

# **K. S. Rangasamy College of Technology**

**(Autonomous)**

**CURRICULUM AND SYLLABI**

**of**

**B.E. Mechatronics Engineering**

**(For the batch admitted in 2023 - 2024)**

**R 2022**

**Courses Accredited by NBA, Accredited by NAAC with 'A++' Grade,  
Approved by AICTE, Affiliated to Anna University, Chennai.**

**KSR Kalvi Nagar, Tiruchengode – 637 215.  
Namakkal District, Tamil Nadu, India.**

## DEPARTMENT OF MECHATRONICS ENGINEERING

### VISION

To become a pioneer in producing competent Mechatronics Engineers, researchers and entrepreneurs through quality education

### MISSION

- To produce competent and ethically bound Mechatronics professionals by imparting the technical knowledge and skills through quality teaching learning process
- To build an environment that is favourable for employability skills through collaborations with academia and industry
- To groom the students to focus on higher studies, research, entrepreneurship and be committed to the societal welfare and quality of life by creating an effective ecosystem

### PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- PEO1: Core competencies: Our graduates apply engineering knowledge to solve problems in Mechatronics and relevant fields.
- PEO2: Employability: Our graduates demonstrate technical and professional skills to ethically address the industrial and societal needs.
- PEO3: Higher Studies, Research and Entrepreneurship: Our graduates pursue higher studies, research and entrepreneurship in diverse fields.

### PROGRAM OUTCOMES (POs)

- PO1: Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2: Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3: Design /development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4: Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5: Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations
- PO6: The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7: Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9: Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10: Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- PO11: Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- PO12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

### PROGRAMME SPECIFIC OUTCOMES (PSOs):

Engineering Graduates will be able to:

- PSO1: Specify, design and develop automation systems for the given engineering applications.
- PSO2: Design and evaluate mechatronic systems using the state-of-the-art equipment and software tools.

## MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES (PEOs) WITH PROGRAMME OUTCOMES (POs)

The B.E. Mechatronics Engineering Programme outcomes leading to the achievement of the objectives are summarized in the following Table.

Programme Educational Objectives	Programme Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
PEO 1	3	1	3	2	2	1	1	1	2	2	3	1
PEO 2	3	3	3	2	2	1	1	1	2	2	3	1
PEO 3	3	2	3	2	2	1	1	1	3	2	3	1

Contributions: 1- low, 2- medium, 3- high

### MAPPING: MECHATRONICS ENGINEERING (UG)

# General Elective- Extra credits is offered

HS – HUMANITIES AND SOCIAL SCIENCES

BS – BASIC SCIENCE

ES – ENGINEERING SCIENCES

PC – PROFESSIONAL CORE

PE – PROFESSIONAL ELECTIVES

OE – OPEN ELECTIVES

CG – CAREER GUIDANCE COURSES

MY – MANDATORY COURSES

AC – AUDIT COURSES

GE – GENERAL

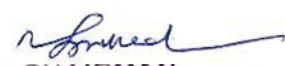

ELECTIVE

Open Electives are courses offered by different departments that do not have any prerequisites and could be of interest to students of any branch

### Objectives

- To help learners improve their vocabulary and to enable them to use words appropriately in different academic and professional contexts
- To help learners develop strategies that could be adopted while reading texts
- To help learners acquire the ability to speak effectively in English in real life and career related situations
- To equip students with effective speaking and listening skills in English
- To facilitate learners to enhance their writing skills with coherence and appropriate format effectively

### Pre-requisites

- Basic knowledge of reading and writing in English

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and interpret complex academic texts	Understand
CO2	Recall the denotative and connotative meanings of technical texts	Remember
CO3	Interpret definitions, descriptions, narrations, and essays on various topics	Understand
CO4	Express fluently and accurately in formal and informal communicative contexts	Understand
CO5	Summarize their opinions effectively in both oral and written medium of communication	Understand

### Mapping with Programme Outcomes

### Objectives

- To familiarize the basic concepts in Cayley-Hamilton theorem and orthogonal transformation
- To get exposed to the fundamentals of differentiation
- To acquire skills to understand the concepts involved in Jacobians and maxima and minima
- To solve various linear differential equations and method of variation of parameters
- To learn various techniques and methods in solving definite and indefinite integrals

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the concepts of Cayley-hamilton theorem and orthogonal transformation to the matrix	Apply
CO2	Apply the concepts of differentiation in solving various Engineering problems	Apply
CO3	Obtain Jacobians and maxima and minima of functions of two variables	Apply
CO4	Employ various methods in solving differential equations	Apply
CO5	Apply different techniques to evaluate definite and indefinite integrals	Apply

### Mapping with Programme Outcomes

Common to MECH, ECE, EEE, CSE, MCT, CIVIL, IT, TXT, BT, FT, AI&DS, AI&ML								
60 MA 001 - Matrices and Calculus								
Semester	Hours/Week			Total Hours	Credit	Maximum Marks		
	L	T	P			C	CA	ES
I	3	1	0	60	4	40	60	100
<b>Matrices</b> Characteristic equation - Eigen values and Eigen vectors of a real matrix - Properties of Eigen values and Eigen vectors - Cayley-Hamilton theorem - Orthogonal transformation of a symmetric matrix to diagonal form - Reduction of quadratic form to canonical form by an Orthogonal transformation - Nature of quadratic form - Applications: Stretching of an elastic membrane <b>Hands-on: Matrix Operations - Addition, Multiplication, Transpose, Inverse and Rank</b>								[9]
<b>Differentiation</b> Representation of functions - Limit of a function - Continuity - Derivatives - Differentiation rules (sum, product, quotient, chain rules) - Successive Differentiation - Leibnitz's theorem - <b>Applications: Maxima and Minima of functions of one variable*</b> <b>Hands-on: Determine the solution of system of linear equations</b>								[9]
<b>Functions of Several Variables</b> Partial differentiation - Homogeneous functions and Euler's theorem - Jacobians - Taylor's series for functions of two variables - <b>Applications: Maxima and minima of functions of two variables - Constrained maxima and minima: Lagrange's Method of Undetermined Multipliers*</b> <b>Hands-on: Compute the Eigen values and Eigen vectors of a Matrix</b>								[9]
<b>Differential Equations</b> Linear differential equations of second and higher order with constant coefficients - R.H.S is of the form $e^{ax}$ , $\sin \alpha x$ , $\cos \alpha x$ , $x^n$ , $n > 0$ - Differential equations with variable coefficients: Cauchy's and Legendre's form of linear equations - Method of variation of parameters <b>Hands-on: Solve the first and second order ordinary differential equations</b>								[9]
<b>Integration</b> Definite and Indefinite integrals - Substitution rule - Techniques of Integration: Integration by parts, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals - Applications: Hydrostatic force and pressure, moments and centres of mass <b>Hands-on: Compute the Maxima and Minima of a function of one variable</b>								[9]
<b>Total Hours: 45 + 5 (Hands-on) + 10 (Tutorial)</b>								<b>60</b>

60 CS 001	C Programming	Category	L	T	P	Credit
		ES	3	0	0	3

### Objectives

- To learn most fundamental element of the C language and to examine the execution of branching, looping statements,
- To examine the concepts of arrays, its characteristics and types and strings.
- To understand the concept of functions, pointers and the techniques of putting them to use
- To apply the knowledge of structures and unions to solve basic problems in C language
- To enhance the knowledge in file handling functions for storage and retrieval of data

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Construct the fundamental building blocks of structured Programming in C	Apply
CO2	Implement the different operations on arrays and strings	Apply
CO3	Develop simple real world applications utilizing functions, recursion and pointers.	Apply
CO4	Demonstrate the concepts of structures ,unions ,user defined data types and preprocessor	Apply
CO5	Interpret the file concepts using proper standard library functions for a given application	Apply

### Objectives

- To familiarize the basic concept on electrical circuits and its various parameters
- To facilitate the various types of electrical machines and their uses
- To gain knowledge on Electrical safety
- To provide exposure on the functions of various semiconductor devices
- To familiarize the use of various measuring instruments

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the basic laws of electric circuits to calculate the unknown quantities.	Apply
CO2	Acquire knowledge on different electrical machines and select suitable machines for industrial applications.	Apply
CO3	Express the significance of various components of low voltage electrical installations and create awareness on electrical safety.	Understand
CO4	Demonstrate the operation and characteristics of various semiconductor devices.	Understand
CO5	Interpret the operating principles of measuring instruments and choose suitable instrument for measuring the parameters.	Understand

### Objectives

- To sketch the conic sections.
- To create the visual representation of points, lines, and planes.
- To illustrate the orthographic projection of three-dimensional objects.
- To depict the cross-sections of objects and the unfolding of surfaces.
- To generate the Isometric and Orthographic Projections through drawing

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Construct the conical sectional curves	Apply
CO2	Construct the projection of points, lines and planes	Apply
CO3	Develop projection of solids	Apply
CO4	Solve problems in sections of solids and development of surfaces	Apply
CO5	Apply the concepts of isometric and Orthographic Projections in engineering practice	Apply

		BS	2	0	0	0

### Objectives

- To understand the impact climate changes in ecosystem and biodiversity.
- To analyze the impacts of pollution, control and legislation.
- To explain the importance of sustainable development practices.
- To explore the significance of organic farming.
- To identify the Geo-spatial tools for resource management.

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Interpret the impacts of pollution on climate change	Understand
CO2	Categorize the wastes and its management.	Analyze
CO3	Identify the different types of sustainable practices	Apply
CO4	Classify the organic farming techniques	Apply
CO5	Categorize the Geo-spatial tools for resource management	Analyze

60 CS 0P1	C Programming Laboratory	Category	L	T	P	Credit
		ES	0	0	4	2

### Objectives

- To enable the students to apply the concepts of C to solve simple problems
- To use selection and iterative statements in C programs
- To apply the knowledge of library functions in C programming
- To implement the concepts of arrays, functions, structures and pointers in C
- To implement the file handling operations through C

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Implement computational problems using selection and iterative statements	Apply
CO2	Demonstrate C program to manage collection of related data.	Apply
CO3	Design and Implement different ways of passing arguments to functions, Recursion and implement pointers concepts.	Apply
CO4	Develop a C program to manage collection of different data using structures, Union, user-defined data types and preprocessor directives.	Apply
CO5	Demonstrate C program to store and retrieve data using file concepts.	Apply

### Mapping with Programme Outcomes

		ES	0	0	4	2

### Objectives

- To acquire knowledge in conducting basic electrical laws
- To gain knowledge on three phase power measurement
- To train the students in conducting load tests on electrical machines
- To gain practical experience in characterizing electronic devices
- To gain practical experience in using measuring devices

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Practice experimental methods to verify the Ohm's and Kirchhoff's Laws.	Apply
CO2	Perform the three-phase power measurement.	Apply
CO3	Demonstrate the load characteristics of electrical machines.	Apply
CO4	Describe the characteristics of basic electronic devices.	Understand
CO5	Use the appropriate measuring devices to measure the electrical parameters.	Apply

\* CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

\*\* End Semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory courses and 40 marks for Practical End Semester Examination.

60 EN 002	Professional English II	Category	L	T	P	Credit
		HS	1	0	2	2

### Objectives

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts.
- To help learners develop strategies that could be adopted while reading texts.
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations.
- Improve listening, observational skills, and problem-solving capabilities
- Develop message generating and delivery skills.

### Pre-requisites

- Basic knowledge of reading and writing in English and should have completed Professional English I.

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and contrast products and ideas in technical texts.	Understand
CO2	Illustrate cause and effects in events, industrial processes through technical texts	Understand
CO3	Infer problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Understand
CO4	Relate events and the processes of technical and industrial nature.	Remember
CO5	Demonstrate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Understand

		BS	3	1	0	4

### Objectives

- To acquire the knowledge about multiple integrals.
- To familiarize the basic concepts of vector calculus.
- To get exposed to the fundamentals of analytic functions.
- To solve various types of partial differential equations.
- To familiarize the concepts of Laplace transform.

