, and simple and compound interest at intermediate level.	Apply

1.3	Blood Relations - Coded Relations	2
1.4	Order and Ranking – odd man out	1
1.5	Direction and distance	1
2	**Quantitative Aptitude – Part 1**	
2.1	Number system	1
2.2	Squares & cubes - Divisibility	1
2.3	Unit digits - Remainder Theorem	1
2.4	HCF & LCM- Geometric and Arithmetic progression	2
2.5	Surds & indices	1
3	**Critical Reasoning**	
3.1	Syllogism	1
3.2	Statements and Conclusions, Cause and Effect	2
3.3	Statements and Assumptions	1
3.4	Identifying Strong Arguments and Weak Arguments	1
3.5	Cause and Action -Data sufficiency	1
4	**Quantitative Aptitude – Part 2**	
4.1	Average - Ratio and proportion	1
4.2	Ages – Partnership	1
4.3	Percentage	1
4.4	Profit & loss	1
4.5	Discount - Mixture and Allegation	2
5	**Quantitative Aptitude – Part 3**	
5.1	Time & Work	1
5.2	Pipes and cistern	1
5.3	Time, Speed & distance - Trains	1
5.4	Boats and Streams	1
5.5	Simple interest and Compound interest	2

Tiruchengode - 637 215, Namakkal-Dt.

** End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination, 50 marks for theory cum practical End Semester Examination and 40 marks for practical End Semester Examination.

60 CS 501	Artificial Intelligence	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To understand the fundamentals of problem solving
- To interpret the knowledge and reasoning in propositional logic and first order logic
- To gain knowledge on Planning and acting in the real world
- To represent uncertain knowledge in solving AI problems and ML and deep learning algorithms and models
- To understand the different forms of learning and NLP, computer vision

Pre-requisites

Linear Algebra

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the concepts of intelligent agents and problem solving aspects.	Understand
CO2	Interpret the knowledge of propositional logic and FOL.	Analyse
CO3	Understand the issues of planning problems.	Understand
CO4	Describe the Uncertainty and probabilistic reasoning and ML and deep learning algorithms and models.	Apply
CO5	Summarize the types of learning methods and AI applications, NLP, Computer vision.	Apply

60 CS 502	Computer Architecture	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To gain the knowledge about basic structure, Instructions, and functional units of a digital computer
- To study the operation of the arithmetic unit including the algorithms and implementation of data manipulation.
- To understand the different types of control and the concept of pipelining and study the hierarchical memory system, cache memory
- To realize the communication with I/O devices and standard I/O interfaces
- To recognize the instruction and thread level parallelism concepts and multicore processors

Pre-requisites

Digital Logic and Microprocessor

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the basic structure of computer, Instruction sequencing and Addressing modes.	Understand
CO2	Design adders, subtractors for fixed point numbers, multipliers and divisors of fixed numbers and floating-point numbers	Apply
CO3	Analyze instruction execution with control signals and pipelining operations	Analyse
CO4	Predict the cache memory and its performance, interrupts, buses, Direct Memory Access and Standard I/O Interfaces	Apply
CO5	Gain Knowledge about Parallelism concepts, compiler techniques, multiprocessor architecture and case studies on Intel's processors	Apply

Mapping with Programme Outcomes

60 CS 503	Operating Systems	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To describe the services provided by and the design of an operating system.
- To understand the structure and organization of the file system, processes synchronization, process scheduling, system calls and different approaches to memory management
- To efficiently allocate and deallocate memory to optimize system performance
- To ensure the integrity, confidentiality, and availability of the information, processes, and resources managed by the OS
- To provide a consistent interface for processes, memory, files, devices, and network communication

Pre-requisites

- Computer Architecture

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Describe the components and basic organization of computer systems	Understand
CO2	Analyse process scheduling, synchronization and deadlocks	Analyse
CO3	Develop memory-management techniques and describe virtual memory system	Apply
CO4	Explain file system design, directory structures and apply algorithms for disk scheduling	Apply
CO5	Analyse the OS security features and recognize the OS abstractions to effectively manage processes, memory, files, and devices	Analyse

60 CS 504	Formal Language and Automata Theory	Category	L	T	P	Credit
		PC	3	1	0	4

Objectives

- To understand the types of finite automata and the relationship between finite automata
- To understand regular expressions, push down automata and context free grammar
- To understand the properties of context free language
- To learn the programming techniques of Turing machine and undecidable problems
- To learn the concepts of Undecidability and interactable Problems

Pre-requisites

Discrete Mathematics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the basic properties of formal language and finite automata.	Understand
CO2	Analyse regular expressions and the properties of regular languages.	Analyse
CO3	Construct grammars to produce strings from a specific language.	Apply
CO4	Analyse the construction of Push Down Automata.	Analyse
CO5	Interpret the uses of Turing machine, undecidability, and interactable problems.	Apply

V	3	1	0	60	4	40	60	100

INTRODUCTION Alphabets, Strings and Languages, Automata and Grammars - Deterministic finite Automata (DFA)-Formal Definition, Simplified notation, State transition graph, Transition table, Language of DFA - Nondeterministic finite Automata (NFA), NFA with epsilon transition, Language of NFA, Equivalence of NFA and DFA - Minimization of Finite Automata - Myhill-Nerode Theorem, FA with output - Moore and Mealy machine, Equivalence of Moore and Mealy Machine - **Applications and Limitation of FA***.	[9]
REGULAR EXPRESSION Definition, Operators of regular expression and their precedence - Algebraic laws for Regular expressions, Kleen's Theorem - Regular expression to FA, DFA to Regular expression - Arden Theorem, Non Regular Languages - Pumping Lemma for regular Languages - Application of Pumping Lemma - Closure properties of Regular Languages - Decision properties of Regular Languages.	[9]
GRAMMAR FORMALISM Regular grammars - Right linear and left linear grammars - Equivalence between regular linear grammar and FA - Context Free Grammar, Definition, Examples, Derivation - Derivation trees, Ambiguity in Grammar - Inherent ambiguity, Ambiguous to Unambiguous CFG - Simplification of CFGs - Normal forms for CFGs - CNF and GNF - Closure properties of CFLs; Decision Properties of CFLs- Emptiness, Finiteness and Membership - Pumping lemma for CFLs.	[9]
PUSH DOWN AUTOMATA (PDA) Description and definition, Instantaneous Description - Language of PDA, Acceptance by Final state, Acceptance by empty stack - Deterministic PDA, Equivalence of PDA and CFG - CFG to PDA and PDA to CFG - Two stack PDA.	[9]
TURING MACHINES Basic model, Definition and representation, Instantaneous Description - Language acceptance by TM - Computable functions, Types of Turing machines - Recursive and recursively enumerable languages - Halting problem.	[9]
Total Hours:	**45**

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	**INTRODUCTION**	
1.1	Alphabets, Strings and Languages, Automata and Grammars	1
1.2	Deterministic finite Automata (DFA)-Formal Definition, Simplified notation, State transition graph,Transition table, Language of DFA	1
1.3	Nondeterministic finite Automata (NFA), NFA with epsilon transition, Language of NFA	2
1.4	Equivalence of NFA and DFA	1
1.5	Minimization of Finite Automata	1
1.6	Myhill-Nerode Theorem, FA with output	1
1.7	Moore and Mealy machine, Equivalence of Moore and Mealy Machine	1
1.8	Applications and Limitation of FA.	1
2.0	**REGULAR EXPRESSION**	
2.1	Definition, Operators of regular expression and their precedence	1
2.2	Algebraic laws for Regular expressions, Kleen's Theorem	2
2.3	Regular expression to FA, DFA to Regular expression	1
2.4	Vehicle Pollutants and its Effect	1
2.5	Arden Theorem, Non Regular Languages	1
2.6	Pumping Lemma for regular Languages	1
2.7	Application of Pumping Lemma	1
2.8	Closure properties of Regular Languages	1
2.9	Decision properties of Regular Languages.	1
3.0	**GRAMMAR FORMALISM**	
3.1	Regular grammars-Right linear and left linear grammars	1
3.2	Equivalence between regular linear grammar and FA	1
3.3	Context Free Grammar, Definition, Examples, Derivation	1
3.4	Derivation trees, Ambiguity in Grammar,	1
3.5	Inherent ambiguity, Ambiguous to Unambiguous CFG	1
3.6	Simplification of CFGs	1
3.7	Normal forms for CFGs - CNF and GNF	1
3.8	Closure properties of CFLs; Decision Properties of CFLs- Emptiness, Finiteness and Membership,	1
3.9	Pumping lemma for CFLs.	1
4.0	**PUSH DOWN AUTOMATA (PDA)**	
4.1	Description and definition, Instantaneous Description	1
4.2	Language of PDA, Acceptance by Final state, Acceptance by empty stack	2
4.3	Deterministic PDA,	2
4.4	Equivalence of PDA and CFG - CFG to PDA and PDA to CFG	2
4.5	Two stack PDA.	2
5.0	**TURING MACHINES**	
5.1	Basic model, Definition and representation, Instantaneous Description	1
5.2	Language acceptance by TM	1

CHAIRMAN
Board of Studies

60 IT 003	Design Thinking	Category	L	T	P	Credit
		PC	2	0	2	3

Objectives

- To learn design thinking concepts and principles.
- To design thinking methods in every stage of the problem.
- To learn the different phases of design thinking.
- To learn the application of design thinking for the IT industry
- To apply various methods in design thinking to different problems.

Pre-requisites

 Basic knowledge of mathematics and programming.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply design thinking for product development	Understand
CO2	Use design thinking tools	Understand
CO3	Identify need for products and disruption	Apply
CO4	Design innovative products	Analyze
CO5	Apply design thinking to improve on existing products in IT	Apply

Introduction to Design Thinking * Why Design? - Four Questions, Ten Tools - Principles of Design Thinking - The process of Design Thinking - How to plan a Design Thinking project.	**[6]**
Understand, Observe and Define the Problem Search field determination - Problem clarification - Understanding of the problem – Problem analysis - Reformulation of the problem - Observation Phase - Empathetic design - Tips for observing - Methods for Empathetic Design - Description of customer needs.	**[6]**
Ideation and Prototyping ** Ideate Phase - The creative process and creative principles - Creativity techniques - Evaluation of ideas - Prototype Phase – Learn Startup Method for Prototype Development - Visualization and presentation techniques.	**[6]**
Testing and Implementation *** Test Phase - Tips for interviews - Tips for surveys - Kano Model - Desirability Testing - How to conduct workshops - Requirements for the space - Material requirements - Agility for Design Thinking.	**[6]**
Future Design Thinking meets the corporation – The New Social Contract – Design Activism – Designing tomorrow.	**[6]**

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

Practical: 1. 2030 Schools Challenge: Concept: Design thinking is often presented without teaching content. This is very different. Learners get 30 minutes to choose a UN 2030 Goal (there are 17) that is relevant and meaningful to them, then they get into small groups. The group researches the goal quickly, by answering the questions: What does the world need to know about this goal and what can we do about it? The group then creates a short PSA (Public Service Announcement) and shares it widely with an authentic audience. It is fun, fast, and shows the power of design sprints to teach content and skills. 2. THE GIFT-GIVING PROJECT VIA STANFORD D-SCHOOL Concept: The Gift-Giving Project is 90-minute (plus debrief) fast-paced project through a full design cycle. Students pair up to interview each other, come to a point-of-view of how they might design for their partner, ideate, and prototype a new solution to "redesign the gift giving experience" for their partner. 3. THE WALLET PROJECT VIA STANFORD D-SCHOOL Concept: Very similar to the Gift-Giving Project, the Wallet Project is 90-minute (plus Tentative 48 debrief) fast-paced project through a full design cycle. Students pair up, show and tell each other about their wallets, ideate, and make a new solution that is "useful and meaningful" to their partner. 4. INVENT A SPORT (WITH JUST THESE ITEMS) Concept: We've all played sports at some point in our life. Who came up with the rules? Who created the game? Who made the constraints? And who decided the objects to play with? Now, with limited time and resources, your group will create and invent a new sport, and a set of directions for people to actually play the game. 5. "BOOK IN AN HOUR" ACTIVITY (VIA ALL WHO WONDER) Concept: Give a group a book (fiction or non-fiction). Then you break them up into smaller groups (or individuals) to read different parts of the book. Each group (or person) has to read and then create an overview/trailer of their part of the book to share chronologically with the rest of the class. Here the design really starts with the creative process driving how you share the	**[30]**
information, plot, characters etc. Perfect use for professional development when you want to introduce a topic in a fun, engaging way. 6. CHILDREN'S STORY DESIGN ACTIVITIES Concept: The University of Arkansas created a series of STEM Challenges that work as great design activities with groups old and young! For example after reading "The Three Billy Goat's Gruff" they set up a challenge like this: You decide to help the billy goats reach the opposite side of the creek so they can eat. You must create a model structure to help the billy goats get from one side to the other while using the design loop and only the materials provided. Your teacher will also provide you with model billy goats, with specific weights, that your bridge must be able to withstand. 7. New Product Development Activity: Student teams were given products ranging from toys to air fresheners. In 2 days, they had to create pitches on how to improve these products. The idea was to give them a clear sense of the scope of what they would do in a product development.	
Total Hours:(Theory – 30 + Practical – 30)	60

List of Experiments*:

1. Develop PEAS descriptions for given AI tasks
2. Write a program to generate the output for A* algorithm
3. Approximate inferences in Bayesian network
4. Implementation of Hidden Markov Models
5. Implement propositional logic inferences for AI tasks
6. Implementation of Python libraries for ML application such as Pandas and Matplotlib.
7. Write a Python program to implement simple linear regression and plot the graph.
8. Implementation of logistic regression for iris using sklearn.
9. Implementation of naïve bayes classifier algorithm.
10. Implementation of SVM classification.
11. Performance analysis of a specific dataset.(Mini project).

60 CS 5P2	Operating Systems Laboratory	Category	L	T	P	Credit
		PC	0	0	4	2

Objectives

- To identify and solve the issues related to Operating System Components
- To learn different programming language in Linux editor environment
- To implement different operating system algorithm
- To implement the performance of different algorithms like CPU scheduling
- To implement the performance of different algorithms like page replacement, deadlock avoidance and detection

Pre-requisites

Computer Architecture

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Learn the basics of Operating system installation and shell scripts and analyze the System calls for Process and inter process communications	Apply
CO2	Examine the steps in process operation and examine the criteria involved in CPU scheduling algorithms.	Apply
CO3	Analyzing the different deadlock avoidance mechanism and implement Classic problem of Synchronization using semaphores	Analyse
CO4	Implement Storage Management and page replacement algorithms	Apply
CO5	Implement the file concept and its allocations and understand the factors in disk scheduling algorithms	Apply

60 CG 0P4	Career Skill Development - IV	Category	L	T	P	Credit
		CG	0	0	2	1*

Objective

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts
- To help learners develop strategies that could be adopted while reading texts
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations
- Improve listening, observational skills, and problem-solving capabilities
- Develop message generating and delivery skills

Prerequisite

Basic knowledge of Arithmetic and Logical Reasoning

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and contrast products and ideas in technical texts.	Analyze
CO2	Identify cause and effects in events, industrial processes through technical texts	Analyze
CO3	Analyze problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Analyze
CO4	Report events and the processes of technical and industrial nature.	Apply
CO5	Articulate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Apply

* CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

** End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination and 40 marks for practical End Semester Examination.

60 CS 601	Cryptography and Network Security	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To know about various encryption techniques
- To understand the concept of Public key cryptography and number theory
- To study about message authentication and hash functions To understand key management and user authentication
- To impart knowledge on Network security and web security

Pre-requisites

 Computer Networks, Mathematical Knowledge, Programming Knowledge and Data Structures

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand various Cryptographic Techniques and symmetric key cryptography techniques to solve real world problems	Understand
CO2	Apply various public key cryptography techniques to real case scenarios	Apply
CO3	Apply Hashing and Digital Signature techniques to solve the problems.	Apply
CO4	Demonstrate the various mutual trust and User authentication mechanisms.	Apply
CO5	Determine the appropriate Security Protocols and standards for the given application.	Analyse

60 CS 602	Principles of Compiler Design	Category	L	T	P	Credit
		PC	3	1	0	4

Objectives

- To learn the various phases of compiler and lexical analysis
- To understand the concepts of syntax analysis and its parsing techniques
- To learn and understand the translation of statements processes involved in intermediate code generation
- To understand the design issues of runtime environment and code generation
- To know the importance of code optimization techniques

Pre-requisites

- Discrete Mathematics, Formal Language and Automata Theory

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the basics of compilers and the phases of a compiler.	Understand
CO2	Interpret the role of the syntax analysis and parsing techniques	Analyse
CO3	Examine the processes involved in intermediate code generation	Analyse
CO4	Investigate the design issues of a code generator and target machine.	Apply
CO5	Apply and analyze the code optimization techniques.	Analyse

60 CS 603	Data Science	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To impart necessary knowledge of the mathematical foundations needed for data science and develop programming skills required to build data science applications

Pre-requisites

- Fundamentals in linear algebra / statistics / probability

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the basics of Data Sciences	Understand
CO2	Know the mathematical foundations needed for Data Science and perform Exploratory Data Analysis	Analyze
CO3	Implement models such as k-nearest Neighbors, Naive Bayes, linear and logistic Regression, decision trees, neural networks and clustering	Analyze
CO4	Create effective visualization of given data	Apply
CO5	Build data science applications	Apply