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Interpret the basic concepts of double and triple integrals.	Apply
CO2	Interpret the basic concepts of vector calculus.	Apply
CO3	Construct the analytic functions and evaluate complex integrals.	Apply
CO4	Compute the solution of partial differential equations using different methods.	Apply
CO5	Apply Laplace transform techniques for solving differential equations.	Apply

		PC	3	1	0	4

### Objectives

- To learn the concept of forces, equilibrium conditions and free body diagram.
- To find the centroid, moment of inertia of various planes and sections.
- To acquire knowledge on motions and impact of bodies.
- To learn the principle of frictional forces and kinematics of rigid bodies
- To understand the fundamentals of robot kinematics

### Pre-requisites

- Engineering Physics

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Resolve the force by applying the equilibrium conditions and represent the forces in vector components.	Apply
CO2	Identify the centroid and moment of inertia of various planes and sections.	Apply
CO3	Study the dynamics of a particle by applying the equations of motions and impact of bodies.	Apply
CO4	Apply the knowledge of friction and kinematics in rigid bodies	Apply
CO5	Apply the fundamentals robot kinematics	Apply

1.3	Equilibrium of a Particle, Forces in Space	1
1.4	Equilibrium of a Particle in Space	1
1.5	Equivalent Systems of Forces	1
1.6	Free Body Diagram	1
1.7	Vectorial Representation of Moments and Couples	1
1.8	Varignon's Theorem-Equilibrium of Rigid Bodies in Two Dimensions	1
1.9	Tutorial	3
<b>2.0</b>	<b>Properties of Surfaces and Solids</b>	
2.1	Determination of Areas and Volumes-Centroid,	1
2.2	Moment of Inertia of Plane Area - Rectangle, Circle, Triangle Using Integration Method	2
2.3	Moment of Inertia of Plane Area - T Section, I Section, Angle Section, Hollow Section Using Standard Formula	2
2.4	Parallel Axis Theorem and Perpendicular Axis Theorem	1
2.5	Polar Moment of Inertia	1
2.6	Mass Moment of Inertia of Thin Rectangular Section	2
2.7	Tutorial	3
<b>3.0</b>	<b>Dynamics of Particles</b>	
3.1	Displacement, Velocity, Acceleration and Their Relationship	2
3.2	Relative Motion, Projectile Motion in Horizontal Plane	2
3.3	Newton's Law, Work Energy Equation	1
3.4	Impulse and Momentum	1
3.5	Impact of Elastic Bodies-Direct Impact	1
3.6	Impact of Elastic Bodies-Indirect Impact	1
3.7	Impact of Elastic Bodies-Direct Impact on a Fixed Plane	1
3.8	Tutorial	3
<b>4.0</b>	<b>Friction and Kinematics of Rigid Bodies</b>	
4.1	Surface Friction, Laws of Dry Friction	1
4.2	Sliding Friction – Ladder Friction	2
4.3	Wedge Friction	1
4.4	Belt Friction	2
4.5	Plane Rigid Bodies	1
4.6	Equations of Motion of Rotation, Velocity and Acceleration	2
4.7	Tutorial	3
<b>5.0</b>	<b>Kinematics of Robots</b>	
5.1	Introduction, Laws of Robots	1
5.2	Classifications-Subsystems	1
5.3	Elements of Motion Subsystem	1
5.4	Classification by Coordinate System and Control Method	1
5.5	Degree of Freedom, Four bar Chain Mechanism	2
5.6	Translation and Rotation of Rigid Bodies	2
5.7	Introduction to General Plane Motion	1
5.8	Tutorial	3

60 PH 001	Engineering Physics	Category	L	T	P	Credit
		BS	3	0	0	3

### Objectives

- To make the students to understand the basics of crystallography, crystal growth and its importance in studying materials properties.
- To establish a sound, grasp of knowledge on optics, laser and its applications
- To understand the dielectric properties of materials including magnetic materials, applications of dielectrics and magnetic materials
- To introduce advanced materials and nano technology for various modern engineering applications
- To instil the knowledge on next generation energy device and its applications

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Realize the basics of crystallography and its importance for varied materials properties	Remember
CO2	Acquire the fundamentals of optics, laser technology and its applications in various fields	Apply
CO3	Appraise the knowledge on magnetic properties of materials and their applications in sensors	Understand
CO4	Infer the properties of advanced materials and nano materials for potential applications	Understand
CO5	Recognize the next generation energy device and its applications in electric vehicles	Understand

		BS	3	0	0	3

### Objectives

- To help the learners to analyse the hardness of water and its removal
- To study the concepts of electrochemistry and corrosion control.
- To learn about the types of engineering materials.
- To explain the characteristics and application of chemical sensors
- To study the types of batteries and fuel cells.

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Identify the types of hardness of water and its removal.	Apply
CO2	Interpret the applications of electrochemistry, corrosion and its control	Apply
CO3	Summarize the application of protective coatings.	Understand
CO4	Categorize the types of sensors for various applications.	Apply
CO5	Illustrate the significance of the types of batteries and fuel cells.	Understand

		BS	0	0	4	2

### Objectives

- To infer the practical knowledge by applying the experimental methods to correlate with the Physics theory.
- To demonstrate an ability to make physical measurements and understand the limits of precision in measurements
- To analyze the behavior and characteristics of various materials for its optimum utilization
- Test the knowledge of theoretical concepts and develop the experimental skills of the learners.
- To facilitate data interpretation and expose the learners to various industrial and environmental applications.

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the concept of stress, strain and elastic limit for a given sample to find their properties	Apply
CO2	Recognize the concept of quantum Physics & magnetic properties by experimental verification	Apply
CO3	Recall the knowledge of properties of light and fiber optic cable	Apply
CO4	Apply the concepts of chemistry and develop analytical skills for applications in engineering to determine the rate of corrosion	Apply
CO5	Analyze the pH, electrode potential, conductance sample solutions	Analyze

### Objectives

- To provide hands-on training on Carpentry, Sheet metal, Fitting and Welding.
- To offer real time activity on plumbing connections and power tools in domestic applications.
- To provide hands-on training on CNC Wood Router and 3D Printing
- To provide hands-on training on household wiring and dismantling and assembling the home appliances.
- To offer real time activity on embedded programming using Arduino

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Make a wooden model using carpentry, Sheet metal Process.	Apply
CO2	Mate a model using filing and joining using MS Plate and repair & maintenances of water lines, power tools for home applications.	Apply
CO3	Cultivate the skills necessary for developing innovative and desirable products, including the ability to integrate user needs, market trends and technological advancement into the design process.	Apply
CO4	Trouble shoot the electrical and electronic circuits, electrical appliances and facilitate the house wiring.	Apply
CO5	Acquire practical knowledge on embedded programming using Arduino.	Apply

## Syllabus

### **Performs of Power Tools\***

Drilling in Different Walls and Materials Fitting of Hand Shower Mount, Shirt Hanger, Towel Hanger and Pipe with Clamps.

### **Carpentry Process\***

Design and Development of Wooden Model using the Carpentry Process T / Cross Joint / Different Joints

### **Sheet Metal and Filling Process\***

Design and Development of Metal Model - Make a Tray Components using Sheet Metal Process and Mating of Square joint in MS Plate Using the Filling Process

### **Welding Process\***

Fabrication of Models with MS Plate Using Arc Welding- Lap Joint, Butt Joint, T Joint

### **Plumbing Process\***

Repair and Maintenances of Pipe Fitting for Home Applications Study of Plumbing Tools, Assembly of G.I. Pipes/ PVC and Pipe Fittings, Cutting of Threads in G.I. Pipes by Thread Cutting Dies.

### **Residential house wiring\***

Design and Excursion of Residential House Wiring with and Without UPS- 1 BHK - 2 BHK. Design and Fabrication of Domestic LED Lamps - Circuit Designing (Calculation of Components)

### **Electronic Circuit wiring\***

PCB Fabrication — Soldering - Assembling of Audio Amplifiers- Connecting USB/Bluetooth MP3 Player Board - Connecting Volume Controllers - Connecting Bass & Treble Filter Boards - Connecting Surround and Sub-Woofer Filter Board

### **Assembling and dismantling of Electronics Machines\***

Iron Box, Induction Stove, Water Heater, Mixer, Table Fan, Ceiling Fan

### **Study Exercises**

Demonstration of Centre Lathe Operations Facing, Turning, and Drilling and its Components.

Assemble and dismantle of Vacuum Cleaner / Refrigerator and its Components

### **Computer Hardware Study Exercises**

Identify Internal Components of Computer - Assemble and Dismantle Desktop Computer Systems

\*SDG 9 – Industry Innovation and Infrastructure

### Objectives

- To help learners improve their vocabulary and to enable them to use words appropriately in different academic and professional contexts
- To help learners develop strategies that could be adopted while reading texts
- To help learners acquire the ability to speak effectively in English in real life and career related situations
- To equip students with effective speaking and listening skills in English
- To facilitate learners to enhance their writing skills with coherence and appropriate format effectively

### Pre-requisites

- Basic knowledge of reading and writing in English.

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Listen and comprehend complex academic texts	Understand
CO2	Read and infer the denotative and connotative meanings of technical texts	Analyze
CO3	Write definitions, descriptions, narrations, and essays on various topics	Apply
CO4	Speak fluently and accurately in formal and informal communicative contexts	Apply
CO5	Appraise the verbal ability skills in the career development and professional contexts	Analyze

### Objectives

- To familiarize the basic concepts of probability and random variables.
- To familiarize various distributions and testing of hypothesis.
- To learn basics of descriptive statistics.
- To get exposed to various techniques to solve equations numerically.
- To know the concepts of interpolation and numerical integration

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Interpret the basic concepts of probability and random variables.	Apply
CO2	Apply Student's t test, F test and Chi-square test for testing the statistical hypothesis.	Apply
CO3	Compute measures of central tendency, measures of dispersion and correlation coefficient.	Apply
CO4	Employ various iteration techniques for solving algebraic, transcendental and system of linear equations.	Apply
CO5	Apply different techniques to find the intermediate values and to evaluate single definite integrals.	Apply

<b>Probability and Random Variables</b> Axioms of probability - Conditional probability - Baye's theorem - Random variable - Expectation - Probability mass function - Probability density function - Moment generating function. <b>Hands - on:</b> Calculate expectation for discrete random variable.								[9]
<b>Standard Distributions and Testing of Hypothesis*</b> Binomial distribution - Poisson distribution – Type I and Type II errors - Test of significance of small samples - Student's 't' test - Single mean - Difference of means - F-test - Chi-square test - Goodness of fit - Independence of attributes. <b>Hands - on:</b> Apply Student's t - test, F- test and Chi-square test to real dataset.								[9]
<b>Empirical Statistics</b> <b>Measures of central tendency*:</b> Mean, Median, Mode - Measures of dispersion: Range - Quartile deviation - Standard deviation - Measures of skewness: Bowley's co-efficient of skewness - Pearson's co-efficient of skewness- Correlation. <b>Hands - on:</b> Calculate mean, median, mode and range for discrete frequency distribution.								[9]
<b>Solutions of Equations and Eigen Value Problem</b> Algebraic and Transcendental equations - Newton Raphson method – Regula Falsi method - Gauss elimination method - Gauss Jordan method - Iterative methods: Gauss Jacobi method - Gauss Seidel method - Eigen value of a matrix by Power method. <b>Hands - on:</b> Visualize the iterative methods for solving linear system of equations								[9]
<b>Interpolation and Numerical Integration</b> <b>Lagrange's and Newton's divided difference interpolation (unequal intervals)** - Newton's forward and backward interpolation (equal intervals)** - Two point and three point Gaussian quadrature - Trapezoidal, Simpson's 1/3 and 3/8 rule (single integral).</b> <b>Hands - on:</b> Numerical integration by Trapezoidal and Simpson's rules								[9]
<b>Total Hours: (Lecture - 45; Tutorial - 15)</b>								<b>60</b>

### Objectives

- To procure the fundamental knowledge in semiconductor diodes and applications
- To impart the fundamental knowledge in the areas of transistors and amplifiers.
- To equip learners with Boolean algebra and design of combinational logic circuits.
- To acquaint learners with fundamentals and design of sequential circuits
- To educate learners with the basics of memory devices and implement combinational circuits

### Pre-requisites

- Basic Electrical and Electronics Engineering

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Describe the concepts and characteristics of Semiconductor Diodes	Understand
CO2	Describe the characteristics of transistor and amplifiers	Understand
CO3	Practice the Boolean techniques and design combinational circuits.	Apply
CO4	Design Synchronous sequential circuit using flipflops.	Analyze
CO5	Construct combinational logic functions using programmable logic devices	Analyze

### Mapping with Programme Outcomes

### Objectives

- To create a conceptual understanding of the basic principles of sensors, actuators, and their operations
- To analyze the real-world problems and provide solutions using sensors and actuators
- To promote awareness regarding recent developments in the fields of sensors and actuators
- To introduce about advancements in sensor technology.
- To educate the advance trends and application of sensors.

### Pre-requisites

- Basics of Electrical and Electronics Engineering, Analog Devices and Digital Circuits

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Classify different Sensors & Actuators based on various physical phenomena and differentiate their performance characteristics	Understand
CO2	Interpret the working principles of thermal and optical sensor	Understand
CO3	Infer the functional principles of Electromagnetic and Mechanical Sensors	Understand
CO4	Illustrate the working and characteristics of Acoustic and Chemical Sensors	Apply
CO5	Select the relevant sensors to design real-time data acquisition from ambience via case studies	Apply

### Objectives

- To enlighten the learners about the concepts of casting and powder metallurgy techniques.
- To impart the fundamental knowledge in the area of metal joining.
- To endow with an overview of metal forming processes.
- To understand the working of conventional machine tools and CNC Machines
- To gain adequate knowledge in the metal finishing processes.

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the concepts of casting and powder metallurgy process.	Remember
CO2	Understand the working of welding processes.	Understand
CO3	Describe the various types of forming processes.	Understand
CO4	Demonstrate and simulate the working principle of machine tools.	Apply
CO5	Understand the different finishing processes.	Understand

60 MC 304	Mechanics of Solids	Category	L	T	P	Credit
		PC	3	1	0	4

### Objectives

- To understand the nature of stresses and strains induced in materials under different loads.
- To analyze biaxial stress under given loading conditions for various materials and to analyze cylindrical shells under circumferential and radial loading.
- To plot shear force and bending moment diagrams of beams under different types of loads.
- To understand the deflection of determinate beams using various methods.
- To analyze the stresses and deformations occurring in circular shafts and helical springs caused by torsional forces.

### Pre-requisites

- Engineering Mechanics

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the concepts of stresses and strains in simple and composite bars	Remember
CO2	Determine the stresses and deformations of objects under external loadings	Apply
CO3	Develop shear force and bending moment diagrams for various types of beams with given loading conditions	Apply
CO4	Find the slope and deflection of beams using Macaulay's method and double integration method	Apply
CO5	Estimate torsional rigidity of given materials numerically using torsion equation, buckling effect of columns	Apply

### Mapping with Programme Outcomes

60 MY 002	Universal Human Values	Category	L	T	P	Credit
		MY	3	0	0	3*

### Objectives

- To identify the essential complementarity between 'values' and 'skills'
- To ensure core aspirations of all human beings.
- To acquire ethical human conduct, trustful and mutually fulfilling human behaviour
- To enrich interaction with Nature
- To achieve holistic perspective towards life and profession

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the significance of value inputs in formal education and start applying them in their life and profession	Understand
CO2	Evaluate coexistence of the "I" with the body.	Analyze
CO3	Identify and evaluate the role of harmony in family, society and universal order.	Analyze
CO4	Classify and associate the holistic perception of harmony at all levels of existence and Nature	Analyze
CO5	Develop appropriate human conduct and management patterns to create harmony in professional and personal lives.	Create

### Objectives

- To Learn the Volt-Ampere characteristic of semiconductor diodes and assessing performance of rectifier circuit using filter.
- To Evaluate frequency response and understand the behavior of amplifier circuits
- To explore a basic knowledge of bit manipulation and Develop the ability to analyze and design digital electronic circuits
- To illustrate the different analog electronic circuits and their application in practice.
- To illustrate the different digital electronic circuits and their application in practice.

### Pre-requisites

- Basic Electrical and Electronics Engineering

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Analyze the characteristics of semiconductor devices and determine the input and output parameters.	Analyze
CO2	Identify the various operating regions and analyze the characteristics of BJT and MOSFET	Analyze
CO3	Apply the fundamentals of digital electronic circuit and their application in practice	Apply
CO4	Construct basic combinational circuits and verify their functionalities	Analyze
CO5	Design and implement synchronous and asynchronous sequential circuits.	Analyze

### Objectives

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts.
- To help learners develop strategies that could be adopted while reading texts.
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations.
- Improve listening, observational skills, and problem-solving capabilities
- Develop message generating and delivery skills

### Pre-requisites

- Basic knowledge of reading and writing in English.

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and contrast products and ideas in technical texts.	Analyze
CO2	Identify cause and effects in events, industrial processes through technical texts	Analyze
CO3	Analyze problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Analyze
CO4	Report events and the processes of technical and industrial nature.	Apply
CO5	Articulate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Apply

**Course Contents and Lecture Schedule**

S. No.	Topics	No. of hours
<b>1.0</b>	<b>Listening</b>	
1.1	Evaluative Listening: Advertisements, Product Descriptions	1
1.2	Listening to Longer Technical Talks and Completing– Gap Filling Exercises.	1
1.3	Listening Technical Information from Podcasts	1
1.4	Listening to Process/Event Descriptions to Identify Cause & Effects and Documentaries Depicting a Technical Problem and Suggesting Solutions	1
1.5	Listening to TED Talks	1
<b>2.0</b>	<b>Speaking</b>	
2.1	Marketing a Product, Persuasive Speech Techniques	1
2.2	Describing and Discussing the Reasons of Accidents or Disasters Based on News Reports,	1
2.3	Group Discussion (Based on Case Studies)	1
2.4	Presenting Oral Reports, Mini Presentations on Select Topics with Visual Aids	1
2.5	Participating in Role Plays and Virtual Interviews	1
<b>3.0</b>	<b>Reading</b>	
3.1	Reading Advertisements, User Manuals and Brochures	1
3.2	Reading – Longer Technical Texts– Cause and Effect Essays, and Letters / Emails of Complaint	1
3.3	Case Studies, Excerpts from Literary Texts, News Reports Etc.	1
3.4	Company Profiles	1
3.5	Statement of Purpose (SoPs)	1
<b>4.0</b>	<b>Writing</b>	
4.1	Professional Emails, Email Etiquette	1
4.2	Compare and Contrast Essay	1
4.3	Writing Responses to Complaints	1
4.4	Precis Writing, Summarizing and Plagiarism	1
4.5	Job / Internship Application – Cover Letter & Résumé	1
<b>5.0</b>	<b>Verbal Ability</b>	
5.1	Reading Comprehension (Inferential Fillups) and Theme Detection	1
5.2	Spotting Errors	1
5.3	Verbal Analogies	1
5.4	Change of Voice and Change of Speech	1
5.5	One Word Substitution	1

60 MC 401	Industrial Drives and Control	Category	L	T	P	Credit
		PC	3	0	0	3

### Objectives

- To learn the structure of Electric Drive systems and their role in various loads
- To impart the knowledge on starting methods of DC and AC motors
- To understand the operation of D.C motor speed control using converters and choppers.
- To introduce the concept of control circuit for industrial drives.
- To provide the knowledge on construction, working and control strategies of special drives.

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the need of electrical drives and their applications in various loads.	Understand
CO2	Describe the starting methods of AC and DC Drives	Understand
CO3	Understand the solid-state speed control techniques in DC & AC Drives	Understand
CO4	Develop motor control circuit basics in industrial standard	Apply
CO5	Understand the principle of operation of special drives and their applications.	Understand

60 MC 402	Fluid Mechanics and Thermodynamics	Category	L	T	P	Credit
		PC	3	1	0	4

### Objectives

- To understand the properties of fluids, manometry and buoyancy
- To recognize mass and momentum conservation laws for fluid flows.
- To know the pressure and velocity variation in flow of fluids through pipes
- To know the basics of thermodynamics and evaluate the properties of changes in open and closed systems.
- To apply the concept of thermodynamics laws to various applications such as heat engine, heat pump and refrigeration systems

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Estimate the properties of fluids, manometry and buoyancy	Remember
CO2	Identify the type of flow and apply the fluid dynamics concepts.	Understand
CO3	Evaluate the velocity and pressure variation in flow through pipes.	Understand
CO4	Describe the basic concepts of zeroth law and first law of thermodynamics and apply the concepts of first law of thermodynamics to open and closed system.	Apply
CO5	Relate the concept of second laws of thermodynamics to heat engine, heat pump and refrigerator and discuss the concept of entropy.	Apply

### Mapping with Programme Outcomes

60 MC 403	Metrology and Statistical Quality Control	Category	L	T	P	Credit
		PC	3	0	0	3

### Objectives

- To give insights on the basics of metrology and measurements.
- To facilitate the knowledge on the various measurement techniques.
- To provide exposure on the fundamental working of optical measuring techniques
- To deliver insights on the basics of different forms of measurements
- To familiarize the statistical tools in the quality analysis

### Pre-requisites

- Engineering physics

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Describe the fundamental concepts of measurement.	Understand
CO2	Recognise the linear and angular measurement techniques to inspect the products.	Understand
CO3	Understand the optical measurement techniques to inspect the products.	Understand
CO4	Demonstrate and simulate the different forms of measurements.	Apply
CO5	Apply the statistical tools and control charts in measurements.	Apply

61 MC 404	Hydraulic and Pneumatic Control	Category	L	T	P	Credit
		PC	3	0	2	4

### Objectives

- To familiarize about the basics fundamentals of hydraulic and pneumatic transmission power using pressurized fluids.
- To understand working principles, operation of hydraulic and pneumatic components.
- To expose to various techniques for choosing pumps, valves and pneumatics components for suitable application.
- Have exposure to diagnose / troubleshoot hydraulic, pneumatic, electro pneumatic circuits.
- To design the circuits using pneumatic / hydraulic components for an industrial application

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explain the fundamental properties of fluids and understand the applications, advantages of fluid power system.	Apply
CO2	Identify the various pumps, valves, actuators and its working principles in hydraulic circuit.	Apply
CO3	Describe and illustrate the construction and working principles of various compressors, pneumatic valves and FRL unit importance in pneumatic circuit.	Apply
CO4	Design and develop the hydraulic and pneumatic circuit for various applications.	Apply
CO5	Know the significance of failures and troubleshooting, fluid power circuit for industry 4.0 and software used in fluid power automation	Apply

<b>Fluid Power System</b> Introduction to fluid power - properties of fluids: Viscosity index, Oxidation index, Demulsibility, Lubricity, Rust prevention, Pour point, Flash point and Fire point, Types of hydraulic fluids - Advantages and drawbacks of fluid power - Applications of fluid power – Fluid power components and symbols- Pascal's law: Multiplication of Force - Analysis of simple hydraulic jack - Applications of Pascal's law: Hand operated hydraulic jack, Air to Hydraulic Pressure Booster								[9]
<b>Hydraulic Pumps, Actuator and Valves</b> Pumps Pumping theory - Pump classification - working principle of Gear pump, Vane pump, Screw pump - Hydraulic Actuators: Hydraulic motors – gear and vane motors, Hydraulic cylinders: single acting and double acting cylinders, Special type cylinders: rodless, tandem and telescopic - Hydraulic valves: Pressure Control Valve types, Direction control valve types, Flow control valve types, Counter balance valve.								[9]
<b>Pneumatic System</b> Properties of air-Compressors: Rotary compressor - Screw compressor, vane compressor - Piston Compressor: Single and Multi-Stage Compressor - Filter, Regulator and Lubricator Unit - Valves: Direction control valves, Two way, Three way, Four way valves - Pneumatic check valves - Flow control valve, Pneumatic shuttle valve - AND type valve - Quick exhaust valve.								[9]
<b>Design of Hydraulic and Pneumatic Circuits</b> Construction of Hydraulic circuits - Fail safe circuit - Regenerative circuit - pressure intensifier circuits - Accumulator circuits. Construction of Pneumatic circuits: Cascade method - sequence circuit. Electro - pneumatic circuit – IoT based solenoid valve.								[9]
<b>Industrial Automation</b> Fluid power circuit for hydraulic braking system-Fluid power circuit for robot arm for pick and placePneumatic automation for Industry 4.0-Hydraulic system for Industry 4.0- Trouble shooting of Fluid power system.								[9]
<b>Practical:</b> 1. Assembling of hydraulic components for basic Hydraulic circuit. 2. Assembling of pneumatic components for basic Pneumatic circuit. 3. Assembling of pneumatic components for Meter in & Meter out circuit 4. Assembling of pneumatic components for Synchronizing circuit. 5. IoT based pneumatic circuit								[30]

61 MC 405	Virtual Instrumentation and Applications	Category	L	T	P	Credit
		PC	2	0	2	3

### Objectives

- To understand the fundamentals of virtual instrumentation and basic concept of graphical programming with their functions in LabVIEW.
- To impart the fundamental knowledge on the software tools in virtual instrumentation.
- To develop programming through LabVIEW graphical programming environment.
- To know about the data acquisition and various types Interfaces used in VI.
- To familiarize students with various applications of VI

### Pre-requisites

- Sensors and Instrumentation

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the basic concepts about virtual instrumentation.	Understand
CO2	Interpret the software tools in virtual instrumentation	Apply
CO3	Develop programming through LabVIEW graphical programming environment.	Analyze
CO4	Describe the functions and the interface requirements in Data acquisition system.	Analyze
CO5	Understand the different applications and advanced concept of VI.	Understand

### Objectives

- To acquire knowledge about speed control of DC drives.
- To determine the performance characteristics of the given DC drives.
- To provide the knowledge about speed control of AC drives.
- To determine the performance characteristics of the given AC drives.
- To acquire the knowledge of solid state speed control of AC & DC drives.

### Pre-requisites

- Basic Electrical and Electronics Engineering

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Test the performance of DC motors under different load condition	Analyze
CO2	Test the performance of induction motors under different load conditions.	Analyze
CO3	Analyze the performance of conventional speed control systems for DC motors	Analyze
CO4	Design power electronics-based speed control systems for DC drives.	Apply
CO5	Design power electronics-based speed control systems for Induction motor drives	Apply

### Objectives

- To study the mechanical properties of metals under tension, hardness, torsion, and impact by testing in laboratory.
- To study on the deflection of open and closed coil springs.
- To facilitate the experimental knowledge about coefficient of discharge using orifice meter.
- To emphasize the concept of fluid mechanics and machinery theory to determine friction factor.
- To analyse the performance characteristics of pumps and turbines.

### Pre-requisites

- Strength of Materials, Fluid Mechanics

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Determine the tensile, hardness, torsion and impact properties of metals.	Apply
CO2	Determine the stiffness of open and closed springs.	Apply
CO3	Estimate the coefficient of discharge using orifice meter	Analyse
CO4	Apply the fluid mechanics and machinery theory to determine the friction factor for various pipes.	Analyse
CO5	Determine the performance characteristics of pumps and turbines.	Analyse

### Objectives

- To help learners improve their logical reasoning skills at different academic and professional contexts.
- To help learners relate basic quantitative problems and solve them.
- To help learners Infer critically the statements with optimal conclusions and assumptions.
- To Solve the quantitative problems pertaining to calculations of averages, ratio and proportions, and profit and loss effectively
- To compute quantitative problems related to time and work, speed and distance, and simple and compound interest

### Pre-requisites

- Basic knowledge of Arithmetic and Logical Reasoning

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Deduce the topics in logical reasoning at the preliminary and intermediate level.	Analyze
CO2	Relate basic quantitative problems and solve them effectively at the preliminary level	Apply
CO3	Infer critically the statements with optimal conclusions and assumptions with the data and information given.	Analyze
CO4	Solve the quantitative problems pertaining to calculations of averages, ratio and proportions, and profit and loss effectively at the pre-intermediate level.	Apply
CO5	Compute quantitative problems related to time and work, speed and distance, and simple and compound interest at intermediate level.	Apply

### Objectives

- To understand the concept of 8086 Microprocessor.
- To study about the 8086-instruction set and addressing mode.
- To understand the concept of I/O Interfacing
- To understand the concept of 8051 micro controllers.
- To study about interfacing microcontroller.

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Learn the architecture and pin configuration of 8086 Microprocessor.	Apply
CO2	Write assembly language programs using 8086 microprocessor.	Apply
CO3	Interface 8086 Microprocessors with peripheral devices.	Analyse
CO4	Learn the architecture and pin configuration of 8051 Microcontroller.	Apply
CO5	Interface 8051 Microcontroller with peripheral devices	Analyse

### Mapping with Programme Outcomes

### Objectives

- To describe feedback control and basic components of control systems
- To understand the various time domain and frequency domain tools for analysis and design of linear control systems.
- To study the methods to analyze the stability of systems from transfer function forms.
- To describe the methods of designing compensators
- To understand the concept of state space analysis

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the open loop and closed loop control system and able to design develop mathematical model, Translations and Rotational systems transfer function	Apply
CO2	Learn about time domain specifications and about various types of test input.	Apply
CO3	Learn about frequency domain specifications and design and develop different frequency response plots.	Apply
CO4	Understand the concept of stability and knowledge about Root locus, Routh Hurwitz Criterion.	Apply
CO5	Design Lag, Lead, Lag-lead network and knowledge about State space Analysis.	Apply

60 MC 503	Kinematics and Dynamics of Machines	Category	L	T	P	Credit
		PC	3	1	0	4

### Objectives

- To learn various mechanisms and find their velocity and acceleration.
- To compute the velocity and acceleration for simple mechanisms and able to construct cam profile.
- To determine gear ratio for simple, compound, reverted and epicyclic gear train.
- To understand the function of flywheel and to determine basic parameters of flywheel
- To perform vibration analysis and balancing of engines.