1.7	Sources of data, Data collection and API	1
1.8	Working with data: Reading Files, Cleaning Data	1
2.0	**Statistical Inference, Exploratory Data Analysis**	
2.1	Statistical thinking in Data Science - Statistical Inference	1
2.2	Statistical Analysis	1
2.3	Modeling	1
2.4	Exploratory Data Analysis	1
2.5	Philosophy of Exploratory Data Analysis	1
2.6	Data visualization	1
2.7	Missing value analysis	1
2.8	The correction matrix	1
2.9	Outlier detection analysis	1
3.0	**Basic Machine Learning Algorithms**	
3.1	Brief introduction, Linear / Polynomial Regression	1
3.2	Logistic Regression, Classification, Regularization,	1
3.3	Support vector machines	1
3.4	Naive Bayes, Cross Validation	1
3.5	Label Encoding, Random Forests, Decision Trees	1
3.6	Clustering, Dimensionality reduction	1
3.7	Manifold learning - 2D/3D Convolution	1
3.8	Introduction to Neural Networks, Evaluation Metrics	1
4.0	**Data visualization**	
4.1	Introduction, Types of data visualization	1
4.2	Data Visualization	1
4.3	Basic principles	1
4.4	Ideas and tools for basic data visualization tools (plots)	1
4.5	Various visualization techniques used in Data Science	1
4.6	Overview of Power BI , Key features and capabilities Connecting to Various Data Sources (SQL, Excel, Web.)	2
4.7	Data Transformation using Power Query, Data Cleaning and Data Profiling	1
4.8	Create your own visualization of a complex dataset	2
4.9	Building Basic Visualizations (Bar charts, Line charts, etc.) , Designing Interactive Dashboards , Applying Filters and Slicers	2
5.0	**Applications of Data Science**	
5.1	Case Studies of Data Science Application	4
5.2	Recommender Systems on Real World Data Sets 01	4

	Startups and Entrepreneurship	**MC**	**2**	**0**	**0**	**2***

Objectives

- To Learn basic concepts in entrepreneurship, develop mind-set and skills necessary to explore entrepreneurship
- To provide practical proven tools for transforming an idea into a product or service that creates value for others.
- To Comprehend the process of opportunity identification through design thinking, identify market potential and customers while developing a compelling value proposition solution and prototypes
- To create business plan, conduct financial analysis and feasibility analysis to assess the financial viability of a venture ideas & solutions built with domain expertise
- To Prepare and present an investible pitch deck of their practice venture to attract stakeholders

Pre-requisites

- Basic knowledge of reading and writing in English

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop an entrepreneurial mindset and appreciate the concepts of design thinking, entrepreneurship and innovation	Understand
CO2	Apply process of problem -opportunity identification and validation through human centred approach to design thinking in building solutions	Apply
CO3	Understand market types, conduct market estimation, identify customers, create customer persona, develop the skills to create a compelling value proposition and build a Minimum Viable Product	Apply
CO4	Create business plan, conduct financial analysis and feasibility analysis to assess the financial viability of a venture	Apply
CO5	Prepare and deliver an investible pitch deck of their practice venture to attract stakeholders	Create

Common to ALL Branches								
60 MY 003 – Startups and Entrepreneurship								
Semester	**Hours/Week**			**Total Hours**	**Credit**	**Maximum Marks**		
	L	T	P		C	CA	ES	Total
VI	2	0	0	30	2*	100	-	100

Introduction to Entrepreneurship & Entrepreneur Meaning and concept of Entrepreneurship, the history of Entrepreneurship development, Myths of Entrepreneurship, role of Entrepreneurship in Economic Development, Agencies in Entrepreneurship Management and Future of Entrepreneurship. The Entrepreneur: Meaning, the skills required to be an entrepreneur, the entrepreneurial decision process, Role models, Mentors and Support system.Innovation and Creativity, types of innovations, Innovations in current scenario	[6]
Problem-Opportunity Identification, Customers Discovery and competitive advantage Understanding the Problem and opportunity, define problem using Design thinking principles and validate problem. Exploring market types and estimating the market size, knowing your customer and consumer, Customer segmentation and creating customer personas. Importance of Value Proposition, Value Proposition Canvas, Developing Problem-solution fit, Competition analysis, Blue ocean strategy, Competitive positioning and understanding unique selling points.	[6]
Business model and build your MVP Introduction to Business model and types, Lean approach, 9 block lean canvas model, riskiest assumptions to Business models. Prototyping, building a Minimum viable product, Hypothesis testing and MVP Validation, MVP Iteration-Importance of Build - Measure – Learn approach	[6]
Business Plan, Financial feasibility and Managing growth Business planning: components of Business plan- Sales plan, People plan and financial plan, Preparing a business plan. Financial Planning: Types of costs, preparing the financial plan using financial template, understanding basics of Unit economics and analyzing Growth and the financial performance	[6]
Go To Market Strategies and Funding Introduction to Go to market strategies, start-up branding and its elements, Selecting the Right Channel, creating digital presence, building customer acquisition strategy. Choosing a form of business organization specific to your venture, identifying sources of funds: Debt & Equity, Map the Start-up Lifecycle to Funding Options, Build an Investor ready pitch deck.	[6]
Total Hours	30

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	**Introduction to Entrepreneurship & Entrepreneur**	
1.1	Meaning and concept of Entrepreneurship and the history of Entrepreneurship development	1
1.2	The Entrepreneur: Meaning, the skills required to be an entrepreneur, the entrepreneurial decision process,	1
1.3	Myths of Entrepreneurship, How to Become a Successful Entrepreneur - Dr Romesh Wadhwani (Platform on boarding)	1
1.4	Role models, Mentors and Support system- Masterclass on My Story - Joshua Salins	1
1.5	Role of Entrepreneurship in Economic Development, Agencies in Entrepreneurship Management and Future of Entrepreneurship	1
1.6	Innovation and Creativity, types of innovations, Innovations in current scenario, Concepts of Entrepreneurial Thinking, General Enterprising tendency test	1
2.0	**Problem-Opportunity Identification, Customers Discovery and competitive advantage**	
2.1	Understanding the Problem and opportunity, define problem using Design thinking principles and validate problem. Case study and Fireside chat – Desi Hangover	1
2.2	Identifying a problem for practice venture and filling Problem statement canvas (Handout week 1 - class activity)	1
2.3	Customer and markets discovery , knowing your customer and consumer, Customer segmentation and Exploring market types and estimating the market size. Case study and Fireside chat – Verloop	1
2.4	Creating customer personas & Market estimation (Handout week 2 - class activity)	1
2.5	Importance of Value Proposition, Introduce Value Proposition Canvas, Developing Problem-solution fit. Case study and Fireside chat – Honey Twigs	1
2.6	Competition analysis, Blue ocean strategy, Competitive positioning and understanding unique selling points. Case study and Fireside chat on Inzpira Fill Value Proposition Canvas (Handout week 3 - class activity) and Competition analysis framework (Handout week 5 - class activity) **Briefing on Assignment 1 - Milestone 1**	1
3.0	**Business model and Build your MVP**	
3.1	Introduction to Business model and types. Case study and Fireside chat – NUOS	1
3.2	Lean approach, 9 block lean canvas model, riskiest assumptions to Business models	1
3.3	Class Activity- Fill Lean canvas for you idea and understand revenue model (Handout week 6)	1
3.4	Prototyping, Meaning of MLP , Difference between MLP and MVP, How to build an MLP? Different types MLP that you can build. Case study and Fireside chat – KNORISH	1
3.5	Hypothesis testing and MVP Validation, MVP Iteration-Importance of Build - Measure – Learn approach	1

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

3.6	Class Activity- Fill MVP framework (Handout week 7) and learn validation	1
4.0	**Business Plan, Financial feasibility and Manging growth**	
4.1	Business planning: components of Business plan- Sales plan, People plan and financial plan, Preparing a business plan. Case study and Fireside chat – Bodh Gems	1
4.2	Financial Planning: Types of costs, preparing the financial plan using financial template (Handout week 9)	1
4.3	Class activity - starting up costs, COGS, Sales plan and people plan template.	1
4.4	Class activity - One year P&L projection, Breakeven Analysis, Five year projection	1
4.5	Understanding basics of Unit economics and analyzing Growth and the financial performance	1
4.6	Class activity - Financial template - Unit economics (Handout week 12)	1
5.0	**Go To Market Strategies and Funding**	
5.1	Introduction to Go to market strategies, start-up branding and its elements, Selecting the Right Channel	1
5.2	Creating digital presence, building customer acquisition strategy.	1
5.3	Class activity: Handout week 10 - create your GTM strategy	1
5.4	Choosing a form of business organization specific to your venture	1
5.5	Identifying sources of funds: Debt & Equity, Map the Start-up Lifecycle to Funding Options	1
5.6	Class activity - Visit relevant GOI websites, other sites to help students explore funding opportunities and **briefing on final submission of the pitch deck** Build an Investor ready pitch deck, What Should You Cover in Your Pitch Deck? Art of pitching and storytelling	1

60 CS 6P1	Cryptography and Network Security Laboratory	Category	L	T	P	Credit
		PC	0	0	4	2

Objectives

- To learn different cipher techniques
- To analyze encryption schemes and algorithms
- To establish digital signatures, hash functions, and signature Standards.
- To utilize network security tools and vulnerability assessment tools
- To implement network security and web security

Pre-requisites

Computer Networks, Mathematical Knowledge, Programming Knowledge and Data Structures

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop code for classical Encryption Techniques to solve the problems.	Apply
CO2	Build cryptosystems by applying symmetric and public key encryption algorithms.	Apply
CO3	Construct code for authentication algorithms.	Apply
CO4	Develop a signature scheme using Digital signature standard.	Apply
CO5	Demonstrate the network security system using open source tools.	Apply

Tiruchengode - 637 215, Namakkal-Dt.

List of Experiments:

1. Perform encryption, decryption using the following substitution techniques*
   i. Ceaser cipher ii. Playfair cipher iii. Hill Cipher iv. Vigenere cipher
2. Perform encryption and decryption using following transposition techniques*
   i. Rail fence - Row & Column Transformation
3. Apply DES algorithm for practical applications*
4. Apply AES algorithm for practical applications*
5. Implement RSA Algorithm using HTML and JavaScript*
6. Implement the Diffie-Hellman Key Exchange algorithm for a given problem*
7. Calculate the message digest of a text using the SHA-1 algorithm*
8. Implement the SIGNATURE SCHEME - Digital Signature Standard*
9. Demonstrate intrusion detection system (ids) using any tool eg. Snort or any other s/w*
10. Automated Attack and Penetration Tools Exploring N-Stalker, a Vulnerability Assessment Tool*
11. Defeating Malware - Building Trojans, Rootkit Hunter*

60 CS 6P2	Data Science Laboratory	Category	L	T	P	Credit
		PC	0	0	4	2

Objectives

- To demonstrate Data exploration and preprocessing
- To investigate Linear and Logistic regression, Naive Bayes classifier model and regularized logistic regression
- To study the performance of ensemble techniques and decision trees To know SVM with different kernels and kNN algorithm to classify a dataset. To develop effective visualization of given data.

Pre-requisites

- Fundamentals in linear algebra / statistics / probability

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand Data exploration and preprocessing.	Apply
CO2	Implement models such as Linear and Logistic regression, Naive Bayes classifier model and regularized logistic regression.	Analyze
CO3	Implement models such as Ensemble techniques, Decision trees.	Apply
CO4	Build model using SVM with different kernels and kNN algorithm to classify a dataset.	Apply
CO5	Create effective visualization of given data.	Analyze

60 CG 0P5	Comprehension Test*	Category	L	T	P	C	CA	ES	Total
Semester VI		CG	0	0	2	1*	100	-	100

Objectives

- To evaluate the knowledge gained in core courses relevant to the programme of study.
- To assess the technical skill in solving complex engineering problems.

Prerequisite

Fundamental knowledge in all core subjects.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Infer knowledge in their respective programme domain.	Apply
CO2	Attend interviews for career progression	Apply
CO3	Exhibit professional standards to solve engineering problems	Apply
CO3	Promote holistic approach to problem solving	Apply
CO5	Examine the competency of graduates in specific programme domain	Apply

60 HS 002	Engineering Economics and Financial Accounting	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To know about the economic principles underlying demand, supply, and market structure
- To understand the concept related to types of business organization and types of banking
- To know about concepts in financial accounting and capital budgeting
- To understand the different methods of pricing and appraisal of projects
- To know the application of break-even analysis in engineering projects

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Summarize the basic concepts of economics, demand, supply, and market structure	Understand
CO2	Interpret the forms of business organization and functions of commercial and central bank	Understand
CO3	Examine the basis of financial accounting and capital budgeting techniques	Analyse
CO4	Demonstrate the different types of pricing strategies and comprehensive project feasibility in diverse business	Apply
CO5	Demonstrate the break even analysis in engineering projects and business	Apply

Syllabus

K.S.Rangasamy College of Technology – Autonomous R2022								
Common to Civil, EEE, ECE, CSE, IT, AI&DS, AIML, CSBS, EE (VLSI D&T), BT, FT								
60 HS 002 - Engineering Economics and Financial Accounting								
Semester	**Hours/Week**			**Total Hours**	**Credit**	**Maximum Marks**		
	L	T	P		C	CA	ES	Total
VII	3	0	0	45	3	40	60	100

Basic Economics Definition of Economics – Nature and Scope of Economics, Basic Concepts of Economics, Factors of Production - Definition of Demand – Law of Demand, Exception to Law of Demand, Factors Affecting Demand, Elasticity of Demand, Demand Forecasting – Definition of Supply – Factors Affecting Supply, Elasticity of Supply – Market Structure – Perfect Competition, Imperfect Competition – Monopoly, Duopoly, Oligopoly, and Bilateral Monopoly.	[9]
Organization and Business Financing* Forms of Business – Sole Proprietorship, Partnership, Joint Stock Company, Cooperative Organization, State Enterprise - Mixed Economy - Money and Banking – Kinds of Banking, Functions of Commercial Banks and Central Bank – Definition of Monetary Policy and its Types – Types of financing - Short Term Borrowing, Long Term Borrowing - Internal Generation of Funds – External Commercial Borrowings.	[9]
Financial Accounting and Capital Budgeting The Balance Sheet and Related Concepts – The Profit and Loss Statement and Related Concepts – Financial Ratio Analysis – Definition of Working Capital – Types, Factors – Definition of Capital Budgeting - Techniques – Average Rate of Return, Payback Period, Net Present Value, Profitability Index Method and Internal Rate of Return..	[9]
Cost Analysis Types of Costing – Traditional Costing Approach - Activity Based Costing - Fixed Cost – Variable Cost – Marginal Cost – Cost Output Relationship in the Short Run and in Long Run – Pricing Practice – Full Cost Pricing – Marginal Cost Pricing – Going Rate Pricing – Bid Pricing – Pricing for a Rate of Return – Project Appraisal - Appraisal process, - Cost Benefit Analysis – Feasibility Reports –– Technical Feasibility, Economic Feasibility, Financial Feasibility, Managerial Feasibility, Operational Feasibility.	[9]
Break Even Analysis Basic Assumptions –Break-Even Chart – Profit Zone in Break-Even Chart, Loss Zone in Break-Even Chart, Angle of Incidence – Managerial Uses of Break-Even Analysis, Applications of Break-Even Analysis in Engineering Projects.	[9]
Total Hours:	**45**

60 CS 701	Cloud Computing	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To provide students with the fundamentals and essentials of Cloud Computing
- To provide students a sound foundation of the Cloud Computing so that they can start using and adopting Cloud Computing services and tools in their real-life scenarios
- To enable students exploring some important cloud computing driven commercial systems and applications
- An understanding of when and where to use it using the appropriate industry models
- To expose the students to frontier areas of Cloud Computing and information systems, while providing sufficient foundations to enable further study and research

Pre-requisites

- Networking, Databases, Operating Systems

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Know the Characteristics of Cloud computing	Understand
CO2	Illustrate the Cloud service models and Cloud Deployment Models	Apply
CO3	Develop an application using Paas Application frameworks	Apply
CO4	Reveal the major security and privacy problems in the Cloud with security mechanism	Apply
CO5	Understand about cloud simulators	Understand

Mapping with Programme Outcomes

Introduction Introduction to Cloud Computing, Cloud service providers, Benefits of Cloud Computing, Cloud computing - Cluster computing, Grid computing, Assessing the role of Open Standards, Measuring the cloud's value, Cloud Architecture - Exploring the cloud computing stack.	[9]
Cloud Computing Architecture & Infrastructure as a Service Cloud computing stack, Service Models (XaaS) - Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Software as a Service (SaaS), Deployment Models - Public, Private, Hybrid and Community Cloud, Infrastructure as a Service (IaaS), Resource Virtualization - Server, Storage, Network.	[9]
Platform as a Service & Software as a Service* Introduction to PaaS, Cloud Platform and Management - Computation, Storage, Software as a Service (PaaS) - Introduction, Web Services, Web 2.0, Web OS, Service Management in Cloud Computing - Service Level Agreements (SLAs), Billing & Accounting, Comparing Scaling Hardware: Traditional vs. Cloud, Managing Data in Cloud.	[9]
Cloud Security and Storage* Infrastructure Security, Data security and Storage - Data privacy and security Issues, Jurisdictional issues, Identity & Access Management, Access Control, Trust, Reputation, Risk, Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations, Cloud Storage - Cloud Array, Shared Cloud Storage.	[9]
Cloud Simulators Introduction to VMWare Simulator Basics of VMWare, advantages of VMware virtualization, using Vmware workstation, creating virtual machines-understanding virtual machines, create a new virtual machine on local host, cloning virtual machines, virtualize a physical machine, starting and stopping a virtual machine. CloudSim - Introduction to Simulator, understanding CloudSim simulator, CloudSim Architecture(User code, CloudSim, GridSim, SimJava) Understanding Working platform for CloudSim.	[9]

60 CS 702	Deep Learning	Category	L	T	P	Credit
		PC	2	0	2	3

Objectives

- To understand the basic ideas and principles of Neural Networks
- To understand the basic concepts of Data Analysis
- To familiarize the student with the Image Processing facilities like Tensorflow and Keras
- To understand and implement Deep Learning Architectures
- To analyse Different Deep Learning Models for different Applications.