### Pre-requisites

- Engineering Mechanics

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Create simple mechanisms based on the degrees of freedom.	Remember
CO2	Design and analyze the velocity and acceleration of different mechanisms. the cam profile	Analyze
CO3	Solve and evaluate the kinematic aspects of gears and gear trains	Apply
CO4	Plot the turning moment diagram of crank rotation at various strokes and the process of providing continuous energy to the system	Analyze
CO5	Analyze different types of vibrations and understanding of balancing of single and several masses in same or different planes	Analyze

2.1	Displacement, velocity and acceleration analysis of simple mechanisms	1
2.2	Graphical method of velocity and acceleration diagram for four bar and slider crank chain.	1
2.3	CAM – Classification of cams and follower	1
2.4	Radial cam nomenclature – analysis of follower motion	1
2.5	Uniform velocity, simple harmonic motion	1
2.6	Uniform acceleration & retardation, Cycloidal motion	2
2.8	Construction of cam profile for a radial cam	1
2.9	Introduction to kinematic analysis software packages	1
<b>3.0</b>	<b>Gears and Gear Trains</b>	
3.1	Gear tooth profiles & action	3
3.2	Interference and undercutting	2
3.3	Requirement of minimum number of teeth in gears	1
3.4	Gear trains, Simple and compound gear trains	2
3.5	Determination of speed and torque in epicyclic gear trains	1
<b>4.0</b>	<b>Turning Moments and Flywheels</b>	
4.1	Introduction	1
4.2	Turning moment diagram for a single cylinder double acting steam engine	1
4.3	Turning moment diagram for a four-stroke internal combustion engine	2
4.4	Fluctuation of energy- determination of maximum fluctuation energy	1
4.5	Co-efficient of fluctuation of energy-	1
4.6	Flywheel: co-efficient of fluctuation of speed	2
4.7	Energy stored in a flywheel- Dimensions of the flywheel rim	2
4.8	Introduction to governors and gyroscope	2
<b>5.0</b>	<b>Vibration and Balancing</b>	
5.1	Free, forced and damped vibrations of single degree of freedom systems	2
5.2	Critical speed of shaft	1
5.3	Logarithmic decrement Force transmitted to supports	1
5.4	Static and dynamic balancing	1
5.5	Balancing of revolving masses masses, single and multi-cylinder engines.	2
5.6	Reciprocating masses - single cylinder engines	2

		HS	3	0	0	3

### Objectives

- To facilitate the understanding of total quality management principles, tools and techniques.
- To equip the students to apply the TQM principles, tools and techniques in manufacturing sectors.
- To equip the students to apply the TQM principles, tools and techniques in service sectors.
- To impart knowledge on quality management principles, tools, techniques and quality standards for real life applications.
- To make the students understand the importance of standards in the quality assurance process and their impact on the final product.

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the need for quality concepts and its application in organizations	Understand
CO2	Apply the TQM principles for survival and growth in world class competition	Apply
CO3	Apply the traditional tools and new tools for quality improvement.	Apply
CO4	Apply the tools and techniques like quality circle, QFD, TPM and FMEA for quality improvement.	Apply
CO5	Apply QMS and EMS in organizations	Apply

 Mechatronics Engineering

60 MY 003	Startups and Entrepreneurship	Category	L	T	P	Credit
		MY	2	0	0	2*

### Objectives

- To Learn basic concepts in entrepreneurship, develop mind-set and skills necessary to explore entrepreneurship
- To provide practical proven tools for transforming an idea into a product or service that creates value for others.
- To Comprehend the process of opportunity identification through design thinking, identify market potential and customers while developing a compelling value proposition solution and prototypes
- To create business plan, conduct financial analysis and feasibility analysis to assess the financial viability of a venture ideas & solutions built with domain expertise
- To Prepare and present an investible pitch deck of their practice venture to attract stakeholders

### Pre-requisites

- Basic knowledge of reading and writing in English.

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop an entrepreneurial mindset and appreciate the concepts of design thinking, entrepreneurship and innovation	Understand
CO2	Apply process of problem -opportunity identification and validation through human centred approach to design thinking in building solutions	Apply
CO3	Understand market types, conduct market estimation, identify customers, create customer persona, develop the skills to create a compelling value proposition and build a Minimum Viable Product	Apply
CO4	Create business plan, conduct financial analysis and feasibility analysis to assess the financial viability of a venture	Apply
CO5	Prepare and deliver an investible pitch deck of their practice venture to attract stakeholders	Create

<b>S. No.</b>	<b>Topics</b>	<b>No. of hours</b>
<b>1.0</b>	<b>Introduction to Entrepreneurship &amp; Entrepreneur</b>	
1.1	Meaning and concept of Entrepreneurship and the history of Entrepreneurship development	1
1.2	The Entrepreneur: Meaning, the skills required to be an entrepreneur, the entrepreneurial decision process,	1
1.3	Myths of Entrepreneurship, How to Become a Successful Entrepreneur - Dr Romesh Wadhvani (Platform on boarding)	1
1.4	Role models, Mentors and Support system- Masterclass on My Story - Joshua Salins	1
1.5	Role of Entrepreneurship in Economic Development, Agencies in Entrepreneurship Management and Future of Entrepreneurship	1
1.6	Innovation and Creativity, types of innovations, Innovations in current scenario, Concepts of Entrepreneurial Thinking, General Enterprising tendency test	1
<b>2.0</b>	<b>Problem-Opportunity Identification, Customers Discovery and competitive advantage</b>	
2.1	Understanding the Problem and opportunity, define problem using Design thinking principles and validate problem. Case study and Fireside chat – Desi Hangover	1
2.2	Identifying a problem for practice venture and filling Problem statement canvas (Handout week 1 - class activity)	1
2.3	Customer and markets discovery , knowing your customer and consumer, Customer segmentation and Exploring market types and estimating the market size. Case study and Fireside chat – Verloop	1
2.4	Creating customer personas & Market estimation (Handout week 2 - class activity)	1
2.5	Importance of Value Proposition, Introduce Value Proposition Canvas, Developing Problem-solution fit. Case study and Fireside chat – Honey Twigs	1
2.6	Competition analysis, Blue ocean strategy, Competitive positioning and understanding unique selling points. Case study and Fireside chat on Inzpira Fill Value Proposition Canvas (Handout week 3 - class activity) and Competition analysis framework (Handout week 5 - class activity). <b>Briefing on Assignment 1 - Milestone 1</b>	1
<b>3.0</b>	<b>Business model and Build your MVP</b>	
3.1	Introduction to Business model and types. Case study and Fireside chat – NUOS	1
3.2	Lean approach, 9 block lean canvas model, riskiest assumptions to Business models	1
3.3	Class Activity- Fill Lean canvas for you idea and understand revenue model ( Handout week 6)	1
3.4	Prototyping, Meaning of MLP , Difference between MLP and MVP, How to build an MLP? Different types MLP that you can build. Case study and Fireside chat – KNORISH	1
3.5	Hypothesis testing and MVP Validation, MVP Iteration-Importance of Build - Measure – Learn approach	1
3.6	Class Activity- Fill MVP framework (Handout week 7) and learn validation	1
<b>4.0</b>	<b>Business Plan, Financial feasibility and Manging growth</b>	
4.1	Business planning: components of Business plan- Sales plan, People plan and financial plan, Preparing a business plan. Case study and Fireside chat – Both Gems	1
4.2	Financial Planning: Types of costs, preparing the financial plan using financial template (Handout week 9)	1
4.3	Class activity - starting up costs, COGS, Sales plan and people plan template.	1
4.4	Class activity - One year P&L projection, Breakeven Analysis, Five year projection	1
4.5	Understanding basics of Unit economics and analyzing Growth and the financial performance	1

60 MC 5P1	Microprocessors and Microcontrollers Laboratory	Category	L	T	P	Credit
		PC	0	0	3	1.5

### Objectives

- To familiarize the architecture of 8085, 8086 Microprocessor and 8051 microcontrollers.
- To explore a basic knowledge of microprocessors and microcontrollers.
- To learn programming of microprocessors and microcontrollers.
- To design and develop interfacing concepts of microprocessors and microcontrollers.
- Ability to develop microprocessor and microcontroller based small applications.

### Pre-requisites

- Microprocessors and Microcontrollers

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Perform the basic arithmetic operations using 8085 microprocessors by developing assembly language programs...	Apply
CO2	Develop an assembly language program to convert hexadecimal to decimal and decimal to hexadecimal and also perform sorting using 8085.	Apply
CO3	Perform the basic programming operations using 8086 microprocessors.	Analyse
CO4	Perform the basic arithmetic operations using 8051 microcontrollers by developing assembly language programs	Apply
CO5	Demonstrate the interfacing of stepper motor and traffic light controller using 8051.	Apply

		PC	0	0	3	1.5

### Objectives

- To be familiar with different measurement equipment's and quality inspection for industrial applications.
- Identify and use reference materials to ensure good quality, accurate, traceable measurement results.
- To study the principles of gyroscope, Cam and measurement of surface finish.
- To calculate the moment of inertia of connecting rod.
- To analyze the natural frequency of different types of vibrations.

### Pre-requisites

- Theory of Machines

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Describe the basic concepts of Metrology and Understand the measuring concepts of microscope.	Understand
CO2	Discriminate between various screws by measuring their taper angle and pitch.	Understand
CO3	Measure the surface finish by using auto collimeter	Analyse
CO4	Verify the laws of gyroscope and plot the profile of cam.	Apply
CO5	Evaluate the natural frequency of spring mass system and moment of inertia of connecting rod.	Apply

60 MC 5P3	Design Thinking and Innovation Laboratory	Category	L	T	P	Credit
		PC	0	0	2	1

### Objectives

- Understand the principles of design thinking and their application in engineering innovation
- Identify real-world engineering problems through brainstorming and mind mapping
- Explore problem space using secondary research methods, including the 5Ws and 1H Matrix, and user participant mapping
- Conduct primary research from multiple perspectives to ensure a user-centered approach
- Define and analyze problem areas to develop clear and well-structured problem statements

### Pre-requisites

-Nil-

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply design thinking principles to promote innovation.	Apply
CO2	Identify and articulate real-world engineering problems through brainstorming and mind map techniques.	Apply
CO3	Perform secondary research using tools 5Ws and 1H Matrix and user participant mapping to explore problem spaces.	Apply
CO4	Conduct primary research to gather insights from diverse perspectives, ensuring a user-centered approach in problem-solving.	Apply
CO5	Define and analyze problem areas to create precise and actionable problem statements.	Analyse

		CG	0	0	2	1*

### Objectives

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts.
- To help learners develop strategies that could be adopted while reading texts.
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations.
- Improve listening, observational skills, and problem-solving capabilities
- Develop message generating and delivery skills

### Pre-requisites

- Basic knowledge of Arithmetic and Logical Reasoning

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and contrast products and ideas in technical texts.	Analyze
CO2	Identify cause and effects in events, industrial processes through technical texts	Analyze
CO3	Analyze problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Analyze
CO4	Report events and the processes of technical and industrial nature.	Apply
CO5	Articulate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Apply

		PC	3	1	0	4

### Objectives

- To gain the knowledge of various skills necessary for industrial applications of PLC.
- To provide the basic programming concepts and various logical instructions used in PLC.
- To familiarize the learners in data handling of PLC.
- To impart the knowledge of Supervisory Control and Data Acquisition (SCADA) System.
- To enable the students to troubleshoot and maintain the controller operation in industries.

### Pre-requisites

- Sensors and Instrumentation, Industrial Drives and Control, Digital electronics and Microprocessors

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Describe the main functional units in a PLC and its elements.	Remember
CO2	Develop ladder logic programming for industrial applications.	Analyze
CO3	Apply PLC data handling instructions for industrial automation	Understand
CO4	Implement the Supervisory Control and Data Acquisition systems for particular applications.	Analyze
CO5	Outline different industrial automation applications and troubleshooting procedure.	Apply

		PC	3	1	0	4

### Objectives

- To familiarize the various steps involved in the Design Process.
- To understand the principles involved in evaluating the shape and dimensions of a component to satisfy functional and strength requirements.
- To learn to use standard practices and standard data.
- To learn to use catalogues and standard machine components.
- To design the various machine components as per standard

### Pre-requisites

- Strength of Materials

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Analyze stresses and dimensions in machine elements at various loads	Apply
CO2	Design the shaft, couplings, keys and knuckle joint for different applications.	Apply
CO3	Design and analyze the springs and gears	Analyze
CO4	Exhibit the design of bearings and connecting rod	Analyze
CO5	Understand the threaded fasteners and ability to design of welded joints.	Apply

Course Contents and Lecture Schedule		
S. No.	Topics	No. of hours
<b>1.0</b>	<b>Variable Stresses in Machine Members</b>	
1.1	Introduction to the design process - factors influencing machine design, selection of materials based on mechanical properties.	1
1.2	Mechanical properties – Direct, Bending and torsional stress equations.	2
1.3	Eccentric loading	1
1.4	Design of curved beams – crane hook and ‘C’ frame	1
1.5	Factor of safety - theories of failure	1
1.6	Stress concentration, design for variable loading – Soderberg	1
1.7	Design for variable loading – Goodman relations.	1
1.8	Design for variable loading – Gerber relations.	1
	Tutorial	3
<b>2.0</b>	<b>Shafts and Couplings</b>	
2.1	Design of solid shaft based on strength	1
2.2	Design of solid shaft based on rigidity	2
2.3	Design of solid shaft based on critical speed	1
2.4	Design of keys – Types - keyways	1
2.5	Design of rigid and flexible couplings	2
2.6	Design of knuckle joints.	1
2.7	Design of knuckle joints.	1
	Tutorial	3
<b>3.0</b>	<b>Electrical Installations</b>	
3.1	Springs –Types of Springs, Design of helical	1
3.2	Design of helical spring	2
3.3	Design of leaf spring	2
3.4	Concentric torsion springs	1
3.5	Gears, types, terminologies-Design of spur and helical gears	1
3.6	Gears, types, terminologies-Design of spur and helical gears	2
	Tutorial	3
<b>4.0</b>	<b>Bearings and Connecting Rod</b>	
4.1	Study of bearings, Design of bearings – sliding contact	2
4.2	Design of rolling contact types	1
4.3	Design of rolling contact types. Cubic mean load	2
4.4	Design of journal bearings, Mckees equation	1
4.5	Lubrication in journal bearings – calculation of bearing dimensions	1
4.6	Design of connecting rod	2
	Tutorial	3
<b>5.0</b>	<b>Fasteners and Welded Joints</b>	
5.1	Threaded fasteners	2
5.2	Design of bolted joints including eccentric loading	2
5.3	Design of welded joints for pressure vessels and structures	3
5.4	Theory of bonded joints	2
	Tutorial	3

60 MC 603	Computer Aided Design and Manufacturing	Category	L	T	P	Credit
		PC	3	0	0	3

### Objectives

- To offer a sight into the utilization of computers in component design.
- To gain insight into the role of computer-aided design and analysis in the design process.
- To comprehend the fundamentals of pioneering manufacturing methodologies.
- To know the impressions of Part programming with computer assistance.
- To understand the Group Technology and Flexible Manufacturing System concepts.