Pre-requisites

 Probability, statistics, linear algebra, calculus and Machine Learning Techniques

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the building blocks of Deep learning.	Understand
CO2	Implement Feature extraction and feature learning by using TensorFlow/ Keras in Deep Learning Applications.	Apply
CO3	Design and implement image recognition and image classification using a pretrained network Learning.	Apply
CO4	Analyse deep learning models in different data related projects.	Analyse
CO5	Design and implement case studies using Convolutional Neural Networks.	Apply

1. Dr. P.KALADEVI - kaladevi@ksrct.ac.in

60 CS 703	Software Testing	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To explain the basics of software testing
- To highlight the strategies for software testing
- To stress the need and conduct of testing levels. To identify the issues in testing management
- To bring out the ways and means of controlling and monitoring testing activity
- To study about Automation testing and tools

Pre-requisites

- Software Engineering

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Interpret the basic concepts of Software testing, defects, verification and validation	Understand
CO2	Analyse the functional requirements of the system and the use of conducting the review	Analyse
CO3	Infer the need of testing techniques for White box, Basis path, Black box and Control structure testing	Analyse
CO4	Analyse the different levels of testing and their importance	Analyse
CO5	Develop your knowledge of automation testing tools and put the guidelines into practice to create test cases	Apply

Introduction to Testing* Software Testing – Definition of Software Testing – Objective and Limits of Testing – Principles of Software Testing - Software Testing Life Cycle- Testing Strategy – Roles and Responsibilities of a Software Tester in Organizations –Origins of Defects – Cost of Defects – Independent Verification and Validation. **Hands - on:** **Introduction to Testing - Crafting Test Plans and Cases** (to create comprehensive test plans and detailed test cases)	[8]
Software testing Requirements* Software Testing Requirements - Analyzing the requirements - Classifying the Functional and Non-Functional Requirements with their types. Software Testing Review Process - Objective of Software Testing Review - Types of Reviews - Peer Review, Walkthrough, Inspection - Checklists of Review Process - Review Log. **Hands - on:** **Software testing Requirements –** Requirement Identification(Using the requirements identified in the previous exercise, groups perform an analysis)	[9]
Testing Techniques* White Box Testing Techniques – Static and Dynamic Testing – Statement Coverage – Decision Coverage – Basic Path Testing – Control Flow Graph Coverage – Branch Coverage – Conditional Coverage – McCabe's Cyclomatic Complexity – Mutation Testing. Black Box Test Techniques – Boundary Value Analysis – Equivalent Class Partition– Error Guessing – Decision Table – State Transition Table – Pair Wise Testing – Use Case Testing. **Hands – on:** **Testing Techniques - Group Discussion and Q&A** (Groups discuss their experiences with different testing techniques, Share challenges and best practices)	[9]
Testing Types* Unit Testing – Smoke Testing – Functional Testing and its Types – Integration, System Testing, User Acceptance Testing (Alpha and Beta)- Non- F unc t io na l Testing and its Types – Performance Testing (Load, Volume and Stress)-Recovery Testing, Browser Compatibility Testing – Security Testing – Scalability Testing – Usability Testing – Ad Hoc Testing – Internationalization Testing – Configuration Testing - Data warehouse Testing and Business Intelligence Testing **–** Mobile Testing. **Hands – on:**	[8]

K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	**Introduction to Testing**	
1.1	Software Testing	1
1.2	Definition of Software Testing	1
1.3	Objective and Limits of Testing	1
1.4	Principles of Software Testing	1
1.5	Software Testing Life Cycle	1
1.6	Testing Strategy	1
1.7	Roles and Responsibilities of a Software Tester in Organizations	1
1.8	Origins of Defects – Cost of Defects	1
1.9	Independent Verification and Validation.	1
2.0	**Software testing Requirements**	
2.1	Software Testing Requirements	1
2.2	Analyzing the requirements	1
2.3	Classifying the Functional and Non-Functional Requirements with their types	1
2.4	Software Testing Review Process	1
2.5	Objective of Software Testing Review	1

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

2.6	Types of Reviews - Peer Review – Walkthrough - Inspection	2
2.7	Checklists of Review Process, Review Log	2
3.0	**Testing Techniques**	
3.1	White Box Testing Techniques - Static and Dynamic Testing	1
3.2	Statement Coverage ,Decision Coverage	1
3.3	Basic Path Testing,Control Flow Graph Coverage	1
3.4	Branch Coverage,Conditional Coverage	1
3.5	McCabe's Cyclomatic Complexity,Mutation Testing	1
3.6	Black Box Test Techniques ,Boundary Value Analysis	1
3.7	Equivalent Class Partition,Error Guessing	1
3.8	Decision Table , State Transition Table	1
3.9	Pair Wise Testing ,Use Case Testing	1
4.0	**Testing Types**	
4.1	Unit Testing,Smoke Testing	1
4.2	Functional Testing and its Types – Integration	1
4.3	System Testing, User Acceptance Testing (Alpha and Beta)	1
4.4	Non-Functional Testing and its Types – Performance Testing (Load, Volume and Stress)	1
4.5	Recovery Testing, Browser Compatibility Testing	1
4.6	Security Testing ,Scalability Testing, Usability Testing, Ad Hoc Testing	1
4.7	Internationalization Testing – Configuration Testing	1
4.8	Data warehouse Testing and Business Intelligence Testing – Mobile Testing.	1
5.0	**Automation Tools and Test Cases**	
5.1	Software Test Automation ,Scope of Automation	1
5.2	Design and Architecture for Automation, Automation Testing using Selenium Tool	1
5.3	JUnit Test Framework, Definition of Test Case	1
5.4	Characteristics of Good Test Cases and its templates	1
5.5	Creation of Test Case Requirement Coverage	1
5.6	Traceability Matrix Test Case Review Process	1
5.7	Guidelines and Naming Conventions for Test Case Design ,Test Execution	1
5.8	Reporting of Test Execution	1
5.9	Risk Based Testing Approach	1
5.10	Test metrics and measurements	1

60 AC 001	Research Skill Development	Category	L	T	P	Credit
		AC	1	0	0	0

Objectives

- To identify research problems, formulate hypotheses, collect data and test hypotheses
- To prepare and submit quality manuscripts and understand peer review process
- To utilize software tools for effective manuscript preparation and visualization of research data
- To familiarize different journal metrics and author-level quality indicators To protect creative works, inventions, and branding elements using IPR

Pre-requisites

- Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop structured scientific approach to plan and execute research work	Apply
CO2	Understand the journal requirements to publish research findings effectively	Understand
CO3	Apply various software tools during the manuscript preparation	Apply
CO4	Select suitable journals to publish the work using different publication metrics	Analyse
CO5	Apply the appropriate form of IP protection to a specific invention or creation	Apply

Mapping with Programme Outcomes

COs	POs												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1	2	2	2	2		2	2	3	3	3		3	3	3

60 AB 001	National Cadet Corps - Air Wing	Category	L	T	P	Credit
		HS	2	0	2	3

Objectives

- To designed especially for NCC Cadets to educate basic military knowledge
- To develop character, camaraderie, discipline, secular outlook
- To inculcate spirit of adventure, sportsman spirit
- To teach selfless service amongst cadets by working in teams
- To learn military subjects including weapon training and motivate them to join in triservices

Pre-requisites

 NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Display sense of patriotism, secular values and shall be transformed into motivated youth who will carry out nation building through national unity and social cohesion.	Remember
CO2	Demonstrate the sense of discipline with smartness and have basic knowledge of weapons and their use and handling.	Remember

60 CS 7P1	Cloud Computing Laboratory	Category	L	T	P	Credit
		PC	0	0	4	2

Objectives

- Be exposed to tool kits for grid and cloud environment
- Be familiar with developing web services/Applications in grid framework
- Learn to run virtual machines of different configuration
- Capability to develop cloud architecture and model
- Learn to configure and use Hadoop

Pre-requisites

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

Computer Networks, Operating Systems

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Ability to use the relevant tools necessary for cloud computing.	Apply
CO2	Demonstrate the use of cloud computing in various applications	Apply
CO3	Apply different cloud programming model as per need.	Apply
CO4	Ability to develop cloud architecture and model.	Apply
CO5	Analyze and implement the best practice model to deploy cloud architecture and configure Hadoop file system and framework in multi node cluster	Analyse

List of Experiments: *

1. Find procedure to run the virtual machine of different configuration. Check how many virtual machines can be utilized at particular time in host machine. (Virtual Box or VM Ware or Hyper-V)
2. Install a C compiler in the virtual machine and execute a sample program
3. Develop a web application to provide Storage as a Service that offers a simple interface which allows users to manage file systems quickly and easily
4. Configure IaaS architecture for installing guest operating system using Eucalyptus
5. Configure IaaS architecture in Eucalyptus for installing multiple operating systems in same host machine by sharing different core in the same processor
6. To set up the single and multi node Hadoop cluster in guest operating systems. Demonstrate the use of Map and Reduce tasks using word count program
7. Set up a Hadoop cluster on the chosen cloud platform.
8. Upload a large dataset to the Hadoop Distributed File System (HDFS).

B.E. / B.Tech. Degree Programme

SCHEME OF EXAMINATIONS
(For the candidates admitted in 2024-2025)

EIGTH SEMESTER

S.No.	Course Code	Name of the Course	Duration of Internal Exam	Weightage of Marks			Minimum Marks for Pass in End Semester Exam	
				Continuous Assessment *	End Semester Exam Max. Marks **		End Semester Exam	Total
THEORY								
1	60 CS E5*	Professional Elective - V	2	40	60	100	45	100
PRACTICAL								
2	60 CS 8P1	Project Work Phase - II	3	60	40	100	45	100
3	60 CG 0P6	Internship	-	100	-	100	-	100

* CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

**End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination and 40 marks for project End Semester Examination.

60 CS 8P1	Project Work Phase - II	Category	L	T	P	Credit
		CG	0	0	16	8

Objectives

- Enabling and strengthening the students to carry out the project on their own and to implement their innovative ideas to forefront the risk issues and to retrieve the hazards by adopting suitable assessment methodologies and stating it to global

Pre-requisites

All Courses

Rev. No.4/w.e.f. 01.06.2024
Passed in BoS Meeting held on 24/05/2024
Approved in Academic Council Meeting held on 25/05/2024

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Design modules of the project	Analyse
CO2	Integrate the modules and arrive the final output	Apply
CO3	Investigate the results with available solutions	Apply
CO4	Demonstrate the outcome of the project and verify.	Apply
CO5	Prepare technical report	Evaluate

Mapping with Programme Outcomes

COs	POs												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1	3	3	3	3	3	3	3	3	3	3	3	3	3	3	-
CO2	3	3	3	3	3	3	3	3	3	3	3	3	3	3	-
CO3	3	3	3	3	3	3	3	3	3	3	3	3	3	3	-
CO4	3	3	3	3	3	3	3	3	3	3	3	3	3	3	-
CO5	3	3	3	3	3	3	3	3	3	3	3	3	3	3	-

3 - Strong; 2 - Medium; 1 - Some

Assessment Pattern

Internal Assessment: 60 Marks + End Semester Examination: 40 Marks

Internal Assessment (60)					End Semester (40)
Items	**Review 1**	**Review 2**	**Review 3**	**Publication***	
Marks	**5**	**10**	**15**	**30**	**40**
	Total internal marks 60				

K.S.Rangasamy College of Technology – Autonomous R2022							
B.E – Computer Science and Engineering							
60 CS 8P1 – Project Work Phase - II							
Semester	**Hours/Week**			**Total Hrs**	**Credit**	**Maximum Marks**	
	L	T	P		C	CA	ES	Total
VIII	0	0	16	240	8	60	40	100

1. Three reviews have to be conducted by the committee of minimum of three members one of which should be the guide
2. Each review has to be evaluated for 100 Marks
3. Attendance is compulsory for all reviews. If a student fails to attend review for some valid reason, one or more chance may be given
4. They should publish the paper preferably in the journals / conference
5. Final review will be done by the committee that consists of minimum of three members one of which should be the guide (If possible include one external expert examiner with in the college)

The Report should be submitted by the students around at the end of April.

Tiruchengode - 637 215, Namakkal-Dt.

60 CS E11	Data Mining	Category	L	T	P	Credit
		PE	2	0	2	3

Objectives

- To introduce basic concepts, tasks, methods, and techniques in data mining.
- To emphasis is on various data mining problems and their solutions.
- To understand the data mining process and issues, learn various data mining techniques
- To apply the techniques in solving data mining problems using data mining tools and systems
- To apply the clustering analysis and statistical approach

Pre-requisites

- Basic understanding of Linear Algebra, Statistics and programming

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the basic concept and issues of data mining	Understand
CO2	Develop data warehouse and OLAP technology for data mining	Apply
CO3	Interpret the steps of data preprocessing and multidimensional association rules	Apply
CO4	Implement different classification techniques and association rule mining and its applications	Apply
CO5	Apply different clustering techniques and outlier analysis in real time applications	Apply

Mapping with Programme Outcomes

COs	POs												PSOs

Syllabus

K.S.Rangasamy College of Technology – Autonomous R2022								
B.E – Computer Science and Engineering								
60 CS E11 – Data Mining								
Semester	**Hours / Week**			**Total Hours**	**Credit**	**Maximum Marks**		
	L	T	P		C	CA	ES	Total
V	2	0	2	60	3	50	50	100

Introduction to Data Mining* Motivation and importance - What is Data Mining - Relational Databases - Data Warehouses - Transactional Databases -Advanced Database Systems - Data Mining Functionalities - Major issues in Data Mining.	[6]
Data Warehouse and OLAP Technology for Data Mining* What is a Data Warehouse - Multi-Dimensional Data Model - Data Warehouse Architecture – Data Warehouse Implementation - Development of Data Cube Technology - Data Warehousing to Data Mining.	[6]
Data Preprocessing and Data Mining Techniques* Data Preprocessing - Data Integration and Transformation - Data Reduction - Data Mining Primitives: Mining Association rule in large Databases - Association Rule Mining - Mining Single-dimensional Boolean Association rules from Transactional Databases - Mining Multi-dimensional Association rules from relational databases & Data Warehouses.	[6]
Classification and Prediction** Concepts and Issues regarding Classification and Prediction - Classification by Decision Tree Induction – Bayesian Classification - Classification by SVM - Classification by Random Forest - Classification by K nearest.	[6]
Cluster Analysis** What is Cluster Analysis? - Types of Data in Cluster Analysis - A Categorization of Major clustering methods – partitioning methods - Hierarchial methods - Density-Based Methods: DBSCAN - Outlier analysis.	[6]
Practical: 1. Implementation of exploratory data analysis 2. Implementation of preprocessing phase 3. Implementation of feature selection techniques 4. Implementation of Association rule mining 5. Implementation of Decision Tree Induction classification algorithm 6. Implementation of Bayesian Classification algorithm 7. Implementation of classification by SVM 8. Implementation of K nearest neighbor algorithm 9. Implementation of k-means clustering algorithm 10. Mini Project	[30]
Total Hours: (Lecture - 30; Practical - 30)	**60**

60 CS E12	Node.js and React.js	Category	L	T	P	Credit
		PE	2	0	2	3

Objectives

- To learn the runtime web development for easily building fast and scalable network applications.
- To enhance the knowledge in event-driven and real-time applications that run across distributed devices.
- To learn the streams and file systems in Node Js
- To acquire the knowledge on web development and database connectivity
- To Acquire the knowledge of MVC template on user interfaces using React JS

Pre-requisites

- HTML, CSS, JavaScript

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the fundamental structure of Node.js platform	Understand
CO2	Experiment the concepts of NPM	Apply
CO3	Develop database connectivity using node.js	Apply
CO4	Interpret the concepts of React.js	Understand
CO5	Analyse the features of React.js	Analyse

Mapping with Programme Outcomes

V	2	0	2	60	3	50	50	100

Introduction to Node.js* The environment of Node.js - Benefits and Features - Install Node.js on Windows - Console and Web programs - Node.js REPL Commands	[6]
NPM* Node.js Package Manager - Installing modules using NPM - Node.js Command Line Options - Node.js File- Node.js DNS - Node.js Net	[6]
Web Development** Node.js Web Module - Node.js html form handling - Node.js Database Connectivity	[6]
Introduction to React.js The environment of React.js - Benefits and Features – components – state – lifecycle – events – forms – CSS	[6]
React.js The React ES6 – React Render HTML - React JSX – React class – React Lists – React Router	[6]
Practical: 1. Create a server program using node.js and display the content in browser 2. Execute Read,Evaluate,Print and Loop(REPL) commands in node.js terminal window. 3. Demonstrate the installation of packages using NPM 4. Develop a node.js server program to implement file upload 5. Design student registration form using html and call the file using node.js which will display output in browser. 6. Demonstrate node.js database connectivity. 7. Create a React Js program to style the html component. 8. Demonstrate React JS various Events. 9. Create a react program to implement JSX(JavaScript XML). 10. Mini Project - Create a web application using react components and implement Node JS database connectivity	[30]

60 CS E13	Mobile Application Development	Category	L	T	P	Credit
		PE	2	0	2	3

Objectives

- To impart knowledge in Android Application Development
- To understand the app idea and design user interface/wireframes of mobile app and set up the mobile app development environment
- To develop and debug mobile app components –User interface, services, notifications, broadcast receivers, data components
- To use emulator to deploy and run mobile app
- To perform mobile app -unit testing and black box testing

Pre-requisites

- Java Programming

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the Mobility landscape and platforms	Understand
CO2	Demonstrate the interactive and feature-rich Android applications to address real-world challenges	Apply
CO3	Develop Android apps using native data handling, background tasks, and location awareness	Apply
CO4	Utilize graphics, animation, and multimedia to enhance the visual appeal and overall engagement of Android apps	Apply
CO5	Apply testing, signing, packaging, and distribution processes to successfully release and update Android apps	Apply

Mapping with Programme Outcomes

GETTING STARTED WITH MOBILITY* Mobility landscape, Mobile platforms, Overview of Android platform, setting up the mobile app development environment along with an emulator, a case study on Mobile app development.	[6]
BUILDING BLOCKS OF MOBILE APPS* App user interface designing – Activity-states and life cycle methods, mobile UI resources (Layout, UI elements, Draw-able, Menu), UI Elements and events, interaction amongst activities, fragments.	[6]
APP FUNCTIONALITY BEYOND USER INTERFACE Background tasks -Threads, Async task, Services, Notifications, Telephony and SMS APIs, Native data handling –on-device file I/O, shared preferences, mobile databases such as SQLite. location awareness, Location services.	[6]
VISUALS AND MULTIMEDIA INTEGRATION* Graphics and animation –custom views, canvas, animation APIs, multimedia –audio/video playback and record.	[6]
TESTING AND PUBLISHING OF MOBILE APPS* Debugging mobile apps, White box testing, Black box testing, and test automation of mobile apps, JUnit for Android, Versioning, signing and packaging mobile apps, distributing apps on mobile market place.	[6]