### Pre-requisites

- Manufacturing Technology

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Obtain an understanding of the stages within the product life cycle, as well as the principles of 2D and 3D transformations and the basics of CAD/CAM	Apply
CO2	Acquire knowledge regarding I/O devices, Boolean operations, and the concepts of Finite Element Analysis (FEA).	Remember
CO3	Comprehend and elucidate the principles governing the latest advancements in manufacturing machinery.	Understand
CO4	Utilize NC programming concepts to create part programs for both Lathe and Milling Machines	Apply
CO5	Enumerate the functions of computers in the context of Group Technology (GT) and Flexible Manufacturing Systems (FMS).	Apply

		MY	2	0	0	0

### Objectives

- To understand the fundamental concepts of disasters, including hazard, vulnerability, risk, and capacity
- To recognise the different types of natural, biological, technological, and man-made disasters
- To explain the disaster management cycle and apply appropriate strategies for prevention, mitigation, preparedness, response, recovery, and rehabilitation.
- To know the disaster management frameworks and practices in India
- To recognise science, technology, and engineering approaches for disaster risk reduction

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand basic terms related to disasters, hazards, vulnerability, risk, and disaster management.	Understand
CO2	Recognize different types of natural, biological, technological, and man-made disasters.	Understand
CO3	Know the main stages of the disaster management cycle and the roles of people and authorities during disasters.	Understand
CO4	Summarize the disaster management systems, laws, and institutions in India.	Understand
CO5	Recognize the role of safety practices, science, and technology in reducing disaster risks.	Understand

60 MC 6P1	Computer Aided Manufacturing Laboratory	Category	L	T	P	Credit
		PC	0	0	3	1.5

### Objectives

- Imparting an understanding of the construction and operation of Computer Numerical Control (CNC) Machines.
- Familiarizing individuals with the interfacing, communication, and control of CNC machine tools.
- Providing foundational knowledge in CNC manual part programming.
- Equipping individuals with the skills needed to program CNC turning centers and CNC machining centers.
- Facilitating hands-on experience in computer-assisted part programming.

### Pre-requisites

- Manufacturing Technology Laboratory

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Elaborate on the structure and functionality of CNC machine tools.	Apply
CO2	Comprehend diverse aspects of CNC programming.	Apply
CO3	Create programs for producing components on CNC turning centers.	Apply
CO4	Develop programs for fabricating geometric components with CNC machining centers.	Apply
CO5	Grasp the generation of NC code from CAD models within CAM software.	Apply

### Objectives

- To train the students to be familiar with the software and hardware of PLC using ladder logic codes.
- To familiarize the student to develop PLC programs for different applications.
- To facilitate knowledge on PLC Control Principles and Applications with Field Devices.
- To train the students to create ladder diagrams for process control descriptions.
- To impart knowledge on Configure communication between the PLC and PC.

### Pre-requisites

- Sensors and Instrumentation, Industrial Drives and Control, Microprocessors and Microcontrollers

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Write a PLC program for various industrial applications.	Understand
CO2	Control the speed of AC motors using VFD.	Apply
CO3	Interface the sensors for flow, pressure and level monitoring and control in process industries	Apply
CO4	Design the of closed loop temperature controller	Apply
CO5	Explore the concept of real-time monitoring and control using HMI	Apply

### Objectives

- Ideate and develop innovative solutions for the given problem statement
- Develop soft prototype and visualize user scenarios for early-stage product validation
- Develop medium and hard prototype, integrating technical, ergonomic, and aesthetic considerations
- Conduct testing, gather user feedback, and apply iterative design processes
- Document, publish and present their solution

### Pre-requisites

- Design Thinking and Innovation Laboratory

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Generate innovative solutions to address specific problem statements.	Apply
CO2	Create and evaluate soft prototype, including paper prototypes and storyboards, to test initial design concepts.	Create
CO3	Create medium and hard prototype using 3D modelling and printing, incorporating human factors and system design.	Create
CO4	Perform usability studies, analyze user feedback, and iterate their designs to finalize user-centered solutions.	Analyse
CO5	Prepare professional documentation, and deliver a comprehensive project report and presentation.	Apply

### Mapping with Programme Outcomes

60 CG 0P5	Comprehension Test*	Category	L	T	P	C	CA	ES	Total
		CG	0	0	2	1*	100	-	100

### Objectives

- To evaluate the knowledge gained in core courses relevant to the programme of study.
- To assess the technical skill in solving complex engineering problems.

### Prerequisite

- Fundamental knowledge in all core subjects.

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Infer knowledge in their respective programme domain.	Apply
CO2	Attend interviews for career progression	Apply
CO3	Exhibit professional standards to solve engineering problems	Apply
CO3	Promote holistic approach to problem solving	Apply
CO5	Examine the competency of graduates in specific programme domain	Apply

### Mapping with Programme Outcomes

60 MC 701	Robotics Engineering	Category	L	T	P	Credit
		PC	3	0	0	3

### Objectives

- To develop the student's knowledge in various robot structures and their workspace.
- To develop student's skills in perform kinematics analysis of robot systems.
- To provide the student with knowledge of the singularity issues associated with the operation of robotic systems.
- To provide the student with some knowledge and analysis skills associated with robotic sensors.
- To provide the student with some knowledge and skills associated with Machine vision.

### Pre-requisites

- Sensors and Instrumentation, System Design and Control

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Express the basic concepts, laws, components and parameters of robots.	Remember
CO2	Identify Types of End Effectors based on their designs and functionalities.	Understand
CO3	Apply homogeneous transformation matrices to solve kinematic problems in robotics.	Apply
CO4	Describe the key characteristics, basic principles of sensors and their importance in robotic systems	Understand
CO5	Implement noise reduction methods to improve the quality of images and enhance the performance of machine vision systems.	Apply

60 MC 702	Embedded System	Category	L	T	P	Credit
		PC	3	0	0	3

### Objectives

- Develop a comprehensive understanding of embedded systems, including their architecture, components, and applications in various domains.
- Gain proficiency in programming and interfacing with ARM microprocessors commonly used in embedded system design.
- Understand the principles and operation of real-time operating systems and their significance in managing tasks, scheduling, and resource allocation in embedded systems.
- Study popular communication protocols used in embedded systems and understand their implementation for data exchange and networking.
- Explore various design methodologies and learn to apply them to efficiently develop embedded systems from concept to implementation

### Pre-requisites

- Microprocessors & Microcontrollers

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Provide an overview of different blocks of an embedded Processor.	Understand
CO2	Provide knowledge about the architecture of ARM Processors.	Understand
CO3	Understand the concept of RTOS and its software tools.	Understand
CO4	Bring out the various networks and buses, interfacing protocols with embedded system.	Apply
CO5	Model hardware/software design approaches for real-time applications	Analyze

		AC	1	0	0	0

### Objectives

- To identify research problems, formulate hypotheses, collect data and test hypotheses
- To prepare and submit quality manuscripts and understand peer review process
- To utilize software tools for effective manuscript preparation and visualization of research data
- To familiarize different journal metrics and author-level quality indicators
- To protect creative works, inventions, and branding elements using IPR

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop structured scientific approach to plan and execute research work	Apply
CO2	Understand the journal requirements to publish research findings effectively	Understand
CO3	Apply various software tools during the manuscript preparation	Apply
CO4	Select suitable journals to publish the work using different publication metrics	Analyse
CO5	Apply the appropriate form of IP protection to a specific invention or creation	Apply

### Objective

- Develop character, camaraderie
- Inculcate discipline, secular outlook
- Enrich the spirit of adventure, sportsman spirit
- Ideals of selfless service amongst cadets by working in teams
- Improve qualities such as self-discipline, self-confidence, self-reliance and dignity of labour in the cadets

### Prerequisite

NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Display sense of patriotism, secular values and shall be transformed into motivated youth who will carry out nation building through national unity and social cohesion.	Apply
CO2	Demonstrate Health Exercises, the sense of discipline, improve bearing, smartness, turn out, develop the quality of immediate and implicit obedience of orders.	Apply
CO3	Basic knowledge of weapons and their use and handling.	Understand
CO4	Aware about social evils and shall inculcate sense of whistle blowing against such evils and ways to eradicate such evils	Analyse
CO5	Acquaint, expose & provide knowledge about Army/Navy/ Air force and to acquire information about expansion of Armed Forces, service subjects and important battles	Apply

### Objectives

- Understand the programming concepts of Embedded Systems.
- Using Embedded C / Assembly Language using Keil IDE or Equivalent. Learn the working of Arm architecture in Atmel processor.
- To explore a basic knowledge of AT89X51ED2 Development board.
- To train the students for creating embedded control process for variety of applications.
- To conduct advanced fundamental and applied research in embedded systems

### Pre-requisites

- Microprocessors and Microcontrollers.

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Acquire the knowledge of basics of embedded system and Perform arithmetic operations in an embedded system with a combination of C and assemble language.	Apply
CO2	Test the serial data communication of internal UART using Atmel processor.	Apply
CO3	Demonstrate the dual slope ADC and 8 channel 12-bit ADC using Atmel processor.	Apply
CO4	Demonstrate the concept of 7 segment display and real time clock.	Apply
CO5	Interface the traffic light signal, stepper motor and position control of DC motor using ARM processor.	Apply

60 MC 7P2	Robotics and Machine Vision Laboratory	Category	L	T	P	Credit
		PC	0	0	4	2

### Objectives

- To introduce different types of robotics and demonstrate them to identify different parts and components
- To write programming for simple operations.
- The students will learn to design, build, program, control robotic devices and think of ways in machine vision system.
- To educate recent robotics concepts.
- To conduct advanced fundamental and applied research in robotics

### Pre-requisites

- Sensors and Instrumentation, System Design and Control

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Describe the different types of links, drives, joints and end effectors used in robots.	Remember
CO2	Analyze the Signal conversion of sensing and digitizing the images using sampling and quantization	Apply
CO3	Analyze the Threshold, connectivity, noise reduction and edge detection of the image.	Apply
CO4	Inspect the color to differentiate the components while doing the pick and place operation of the desired components.	Apply
CO5	Develop the various methods of inspection and maintenance.	Apply

60 MC 7P3	Project Work - Phase I	Category	L	T	P	Credit
		PC	0	0	4	2

### Objectives

- To apply the knowledge / concepts acquired in the Previous semesters to create / design / implement project relevant to the field of Electrical / Electronics / Robotics / Automation / IoT / Electric Vehicle / Mechanical domains.
- To acquire collaborative skills through working in a team to achieve common goals.
- To search for related area in which the students are going to do their project.
- To identify suitable project work, acquiring knowledge on that area, making preliminary works towards project phase II.
- To acquire the skills to communicate effectively and to present ideas clearly and coherently to a specific audience in both the written and oral forms.

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Survey the literature and market for availability of resources	Analyse
CO2	Select the title and collect relevant information related with selected title.	Analyse
CO3	Collect the literature based on survey and do the partially design of the system.	Analyse
CO4	Carryout partial design of the system	Analyse
CO5	Prepare and present the project report	Analyse

Semester	Hours/Week			Total Hours	Credit	Maximum Marks			
	L	T	P			C	CA	ES	Total
VII	0	0	4	60	2	100	0	100	

### Methodology

- Three reviews have to be conducted by the committee of minimum of three members one of which must be the guide.
- Problem should be selected.
- Students have to collect around 25 papers related to their work.
- Report has to be prepared by the students as per the format available in CTCMS
- Preliminary implementation can be done if possible.
- Evaluation has to be done for 100 marks.

		<b>PC</b>	<b>0</b>	<b>0</b>	<b>16</b>	<b>8</b>

### Objectives

- To enable the students in convenient groups of not more than 3 members on a project involving theoretical and experimental studies related to the branch of study.
- To have guidance for every project team, by the faculty member of the concerned department.
- To receive the directions from the guide, on library reading, laboratory work, computer analysis or field work as assigned by the guide.
- To present in periodical seminars on the progress made in the project
- To produce a comprehensive report covering background information, literature survey, problem statement, project work details and conclusion. This final report shall be typewritten form as specified in the guidelines.

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Make links across different areas of knowledge and to generate, develop and evaluate ideas and information	Create
CO2	Apply these skills to the project	Create
CO3	Design the project work.	Create
CO4	Model and fabricate the project work	Create
CO5	Prepare and present the project work along with report	Create

### Methodology

- Three reviews have to be conducted by the committee of minimum of three members one of which should be their project guide.
- Progress of project has to be monitored by the project guide and committee regularly.
- Each review has to be evaluated for 100 marks.
- Attendance is compulsory for all reviews. If a student fails to attend review for some valid reasons, one more chance may be given.
- Final review will be carried out by the committee that consists of minimum of three members one of which should be their project guide (if possible include one external expert examiner within the college).
- The project report should be submitted by the students around at the first week of April.

### Objectives

- To broaden the importance of Robot Locomotion
- To learn the knowledge of mobile Robot kinematics and dynamics
- To broaden the importance of GPS and sensors
- To enhance the knowledge about Localization, Planning and Navigation
- To make the student design, fabricate, motion planning, and control of intelligent mobile robotic systems.

### Pre-requisites

- Robotics Engineering

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Discuss about the Robot Locomotion.	Apply
CO2	Differentiate the Kinematics and the Dynamics of Mobile Robots	Apply
CO3	Illustrate the Sensors and GPS.	Understand
CO4	Apply the Localization and Planning of Robots	Apply
CO5	Summarize the knowledge on Navigation	Apply

### Objectives

- To impart knowledge on the structure and properties of alloys.
- To understand heat treatment processes and hardening techniques.
- To acquire knowledge in ferrous and non-ferrous materials.
- To impart knowledge on Powder metallurgy processes and applications.
- To identify and select suitable characterization techniques for material testing.

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the various types of alloy structures using iron carbide equilibrium diagram and phase changes of various structures.	Remember
CO2	Identify heat treatment process for engineering applications and case hardening process -carburizing, nitriding and cyaniding.	Apply
CO3	Predict the effect of alloying addition on ferrous and non-ferrous metals.	Apply
CO4	Comply the properties of ceramic materials and powder metallurgy for engineering applications and production of different metal powders.	Apply
CO5	Utilize the mechanism of plastic deformation process, testing of mechanical properties and metallographic procedures.	Apply

### Objectives

- To impart knowledge on various types of experimental designs conduct of experiments
- To understand the different data analysis techniques
- To Understand the importance of Design of Experiments
- Be able to allocate observations using Single Factor Experiments
- To Learn the factorial design of experiments

### Pre-requisites

- Statistics and Numerical Methods

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply experimental techniques to practical problems to improve quality of processes	Apply
CO2	Analyze the variance and apply the single factor variance	Analyze
CO3	Learn the factorial design of experiments	Apply
CO4	Design and learn Special Experimental Design	Analyze
CO5	Focuses on design efficient, reliable products using Taguchi method.	Analyze

### Objectives

- Identify and describe different types of medical robots and their potential applications
- Know basic concepts in kinematics, dynamics, and control relevant to surgical manipulators
- Develop the analytical and experimental skills necessary to design and implement Motion control and force control in medical robotics
- Be familiar with the state of the art in applied medical robotics and Haptic Tele manipulation.
- Understand the various roles that robotics can play in Minimally Invasive Surgery.

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Classify the different types design of control architectures	Understand
CO2	Identify the function of -assisted minimally invasive surgery.	Understand
CO3	Design of control architectures for robotic-assisted tele-medicine. Evaluation of medical robots	Apply
CO4	Describe the haptic tele manipulation and control strategies	Apply
CO5	Discuss the different techniques minimal invasive surgery	Apply

		PE	3	0	0	3

### Objectives

- Impart artificial intelligence principles, techniques and its history.
- Assess the applicability, strengths, and weaknesses of the basic knowledge representation, problem solving, and learning methods in solving engineering
- Enable robots to navigate complex environments without human intervention
- Learn from their experiences, adapt to new tasks, or improve their performance over time
- Develop intelligent systems by assembling solutions to concrete computational problems

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the Artificial Intelligence (AI) methods and describe their foundations.	Understand
CO2	Understand the basic principles of AI in solutions that require problem-solving, inference, perception, knowledge representation and learning.	Understand
CO3	Demonstrate knowledge of reasoning, uncertainty, and knowledge representation for solving real-world problems	Apply
CO4	Illustrate how search algorithms play a vital role in problem-solving	Understand
CO5	Apply intuitive ways for humans to communicate and collaborate with robots	Apply

60 MC E21	Agricultural Robotics and Automation	Category	L	T	P	Credit
		PE	3	0	0	3

### Objectives

- Recognize the areas in agricultural process where robotics can be applied.
- Integrate sensor and system for a required specific process in agricultural applications.
- Apply Mechanics to the design various robot parameters
- Convert various mechanisms into robot by providing actuation at specific links and joints of the mechanism.
- Develop suitable robotic system for specific agricultural tasks.

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Know the basics of automation in agriculture. .	Remember
CO2	Recognize the concepts of Precision agricultural systems and trends	Understand
CO3	understand importance of automation in Irrigation systems	Understand
CO4	Realize the various Automation Practices in agriculture through case Studies	Understand
CO5	Apply concepts in material handling and packaging industries	Remember

60 MC E22	Design of Transmission Systems	Category	L	T	P	Credit
		PE	3	0	0	3

### Objectives

- To learn about the and design process for mechanical power transmission components.
- To understand the standard procedure available for Design of Transmission of Mechanical elements
- To learn to use standard data and catalogues.
- To select and design drive systems for a wide variety of driven loads to a given performance specification.
- To design a power transmission component with quality assurance.

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the concepts of design to belts, chains and rope drives.	Apply
CO2	Apply the concepts of design to spur, helical gears.	Apply
CO3	Apply the concepts of design to worm and bevel gears.	Apply
CO4	Apply the concepts of design to gear boxes.	Apply
CO5	Apply the concepts of design to cams, brakes and clutches.	Apply

60 MC E23	Navigation and Communication Systems	Category	L	T	P	Credit
		PE	3	0	0	3

### Objectives

- To familiarize the basic concept on inertial navigation systems
- To facilitate the various types of radio navigation & satellite navigation and their uses
- To gain knowledge on navigation system and guidance system of aircraft
- To provide exposure on the functions of various aircraft communication systems
- To familiarize the use of various principles of weather radar system and DME

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the advanced concepts of Aircraft Navigation	Understand
CO2	Understand the necessary mathematical knowledge those are needed in modelling the navigation process and methods.	Understand
CO3	Apply exposure on various Navigation systems such as Inertial Measurement systems, Radio Navigation Systems, Satellite Navigation and GPS	Apply
CO4	Design Landing aids and will be able to deploy these skills effectively in the analysis and understanding of navigation systems in an aircraft.	Analyze
CO5	Apply the principles of Radar and its related components.	Apply

		PE	3	0	0	3

### Objectives

- To learn the fundamentals of NDT Techniques
- To understand the basic principle so f various NDT methods
- To be aware of applications and limitations of the NDT techniques
- To know the different type of service and process defects.
- To learn the NDT method(s) best suite do evaluate the manufactured products.

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the fundamentals of NDT techniques and testing equipment.	Remember
CO2	Understand the eddy current testing procedures for non-destructive testing	Apply
CO3	Apply principles of magnetism to investigate the service and processing defects	Apply
CO4	Select appropriate radio graphic techniques and X-Rays for evaluation	Apply
CO5	Utilize ultrasonic testing as an NDT technique to investigate defects.	Apply

### Objectives

- To impart knowledge about Operations Research techniques and enable students to take effective engineering and managerial decisions
- To equip students to find the optimum solution for transportation problems and assignment problems
- To train students to apply simulation techniques to solve Inventory and queuing problems
- To train students to apply Operations Research techniques for the effective utilization of available resources in engineering and business
- To impart knowledge about network models and train students to apply these concepts to solve the real world problems

### Pre-requisites

- Statistics and Numerical method

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Form the Linear Programming models and solve them.	Apply
CO2	Apply transportation models and Assignment models to solve real world problems.	Apply
CO3	Apply Inventory models to solve inventory problems	Apply
CO4	Apply Queuing models to solve problems and analyze them using simulation techniques	Apply
CO5	Construct Networks and find optimum solution	Apply

60 MC E26	Supply Chain Management	Category	L	T	P	Credit
		PE	3	0	0	3

### Objectives

- To provide an insight on the fundamentals of supply chain networks, tools and techniques.
- To describe the increasing significance of logistics and its impact on both costs and service in business and commerce.
- To incorporate and learn the critical elements of logistics and supply-chain management processes based on the most relevant application in forward-thinking companies.
- To develop a sound understanding of the important role of supply chain management in today's business environment
- To incorporate a meaningful focus on the rate of change occurring in business today, and more specifically, in business logistics.

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand fundamental supply chain management concepts.	Understand
CO2	Understand the foundational role of logistics in transportation system.	Understand
CO3	Integrating and optimizing the total logistics and supply-chain design.	Understand
CO4	Co-ordinate the efficient handling and movement of goods, services, materials and related information within and between supply chains	Apply
CO5	Learn and apply computer-based supply chain management	Apply

60 MC E27	Robot Kinematics and Dynamics	Category	L	T	P	Credit
		PE	3	0	0	3

### Objectives

- Provide a mathematical and geometrical description of robotic manipulators
- To retain the best traditions of traditional calculus.
- Derive from first principles robot dynamics and know how to simulate them
- Understand basic robot control architectures
- Articulate scientific results to your peers

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Impart knowledge about kinematic and dynamic analysis of robot manipulators.	Understand
CO2	Understand the Control both the position and orientation of the tool in the three dimensional space.	Understand
CO3	Apply the relationship between the joint variables and the position and the orientation of the tool.	Apply
CO4	Apply the Planning trajectories for the tool to follow on order to perform meaningful tasks.	Apply
CO5	Apply the precise control of the high speed motion of the system.	Apply

### Objectives

- To acquire the basic concepts of Industrial Robot.
- To selection of robots based on various applications.
- To familiar with a material handling system
- To impart the knowledge on robotic welding
- To obtain the knowledge on various type of robot welding operation

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize various concepts of Industrial Robot.	Understand
CO2	Select the appropriate manufacturing procedure for Robots	Understand
CO3	Apply various manufacturing process in Robot manufacturing.	Understand
CO4	Learn about the Welding operation and also related to Programming	Understand
CO5	Produce a manufacturing plan for developing a robot	Apply

### Objectives

- To study the basics of electronics and Various Vehicle Sensors.
- To study the Ignition and Injection system in Automobiles
- To expose students about the automotive engine management and its construction details.
- To understand the principles of comfort, safety systems
- To understand the concept of advanced vehicle technologies of automobiles.

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Know the working of Various Vehicle Sensors	Remember
CO2	Understand the electronic fuel injection/ignition components and their function.	Understand
CO3	Study the construction details of new developments in engine management	Understand
CO4	Exposure of different automotive safety systems	Understand
CO5	Acquire knowledge about advanced vehicle technology and navigation systems	Understand

<b>Course Contents and Lecture Schedule</b>		
<b>S. No.</b>	<b>Topics</b>	<b>No. of hours</b>
<b>1.0</b>	<b>Introduction and Mechanical Energy Based Processes</b>	
1.1	Comparison between Traditional and non- Conventional Machining Process	1
1.2	Need for Non - Conventional Machining Process	1
1.3	Classification Based on Nature of Energy Employed in Machining	1
1.4	Selection of non-Conventional Machining Processes	1
1.5	Specific Advantages, limitations and Applications	1
1.6	Abrasive Jet Machining - Working Principles – Equipment used – Process Parameters – MRR - Applications.	1
1.7	Water Jet Machining - Working Principles – Equipment used – Process Parameters – MRR - Applications.	1
1.8	Abrasive Water Jet Machining - Working Principles – Equipment used – Process Parameters – MRR - Applications.	1
1.9	Ultrasonic Machining - Working Principles – Equipment used – Process Parameters – MRR - Applications.	1
<b>2.0</b>	<b>Thermal and Electrical Energy Based Processes</b>	
2.1	Electric Discharge Machining – Working Principle – Equipments - Process Parameters - Surface Finish and MRR - Electrode/Tool – Power and Control Circuits - Tool Wear	1
2.2	Wire cut EDM - Working Principle – Equipments - Process Parameters - Surface Finish and MRR - Electrode/Tool – Power and Control Circuits - Tool Wear	1
2.3	Electrical Discharge Grinding Working Principle – Equipments - Process Parameters - Surface Finish and MRR - Electrode/Tool – Power and Control Circuits - Tool Wear	1
2.4	Flushing types - Pressure Flushing, Suction Flushing, Side Flushing, Pulsed Flushing.	1
2.5	EDM Process Parameters: Spark Frequency, Current & Spark Gap, Surface Finish, Heat Affected Zone	1
2.6	Laser Beam Machining - Principles – Equipment – Types – Beam control techniques – Applications	1
2.7	Laser Beam Drilling - Principles – Equipment – Types – Beam control techniques – Applications	1
2.8	Plasma Arc Machining - Principles – Equipment – Types – Beam control techniques – Applications	1
2.9	Electron Beam Machining - Principles – Equipment – Types – Beam control techniques – Applications	1
<b>3.0</b>	<b>Chemical and Electro-Chemical Energy Based Processes</b>	
3.1	Chemical Machining - Process Parameters	1
3.2	Surface Finish and MRR - Applications	1
3.3	Electro-Chemical Machining - Process Parameters	1
3.4	Surface Finish and MRR - Applications	1
3.5	Etchants – Maskant Techniques of Applying Maskants	1
3.6	Principles of ECM - Equipment - Surface Roughness	1
3.7	ECM - MRR - Electrical Circuit	1
3.8	Electro-Chemical Grinding - Process Parameters - Applications	1
3.9	Electro-Chemical Honing - Process Parameters - Applications	1

<b>4.0</b>	<b>Advanced Nano Finishing Processes</b>	
4.1	Abrasive Flow Machining - Working Principles, Equipments	1
4.2	Effect Of Process Parameters, Applications, Advantages And Limitations	1
4.3	Chemo Mechanical Polishing - Working Principles, Equipments	1
4.4	Effect Of Process Parameters, Applications, Advantages And Limitations	1
4.5	Magnetic Abrasive Finishing - Working Principles, Equipments	1
4.6	Effect Of Process Parameters, Applications, Advantages And Limitations	1
4.7	Magnetorheological Abrasive Flow Finishing - Working Principles, Equipments	2
4.8	Effect Of Process Parameters, Applications, Advantages And Limitations	1
<b>5.0</b>	<b>Recent Trends In Non-Conventional Machining Processes</b>	
5.1	Recent Developments In Non-Conventional Machining Processes	2
5.2	Electric Discharge Diamond Grinding - Working Principles, Equipments	1
5.3	Effect Of Process Parameters, Applications, Advantages And Limitations	1
5.4	Wire Electro Discharge Grinding - Working Principles, Equipments	1
5.5	Effect Of Process Parameters, Applications, Advantages And Limitations	1
5.6	Electro Chemical Spark Machining - Working Principles, Equipments	1
5.7	Effect Of Process Parameters, Applications, Advantages And Limitations	1
5.8	Comparison Of Non-Conventional Machining Processes	1

60 MC E35	Product Design and Costing	Category	L	T	P	Credit
		PE	3	0	0	3

### Objectives

- To enable the student to understand the various aspects of the product design and development.
- To educate the concept of customer need and product architecture.
- To train the student in the concept of product development economics in product design.
- To impart knowledge on various types of costs associated with production of components
- To educate the concept of work study and ergonomics and its influence in production.