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

Practical: 1. Create a simple Android app with a simple user interface. 2. Create a mobile app with various GUI components like buttons, text fields, and labels 3. Design an application that uses Layout Managers and event listeners. 5. Create a mobile app that allows users to draw basic shapes (lines, circles, rectangles) on the screen using touch or mouse input. 6. Implement an application that uses Multi-threading. 7. Implement an application that creates an alert upon receiving a message 8. Develop an application that makes use of databases. 9. Integrate audio/video playback using Android's animation APIs. 10. Develop a mobile application to send an email. 11. Write automated test cases for a mobile app using Robotium. * Develop a Mobile application for simple needs and publish the app on a mobile marketplace (Mini Project) **Tools used: Android, Java / Flutter**	[30]
Total Hours: (Lecture - 30; Practical - 30)	**60**
Text Book(s):

		PE	2	0	2	3

Objectives

- To learn the concepts behind IR
- To understand the operation of web search
- To study the construction and working principle of transmission systems and types of tyres
- To learn the algorithms related to text classification, indexing and searching
- To learn IR and Applications

Pre-requisites

- Data Structures

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the Knowledge on open source search engine framework and explore its capabilities	Apply
CO2	Analyze the various modeling and evaluation techniques	Analyze
CO3	Apply the represent documents in different ways and discuss its effect on similarity	Apply
CO4	Analyze the Calculations and on search	Analyze
CO5	Develop and implement an innovative feature in a search engine	Apply

Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

Practical: 1. Representation of a Text Document in Vector Space Model and Computing Similarity between two documents. 2. Pre-processing of a Text Document: stop word removal and stemming 3. Construction of an Inverted Index for a given document collection comprising of at least 50 documents with a total vocabulary size of at least 1000 words. 4. Classification of a set of Text Documents into known classes (You may use any of the Classification algorithms like Naive Bayes, Max Entropy, Rochio's, Support Vector Machine). Standard Datasets will haveto be used to show the results. 5. Text Document Clustering using K-means. Demonstrate with a standard dataset and compute performance measures- Purity, Precision, Recall and F-measure. 6. Crawling/ Searching the Web to collect news stories on a specific topic (based on user input). The program should have an option to limit the crawling to certain selected websites only. 7. To parse XML text, generate Web graph and compute topic specific page rank 8. Matrix Decomposition and LSI for a standard dataset. 9. Mining Twitter to identify tweets for a specific period (and/or from a geographical location) and identify trends and named entities. 10. Implementation of PageRank on Scholarly Citation Network	[30]
Total Hours: (Lecture - 30; Practical - 30)	**60**

Course Contents and Lecture Schedule

S. No.	Topics	No. of Hours
1	**INTRODUCTION**	
1.1	Information Retrieval - Early Developments	1
1.2	The IR Problem, The User‘s Task - Information versus Data Retrieval	1
1.3	The IR System, The e-Publishing Era	1
1.4	The Software Architecture of the IR System - The Retrieval and Ranking Processes	1
1.5	Practical Issues on the Web, How People Search	1
1.6	Search Interfaces Today, Visualization in Search Interfaces	1
2	**MODELING AND RETRIEVAL EVALUATION**	
2.1	IR models, Classic Information Retrieval	1
2.2	Alternative Set Theoretic Models, Algebraic Models, Probabilistic Models	1
2.3	Hypertext Models, Web based Models - Retrieval Evaluation, Cranfield Paradigm	1
2.4	Retrieval Metrics, Reference Collections, User-based Evaluation	1
2.5	Relevance Feedback and Query Expansion - Explicit Relevance Feedback	1
2.6	Implicit Feedback Through Local Analysis - Global Analysis, Documents: Languages & Properties	1
3	**TEXT CLASSIFICATION, INDEXING AND SEARCHING**	
3.1	A Characterization of Text Classification	1
3.2	Supervised and Unsupervised Algorithms	1
3.3	Feature Selection or Dimensionality Reduction	1
3.4	Evaluation metrics , Organizing the classes	1
3.5	Indexing and Searching, Inverted Indexes - Sequential Searching, Multidimensional Indexing	1

60 CS E15	Graph Theory	Category	L	T	P	Credit
		PE	2	0	2	3

Objectives

- To know and apply the fundamental concepts in graph theory.
- To learn the model problems using graphs and to solve these problems algorithmically.
- To acquire knowledge about trees in graph theory.
- To understand the concepts of sets, coverings and matchings and apply practically.
- To get exposed about the fundamentals of vertex colouring

Pre-requisites

 Linear Algebra

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Know the basic terminology and some of the theory associated with graphs.	Apply
CO2	Formulate graph theoretic models to solve real world problems.	Apply
CO3	Implement the concept of tree and graphs in real time applications.	Apply
CO4	Apply the concepts of sets and coverings in various engineering problems.	Apply
CO5	Evaluate the vertex colouring and edge colouring in the applications of graph theory.	Apply

Semester	**Hours / Week**			**Total Hours**	**Credit**	**Maximum Marks**		
	L	T	P		C	CA	ES	Total
V	2	0	2	60	3	50	50	100

Basic Concepts in Graph Theory * Undirected graph – Degree of a vertex – Degree sequence – Sub graphs – Vertex induced sub graphs – Complement of a graph – Self complementary graphs – Walk – Path – Connectivity – Eccentricity – Radius – Diameter – Vertex and edge cuts – Vertex partition – Independent set – Clique. Digraph – Orientation – Strongly connected digraphs – Weekly connected digraphs – Unilaterally connected digraphs – Directed acyclic graph. Adjacency matrix –Incidence matrix of graphs.	[6]
Connected graphs and shortest paths ** Walks – trails – paths – cycles – Connected graphs – Distance – Cut-vertices and cutedges – Blocks – Connectivity – Weighted graphs and shortest paths – Dijkstra's shortest path algorithm – Floyd-Marshall shortest path algorithm.	[6]
Trees Definitions and characterizations – Number of trees – Cayley's formula – Kircho-matrix tree theorem – Minimum spanning trees – Kruskal's algorithm – Prim's algorithm –Special classes of graphs – Bipartite Graphs– Line Graphs– Chordal Graphs– Eulerian Graphs – Fleury's algorithm– Chinese Postman problem – Hamilton Graphs– Introduction – Necessary conditions and sufficient conditions.	[6]
Independent sets, coverings and matchings Introduction – Independent sets and coverings – Basic equation – Matchings in bipartite graphs – Hall's Theorem – Konig's Theorem – Perfect matchings in graphs– Greedy and approximation algorithms.	[6]
Vertex Colorings Basic definitions – Cliques and chromatic number – Mycielski's theorem – Greedy coloring algorithm – Coloring of chordal graphs – Brooks theorem – Edge Colorings – Introduction and Basics – Gupta-Vizing theorem – Class-1 and Class-2 graphs – Edge-coloring of bipartite graphs – Class-2 graphs – Hajos union and Class-2 graphs – A scheduling problem and equitable edge-coloring.	[6]
Practical: 1. Program to find the number of vertices, even vertices, odd vertices and number of edges in a graph. 2. Program to find the union, intersection, and ring-sum of two graphs. 3. Program to find the minimum spanning tree using Prim's algorithm. 4. Program to find the minimum spanning tree using Kruskal's algorithm. 5. Program to find the shortest path between two vertices using Dijkstra algorithm. 6. Program to find the shortest path between every pair of vertices in a graph using Floyd-Warshall's algorithm. 7. Program to find the shortest path between two vertices using Bellman Ford's algorithm. 8. Program for finding maximum matching for the bipartite graph. 9. Program for finding maximum matching for the general path.	[30]

60 CS E16	Industrial Cloud Practices	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- Equip participants with a comprehensive understanding of cloud computing principles, AWS services, and security fundamentals to confidently initiate their cloud journey
- Enable participants to grasp fundamental concepts of cloud-based compute resources, specifically focusing on Amazon Elastic Compute Cloud (Amazon EC2) and related services, including containerization and orchestration, fostering a solid foundation for practical application
- Provide a concise understanding of OSI model layers, foundational AWS networking and security services, and proactive vulnerability prevention within the AWS cloud environment
- Immerse learners in the realm of AWS storage solutions, covering the diverse offerings of block storage, object storage, and database services, while facilitating practical skills in hosting websites through Amazon S3
- Equip participants with a comprehensive understanding of AWS monitoring and cost management tools, specifically focusing on CloudTrail, CloudWatch, and effective cloud cost optimization strategies

Pre-requisites

- Programming Skill, Computer Networks, DBMS

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Possess a clear grasp of cloud computing concepts, the advantages of cloud adoption, the significance of AWS, and the foundational knowledge to utilize key AWS services effectively, while also demonstrating an understanding of cloud security essentials and initial steps to set up an AWS account and explore its service offerings.	Understand
CO2	Understand the benefits of Amazon EC2 and its various instance types, distinguishing among billing options, comprehending dynamic scaling through features like Amazon EC2 Auto Scaling and Elastic Load Balancing, grasping containerization history and technologies, explaining AWS container offerings like Fargate and Amazon EKS, and practically creating an EC2 instance using a t2.micro instance type.	Understand
CO3	Gain the knowledge of OSI model's structure, AWS networking services including subnetting, Virtual Private Cloud (VPC), security essentials like Security Groups and Network Access Control Lists (NACLs), AWS's comprehensive security measures and global infrastructure, strategies to prevent and detect vulnerabilities, and practical skills to create a VPC with multiple subnets across different availability zones.	Understand
CO4	Understand the Amazon Elastic Block Store (EBS) and its volume types, performance distinctions, and EC2 instance store applications. They will also be adept in comprehending Amazon S3's object storage services, storage classes, tiering options, data protection, AWS database options including RDBMS and NoSQL (DynamoDB), and will have the practical ability to create an S3 bucket and host a static website.	Understand
CO5	Understand CloudTrail operations, application scenarios, cost structures, and benefits. They will also gain an understanding of Amazon CloudWatch, CloudWatch Logs, and Log Insights, along with the ability to query logs from CloudWatch Logs. Additionally, participants will become proficient in cloud financial management, cost optimization considerations, and practical skills such as sending CloudTrail logs to CloudWatch, running Log Insights queries, and validating their results.	Understand

Overview of Cloud Computing*: Exploring the Concept of Cloud Computing, Understanding the Benefits of Cloud Adoption - Selecting AWS: Reasons and Advantages - Initiating Your Journey: Getting Started with Cloud and AWS - **Introduction to AWS:** Getting Started in the AWS Cloud, Understanding the AWS Global Infrastructure - **Core Services Part I:** Explore AWS Cloud Computing Fundamentals, Delve into AWS Cloud Storage Essentials, Gain Insight into AWS Cloud Database Services - **Core Services Part II:** Understand Networking in Core AWS Services, Explore Security Aspects in Core AWS Services, Grasp Pricing Essentials of Core AWS Services - **Security Basics:** Identity and Access Management**.** **Case Study: A Kick Start - Cloud Journey:** Open AWS Cloud Account - Review the Services Offerings from Compute, Storage, Database, Networking, Security.	[9]
Compute in the Cloud*: Benefits of Amazon Elastic Compute Cloud (Amazon EC2) at a basic level, Identify the different Amazon EC2 instance types, Differentiate between the various billing options for Amazon EC2, Benefits of Amazon EC2 Auto Scaling - **Dynamic Scaling and Hosting in the Cloud:** Summarize the benefits of Elastic Load Balancing, Give an example of the uses for Elastic Load Balancing, Summarize additional AWS compute options - **Learn Container Concepts:** History of Containerization, Container Technologies, Microservices and Management - **Learn AWS Container Offerings:** Explain the functioning of Fargate, What is Container Orchestration Environment, Learn the fundamentals of AWS EKS. **Case Study:** Create EC2 Instance - t2. Micro.	[9]
Introduction to OSI Layer*: OSI Model Overview, Physical and Data Link Layers, Network and Transport Layers Session, Presentation, and Application Layers - **AWS Networking Services Fundamentals:** Learn the concept of Subnetting, Amazon Virtual Private Cloud, Security Group, NACL - **AWS Security Services Fundamentals:** Cloud Security Measures, The Worldwide Infrastructure of AWS, Ensuring Data Center Security, Adhering to Compliance and Governance, Countering DDoS Attacks - **Prevention and Detection Vulenarabities in AWS Cloud:** Introduction to AWS Entry Points, Identity and Access Management in AWS, Exploring Detective Controls, Securing Infrastructure in Cloud, Ensuring Data Protection in AWS, Incident Response Strategies in Cloud Environment. **Case Study:** Create a VPC and 2 Subnets in Different Availability Zone.	[9]
AWS Block Storage*: Amazon EBS Block Storage Service, Amazon EBS Volume Types, Performance Differentiation of Amazon EBS Volume Types, Uses for Amazon EC2 Instance Stores, Retention Options for EBS Volumes - **AWS Object Storage Basic:** Amazon S3 Object Storage Services, Amazon S3 Storage Classes Distinguishing Amazon S3 Glacier Storage Classes, Storage Class Data Tiering Options, Data Protection for Amazon S3 - **AWS Database offerings – RDBMS:** Discerning Among AWS Database Options, Exploring Amazon Relational Database Service (RDS) Value, Unveiling Amazon Aurora Architecture, Achieving High Performance with Amazon Aurora - **AWS Database offerings - NoSQL – DynamoDB:** What is NoSQL and why we need it, Amazon DynamoDB Fundamentals, Terminology and Technology Concepts. **Case Study: Host Website in S3 Bucket:** Create a S3 Bucket and Host a Static Website.	[9]
Learn the CloudTrail*: CloudTrail Operation Understanding, Surveying CloudTrail Application Scenarios, CloudTrail Cost Structure Explanation, Recognizing CloudTrail Advantages - **Understand the Cloudwatch, Cloudwatch Logs and Log Insights:** Introduction to Amazon CloudWatch, Log files from Amazon Elastic Compute Cloud (Amazon EC2) instances, AWS CloudTrail, Query the logs from Cloudwatch Logs - **Cloud Cost Management:** Understand Cloud Financial Management, Six capabilities to have to be successful in your Cloud Financial Management journey - **Cost Optimization:** Cloud Usage with Cost Consideration, Enhance Cloud Utilization, Purchase Choices Based on Commitment. **Case Study: Explore CloudTrail and CloudWatch:** Send the Logs from CloudTrail to Cloudwatch, Run LogInsights query and Validate it.	[9]

*SDG 9 – Industry Innovation and Infrastructure

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	**Overview of Cloud Computing**	
1.1	Exploring the Concept of Cloud Computing, Understanding the Benefits of Cloud Adoption	1
1.2	Selecting AWS: Reasons and Advantages	1
1.3	Initiating Your Journey: Getting Started with Cloud and AWS	1
1.4	Introduction to AWS: Getting Started in the AWS Cloud, Understanding the AWS Global Infrastructure	1
1.5	Core Services Part I: Explore AWS Cloud Computing Fundamentals, Delve into AWS Cloud Storage Essentials, Gain Insight into AWS Cloud Database Services	1

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

1.6	Core Services Part II: Understand Networking in Core AWS Services, Explore Security Aspects in Core AWS Services, Grasp Pricing Essentials of Core AWS Services	1
1.7	Security Basics: Identity and Access Management**.**	1
1.8	Case Study: A Kick Start - Cloud Journey: Open AWS Cloud Account	1
1.9	Review the Services Offerings from Compute, Storage, Database, Networking, and Security.	1
2.0	**Compute in the Cloud**	
2.1	Benefits of Amazon Elastic Compute Cloud (Amazon EC2) at a basic level, Identify the different Amazon EC2 instance types, Differentiate between the various billing options for Amazon EC2, Benefits of Amazon EC2 Auto Scaling	2
2.2	Dynamic Scaling and Hosting in the Cloud**:** Summarize the benefits of Elastic Load Balancing, Give an example of the uses for Elastic Load Balancing, Summarize additional AWS compute options	2
2.3	Learn Container Concepts: History of Containerization, Container Technologies, Micro services and Management	2
2.4	Learn AWS Container Offerings: Explain the functioning of Fargate, What is Container Orchestration Environment, Learn the fundamentals of AWS EKS.	2
2.5	Case Study: Create EC2 Instance - t2. Micro	1
3.0	**Introduction to OSI Layer**	
3.1	OSI Model Overview, Physical and Data Link Layers, Network and Transport Layers Session, Presentation, and Application Layers	2
3.2	AWS Networking Services Fundamentals: Learn the concept of Subnetting, Amazon Virtual Private Cloud, Security Group, NACL	1
3.3	AWS Security Services Fundamentals: Cloud Security Measures, The Worldwide Infrastructure of AWS, Ensuring Data Center Security, Adhering to Compliance and Governance, Countering DDoS Attacks	2
3.4	Prevention and Detection Vulenarabities in AWS Cloud: Introduction to AWS Entry Points, Identity and Access Management in AWS, Exploring Detective Controls, Securing Infrastructure in Cloud, Ensuring Data Protection in AWS, Incident Response Strategies in Cloud Environment	2
3.5	Case Study: Create a VPC and 2 Subnets in Different Availability Zone	2
4.0	**AWS Block Storage**	
4.1	Amazon EBS Block Storage Service, Amazon EBS Volume Types, Performance Differentiation of Amazon EBS Volume Types, Uses for Amazon EC2 Instance Stores, Retention Options for EBS Volumes.	2
4.2	AWS Object Storage Basic: Amazon S3 Object Storage Services, Amazon S3 Storage Classes Distinguishing Amazon S3 Glacier Storage Classes, Storage Class Data Tiering Options, Data Protection for Amazon S3	2
4.3	AWS Database offerings – RDBMS: Discerning Among AWS Database Options, Exploring Amazon Relational Database Service (RDS) Value, Unveiling Amazon Aurora Architecture, Achieving High Performance with Amazon Aurora.	1
4.4	AWS Database offerings - NoSQL – DynamoDB**:** What is NoSQL and why we need it, Amazon DynamoDB Fundamentals, Terminology and Technology Concepts.	2
4.5	Case Study: Host Website in S3 Bucket**:** Create a S3 Bucket and Host a Static Website	2
5.0	**Learn the CloudTrail**	
5.1	CloudTrail Operation Understanding, Surveying CloudTrail Application Scenarios, CloudTrail Cost Structure Explanation, Recognizing CloudTrail Advantages.	2