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the fundamentals of product design, planning, development and product life cycle.	Understand
CO2	Understand the significance of customer satisfaction and issues associated with it	Understand
CO3	Learn the economic analysis process, factors affecting it and trade-offs.	Understand
CO4	Estimate various types of costs for producing components by turning, drilling, shaping, planning, milling, grinding, welding and forging.	Understand
CO5	Learn the process of work study, method study, tools and techniques used for it and able to calculate the standard time	Understand

### Mapping with Programme Outcomes

### Objectives

- To develop competencies and knowledge of students to become Warehouse professionals
- To orient students in the field of Logistics
- To understand Warehousing and distribution centre operations.
- To study Warehouse Safety Rules and Procedures
- To understand complete the analysis and to select the most appropriate solution for warehouse automation

### Pre-requisites

- NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the Basic concept of Warehouse	Understand
CO2	Plan the activity in the field of Logistics	Understand
CO3	Identify Warehousing and distribution centre operations	Understand
CO4	Know the Warehouse Safety Rules and Procedures	Understand
CO5	Understand the basic concept of the most common automations from light to heavy	Understand

### Mapping with Programme Outcomes

### Objectives

- To familiarize robot structures, classification and Types, levels, need of Automation.
- To develop knowledge in Grippers and Sensors for Robotics.
- To develop skills in performing Drives, Transmission and Control for Robotics.
- To develop knowledge in the Artificial Intelligence for Robotics.
- To design and develop a robotic system for a given industrial application.

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Identify and understand the automation concepts for Industries.	Understand
CO2	Understand various grippers and sensors for robotics	Understand
CO3	Interpret terminologies related to drives, actuators and controllers.	Apply
CO4	Apply the principles of AI in robot system integration	Apply
CO5	Integrate the applications of robots and digital technology	Apply

### Objectives

- To design and optimize a robotic arm for a specified application
- To investigate and analyse the properties of engineering materials
- To understand the principles and operation of different types of actuators
- To explore the principles and characteristics of different types of joints
- To examine robot element design including bioinspired design principles

### Pre-requisites

- Robotics Engineering, Sensors and Instrumentation

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate an ample understanding of the principles and practices involved in designing robots.	Apply
CO2	Apply appropriate materials for various robot elements based on their properties and performance requirements.	Apply
CO3	Proficient in selecting, and implementing actuators and transmission systems in robotic applications	Apply
CO4	Gain a comprehensive understanding of linkages, mechanisms, force distribution and stress in linkages	Apply
CO5	Equipped to integrate advanced sensor technologies, utilize emerging trends in bioinspired design and smart materials	Apply

<b>Robot Design*</b> Introduction to Robots and Their Applications - Design Considerations: Functionality, Strength, Weight, Cost - Kinematics and Dynamics Fundamentals - Design Process and Optimization Techniques.								[6]
<b>Materials for Robot Elements**</b> Properties of Engineering Materials: Metals, Polymers, Composites - Material Selection for Specific Robot Components - Weight Optimization and Lightweight Materials.								[6]
<b>Actuators and Transmissions***</b> Actuator Characteristics: Power, Torque, Speed, Efficiency, Controllability - Actuator Selection: Matching Actuator Capabilities to Robot Requirements. - Transmission Design Considerations: Gear Ratios, Efficiency, Backlash, Power Transmission Capacity.								[6]
<b>Linkages and Mechanisms*</b> Design Considerations for Linkages - Applications of Linkages in Robotics - Types of Mechanisms (Gear, Cam, Geneva, Rack and Pinion) - Design Considerations for Mechanisms - Applications of Mechanisms in Robotics.								[6]
<b>Advances in Robot Element Design*</b> Robot Sensors: Proprioceptive and Exteroceptive Sensors - Emerging Trends In Robot Element Design: Bioinspired Design - Smart Materials and Actuators.								[6]
<b>Practical:</b> 1. Use Simulation Software to Model a Simple Robot arm and Analyze its Forward and Inverse Kinematics 2. Simulate The Speed and Torque Characteristics of Different Types of Electric Motors (DC, AC Induction, Stepper Motor) Under Varying Loads 3. Design and Build a Simple Pick-And-Place System Using a Pneumatic Actuator and Control Valves 4. Design a Lightweight Bridge or Cantilever Beam Using Limited Materials (E.G., Cardboard, Balsa Wood) to Support a Specific Load 5. Simulate The Behaviour of a Single-Acting Hydraulic Actuator Using Any Simulation Software 6. Design of Robotic Arms Focusing On Gripping Force and Control Using Servo Motors, Simple Gripper Mechanism and Force Gauge 7. Plan The Robot's Trajectory Using Forward and Inverse Kinematics to Move the End-Effector to The Desired Locations for Grasping and Placing an Object 8. Detect and Avoid Obstacles Using Obstacle Detection with Ultrasonic Sensor 9. Track A Light Source Using a Light Sensor 10. Use Simulation Software to Model a Simple Robot with a Bioinspired Locomotion Mechanism <b>Tools Used: MATLAB, Simulink, Fluidsim</b>								[30]

		PE	2	0	2	3

### Objectives

- To learn about Mechatronics system design and simulation, ergonomics and safety.
- To know about Electro mechanical system design.
- To understand theoretical and practical aspects of interfacing, real time data acquisition and control.
- To learn the real time interfacing software and man machine interface.
- To know about the various applications in this system

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the fundamental ideas and components of mechatronics	Apply
CO2	Develop system models and acquire familiar with the design process for mechatronics.	Apply
CO3	Realize the data acquisition for Real Time application.	Apply
CO4	Select the suitable interface for mechatronics system	Apply
CO5	Develop the various Mechatronics system	Apply

### Objectives

- The main aim of this course is to understand the basics of Drones and its components.
- To make the students understand the basic working principle and different Sensors used in UAV.
- To Learn about the various components of drone design.
- To enable the students to identify and understand various navigation guidance systems.
- To Learn about the various types of Drones and its applications

### Pre-requisites

- Sensor and Instrumentation

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explain the fundamental ideology about unmanned and micro air vehicles.	Remember
CO2	Demonstrate the design process of UAVs fixed wing multi copter and electronic components used in Drones and its specification.	Apply
CO3	Predict the effect of Flight Mechanics and Dynamics	Apply
CO4	Apply guidance and trajectory control algorithm to navigate the unmanned system.	Apply
CO5	Apply the mechanism and applications of the different types of drones	Apply

60 MC E44	Design for Manufacturing	Category	L	T	P	Credit
		PE	2	0	2	3

### Objectives

- To provide an overview of DFM processes and their importance in product design and development
- To familiarize the key design considerations involved in DFM and their impact on product manufacturability and cost
- To familiarize the principles of DFA and Cost Analysis in the context of product design and manufacturing
- To educate the principles of Design for Quality (DFQ) and Tolerance Analysis in product design
- To introduce the concept of Sustainable Design to focus on minimizing environmental impact and maximizing resource efficiency

### Pre-requisites

- Manufacturing Technology, Computer Aided Design and Manufacturing

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the concept of DFM and its significance in optimizing product designs	Understand
CO2	Apply design considerations in Design for Manufacturing	Apply
CO3	Conduct cost analyses for product designs and identify cost-saving opportunities	Apply
CO4	Apply DFQ principles to design products that meet quality standards and are robust to variations in manufacturing processes	Apply
CO5	Integrate sustainable design principles into product development processes, considering environmental, social, and economic factors	Apply

**Introduction to Design for Manufacturing Processes\***  
 Definition and Importance of DFM - Benefits and Cost Savings through DFM - DFM Principles and Guidelines - Design for Assembly (DFA) Concepts - Common Manufacturing Processes: Casting, Machining. **[6]**

**Design Considerations\*\***  
 Design for Machinability: Minimizing Machining Time and Cost - Design for Forging: Design Rules for Forgeable Parts - Design for Additive Manufacturing: Design Concept Generation, Manufacturability and Process Selection. **[6]**

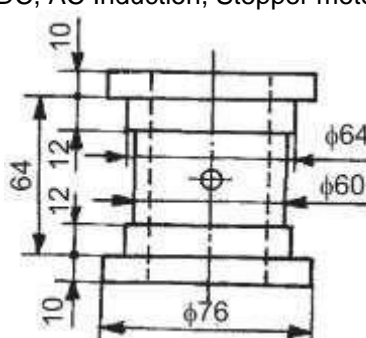

**Design for Assembly and Cost Analysis\***  
 Assembly Process Analysis and Simplification - Design for Minimum Parts and Reduced Assembly Time - Techniques for Designing for Easy Assembly - Cost Estimation Techniques for Manufacturing - Life Cycle Cost Analysis and Design Optimization. **[6]**

**Design for Quality and Tolerance Analysis\***  
 Principles of Quality Control and Defect Prevention - Design Platforms with cloud-based software tools - Design for Robustness - Tolerance Analysis: Symbols and Terms - Datum Reference Frames (DRFs) - Form Tolerances - Position Tolerance. **[6]**

**Emerging Technologies and Sustainable Design\***  
 Design for Automation and Robotics Integration - Design for Additive Manufacturing (3D Printing) - Sustainable Design Considerations and Material Selection - Design for Disassembly and Remanufacturing. **[6]**

**Practical:**

- For the Pedestal Shown in Fig.1 Indicate the Probable Parting Line and any Unnecessary Sand Cores, Accepting that the Probable Parting line is the one Involving the Minimum Sand Cores. Show a Design Modification to Reduce or Eliminate the Need for Sand Cores; Maintain Approximately Same Weight of Casting in the Modified Design Simulate the Speed and Torque characteristics of different types of Electric Motors (DC, AC Induction, Stepper motor) under Varying Loads. **[30]**

**Fig. 1**

- There are two Possible Parting Lines for the V-belt Pulley. These Parting Lines can be Indicated along with the Appropriate sand Cores. Assuming that the V-Grooves are Machined from a Solid rim, a Design Modification is Required to Reduce or eliminate the need for sand cores while maintaining similar weight and stability of the casting. Provide the possible solutions with appropriate solid models.
- The Shaft is to be Manufactured from 0.4% carbon steel to the sizes shown in Fig.2. The 30 mm and the 40 mm diameter are to be ground. Prepare a production detail drawing for shaft using any modeling software.

**Fig. 2**

1. There are two possible parting lines for the V-belt pulley. These parting lines can be indicated along with the appropriate sand cores. Assuming that the V-grooves are machined from a solid rim, a design modification is required to reduce or eliminate the need for sand cores while maintaining similar weight and stability of the casting. Provide the possible solutions with appropriate solid models.

**Fig. 3**

2. Create a Square headed bolt as shown in Fig.4 in additive manufacturing technique using FreeCAD software. Use  $D = 10\text{ mm}$ ,  $15\text{ mm}$ ,  $20\text{ mm}$ .

**Fig. 4**

3. Suggest a suitable machining sequence for the Screw Jack Cup as shown in Fig.5 and redraw the component incorporating step by step features to facilitate manufacture.

Fig. 5

7. In a four Story Wooden Rack Furniture Assembly Line the Furniture Manufacturer Sought to Reduce the Complexity of Assembling In the Product Line. Provide as Case Study With Appropriate Diagrams That Which Focuses on Assembly Process Analysis and Simplification.
8. A Company Manufactures a Stapler With 14 Individual Parts. The Assembly Process Is Time-Consuming And Prone to Errors. Demonstrate the Benefits of Designing for Minimum Parts In The Stapler to Achieve Simplicity And Reduce Costs.
9. A Company That Manufactures Smartphones Wants to Improve the Recyclability of Its Products By Designing them for Easier Disassembly At The End of Their Life Cycle. Provide a Detailed Approach That Can Be Disassembled More Easily, Allowing For The Efficient Recovery of Valuable Components And Materials for Recycling.
10. A Company Designs Disposable Plastic Water Bottles. They Want to Create a More Sustainable Alternative. Discuss In Details About that the Final Design Might Be a Reusable and Cost Effective With Appropriate Sketches

**Tools used: Fusion 360, AutoCAD, FreeCAD**

60 MC E45	Finite Element Analysis	Category	L	T	P	Credit
		PE	2	0	2	3

### Objectives

- To explore the mathematical theory keystones in finite element analysis.
- To practice the various steps involved in the finite element analysis of a problem.
- To learn solve the two-dimensional problems.
- To apply the finite element method by solving the problems in solid and structural mechanics, heat transfer.
- To solve isoperimetric element problems.