5.2	Understand the Cloudwatch, Cloudwatch Logs and Log Insights: Introduction to Amazon CloudWatch, Log files from Amazon Elastic Compute Cloud (Amazon EC2) instances, AWS CloudTrail, Query the logs from Cloudwatch Logs.	2
5.3	Cloud Cost Management: Understand Cloud Financial Management, Six capabilities to have to be successful in your Cloud Financial Management journey.	2
5.4	Optimization: Cloud Usage with Cost Consideration, Enhance Cloud Utilization, Purchase Choices Based on Commitment.	2
5.5	Case Study: Explore CloudTrail and CloudWatch: Send the Logs from CloudTrail to Cloudwatch, Run LogInsights query and Validate it	1

60 CS E17	DevOps	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- Understand the concept of DevOps
- Understand the Continuous Integration in Automated Testing and Reporting
- Explore Configuration Management, Continuous Delivery and Deployment
- Know the concept of Containerization and Orchestration
- Analyse the Security and Compliance

Pre-requisites

- Programming Skill, Operating Systems and Networking

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the concept of DevOps	Remember
CO2	Apply Continuous Integration in Automated Testing and Reporting	Apply
CO3	Analyze Configuration Management, Continuous Delivery and Deployment	Analyse
CO4	Understand the Containerization and Orchestration	Understand
CO5	Evaluate the Security and Compliance	Apply

Mapping with Programme Outcomes

Introduction to DevOps: What is DevOps? - Benefits of DevOps - DevOps Principles - DevOps Culture and Collaboration. **Version Control and Collaboration Tools:** - Introduction to Version Control (Git) - Git Basics: Clone, Commit, Push, Pull - Branching and Merging - Collaborative Development with Git - Introduction to Git Hub/ Git Lab/ Bi bucket.	[9]
Continuous Integration (CI) CI/CD Pipeline Overview - Building and Testing Code Automatically - Introduction to Jenkins or other CI tools - Configuring Jenkins Jobs - Integration with Version Control - Automated Testing and Reporting.	[8]
Configuration Management Infrastructure as Code (IaC) concepts - Introduction to Configuration Management Tools (e.g., Ansible) - Creating Playbooks/Roles for Automated Deployment - Managing Configuration Drift. **Continuous Delivery and Deployment** Understanding Continuous Delivery vs. Continuous Deployment - Blue-Green Deployments - Canary Deployments - Release Orchestration.	[10]
Containerization and Orchestration Introduction to Containers (Docker) - Creating Docker Images - Container Registries (Docker Hub, AWS ECR) - Introduction to Kubernetes - Deploying Containers with Kubernetes **Monitoring and Logging** Importance of Monitoring and Observability - Monitoring Tools (Prometheus, Grafana) - Application Logging and Log Management.	[10]
Security and Compliance Security Principles in DevOps - Incorporating Security in CI/CD - Compliance and Auditing in DevOps. **Cloud Services and DevOps** Cloud Computing Overview - Infrastructure Automation in the Cloud - Serverless Architectures. **DevOps Best Practices and Case Studies** Industry Best Practices - Case Studies of Successful DevOps Implementations.	[8]
Hands On: - Applying DevOps Concepts to a Sample Project. - Setting Up a CI/CD Pipeline. - Deploying and Monitoring the Application.

60 CS E21	Generative AI	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To get an introduction to Generative AI
- To learn the language models and LLM architectures of generative AI
- To understand the Generative Pre-Trained Transformer
- To work with LangChain framework
- To learn about prompt engineering

Pre-requisites

 Knowledge on statistics, linear algebra, matrix, calculus, probability, programming languages and data modelling

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the generative AI basics	Understand
CO2	Apply the language models and LLM architectures in generative AI	Apply
CO3	Develop the ChatGPT from Generative Pre-trained Transformer	Apply
CO4	Recognize the concept of LangChain framework	Apply
CO5	Comprehend the concept of Prompt Engineering	Apply

60 CS E22	Angular	Category	L	T	P	Credit
		PE	2	0	2	3

Objectives

- Understanding Basic concept of Angular.
- Properly separate the model, view, and controller layers of your application and implement them using Angular.
- Master Angular expressions, filters, Angular directives and scopes.
- Build Angular forms.
- Understand the design of single-page applications and how AngularJS facilitates their development

Pre-requisites

- HTML, CSS, JavaScript

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Build an awesome User Interface	Apply
CO2	Create and bind controllers with JavaScript	Analyse
CO3	Validate user input data	Analyse
CO4	Write own filters, directives and controls	Apply
CO5	Create animation in web page and Create single page application	Apply

VI	2	0	2	60	3	50	50	100

Introduction What is AngularJS?, Why AngularJS?, Features of AngularJS, AngularJS architecture, Setting up the Environment, Model-View-Controller explained, My first AngularJS app, All about Angular expressions, How to use expressions, Number and String Expressions.	[6]
Data and Event Binding Object Binding and Expressions, Working with Arrays, Forgiving Behaviour, Angular expressions v/s Javascript expressions, Built-in filters, Uppercase and Lowercase Filters, Currency and Number Formatting Filters, OrderBy Filter, Filter Filter, Using AngularJS filters, Creating custom filters - Introduction to AngularJS Modules, Module Loading and Dependencies, Creation vs Retrieval, Bootstrapping AngularJS Role of a Controller, Attaching properties and functions to scope, Nested Controllers.	[6]
Directives Introduction to Directives, Directive lifecycle, Using AngularJS built-in directives, Core Directives, Conditional Directives, Style Directives, Mouse and Keyboard Events Directives, Matching directives, Creating a custom directives.	[6]
Forms Working with Angular Forms, Model binding, Understanding Data Binding, Binding controls to data, Form controller, Validating Angular Forms, Form events, Updating models with a twist, $error object What is scope, Scope lifecycle, Two way data binding, Scope inheritance, Scope & controllers, Scope & directives, $apply and $watch, Rootscope, Scope broadcasting, Scope events	[6]
Single Page Application (SPA)* what is SPA, Pros & Cons of SPA, Installing the ngRoute module, Configure routes, Passing parameters, Changing location, Resolving promises, Create a Single Page Application AngularJS Animation - ngAnimate Module, CSS transforms, CSS transitions, Applying animations, Directives supporting animation.	[6]
Practical: 1. Build an Angular Application and serve it on a server. 2. Create an Angular application. Build a component inside the application in order to implement a simple login form. 3. Create an Angular application. Create a component to implement two-way binding which is a combination of both property binding and event binding. 4. Create an Angular application. Create a component to define the switch structural directive. The user will enter their choice of course based on which the switch directive will choose an appropriate output. 5. Write a program to show thw responses while the Form is in the Submitted State and provide an Edit Button. 6. Create an Angular application. Create a component to inject a service into it. The component will also display the data provided by the service. The service will provide an array of employee details.	[30]
Total Hours: (Lecture - 30; Practical - 30)	**60**

2.3	Built-in filters, Uppercase and Lowercase Filters	1
2.4	Currency and Number Formatting Filters	1
2.5	OrderBy Filter, Filter Filter, Using AngularJS filters, Creating custom filters Introduction to AngularJS Modules, Module Loading and Dependencies	1
2.6	Bootstrapping AngularJS Role of a Controller, Attaching properties and functions to scope, Nested Controllers	1
3	**Directives**	
3.1	Introduction to Directives	1
3.2	Directive lifecycle, Using AngularJS built-in directives,	1
3.3	Core Directives, Conditional Directives	1
3.4	Style Directives, Mouse and Keyboard Events Directives	1
3.5	Matching directives	1
3.6	Creating a custom directives	1
4	**Forms**	
4.1	Working with Angular Forms, Model binding, Understanding Data Binding	1
4.2	Binding controls to data, Form controller, Validating Angular Forms	1
4.3	Form events, Updating models with a twist, $error object	1
4.4	What is scope, Scope lifecycle,	1
4.5	Two way data binding, Scope inheritance, Scope & controllers, Scope & directives	1
4.6	$apply and $watch, Rootscope, Scope broadcasting, Scope events.	1
5	**Single Page Application (SPA)***	
5.1	what is SPA, Pros & Cons of SPA, Installing the ngRoute module, Configure routes	1
5.2	Passing parameters, Changing location	1
5.3	Changing location, Resolving promises	1
5.4	Create a Single Page Application AngularJS Animation	1
5.5	ngAnimate Module, CSS transforms, CSS transitions	1
5.6	Applying animations, Directives supporting animation.	1

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

Practical:		
1.	Build an Angular Application and serve it on a server	5
2.	Create an Angular application. Build a component inside the application in order to implement a simple login form	5
3.	Create an Angular application. Create a component to implement two-way binding which is a combination of both property binding and event binding	5
4.	Create an Angular application. Create a component to define the switch structural directive. The user will enter their choice of course based on which the switch directive will choose an appropriate output	5
5.	Write a program to show thw responses while the Form is in the Submitted State and provide an Edit Button	5
6.	Create an Angular application. Create a component to inject a service into it. The component will also display the data provided by the service. The service will provide an array of employee details	5

60 CS E23	User Interface Technologies	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To understand User Interface design and web languages
- To understand the web applications and client server communication
- To program for web client and web server objects
- To understand web development environment and methodology
- To learn the reactive frameworks

Pre-requisites

 Web Development

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the User Interface Design essentials and scripting language	Understand
CO2	Develop Web Applications and Implement Client/Server Web programming	Apply
CO3	Recognize the Web servers and frameworks	Apply
CO4	Understand MongoDB and Node JS applications	Understand
CO5	Apply Reactive Frameworks	Apply

60 CS E24	Parallel and Distributed Computing	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To understand the need and fundamentals of parallel computing paradigms
- To learn the nuances of parallel algorithm design
- To understand the programming principles in parallel computing architectures
- To learn few problems that are solved using parallel algorithms
- To learn fault tolerant techniques and various algorithms

Pre-requisites

 Operating Systems

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understanding the requirements of Parallel Computing	Understand
CO2	Apply the knowledge of different types of methodologies like mapping techniques	Apply
CO3	Understand the concept of message passing and shared address space	Understand
CO4	Apply the concepts of distributed computing paradigm with applications	Apply
CO5	Relate fault tolerant techniques	Understand

60 CS E25	Cyber Forensics and Malware	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To understand the responsibilities related to Computer Crime and Cyber Crime
- To define and cite suitable scenarios for applying computer forensics
- To identify the methodology of Memory Forensics and its tools
- To acquire an understanding of conducting Malware analysis
- To comprehending the operation and actions of malicious software, as well as a selection for analysing malware

of tools

Pre-requisites

- Operating Systems Knowledge and Networking Fundamentals

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Gain valuable lessons from significant cybercrime incidents, leveraging past experiences to shape proactive prevention and response approaches for the future	Understand
CO2	Demonstrate a deep understanding of the fundamental concepts and practices of computer forensics	Apply
CO3	Apply various forensic tools and techniques to collect, preserve, and analyse digital evidence related to cyber crimes	Apply
CO4	Recognize and categorize various forms of malware	Apply
CO5	Devise effective strategies for detecting, preventing, and mitigating malware threats	Analyse

60 CS E26	C# and .NET Core	Category	L	T	P	Credit
		PE	2	0	2	3

Objectives

- To gain the fundamental skills in C# programming Language
- To gain knowledge in object-oriented concepts in C#
- To understand the concepts of the .NET Core and its platform
- To implement data manipulation using Razor pages
- To enhance the knowledge in Model-View-Controller architecture

Pre-requisites

 Object Oriented Programming

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the basic concepts of C#	Understand
CO2	Apply the Object-Oriented concepts in C# for problem solving	Apply
CO3	Develop web pages using ASP.NET Core platform	Apply
CO4	Implement the data manipulation concept using Razor Pages	Apply
CO5	Integrate the concept of MVC in ASP.NET Core platform	Apply

Introduction to C#: Introducing C# – Understanding .NET – Overview of C# – Literals – Variables – Data Types – Operators –Expressions – Branching – Looping – Methods – Arrays – Strings – Structures – Enumerations.	[6]
Object-Oriented Programming in C#: Classes–Objects –Inheritance– Methods –Polymorphism –Interfaces –Operator Overloading – Delegates –Events–Errors–Exceptions–Collections–Managing File system.	[6]
ASP.NET Core Web Application using Razor Pages:* Introduction to ASP.NET Core Web Application – Environment Setup – Project Layout – Static and Default Files - Enabling and Defining Razor Pages – Shared Layouts – Using code-behind files.	[6]
Data Manipulation using Razor Pages:* Introduction to ADO.NET-Database connectivity concept using ADO.NET – Connection Class with Authentication – Command Class – DataReader Class –DataAdapter Class – DataSet – OnGet –OnPost – OnPostDelete – OnPostEdit – OnPostView – REST API – Model and Controller for REST API.	[6]
Model-View-Controller (MVC) in ASP.NET Core:* Introduction to MVC – Setting up an ASP.NET Core MVC Website – MVC Routing – Controllers and Actions –Model – Views – Parameters Passing – View Helpers – Model Validation.	[6]
Practical: 1. Develop simple application using C#. 2. Implement inheritance and Operator overloading using C#. 3. Design an ASP.NET Webpage to work with Dropdown list and ListBox controls. 4. Write a C# programs to demonstrate the concepts of Label, Text Box and Button controls. 5. Create a ADO.NET application in C# to verify if the connection is established with OLEDB and MS-ACCESS. 6. Create a ADO.NET applications in C# to demonstrate the Data Reader, Data Set, Data Adapter and Data View Objects 7. Develop a Registration Form with all Validation Controls 8. Create a Web Service for all Arithmetic operations	[30]

Course Contents and Lecture Schedule

S. No.	Topics	No. of Hours
1	**Introduction to C#**	
1.1	Introducing C# – Understanding .NET	1
1.2	Overview of C# – Literals	1
1.3	Variables – Data Types – Operators –Expressions	1
1.4	Branching – Looping	1
1.5	Methods – Arrays - Strings	1
1.6	Structures – Enumerations	1
2	**Object-Oriented Programming in C#**	
2.1	Object-Oriented Programming in C# -Classes – Objects	1
2.2	Inheritance - Methods	1
2.3	Polymorphism – Interfaces - Operator Overloading	1
2.4	Delegates –Events	1
2.5	Errors – Exceptions – Collections	1
2.6	Managing File system	1
3	**ASP.NET Core Web Application using Razor Pages**	
3.1	Introduction to ASP.NET Core Web Application	1
3.2	Environment Setup	1
3.3	Project Layout	1
3.4	Static and Default Files	1
3.5	Enabling and Defining Razor Pages	1
3.6	Shared Layouts - Shared Layouts Using code-Managing File system	1
4	**Data Manipulation using Razor Pages**	
4.1	Introduction to ADO.NET	1
4.2	Database connectivity concept using ADO.NET	1
4.3	Connection Class with Authentication - Command Class	1
4.4	DataReader Class - DataAdapter Class - DataSet	1
4.5	OnGet –OnPost – OnPostDelete - OnPostEdit – OnPostView	1
4.6	REST API –Model and Controller for REST API	1
5	**Electric and Autonomous Vehicles**	
5.1	Introduction to MVC	1
5.2	Setting up an ASP.NET Core MVC Website	1
5.3	MVC Routing - Controllers and Actions	1
5.4	Model – Views - Parameters Passing	1
5.5	View Helpers	1
5.6	Model Validation.	1
Practical:		
1.	Develop simple application using C#	2

Objectives

- To enable the students to learn Java Collections Framework.
- To understand the Collections Utility and Concurrent Collections in Java.
- To create and use Spring Framework and Enterprise JavaBeans (EJB).
- To understand Java 8 Features.
- To understand Web Services and Design Patterns.

Pre-requisites

Basics of Java

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the principles of Java Collections Framework	Understand
CO2	Implement Collections Utility and Concurrent Collections in Java	Apply
CO3	Create and use Spring Framework and Enterprise JavaBeans (EJB)	Apply
CO4	Analyzing the Java 8 Features	Analyse
CO5	Implement the concept of Web Services and Design Patterns	Apply

Java Collections Framework* Introduction to Collections, Overview of the Java Collections Framework (JCF), Importance of collections in Java programming, Core Interfaces- List, Set, and Map interfaces, hierarchy of collection interfaces, Lists and their Implementations - ArrayList and LinkedList, Sets and their Implementations - HashSet, LinkedHashSet, and TreeSet, Maps and their Implementations- HashMap, LinkedHashMap, and TreeMap, Key-value pairs, ordering, and special features.	[9]
Collections Utility and Concurrent Collections* Common utility methods- Sorting, searching, and synchronization, Custom Objects in Collections- Implementing Comparable and Comparator interfaces, customizing sorting for user-defined classes, Concurrent Collections - ConcurrentHashMap and CopyOnWriteArrayList, Collections Best Practices - Guidelines for choosing the right collection, Performance considerations and best coding practices.	[9]
Spring Framework and Enterprise JavaBeans (EJB)* Overview of the Spring framework - Dependency injection and Inversion of Control (IoC), Spring MVC - Building web applications, Controllers, views, and forms, Spring Data and Hibernate Integration, Integrating Spring with Hibernate, Spring Data. Introduction to EJB - Session beans, entity beans, and message-driven beans, EJB 3.x Features - Annotations and simplifications.	[9]
Java 8 Features* Lambda expressions, Method references, Functional interfaces, Stream API, Default methods, Base64 Encode Decode, Static methods in interface, Optional class, Collectors class, ForEach() method, Nashorn JavaScript Engine, Parallel Array Sorting, Type and Repeating Annotations, IO Enhancements, Concurrency Enhancements, JDBC Enhancements.	[9]
Web Services and Design Patterns* Web Services - SOAP and RESTful web services, JAX-RS and JAX-WS for Java web services. Design Patterns in Java - Overview of Design Patterns – Categories, Creational Design Patterns - Singleton, Factory, Builder, Prototype. Structural Design Patterns – Adapter, Bridge, Composite, Decorator. Behavioral Design Patterns – Observer, Strategy, Command. Additional Design Patterns and Best Practices - Chain of Responsibility Pattern, Visitor and Template Method patterns.	[9]

Objectives

- To know the concept of prompt engineering with ChatGPT
- To understand the limitations of prompt engineering
- To write powerful prompts
- To explain the quality control and testing of existing prompts
- To automate prompt engineering solutions

Pre-requisites

 Artificial Intelligence and NLP

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the concept of prompt engineering with ChatGPT.	Understand
CO2	Analyse the limitations of prompt solutions.	Analyse
CO3	Apply the techniques to write powerful prompts.	Apply
CO4	Evaluate and refine the existing prompt solutions.	Apply
CO5	Use automated techniques to develop prompt solutions.	Apply

Objectives

- Enable the students to understand the design of Web Page Development concepts and scripting languages.
- To learn the knowledge of Angular framework and apply in the real world.
- To update and enhance skills in writing C#.NET framework and apply web services in real time environment
- To familiarize and update the students with various data models and SQL functions to apply in real world
- To providing students with hands on experience and enhancing problem solving skills in writing web-based applications on .NET

Pre-requisites

- Web Development

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recall the concepts of HTML, CSS, JavaScript and express the features of scripting language.	Apply
CO2	Gain knowledge of Angular framework and apply in the real world	Apply
CO3	Design and apply the knowledge of data binding to create Web forms and obtain knowledge of Web services	Apply
CO4	Express the knowledge of data models and apply the various sequence and functions	Apply
CO5	Ability to develop web pages using ASP.NET Core platform	Apply

VI	2	0	2	60	3	50	50	100

Introduction to Front End Development* Overview of Front-End Development - HTML - CSS - JavaScript - Typescript - Bootstrap – Design Webpage using this technology	[6]
Angular* Npm - Visual Code Installation - Life Cycle - Binding - Building Block - Component, Pipe, Module, Service, Directive, Routing Dependency Injection, JSON - Forms - Template and Reactive Forms - RXJX - API client, API request and API response, Simple Angular Application.	[6]
Middle Layer- WebAPI* Overview - Installing Visual Studio - XML - SOAP service vs RESTful services - HTTP Verbs, Develop API on - Get, Post, Patch, Delete - IIS Overview - Hosting in IIS - API testing using PostMan - Simple API with JSON file.	[6]
Back End Development* PL/SQL - DDL/DML -Basic Syntax - Data Types – Queries, JSON formation in the Backend, SQL Injection, and Simple PL/SQL Application.	[6]
Case study* Shopping APP- Login/Signup Page - Credentials - Enable Multi-factor Authentication - List the Product - Add to Cart - Select and Confirm the Order - Payment Gateway - Send Notification after Order Confirmation - Logout	[6]
Practical: 1. HTML Structure and Tags: Hands-on practice building a basic webpage using HTML elements like headers, paragraphs, images, and lists. 2. CSS Styling: Apply CSS selectors, properties, and values to style the webpage from focusing on visual appeal and layout. 3. Interactive JavaScript: Introduce interactivity by incorporating JavaScript events and functions (e.g., button clicks, form submissions) to the webpage. 4. Bootstrap Integration: Enhance the webpage's layout and responsiveness using Bootstrap components like grids, navigation bars, and cards. 5. Building a Simple Angular Application: Create a basic Angular application with components, templates, and data binding to solidify core concepts. 6. Angular: Create user registration form using reactive or template form with validation 7. Component Communication: Implement communication between components using Input and Output decorators, enabling data exchange within the application. 8. HTTP Services: Construct an Angular application that fetches data from an API using HTTP services, familiarizing students with data retrieval techniques. 9. create Web API using HTTP verb and Deploying Web server. 10. PL/SQL Procedures and Functions: Write PL/SQL procedures and functions to perform data manipulation tasks in an Oracle database, fostering practical database programming skills.	[30]
Total Hours: (Lecture - 30; Practical - 30)	60

4.	Bootstrap Integration: Enhance the webpage's layout and responsiveness using Bootstrap components like grids, navigation bars, and cards	3
5.	Building a Simple Angular Application: Create a basic Angular application with components, templates, and data binding to solidify core concepts	3
6.	Angular: Create user registration form using reactive or template form with validation	3
7.	Component Communication: Implement communication between components using Input and Output decorators, enabling data exchange within the application	3
8.	HTTP Services: Construct an Angular application that fetches data from an API using HTTP services, familiarizing students with data retrieval techniques	3
9.	Create Web API using HTTP verb and Deploying Web server	3
10.	PL/SQL Procedures and Functions: Write PL/SQL procedures and functions to perform data manipulation tasks in an Oracle database, fostering practical database programming skills	3

60 CS E33	Salesforce	Category	L	T	P	Credit
		PE	2	0	2	3

Objectives

- To Understand Salesforce Architecture and Features
- To know the customization process in Salesforce
- To Understand the security model
- To Understand the Sales Cloud and Cloud modules
- To Understand the business process automation options, reports and dashboard

Pre-requisites

 Knowledge on Software Engineering and computer programming

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply data modeling techniques to design and configure custom objects, fields, and relationships in Salesforce.	Apply
CO2	Apply advanced data management and customization techniques in Salesforce to enhance data organization and user experience	Apply
CO3	Evaluate and recommend appropriate Salesforce user setup and security settings to control access and permissions	Analyze
CO4	Develop advanced automation solutions using Process Builder and Visual Workflow to meet complex business requirements	Apply
CO5	Evaluate and recommend appropriate reporting and analytics strategies based on business requirements.	Evaluate

60 CS E34	Game Design Technologies	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To introduce the student to the notion of a game, its solutions concepts, and other basic notions and tools of game theory, and the main applications for which they are appropriate, including electronic trading markets
- To formalize the notion of strategic thinking and rational choice by using the tools of game theory, and to provide insights into using game theory in modeling applications
- To draw the connections between game theory, computer science, and economics, especially emphasizing the computational issues
- To introduce contemporary topics in the intersection of game theory, computer science, and economics

Pre-requisites

- Programming Knowledge

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the notion of a strategic game and equilibria, and identify the characteristics of main applications of these concepts.	Understand
CO2	Understand the applications of Game Theory in Computer Science and Engineering	Understand
CO3	Discuss the use of Nash Equilibrium for other problems.	Apply

Rev. No.4/w.e.f. 01.06.2024

60 CS E35	Block Chain Technology	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- Understand the basic concepts of Distributed systems and Cryptography Understand emerging abstract models for Block Chain Technology.
- Identify the challenges and technical gaps existing between theory and practice in cryptocurrency domain
- Design, build, and deploy smart contracts and distributed applications.
- Develop Block chain based applications and games

Pre-requisites

- Data Structures, Cryptography

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explore the basic concepts of Distributed database, Cryptography algorithms and functions.	Understand
CO2	Interpret the design principles of Blockchain and Mining concepts.	Understand
CO3	Understand the techniques of distributed consensus.	Understand
CO4	Apply the concepts of cryptocurrency and learn Ethereum development	Apply
CO5	Design and develop projects, smart contracts using Block-chain technology	Apply

		PE	3	0	0	3

Objectives

- To provide a strong foundation on fundamental concepts in Computational Intelligence.
- To enable Problem-solving through various searching techniques.
- To apply these techniques in applications which involve perception, reasoning and learning.
- To apply Computational Intelligence techniques for information retrieval
- To apply Computational Intelligence techniques primarily for machine learning

Pre-requisites

- Programming knowledge, linear Algebra

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the goals and methods of Computational Intelligence	Understand
CO2	Study the knowledge representation and reasoning computational intelligence techniques	Apply
CO3	Apply the Intelligent techniques for problem solving.	Apply
CO4	Improve problem solving in the areas of reasoning and natural language.	Apply
CO5	Understand computer vision, automatic programming and machine learning.	Understand

60 CS E37	Data Analytics	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To know the basic data analytics concepts
- To understand the Data Collection and Preprocessing
- To understand Exploratory Data Analytics (EDA)
- To learn Statistical Data Analytics
- To know about Distributed File Systems

Pre-requisites

- Python Programming

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the basic concepts of data analytics	Understand
CO2	Understand the data collection and preprocessing	Understand
CO3	Apply Exploratory Data Analytics (EDA)	Apply
CO4	Apply the knowledge of statistical data analytics	Apply
CO5	Understand the distributed file systems	Understand

Mapping with Programme Outcomes

60 CS E41	Natural Language Processing	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To learn the fundamentals of natural language processing.
- To learn and understand the word level analysis methods.
- To explore the syntactic analysis concepts of grammar, parsing and probabilistic.
- To learn and understand the semantics and pragmatics.
- To learn the design and implementation of discourses and lexical resources.

Pre-requisites

- Machine Learning, Python Programming

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the use of regular expression and tokenization for the basic language features.	Understand
CO2	Interpret the tags for the word level analysis.	Understand
CO3	Examine the real time system to tackle morphology and syntax of a language.	Understand
CO4	Design a tag set to be used for statistical processing for real-time applications.	Apply
CO5	Analyze and compare the use of various statistical approaches for different types of NLP applications.	Analyze

60 CS E42	Industrial Applications Development and Deployment Practices	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To provide a comprehensive understanding of Real-Time IoT applications.
- To understand effective project management and issue tracking using JIRA.
- To learn version control fundamentals and seamless CI/CD integration.
- Develop expertise in InstallAnywhere for cross-platform installation and deployment. To understand hands-on experience in Docker architecture.

Pre-requisites

- Software Engineering

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Design, deploy, and optimize real-time IoT applications in healthcare by leveraging IoT technologies.	Apply
CO2	Understand efficiently manage projects, track issues, customize workflows, and leverage JIRA's capabilities across diverse projects.	Understand
CO3	Integrating CI/CD practices via hands-on project work with Helix Core for streamlined software development workflows.	Apply
CO4	Create and deploy efficient, user-friendly installers across multiple platforms through hands-on projects in InstallAnywhere 2018.	Apply
CO5	Deploy and manage containerized applications proficiently using Docker, covering Docker Hub, image manipulation, commands.	Apply

2.4	Permissions, and security management	1
2.5	Integrating JIRA with other tools	1
2.6	Creating meaningful reports, and analyzing project data	2
3.0	Effective utilization of JIRA in diverse projects.	1
3.1	Introduction to version control systems	1
3.2	Understanding the need for version control in software development	1
3.3	Overview of Perforce and its role in version control	1
3.4	Installing Perforce server and client	1
3.5	Understanding user roles and permissions	1
3.6	Basic Perforce commands: p4 add, p4 edit, p4 submit, p4 sync	1
3.7	Branching and Merging, Collaboration and Code Review	1
3.8	Automation and CI/CD Integration	1

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

3.9	Project Hands-on using Perforce Helix Core Tool.	1
4.0	**Cross-Platform Installation and Deployment**	
4.1	InstallAnywhere as a cross-platform installation tool	1
4.2	Building a basic installer package	1
4.3	Customizing installation options and user prompts	2
4.4	Custom actions and scripting	1
4.5	License management and software updates	1
4.6	Best practices for creating efficient and user-friendly installers	1
4.7	Deploying installers across different platforms	1
4.8	Project Hands-on using InstallAnyWhere 2018	1
5.0	**DevOps Containerization using Docker**	
5.1	Docker - An Architectural overview	1
5.2	Docker Hub - Installation and configuration	1
5.3	Docker images - Docker commands	1
5.4	Saving and Loading Docker Images	1
5.5	Docker Compose	1
5.6	Run applications using Docker	2

60 CS E44	Multicore Architecture and Programming	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To understand the need for multi-core processors, and their architecture.
- To understand the challenges in parallel and multi-threaded programming. To learn about the various parallel programming paradigms, To develop multicore programs and design parallel solutions.
- To learn about serial and parallel processor

Pre-requisites

 Computer Architecture

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Describe multicore architectures and identify their characteristics and challenges.	Remember
CO2	Identify the issues in programming Parallel Processors.	Understand

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

CO3	Write programs using OpenMP and MPI.	Understand
CO4	Design parallel programming solutions to common problems.	Apply
CO5	Compare and contrast programming for serial processors and programming for parallel processors.	Apply

Objectives

- To understand the big data platform and its use cases
- To provide an overview of Apache Hadoop
- To provide HDFS Concepts and Interfacing with HDFS
- To understand Map Reduce jobs and provide hands on Hadoop Eco System Apply analytics on structured, unstructured Data.

Pre-requisites

Should have knowledge of one Programming Language (Java preferably), Practice of SQL (queries and sub queries), exposure to Linux Environment.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Identify Big Data and its Business Implications.	Remember
CO2	Apply the components of Hadoop and Hadoop Eco-System and Process Data on Distributed File System	Apply
CO3	Manage Job Execution in Hadoop Environment	Apply
CO4	Develop Big Data Solutions using Hadoop Eco System and Analyze Infosphere BigInsights Big Data Recommendations.	Analyze
CO5	Apply Machine Learning Techniques using R.	Apply

60 CS E47	Advanced .NET	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To gain knowledge in object-oriented concepts in C#
- To gain the fundamental skills of Model-View-Controller (MVC) in ASP.NET Core
- To understand the concepts of ASP.NET Core Web Application using Razor Pages
- To implement data manipulation using Razor pages

Rev. No.4/w.e.f. 01.06.2024
Passed in BoS Meeting held on 24/05/2024
Approved in Academic Council Meeting held on 25/05/2024

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

- To enhance the knowledge of Real-time Communication using C#

Pre-requisites

- C# and .NET

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the Object-Oriented concepts in C#	Understand
CO2	Integrate the concept of MVC in ASP.NET Core platform	Apply
CO3	Develop web pages using ASP.NET Core platform	Apply
CO4	Implement the data manipulation concept using Razor Pages	Apply
CO5	Implement the concept of Real-time Communication using C#	Apply

Object-Oriented Programming in C#: Introduction to C#, Classes–Objects –Inheritance– Methods –Polymorphism –Interfaces – Operator Overloading – Delegates –Events–Errors–Exceptions–Collections–Managing File system.	[9]

Rev. No.4/w.e.f. 01.06.2024
Passed in BoS Meeting held on 24/05/2024
Approved in Academic Council Meeting held on 25/05/2024

CHAIRMAN
Board of Studies
Department of Computer Science and Engineering
K. S. Rangasamy College of Technology
Tiruchengode - 637 215, Namakkal-Dt.

Model-View-Controller (MVC) in ASP.NET Core:* Introduction to MVC – Setting up an ASP.NET Core MVC Website – MVC Routing – Controllers and Actions –Model – Views – Parameters Passing – View Helpers – Model Validation.	[9]
ASP.NET Core Web Application using Razor Pages:* Introduction to ASP.NET Core Web Application – Environment Setup – Project Layout – Static and Default Files - Enabling and Defining Razor Pages – Shared Layouts – Using code-behind files.	[9]
Data Manipulation using Razor Pages:* Introduction to ADO.NET-Database connectivity concept using ADO.NET – Connection Class with Authentication – Command Class – DataReader Class –DataAdapter Class – DataSet – OnGet –OnPost – OnPostDelete – OnPostEdit – OnPostView – REST API – Model and Controller for REST API.	[9]
Real-time Communication Limitations of traditional web communication - SignalR - Setting Up a SignalR Project - SignalR Hubs - Sending and Receiving Messages - Connection Management - Dependency Injection with SignalR - Building Real-Time Applications with SignalR.	[9]
Total Hours:	**45**

		PE	3	0	0	3

Objectives

- To provide the knowledge on elements of multimedia system
- To understand multimedia tools
- To understand multimedia operating systems
- To know about Multimedia Communication Systems
- To understand the Data Compression and Multimedia Applications

Pre-requisites

 Operating System

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand different elements of multimedia system, storage media for multimedia systems and animation	Understand
CO2	Analyse multimedia editing tools for audio, video, image and analyse linking multimedia objects	Analyse
CO3	Outline Real-time, process, resource management and examine different Database management system for multimedia	Apply
CO4	Predict multimedia communication subsystems and generate multimedia synchronization reference model	Apply
CO5	Compare different data compression techniques and gain knowledge about Multimedia application	Analyse

Mapping with Programme Outcomes

Objectives

- To understand algorithm design, probabilistic analysis and amortized analysis of algorithms To know Divide and Conquer, Dynamic programming and Greedy Algorithms techniques.
- To study Graph algorithms and Matrix operations.
- To apply multithreaded algorithms and linear programming and polynomial multiplication using Fast Fourier Transforms.
- To understand string matching, computational geometry, Notions of NP-Completeness and approximation algorithms

Pre-requisites

- Data Structures and Algorithms

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Design and analyze algorithms using divide and conquer	Analyze
CO2	Design and analyze algorithms using dynamic programming, greedy algorithms	Analyze
CO3	Understand sorting algorithms based on a comparison-network model of computation	Understand
CO4	Solve problems using multithreaded algorithms and linear programming approach	Apply
CO5	Apply suitable string matching algorithms and Computational geometry algorithms	Apply

Objectives

- To review image processing techniques for computer vision.
- To understand various features and recognition techniques.
- To learn about histogram and binary vision.
- Apply three-dimensional image analysis techniques.
- Study real world applications of computer vision algorithms

Pre-requisites

- Linear Algebra, Data Structures

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the low level processing of image and transformation techniques applied to images.	Understand
CO2	Describe the feature extraction, segmentation and object recognition methods.	Understand
CO3	Apply Histogram transform for detection of geometric shapes like line, ellipse and objects.	Apply
CO4	Illustrate 3D vision process and motion estimation techniques.	Apply
CO5	Apply vision techniques to real time applications.	Apply

61 CS L01	Object Oriented Programming	Category	L	T	P	Credit
		OE	2	0	2	3

Objectives

- To enable the students to learn how C++ supports object Oriented properties
- To create and use classes, objects, constructors and destructors for specific applications
- To learn how inheritance and virtual functions implement dynamic binding with polymorphism.
- To learn how to design and implement generic classes with C++ templates. To learn how to use exception handling in C++ programs