### Pre-requisites

NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the concept of FEA and develop the governing equations for a continuum.	Understand
CO2	Model and assemble the stiffness matrices for 1D elements	Apply
CO3	Apply plane stress and plane strain and solve 2D heat transfer problems.	Apply
CO4	Solve and analyze the engineering problems in axisymmetric elements.	Apply
CO5	Apply the concepts of isoparametric elements in FEA	Apply

### Mapping with Programme Outcomes

60 MC E46	Process Planning and Cost Estimation	Category	L	T	P	Credit
		PE	2	0	2	3

### Objectives

- To introduce the process planning concepts and its necessity
- Economic planning of tools and equipment requirement
- Differentiate between cost accounting and cost estimation
- Cost Estimation and analysis
- To estimate time for various machining operations

### Pre-requisites

Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explain the concept of selection and steps in process planning, tooling, equipment selection and material evaluation	Understand
CO2	Calculate process parameters and select Jig, Fixtures and quality assurance methods	Apply
CO3	Apply the methods of costing and to explain the concept of estimation.	Apply
CO4	Compute the cost of the product in various shops of production	Apply
CO5	Calculate the machining time for various operation	Apply

60 MC E47	Robotics Programming	Category	L	T	P	Credit
		PE	3	0	0	3

### Objectives

- To introduce the fundamentals of robotic programming
- To understand the ROS fundamentals.
- To understand the criteria for selecting a sensor and actuator for a particular ROS robotic application.
- To familiarize with various hardware based robotic application
- Learn about various sensors, actuators, robot programming

### Pre-requisites

- Robotics Engineering

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the robotics design and implementation.	Understand
CO2	Gain the knowledge on fundamentals of robotic programming	Understand
CO3	Comprehend, classify and analyze the behavior of different types of sensors and actuators	Apply
CO4	Understand the ROS fundamentals	Understand
CO5	Design robotic applications using ROS	Apply

<b>Introduction to Robotics Programming</b> Overview of robotics applications and domains- Introduction to robot components: sensors, actuators, controllers- Basics of robot kinematics and dynamics- Introduction to ROS (Robot Operating System)- ROS architecture and concepts (nodes, topics, messages)- Writing simple ROS programs in Python or C++.								[09]
<b>Sensors and Perception</b> Introduction to sensors commonly used in robotics- Sensor data processing and interpretation- Introduction to computer vision techniques for robotics- Basics of motion planning algorithms- Path planning and trajectory generation- Integration of motion planning with ROS.								[09]
<b>Robot Control</b> Introduction to localization and mapping (SLAM)- Techniques for robot localization - Building maps of robot environments using ROS packages- Introduction to machine learning for robotics- Reinforcement learning for robot control-Integration of AI techniques with ROS.								[09]
<b>AI in Robotics</b> Socio-Economic aspect of robotisation. Economical aspects for robot design, Safety for robot and standards, Introduction to Artificial Intelligence, AI techniques, Need and application of AI, mobile robotics, New trends & recent updates in robotics. Mobile Robot locomotion: Types of locomotion, hopping robots, legged robots, wheeled robots, stability, manoeuvrability, controllability.								[09]
<b>Applications and Digital Manufacturing</b> Robots Manufacturing, Construction, Medical, Defense, Logistics & Storage, Packing & Palletizing, Inspection & Quality Control, Harvesting, Painting & Coating, Cleaning & Hygiene, Aerospace, basics in cyber-physical production systems, data- driven production, industrial internet of things, digital twin technology and simulation methodologies.								[09]

60 MC E48	Sensors and Machine Vision System	Category	L	T	P	Credit
		PE	3	0	0	3

### Objectives

- Acquaint students with the various types of sensors, their principles, and their applications in diverse fields.
- Provide students with a comprehensive overview of machine vision systems, image processing techniques, and their role in automation and analysis.
- Develop practical skills in interfacing sensors, processing visual data, and designing simple vision-based systems.
- Enable students to apply sensor and machine vision knowledge to solve real-world challenges in fields like robotics, manufacturing, and healthcare.
- Foster an understanding of the ethical considerations related to data collection, privacy, and bias in machine vision applications

### Pre-requisites

- Sensors and Instrumentation, Robotics Engineering

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Identify and classify various sensor types based on their principles and applications.	Understand
CO2	Assess the suitability of different sensors for specific tasks based on their characteristics.	Understand
CO3	Describe the optical components, image formation process, and image sensor technologies in machine vision systems.	Apply
CO4	Apply image enhancement, transformation, and segmentation techniques to preprocess images for analysis.	Apply
CO5	Utilize image processing libraries and tools to extract relevant features from images.	Apply

### Objectives

- To familiarize the fundamental types of welding technologies
- To understand the concepts of robotic welding systems.
- Learn about safety protocols and best practices in robotic welding.
- To enhance the knowledge in welding inspection and quality control techniques.
- Explore real-world applications of robotic welding in various industries

### Pre-requisites

- Robotics Engineering

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Realize the operation and processes of welding processes.	Understand
CO2	Recognize the significance of various robotic welding systems	Apply
CO3	Monitor and measure safety performance of robotic welding	Apply
CO4	Apply basic knowledge of welding inspection and quality control techniques to identify welding defects.	Apply
CO5	Recognize the various industrial applications of robotic welding.	Apply

60 MC E52	Smart Mobility and Intelligent Vehicles	Category	L	T	P	Credit
		PE	3	0	0	3

### Objectives

- To introduce students to the various technologies and systems used to implement smart mobility and intelligent vehicles.
- To learn Basics of Radar Technology and Systems, Ultrasonic Sonar Systems, LIDAR Sensor Technology and Systems and other sensors for automobile vision system.
- To learn Basic Control System Theory applied to Autonomous Automobiles.
- To produce overall impact of automating like various driving functions, connecting the automobile to sources of information that assist with a task
- To allow the automobile to make autonomous intelligent decisions concerning future actions

### Pre-requisites

- Autonomous Vehicle

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the concept of cyber-physical control systems and their application to collision avoidance and autonomous vehicles	Understand
CO2	Select the concept of remote sensing and the types of sensor technology needed to implement remote sensing	Understand
CO3	Familiar with the concept of comfort systems for smart vehicles.	Understand
CO4	Apply the basic concepts of wireless communications and wireless data networks	Apply
CO5	Apply the concept of the Intelligent and Safety systems for intelligent vehicles.	Apply

60 MC E53	Aerodynamics of Drones	Category	L	T	P	Credit
		PE	3	0	0	3

### Objectives

- The main aim of this course is to understand the basics of aerodynamics
- To make the students understand the basic working principle and different Sensors used in UAV.
- To Learn about the various components of drone design.
- To enable the students to identify and understand rotorcraft aerodynamics.
- To Learn about the various Automated flight stability

### Pre-requisites

- Drone technology

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explain the fundamental ideology about unmanned and micro air vehicles.	Remember
CO2	Demonstrate the design process of UAVs fixed wing multi copter and Airfoils	Apply
CO3	Predict the effect of airfoils of aerodynamics	Apply
CO4	Apply guidance and trajectory control algorithm to rotorcraft aerodynamics .	Apply
CO5	Utilize the mechanism of Automated flight stability	Apply

60 MC E54	AI/ML for Manufacturing	Category	L	T	P	Credit
		PE	3	0	0	3

### Objectives

- This course systematically introduces the aspects of artificial intelligence and machine learning in the context of manufacturing.
- The course will provide state of the art ideas in AI, ML and their applications in manufacturing process & control, robotics applications, etc.
- This course will enable the students to apply artificial intelligence based techniques
- To solve the core engineering problems related to manufacturing

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the artificial intelligence based techniques to solve the core engineering problems related to manufacturing	Understand
CO2	Realize the Machine learning based techniques to solve the core engineering problems related to manufacturing	Understand
CO3	Understand the different expert tools used for manufacturing	Understand
CO4	Apply the different Expert Systems Tools in suitable applications	Apply
CO5	Apply the Artificial Neural Networks, Fuzzy Logic and Genetic Algorithms in different applications.	Apply

### Objectives

- To understand the various rapid prototyping, process and its applications.
- To know the principle methods, areas of usage, possibilities and limitations as well as environmental effects of the Additive Manufacturing technologies.
- To understand different types of tooling in additive manufacturing.
- To be familiar with the characteristics of the different materials those are used in Bio-Additive Manufacturing.
- To know the different applications additive manufacturing role in the medical field

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the need, history, growth and classification of RP system.	Understand
CO2	Understand the Principle, process parameters, applications of SLA, FDM and LOM.	Understand
CO3	Learn the Principle, process parameters, applications of SLS, 3DP and LENS.	Understand
CO4	Initiate a continuous improvement in medical and bio additive manufacturing.	Understand
CO5	Understand the different types of rapid tooling and applications	Understand

### Objectives

- Provide the learner with a good knowledge of warehousing, material handling
- To understand different cargo and facilities available in Indian railway
- To make learner understand about the regulation and ground handling operations in air cargo industry
- To comprehend the meaning of logistics and importance of its operation
- To provide general information about different components of logistics business.

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Learn the need and importance of logistics in product flow	Understand
CO2	Gain knowledge on warehousing and material handling	Understand
CO3	Gain knowledge and understanding facilities and cargo Process in Indian railway	Understand
CO4	Demonstrate knowledge and understanding of Air cargo and Documentation Process	Understand
CO5	Learn the current challenges faced by logistics professionals	Understand

		OE	3	0	0	3

### Objectives

- Course imparts basic knowledge on ergonomics anatomy and biomechanics.
- Insights on importance of organization ergonomics.
- Emphasis on the factors affecting ergonomic design.
- Course deals with Physical and cognitive ergonomics.
- Course provides an idea about man-workplace interface in regard with ergonomics

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the basic concept of ergonomics and human anatomy.	Understand
CO2	Understand the factors contributing to human error.	Understand
CO3	Correlate the parameters involved in designing ergo workplace.	Understand
CO4	Determine the factors influencing physical ergonomics.	Apply
CO5	Interface between man machine and work environment pertaining to ergonomics	Apply

60 MC L04	Introduction to Occupational Health	Category	L	T	P	Credit
		OE	3	0	0	3

### Objective

- To Identify the various fields of safety and risk management
- To Identify and describe the organization of regulatory agencies that deal with issues of occupational safety and health, environmental health, and risk management.
- To Define and understand basic terminology used in the field of occupational safety and health and apply it appropriately.
- To Describe and demonstrate how to access safety information and resources.
- To Describe the history and evolution of occupational safety and health.

### Prerequisite

NIL

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the Need for EHS in industries and related Indian regulations	Understand
CO2	Understand the Various types of Health hazards, effect, assessment and control methods	Understand
CO3	Understand the Various safety systems in working environments	Understand
CO4	Apply the methodology for preparation of Emergency Plans and Accident investigation	Apply
CO5	Apply the EHS Management System and its elements	Apply

### Mapping with Programme Outcomes

		OE	3	0	0	3

### Objectives

- The concepts, methodologies, mathematics, techniques and algorithms needed for this course are drawn from engineering approaches, statistics, safety analytical tools.
- The primary focuses of this course is to learn from data, predict the future and take data driven decision making.
- To develop analysis and apply basic data and improve the quality of information
- To apply safety analytical tools in establishing safety management system
- To collect and disseminate big data and improve safety performance

### Pre-requisites

- Nil

### Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand The Types, Sources and Characteristics of Safety Data and Their Integration for Organization-Wide Safety Centric Data Model,	Understand
CO2	Perform Safety Data Visualization and Exploration along with Safety Performance Evaluation and Monitoring	Understand
CO3	Draw Safety Predictive Models and Behavioural Safety Analytics	Apply
CO4	Understand Injury Epidemiology	Understand
CO5	Recommend on Safety Related Decision Making.	Apply

\*SDG 3 – Good Health and Well Being

**Course Contents and Lecture Schedule**

S. No.	Topics	No. of hours
<b>1.0</b>	<b>Basics of Safety and Risk</b>	
1.1	Introduction to Safety and Risk Management	2
1.2	Hazard Triangle- Safety Ontology	1
1.3	Qualitative Risk Assessment	3
1.4	Quantitative Risk Assessment	3
<b>2.0</b>	<b>Safety Data Quality Assessment and Pre Processing</b>	
2.1	Creation of Safety Database -Hazard and Risk Data	1
2.2	Incident Investigation Data	2
2.3	Behavioral and Organizational Safety Data	2
2.4	Data Dimensions and Information Quality	2
2.5	Missing Data Handling – Data Transformation – Data Reduction	2
<b>3.0</b>	<b>Descriptive Safety Analytics</b>	
3.1	Probability Distribution – Sample and Statistics	2
3.2	Safety Data Visualization Data Tool – Data Exploration	2
3.3	Predictive Safety Analytics - Predictive Risk Analytics	2
3.4	Prescriptive Safety Analytics	2
3.5	Behavioral Safety Analytics and Injury Epidemiology	1
<b>4.0</b>	<b>Safety Performance Evaluation and Monitoring</b>	
4.1	Leading and Lagging Indicators for Measuring Safety Performance	2
4.2	Control Charts for Safety Performance	3
4.3	Evaluation and Monitoring	2
4.4	Safety Capability Analysis	2
<b>5.0</b>	<b>Analysis of Safety Reports and Narratives</b>	
5.1	Safety Report and Use of Text Analytics	1
5.2	Preprocessing of Text Data	2
5.3	Document Classification Using KNN	2
5.4	Topic Modelling	2
5.5	Risk Quantification	2

**Course Designer(s)**