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the principles of object-oriented problem solving and programming	Understand
CO2	Implement the concept of classes and objects	Apply
CO3	Analyze the concept of reusability and compile time polymorphism	Analyze
CO4	Recognize the concept of dynamic memory allocation and runtime polymorphism.	Apply
CO5	Identify the uses of generic programming and exception handling	Apply

Mapping with Programme Outcomes

Introduction to C++ and Functions* Evolution of C++ - Concepts of OOP - Advantages of OOP, Basics of C++ - Structure of a C++ Program - C++ Declarations - Functions - Return by Reference - Default Arguments - const arguments - Inline Functions - Function Overloading.	[6]
Classes and Objects, Constructors and Destructors* Classes in C++ - Declaring Objects - Access Specifiers and their Scope - Defining Member Functions - Static Members - Array of Objects - Object as Function Arguments - Friend Function and Friend Classes, Constructors and Destructors - Characteristics - Parameterized Constructor - Overloading Constructor - Copy Constructor - Dynamic Initialization Constructor - Destructors	[6]
Inheritance, Compile Time Polymorphism and Type Conversion* Inheritance - Reusability - Types of Inheritance - Abstract Classes - Object as Class Member, Operator Overloading - Rules for Operator Overloading - The Keyword Operator - Unary and Binary Operators Overloading - Overloading using Friend Function - Type Conversion.	[6]
Pointers, Binding and Polymorphism* Pointers - Pointer to Class - Pointer to Object - void, wild and this Pointers - Pointer to Constant and Constant Pointers - Dynamic Memory Allocation - Dynamic Objects, Polymorphism - Binding in C++ - Pointer to Base and Derived Class Objects - Working with Virtual Functions - Pure Virtual Functions - Virtual Destructor.	[6]
Generic Programming with Templates, Exception Handling* Class Templates - Function Templates - Exception Handling: Principles of Exception Handling - try, throw and catch keywords - Re-throwing Exception - Specifying Exception.	[6]
Practical: 1. Construct a C++ program to manage large amount of statements using functions 2. Design a C++ program to implement the concept of class and objects 3. Develop a C++ program to initialize the class members using constructors and destroy the objects by using destructor 4. Design a C++ program for reusability using inheritance 5. Develop a C++ program to perform compile time polymorphism 6. Develop a C++ program to handle function overriding by using virtual function. 7. Develop a C++ program to allow functions and classes to operate with generic types using templates	[30]

60 CS L02	Angular JS	Category	L	T	P	Credit
		OE	2	0	2	3

Objectives

- To understand the design of single-page applications and how Angular JS facilitates their development
- To properly separate the model, view, and controller layers of your application and implement them using Angular JS
- To master Angular JS expressions, filters, and scopes
- To build Angular forms
- To implement Ajax in your Angular JS applications

Pre-requisites

Moderate knowledge of HTML, CSS, and JavaScript

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recall the concepts of HTML and JavaScript and express the features of AngularJS	Understand
CO2	Apply the concept of binding, template and various effects of elements and events	Apply
CO3	Apply the knowledge of scopes and controllers and various features of directives	Apply
CO4	Identify the several services and its works and Design the applications using AJAX	Apply
CO5	Comprehend the concepts of animation services and various actions of provision and injection services	Apply

Introduction* Introduction to AngularJS: HTML and Bootstrap CSS Primer - JavaScript Primer - Single Page Application –MVC Architecture – First Application of AngularJS.	[6]
Working with AngularJS* Binding – Template Directives – Elements – Events.	[6]
Working with Forms* Forms – Controllers – Scopes – Filters - Custom & Complex Directives.	[6]

Working with Services* Modules – Services – Global objects – Errors and Expressions – AJAX and Promises.	[6]
Advanced Services* REST – Views – Animation – Touch – Provision – Injection Real-world applications: NLP and Computer Vision.	[6]
Practical: 1. Build an Angular Application and serve it on a server. 2. Create an Angular application. Build a component inside the application in order to implement a simple login form. 3. Create an Angular application. Create a component to implement two-way binding which is a combination of both property binding and event binding. 4. Create an Angular application. Create a component to define the switch structural directive. The user will enter their choice of course based on which the switch directive will choose an appropriate output. 5. Write a program to show the responses while the Form is in the Submitted State and provide an Edit Button. 6. Create an Angular application. Create a component to inject a service into it. The component will also display the data provided by the service. The service will provide an array of employee details. 7. Create AngularJS application that allows users to maintain a collection of items. The application should display the current total number of items, and this count should automatically update as items are added or removed. Users should be able to add items to the collection and remove them as needed. Note: The default values for items may be included in the program. 8. Mini Project	[30]

60 CS L04	Data Mining	Category	L	T	P	Credit
		OE	2	0	2	3

Objectives

- To introduce basic concepts, tasks, methods, and techniques in data mining.
- To emphasis is on various data mining problems and their solutions.
- To understand the data mining process and issues, learn various data mining techniques
- To apply the techniques in solving data mining problems using data mining tools and systems
- To apply the clustering analysis and statistical approach

Pre-requisites

Basic understanding of Linear Algebra, Statistics and programming

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the basic concept and issues of data mining	Understand
CO2	Develop data warehouse and OLAP technology for data mining	Apply
CO3	Interpret the steps of data preprocessing and multidimensional association rules	Apply
CO4	Implement different classification techniques and association rule mining and its applications	Apply
CO5	Apply different clustering techniques and outlier analysis in real time applications	Apply

Introduction to Data Mining* Motivation and importance - What is Data Mining - Relational Databases - Data Warehouses - Transactional Databases -Advanced Database Systems - Data Mining Functionalities - Major issues in Data Mining.	[6]
Data Warehouse and OLAP Technology for Data Mining* What is a Data Warehouse - Multi-Dimensional Data Model - Data Warehouse Architecture – Data Warehouse Implementation - Development of Data Cube Technology - Data Warehousing to Data Mining.	[6]
Data Preprocessing and Data Mining Techniques* Data Preprocessing - Data Integration and Transformation - Data Reduction - Data Mining Primitives: Mining Association rule in large Databases - Association Rule Mining - Mining Single-dimensional Boolean Association rules from Transactional Databases - Mining Multi-dimensional Association rules from relational databases & Data Warehouses.	[6]
Classification and Prediction** Concepts and Issues regarding Classification and Prediction - Classification by Decision Tree Induction – Bayesian Classification - Classification by SVM - Classification by Random Forest - Classification by K nearest.	[6]
Cluster Analysis** What is Cluster Analysis? - Types of Data in Cluster Analysis - A Categorization of Major clustering methods – partitioning methods - Hierarchial methods - Density-Based Methods: DBSCAN - Outlier analysis.	[6]
Practical: 1. Implementation of exploratory data analysis 2. Implementation of preprocessing phase 3. Implementation of feature selection techniques 4. Implementation of Association rule mining 5. Implementation of Decision Tree Induction classification algorithm 6. Implementation of Bayesian Classification algorithm 7. Implementation of classification by SVM 8. Implementation of K nearest neighbor algorithm 9. Implementation of k-means clustering algorithm 10. Mini Project	[30]
Total Hours: (Lecture - 30; Practical - 30)	**60**

1. Ms. T. Subalaxmi -subalakxmi@ksrct.ac.in

60 CS L05	Artificial Intelligence	Category	L	T	P	Credit
		OE	2	0	2	3

Objectives

- Understand the fundamentals of problem solving
- Interpret the knowledge and reasoning in propositional logic and first order logic
- Gain knowledge on Planning and acting in the real world
- Learn to represent uncertain knowledge in solving AI problems and ML and deep learning algorithms and models
- Understand the different forms of learning and NLP, computer vision

Pre-requisites

Knowledge on statistics, linear algebra, matrix, calculus, probability, programming languages and data modelling

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the concepts of intelligent agents and problem solving aspects.	Understand
CO2	Apply the knowledge of propositional logic and FOL.	Apply
CO3	Understand the issues of planning problems.	Understand
CO4	Describe the Uncertainty, probabilistic reasoning, ML and deep learning algorithms and models.	Understand
CO5	Apply the learning methods for AI applications.	Apply

60 CS L06	Python Programming for Data Analytics	Category	L	T	P	Credit
		OE	2	0	2	3

Objectives

- To know the basic python concepts
- To understand the data wrangling and string manipulation
- To understand data aggregation, group operation and time series
- To learn web scrapping and CSS selectors
- To visualize the data using packages in python

Pre-requisites

Knowledge in basic mathematics, including algebra, calculus, and probability

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understanding the basic concepts of Python and data structures	Understand
CO2	Apply the concept of data wrangling and various ways of combining and merging datasets	Apply
CO3	Implement data aggregation and group operations and time series basics	Apply
CO4	Gain the knowledge for Preparing and pre-processing of data, data aggregation and grouping concepts	Apply
CO5	Apply web scraping and visualize the results of analytics effectively	Apply

Mapping with Programme Outcomes

Objectives

- To cram the fundamental element of the Java language
- To communicate classes over objects using methods
- To implement Packages and Interfaces
- To understand the concept of Collections
- To handle the run time errors using exception handling

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Know the need of Platform independency by acquiring knowledge in architecture, Language basics and implementing Character and String Class	Understand
CO2	Express the concept of classes, objects and communicate classes over objects using methods	Apply
CO3	Implement applications using Packages and Interfaces	Apply
CO4	Apply the collection classes to implement various data structures	Apply
CO5	Apply the concept of exception handling to handle abnormal conditions	Apply

60 CS L08	Linux and Shell Programming	Category	L	T	P	Credit
		OE	2	0	2	3

Objectives

- To know the basics of Linux OS, Linux environment and file system
- To understand and make effective use of the UNIX commands
- To learn and understand the use of process fundamentals in Linux
- To enhance the skills needed for the shell scripting and shell programming
- To develop the writing skills for system programming

Pre-requisites

Knowledge on basic programming constructs

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apprehend the basics of Linux environment and file system	Apply
CO2	Demonstrate and execute the files and directories commands to store in directories	Apply

CO3	Interpret the uses of commands for the processes in Linux	Apply
CO4	Analyze and implement the programs using shell programming	Analyze
CO5	Design and execute the filter commands using regular expressions to match a string of text	Apply

Introduction* Linux Introduction and File System - Basic Features, Advantages, Installing Requirement, Basic Architecture of Unix/Linux System, Kernel, Shell, Linux File System - Boot Block, Super Block, Inode Table, Data Blocks, How Linux Access Files, Storage Files, Linux Standard Directories.	[6]

Files and Directories Commands* Files and Directories Commands - cd, ls, cp, md, rm, mkdir, rmdir, pwd, file, more and less, Creating and Viewing Files Command - cat, File Comparisons Commands - cmp and comm, View files, Disk Related Commands, Checking Disk Free Spaces, System Startup and Shut - Down Process, init and Run Levels.	[6]
Essential Linux Commands* Understanding Shells, Processes in Linux - Process Fundamentals, Connecting Processes Commands - pipes and tee, Input/Output Redirecting, Manual Help, Background Processing, Managing Multiple Processes, Changing Process Priority with nice Command, Scheduling of Processes Commands - at, cron, batch, kill, ps, who and sleep, Printing Commands - find, sort, touch and file, File Related Commands - ws, sat, cut and dd, Mathematical Commands - bc, expr, factor and units, Creating and Editing Files Commands - vi and vim.	[6]
Shell Programming* Shell Programming - Basic of Shell Programming, Various Types of Shell Available in Linux, Comparisons Between Various Shells, Shell Programming in Bash - read Command, Conditional and Looping Statements, Case Statements, Parameter Passing and Arguments, Shell Variables, System Shell Variables, Shell Keywords, Creating Shell Programs.	[6]
Filtering Commands* Filtering Commands - pr, head, tail, cut, paste, sort, uniq and tr, Filter using Regular Expressions - grep, egrep, and sed; AWK Programming – Report Printing with AWK.	[6]
Practical: 1. Execution of files and directory commands to list all files or directories in the current directory. 2. Execution of scheduling of processes commands to schedule one-time jobs for a specific time and date 3. Implementation of Shell script to perform operations on files and strings. 4. Implementation of Shell programming concepts such as conditional and looping statements, and functions. 5. Implement and execute the C program in Linux. 6. Implementation of inter process communication between two unrelated processes. 7. Execution of filtering commands for filtering text for effective file operations. 8. Execution of filters and regular expressions commands grep, awk and sed that use all of its features.	[30]
Total Hours: (Lecture - 30; Practical - 30)	**60**
Text Book(s):	
1.	Behrouz A. Forouzan and Richard F. Gilberg, ” Unix and Shell Programming”, Cengage Learning, 2009.

4.	Christopher Vickery, “UNIX Shell Programmer's Interactive Workbook”, Pearson Education 2001.

Course Contents and Lecture Schedule

S. No.	Topics	No. of Hours
1	**Introduction**	
1.1	Linux Introduction and File System	1

1.2	Basic Features, Advantages	1
1.3	Installing Requirement, Basic Architecture of Unix/Linux System, Kernel, Shell, Linux File System	1
1.4	Boot Block, Super Block, Inode Table	1
1.5	Data Blocks, How Linux Access Files	1
1.6	Storage Files, Linux Standard Directories	1
2	**Files and Directories Commands**	
2.1	Files and Directories Commands - cd, ls, cp, md, rm, mkdir, rmdir, pwd, file, more and less	1
2.2	Creating and Viewing Files Command - cat,	1
2.3	File Comparisons Commands - cmp and comm	1
2.4	View files, Disk Related Commands	1
2.5	Checking Disk Free Spaces	1
2.6	System Startup and Shut - Down Process, init and Run Levels	1
3	**Essential Linux Commands**	
3.1	Understanding Shells	1
3.2	Processes in Linux - Process Fundamentals, Connecting Processes Commands	1
3.3	pipes and tee, Input/Output Redirecting, Manual Help	1
3.4	Background Processing, Managing Multiple Processes, Changing Process Priority with nice Command	1
3.5	Scheduling of Processes Commands - at, cron, batch, kill, ps, who and sleep, Printing Commands - find, sort, touch and file	1
3.6	File Related Commands - ws, sat, cut and dd, Mathematical Commands - bc, expr, factor and units, Creating and Editing Files Commands - vi and vim.	1
4	**Shell Programming**	
4.1	Shell Programming - Basic of Shell Programming	1
4.2	Various Types of Shell Available in Linux	1
4.3	Comparisons Between Various Shells	1
4.4	Shell Programming in Bash - read Command, Conditional and Looping Statements	1
4.5	Case Statements, Parameter Passing and Arguments	1
4.6	Shell Variables, System Shell Variables, Shell Keywords, Creating Shell Programs.	1
5	**Filtering Commands**	
5.1	Filtering Commands - pr, head, tail, cut, paste, sort, uniq and tr,	1
5.2	Filter using Regular Expressions - grep, egrep, and sed	1
5.3	AWK Programming	2
5.4	Report Printing with AWK	2
Practical:		
1.	Execution of files and directory commands to list all files or directories in the current directory.	4
2.	Execution of scheduling of processes commands to schedule one-time jobs for a specific time and date	4
3.	Implementation of Shell script to perform operations on files and strings.	4
4.	Implementation of Shell programming concepts such as conditional and looping statements, and functions.	4

5.	Implement and execute the C program in Linux.	4
6.	Implementation of inter process communication between two unrelated processes.	5
7.	Execution of filtering commands for filtering text for effective file operations.	5

		OE	2	0	2	3

Objectives

- To Understand Salesforce Architecture and Features
- To know the customization process in Salesforce
- To Understand the security model
- To Understand the Sales Cloud and Cloud modules
- To Understand the business process automation options, reports and dashboard

Pre-requisites

Knowledge on Software Engineering and computer programming skills

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply data modeling techniques to design and configure custom objects, fields, and relationships in Salesforce.	Apply
CO2	Apply advanced data management and customization techniques in Salesforce to enhance data organization and user experience	Apply
CO3	Evaluate and recommend appropriate Salesforce user setup and security settings to control access and permissions	Analyze
CO4	Develop advanced automation solutions using Process Builder and Visual Workflow to meet complex business requirements	Apply
CO5	Evaluate and recommend appropriate reporting and analytics strategies based on business requirements.	Evaluate

Mapping with Programme Outcomes

Salesforce Fundamentals Introduction to CRM- Overview of Salesforce platform and its Architecture, Salesforce editions and licenses - Salesforce user interface and Salesforce Lightning Experience Signing up Developer Edition , Apps Creation.- Standard Objects - Creating Custom Objects - Fields and data types	[6]
Salesforce Data Management and Customization Essentials* Creating Formula Fields, Data Validation - Validation rules. Working with Record Types and Page Layouts - Compact Layout- Lightning Record Pages - Path Settings. - List Views - Relationships and junction objects, Roll up Summary.	[6]
Security and Data Access* Organization Security Controls - User Setup and Security - User Creation- Security Model: Profile settings and permissions - Permission set- Salesforce Sharing model - Organization Wide Defaults (OWD) - Role Hierarchy- Sharing Rules- Manual Sharing - Sharing rules and public groups.	[6]
Business Process Automation Introduction to Flows: Types of Flow: Screen Flow- Record Trigrrered Flow- Scheduled Trigger Flow- Auto Launched Flow. **uses cases of Process Automation. Email Alerts and Field Updates - Approval Processes****.	[6]
Reports, Dashboards, and Analytics Creating or customizing a report - Summarizing data, report formats and filtering data, **Report Charts and Dashboard Components, Custom Report Types- Dashboard Creation and Modification ****.	[6]

Practical: 1. Create Objects, Fields and App 2. Explore Data Types 3. Create Field Relationships 4. Create Record Types(create), Page Layout (adding section, field property settings), Page Layout Assignment (assign page layout based on Record types) 5. Create Lightning Record Page, List View, Path Settings 6. Validation Rule 7. **Automation I*** a. Screen Flow b. Auto Launched Flow 8. **Automation II*** a. Record Trigger Flow b. Scheduled Flow c. Approval Process 9. **Security*** a. Profiles and Permission Set b. Org Wide Default c. Roles d. Sharing Rules e. Manual Sharing 10. **Reports and Dashboards **** a. Custom Report Types b. Dynamic Dashboards c. Report and Dashboards Sharing	[30]
Total Hours: (Lecture - 30; Practical - 30)	**60**

60 CS L11	Advanced Java Programming	Category	L	T	P	Credit
		OE	3	0	0	3

Objectives

- To become familiar with the advanced features of Java Language
- To discover how to write Java applications this can communicate with Relational Databases
- To understand the possible actions can be performed using JSP
- To develop Web Applications using Servlets / JSP
- To understand the Java 8 features

Pre-requisites

Basics of Java

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Interpret the java fundamentals and essentials of inheritance	Understand
CO2	Execute the various commands in RDBMS for data management	Apply
CO3	Apply the elements available in JSP for web page design	Apply
CO4	Explore the various JSP actions in web application development	Apply
CO5	Demonstrate Java 8 features	Apply

4.	Joseph Babcock, Raghav Bali,“Generative AI with Python and TensorFlow 2: Create images, text, and music with VAEs, GANs, LSTMs, Transformer models”, Packt Publishing Limited, 2021

***SDG 4 – Quality Education**

Course Contents and Lecture Schedule

S. No.	Topics	No. of Hours
1	**Introduction to Generative AI**	
1.1	Introduction to Artificial Intelligence	2
1.2	Machine Learning ,Difference between AI and Machine Learning	2
1.3	Deep Learning ,Deep Learning Model Types	2
1.4	Generative AI , Definition and scope of Generative AI ,Overview of generative models and their applications	1
1.5	Importance of Generative AI in various domains - Ethical considerations and challenges	1
1.6	Ethical considerations and challenges	1
2	**Generative AI: Language Models and LLM Architectures**	
2.1	Introduction to language models and their role in AI	3
2.2	Traditional approaches to language modeling	2
2.3	Deep learning-based language models and their advantages	2
2.4	Overview of popular LLM architectures: RNNs, LSTMs, and Transformers	2
3	**Understanding GPT (Generative Pre-trained Transformer)**	
3.1	Introduction to GPT and its significance	2
3.2	Pre-training and fine-tuning processes in GPT	2
3.3	Architecture and working of GPT models	3
3.4	Overview of GPT variants and their use cases	2
4	**ChatGPT: A Practical Application of GPT**	
4.1	Introduction to ChatGPT and its purpose	2
4.2	Training data and techniques for ChatGPT	3
4.3	Handling user queries and generating responses	2
4.4	Tips for improving ChatGPT's performance	2
5	**LangChain: Simplifying Development with Language Models**	
5.1	Introduction to LangChain and its objectives	2
5.2	Overview of the LangChain framework and its components	2
5.3	Streamlining application development using LangChain	2
5.4	Examples of applications built with LangChain	3
	Total	**45**

Rev. No.4/w.e.f. 01.06.2024
Passed in BoS Meeting held on 24/05/2024
Approved in Academic Council Meeting held on 25/05/2024 BoS Chairman

60 CS L13	Industrial Cloud Practices	Category	L	T	P	Credit
		OE	3	0	0	3

Objectives

- Equip participants with a comprehensive understanding of cloud computing principles, AWS services, and security fundamentals to confidently initiate their cloud journey
- Enable participants to grasp fundamental concepts of cloud-based compute resources, specifically focusing on Amazon Elastic Compute Cloud (Amazon EC2) and related services, including containerization and orchestration, fostering a solid foundation for practical application
- Provide a concise understanding of OSI model layers, foundational AWS networking and security services, and proactive vulnerability prevention within the AWS cloud environment
- Immerse learners in the realm of AWS storage solutions, covering the diverse offerings of block storage, object storage, and database services, while facilitating practical skills in hosting websites through Amazon S3
- Equip participants with a comprehensive understanding of AWS monitoring and cost management tools, specifically focusing on CloudTrail, CloudWatch, and effective cloud cost optimization strategies

Pre-requisites

- Programming Skill, Computer Networks, DBMS

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Possess a clear grasp of cloud computing concepts, the advantages of cloud adoption, the significance of AWS, and the foundational knowledge to utilize key AWS services effectively, while also demonstrating an understanding of cloud security essentials and initial steps to set up an AWS account and explore its service offerings.	Understand
CO2	Understand the benefits of Amazon EC2 and its various instance types, distinguishing among billing options, comprehending dynamic scaling through features like Amazon EC2 Auto Scaling and Elastic Load Balancing, grasping containerization history and technologies, explaining AWS container offerings like Fargate and Amazon EKS, and practically creating an EC2 instance using a t2.micro instance type.	Understand
CO3	Gain the knowledge of OSI model's structure, AWS networking services including subnetting, Virtual Private Cloud (VPC), security essentials like Security Groups and Network Access Control Lists (NACLs), AWS's comprehensive security measures and global infrastructure, strategies to prevent and detect vulnerabilities, and practical skills to create a VPC with multiple subnets across different availability zones.	Understand
CO4	Understand the Amazon Elastic Block Store (EBS) and its volume types, performance distinctions, and EC2 instance store applications. They will also be adept in comprehending Amazon S3's object storage services, storage classes, tiering options, data protection, AWS database options including RDBMS and NoSQL (DynamoDB), and will have the practical ability to create an S3 bucket and host a static website.	Understand

CO5	Understand CloudTrail operations, application scenarios, cost structures, and benefits. They will also gain an understanding of Amazon CloudWatch, CloudWatch Logs, and Log Insights, along with the ability to query logs from CloudWatch Logs. Additionally, participants will become proficient in cloud financial management, cost optimization considerations, and practical skills such as sending CloudTrail logs to CloudWatch, running Log Insights queries, and validating their results.	Understand

Overview of Cloud Computing*: Exploring the Concept of Cloud Computing, Understanding the Benefits of Cloud Adoption - Selecting AWS: Reasons and Advantages - Initiating Your Journey: Getting Started with Cloud and AWS - **Introduction to AWS:** Getting Started in the AWS Cloud, Understanding the AWS Global Infrastructure - **Core Services Part I:** Explore AWS Cloud Computing Fundamentals, Delve into AWS Cloud Storage Essentials, Gain Insight into AWS Cloud Database Services - **Core Services Part II:** Understand Networking in Core AWS Services, Explore Security Aspects in Core AWS Services, Grasp Pricing Essentials of Core AWS Services - **Security Basics:** Identity and Access Management**.** **Case Study: A Kick Start - Cloud Journey:** Open AWS Cloud Account - Review the Services Offerings from Compute, Storage, Database, Networking, Security.	[9]
Compute in the Cloud*: Benefits of Amazon Elastic Compute Cloud (Amazon EC2) at a basic level, Identify the different Amazon EC2 instance types, Differentiate between the various billing options for Amazon EC2, Benefits of Amazon EC2 Auto Scaling - **Dynamic Scaling and Hosting in the Cloud:** Summarize the benefits of Elastic Load Balancing, Give an example of the uses for Elastic Load Balancing, Summarize additional AWS compute options - **Learn Container Concepts:** History of Containerization, Container Technologies, Microservices and Management - **Learn AWS Container Offerings:** Explain the functioning of Fargate, What is Container Orchestration Environment, Learn the fundamentals of AWS EKS. **Case Study:** Create EC2 Instance - t2. Micro.	[9]
Introduction to OSI Layer*: OSI Model Overview, Physical and Data Link Layers, Network and Transport Layers Session, Presentation, and Application Layers - **AWS Networking Services Fundamentals:** Learn the concept of Subnetting, Amazon Virtual Private Cloud, Security Group, NACL - **AWS Security Services Fundamentals:** Cloud Security Measures, The Worldwide Infrastructure of AWS, Ensuring Data Center Security, Adhering to Compliance and Governance, Countering DDoS Attacks - **Prevention and Detection Vulenarabities in AWS Cloud:** Introduction to AWS Entry Points, Identity and Access Management in AWS, Exploring Detective Controls, Securing Infrastructure in Cloud, Ensuring Data Protection in AWS, Incident Response Strategies in Cloud Environment. **Case Study:** Create a VPC and 2 Subnets in Different Availability Zone.	[9]
AWS Block Storage*: Amazon EBS Block Storage Service, Amazon EBS Volume Types, Performance Differentiation of Amazon EBS Volume Types, Uses for Amazon EC2 Instance Stores, Retention Options for EBS Volumes - **AWS Object Storage Basic:** Amazon S3 Object Storage Services, Amazon S3 Storage Classes Distinguishing Amazon S3 Glacier Storage Classes, Storage Class Data Tiering Options, Data Protection for Amazon S3 - **AWS Database offerings – RDBMS:** Discerning Among AWS Database Options, Exploring Amazon Relational Database Service (RDS) Value, Unveiling Amazon Aurora Architecture, Achieving High Performance with Amazon Aurora - **AWS Database offerings - NoSQL – DynamoDB:** What is NoSQL and why we need it, Amazon DynamoDB Fundamentals, Terminology and Technology Concepts. **Case Study: Host Website in S3 Bucket:** Create a S3 Bucket and Host a Static Website.	[9]
Learn the CloudTrail*: CloudTrail Operation Understanding, Surveying CloudTrail Application Scenarios, CloudTrail Cost Structure Explanation, Recognizing CloudTrail Advantages - **Understand the Cloudwatch, Cloudwatch Logs and Log Insights:** Introduction to Amazon CloudWatch, Log files from Amazon Elastic Compute Cloud (Amazon EC2) instances, AWS CloudTrail, Query the logs from Cloudwatch Logs - **Cloud Cost Management:** Understand Cloud Financial Management, Six capabilities to have to be successful in your Cloud Financial Management journey - **Cost Optimization:** Cloud Usage with Cost Consideration, Enhance Cloud Utilization, Purchase Choices Based on Commitment. **Case Study: Explore CloudTrail and CloudWatch:** Send the Logs from CloudTrail to Cloudwatch, Run LogInsights query and Validate it.	[9]

Objectives

- To learn the fundamental element of the Java language
- To understand the concept of Array and Strings
- To apply the knowledge of Collections and Generics
- To learn about Exception and Threads
- To enhance the knowledge in Java Database Connectivity

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate the concept of classes, objects and communicate classes over objects using methods	Understand
CO2	Apply the concepts of Arrays and String	Apply
CO3	Apply the Collections and Generics	Apply
CO4	Implement the concept of Exception Handling and Threads	Apply
CO5	Develop an application to enrich the knowledge in database Connectivity	Apply

		PE	3	0	0	3

Objectives

- To understand the communication between web browsers and servers
- To enhance the knowledge of how hierarchy of objects are used in HTML
- To design a web page by utilizing CSS components
- To Incorporate JavaScript variables, operators and functions in web pages
- To design of single-page applications and how Angular JS facilitates their development

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand and create interactive web pages	Understand

CO2	Analyze different types of HTML tags, their functionality and attributes and learn the basics of web services	Analyse
CO3	Implement CSS to control the appearance of web pages and denote the background elements and media types	Apply
CO4	Interpret JavaScript variables, operators and functions in web pages and manipulate HTML forms to validate user inputs	Apply
CO5	Implement the features of AngularJS with the various effects of elements and events	Apply

Mr. K. Dineshkumar – dineshkumark@ksrct.ac.in

60 CS M03	Database Technology	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To familiarize the students with various data models and query language
- To Gain knowledge on data storage and indexing concepts
- To expose the fundamentals of transaction processing and recovery concepts
- To make the students aware of the various current trends in database system
- To know the current trends of various databases

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the knowledge of data base systems and various data models	Understand
CO2	Implement the concept of Data Definition Language and Data Manipulation Language and apply the various Normal Forms in database design	Apply
CO3	Understand the knowledge of secondary storage device and apply the concepts of hashing, B Tree, B+ Tree in indexing to retrieve the data	Apply
CO4	Apply the various concurrency control techniques in database transactions and recovery techniques	Apply
CO5	Classify the recent databases such and Express the knowledge of data warehousing and data mining	Understand

Mapping with Programme Outcomes

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	**Introduction and Conceptual Modeling**	
1.1	Introduction Database systems	1
1.2	DBMS Applications – Purpose of DBMS	2
1.3	Views of Data - Database System Architecture	2
1.4	Data Storage and Querying	1
1.5	DB Users and Administrators	1
1.6	Data Models – ER model	1
1.7	Relational Model – Relational Algebra and Calculus	1

2.0	**Relational Model**	
2.1	Introduction to SQL	2
2.2	Intermediate SQL	1
2.3	Advanced SQL– Triggers	2
2.4	Functions and Procedures	1
2.5	Embedded SQL	1
2.6	Normalization for Relational Databases (up to 5NF).	2
3.0	**Data Storage and Indexing Concepts**	
3.1	Record storage and Primary file organization	1
3.2	RAID – Operations on Files	2
3.3	Heap File- Sorted Files	2
3.4	Hashing Techniques	1
3.5	Index Structure for files	1
3.6	Different types of Indexes	1
3.7	B-Tree - B+Tree.	1
4.0	**Transaction Management**	
4.1	Transaction – Transaction Concepts	1
4.2	Transaction Model- Desirable properties of Transaction	1
4.3	Schedule and Recoverability	1
4.4	Serializability – Concurrency Control	2
4.5	Types of Locks- Two Phase locking	1
4.6	Time stamp based concurrency control	1
4.7	Recovery Techniques – Concepts	1
4.8	Immediate Update- Deferred Update.	1
5.0	**Current Trends**	
5.1	Object Oriented Databases	1
5.2	Distributed databases	1
5.3	Homogenous and Heterogeneous	1
5.4	Distributed data Storage	1
5.5	Distributed Transaction	1
5.6	Commit Protocols - Data Mining	2
5.7	Data Mining Applications –Data Warehousing.	2

Course Designer(s)

1. Dr. A. Gananabaskaran - gnanabaskarana@ksrct.ac.in

60 CS M04	Node JS	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To learn the runtime web development for easily building fast and scalable network applications
- To enhance the knowledge in event-driven and real-time applications that run across distributed devices
- To learn the streams and file systems in Node Js

- To acquire the knowledge on web development and database connectivity
- To Acquire the knowledge of various file operations using file systems

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the fundamental structure of Node.js platform	Understand
CO2	Apply the concepts of NPM	Apply
CO3	Implement the concepts of streams and file systems	Apply
CO4	Gain the knowledge of web content using node.js	Apply
CO5	Annotate the various file operations using file systems	Understand

Mapping with Programme Outcomes

Introduction to Node.js The environment of Node.js - Benefits and Features - Install Node.js on Windows - Console and Web programs - Node.js REPL Commands.	[8]
NPM Node.js Package Manager - Installing modules using NPM - Node.js Command Line Options - Node.js Errors- Node.js DNS - Node.js Net.	[9]

Streams and File Systems Node.js Creating Buffers - Node.js Streams - Node.js Piping Streams - Node.js Chaining Streams - Node.js File Systems.	[11]
Web Development Node.js Web Module - Node.js html form handling - Node.js Database Connectivity.	[9]
File System Fs.readFile - Writing a File - Writing a file asynchronously - Opening a file - Deleting a file - Other IO Operations. **Hands on:** 1. Read the text file and print the content using file system module. 2. Design the employee web page using html. Using node js program call the HTML file which display the output in browser. 3. Sample buffer program for different operations • Creating buffer • Concatenating the buffer • Copying buffer • Buffer length • Compare • Slice • Converting buffer to JSON file 4. Read the data from one text file and write the content to another text file using readerStream, writerStream. 5. Sample Node.js program using pipe and chaining using streams. 6. Node.js program for various file operation using File System • Reading the file • Writing the file • Truncating the file • Deleting the file 7. Design the sample student registration form using html and call these html file using node.js, which will display output in browser. 8. Mini Project with Node.js database connectivity.	[8]

Course Designer(s)

1. Ms. J. Mythili – mythili@ksrct.ac.in

60 CS M05	React JS	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To understand the fundamentals of web programming and client side scripting.
- To learn server side development using NodeJS.
- To understand API development with Express Framework.
- To understand and architect databases using NoSQL and SQL databases.
- To learn the advanced client side scripting and ReactJS framework

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Write client side scripting HTML, CSS and JS.	Remember
CO2	Implement and architect the server side of the web application.	Apply
CO3	Implement Web Application using NodeJS.	Apply

CO4	Architect NoSQL databases with MongoDB.	Apply
CO5	Implement a full-stack Single Page Application using React, NodeJS and MongoDB and deploy on Cloud.	Apply

Introduction to React What is React? - Setting up the development environment: Installing Node.js and npm, Creating a React app using Create React App - Understanding JSX - Components and Props: Functional vs. Class Components, Passing props to components. **State and Lifecycle** State in React: Using the useState Hook, Class component state - Lifecycle Methods: useEffect Hook, ComponentDidMount, ComponentDidUpdate, ComponentWillUnmount.	[9]
Event Handling and Conditional Rendering Handling Events: Adding event listeners in React, Synthetic events - Conditional Rendering: if/else statements, Ternary operators, Short-circuit evaluation. **Lists and Keys** Rendering Lists: Using the map() function, Keys in React – Forms: Controlled vs. uncontrolled components, Handling form submissions.	[9]

Advanced Topics in React Context API: Creating context, Consuming context - React Router: Setting up React Router, Route parameters and navigation. **State Management** Redux: Setting up Redux, Actions, reducers, and the store - Recoil and other state management libraries.	[9]
Hooks Custom Hooks: Creating and using custom hooks - useReducer and useContext **Performance Optimization** Memoization: useMemo and useCallback - React.memo: PureComponent.	[9]
Testing React Applications Unit Testing with Jest, Testing Components with React Testing Library, End-to-End Testing with Cypress. **Deployment and Best Practices** Building and Deploying React Apps: Using Vercel, Netlify, or other platforms. **Best Practices** Hacker Rank - Leet Code.	[9]

Objectives

- To become familiar with the advanced features of Java Language
- To discover how to write Web applications
- To understand the possible function can be performed using JavaScript
- To develop Web Applications using Servlets
- To understand the process of deploying EJB in popular servers like Tomcat

Pre-requisites

Basics of Java

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Interpret the java fundamentals and essentials of inheritance	Understand
CO2	Execute the various tags in HTML and CSS	Apply
CO3	Apply the events available in JavaScript for web page design	Apply
CO4	Explore the various Servlet actions in web application development	Apply
CO5	Demonstrate the process of developing EJB	Apply
