K.S. Rangasamy College of Technology

(Autonomous)

CURRICULUM AND SYLLABI

of

B. Tech Biotechnology

(For the batch admitted in 2024–2025)

R 2022

Courses Accredited by NBA, Accredited by NAAC with 'A++' Grade, Approved by AICTE, Affiliated to Anna University, Chennai.

> KSR Kalvi Nagar, Tiruchengode – 637 215. Namakkal District, Tamil Nadu, India.

DEPARTMENT OF B.TECH., BIOTECHNOLOGY

VISION OF THE DEPARTMENT

• To produce competent Scientists, Technologists, Entrepreneurs and Researchers in Biotechnology through quality education.

MISSION OF THE DEPARTMENT

- To be recognized as a place of excellence in teaching-learning through continual improvement process (Place of excellence and continual improvement)
- To work in close liaison with the industry to achieve socio-economic development through biotechnological ventures (Socio-economic development)
- To facilitate students to perform as competent rofessional Biotechnologists (Professional Competence)

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- **PEO1:** Fundamentals: Graduates are professionally competent in Biotechnology to solve problems in environmental, food, biochemical and biomedical engineering and technology.
- **PEO2:** Career Growth: Graduates demonstrate proficiency in theory and practice of biotechniques through life-long learning.
- **PEO3: Professional Practices:** Graduates perform as an individual and / or member of a team with professional and ethical behaviour.

PROGRAMME OUTCOMES (POs)

Engineering Graduates will be able to:

- **PO1:** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **PO2: Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **PO3:** Design /development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **PO4:** Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **PO5:** Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- **PO6:** The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **PO7:** Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **PO8:** Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **PO9:** Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **PO10:** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **PO11: Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **PO12:** Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs):

Engineering Graduates will be able to:

- **PSO1:** Design and execute industry-oriented experiments in biotechnology using modern tools and techniques
- **PSO2:** Apply the knowledge of Bioengineering and Technology to demonstrate research skills and develop technology for commercialization

MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES (PEOs) WITH PROGRAMME OUTCOMES (POs)

The B. Tech., Biotechnology Programme outcomes leading to the achievement of the objectives are summarized in the following Table.

Programme Educational Objectives					Progra			•	•				Progra Spe Outco (PS	cific omes SO)
(PEO)	PO1	PO2	PO3	PO4	PO5	PO6	P07	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
PEO 1	3	1	3	2	2	1	1	1	2	2	3	1	3	3
PEO 2	3	3	3	2	2	1	1	1	2	2	3	1	3	2
PEO 3	3	2	3	2	2	1	1	1	3	2	3	1	1	1

Contributions: 1- low, 2- medium, 3- high

PROFESSIONAL ELECTIVE COURSES (PE)/ HONOURS

SEMESTER V, PROFESSIONAL ELECTIVE I

S.No.	Course Code	Course Title	Category	Contact Periods	L	т	Р	С	Pre-requisite
1.	60 BT E11	Bioresource Technology	PE	3	3	0	0	3	Environmental Biology and Microbiology
2.	60 BT E12	Intellectual Property Rights	PE	3	3	0	0	3	Biopharmaceuti cal Technology
3.	60 BT E13	Cancer Biotechnology	PE	3	3	0	0	З	Basic Knowledge on Cell Biology, Genetics and Molecular Biology
4.	60 BT E14	Biosensors	PE	3	3	0	0	3	Biomedical Engineering
5.	60 BT E15	Genomics and Proteomics	PE	3	3	0	0	3	Bioinformatics
6.	60 BT E16	Food Biotechnology	PE	3	3	0	0	3	Basics of Biology, Microbiology and Biochemistry

Note: Students may opt any elective course for honours degree

SEMESTER VI, PROFESSIONAL ELECTIVE II

S.No.	Course Code	Course Title	Category	Contact Periods	L	т	Р	С	Pre-requisite
1.	60 BT E21	Bioreactor Design	PE	3	3	0	0	3	Basic knowledge in Fluid flow, Heat and Mass transfer, Chemical Reaction Engineering and Bioprocess Engineering
2.	60 BT E22	Bioethics and Biosafety	PE	3	3	0	0	3	Nil
3.	60 BT E23	Stem Cell Technology	PE	3	3	0	0	3	Basic Knowledge on Cell Biology and Immunology
4.	60 BT E24	Marine Biotechnology	PE	3	3	0	0	3	Biodiversity and its conservation
5.	60 BT E25	Computational Biology	PE	3	3	0	0	3	Basic knowledge of biology and genetics
6.	60 BT E26	Organic Farming for Sustainable Agriculture	PE	3	3	0	0	3	Biology

Note: Students may opt any elective course for honours degree

SEMESTER VII, PROFESSIONAL ELECTIVE III

S.No.	Course Code	Course Title	Category	Contact Periods	L	т	Р	С	Pre-requisite
1.	60 BT E31	Translational Biotechnology	PE	3	3	0	0	3	Basic Biology
2.	60 BT E32	Environmental Hazards and Management	PE	3	3	0	0	3	Environment Science
3.	60 BT E33	Molecular Medicine	PE	3	3	0	0	3	Basic Biology
4.	60 BT E34	Pharmacology and Toxicology	PE	3	3	0	0	3	Biochemistry
5.	60 BT E35	Metabolomics and Metabolic Engineering	PE	3	3	0	0	3	Biochemistry, Stoichiometry, Bioprocess / Fermentation Technology
6.	60 BT E36	Biotechniques in Crop Improvement	PE	3	3	0	0	3	Biochemistry, Microbiology, Molecular Biology and Biology

* CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

** End Semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory end semester examination and 40 marks for practical end semester examination.

60 EN 001	Brofossional English - I	Category	L	Т	Ρ	Credit
00 EN 001	Professional English – I	HS	1	0	2	2

Objectives

- To help learners improve their vocabulary and to enable them to use words appropriately in different academic and professional contexts
- To help learners develop strategies that could be adopted while reading texts
- To help learners acquire the ability to speak effectively in English in real life and career related situations
- To equip students with effective speaking and listening skills in English
- To facilitate learners to enhance their writing skills with coherence and appropriate format effectively

Pre-requisites

• Basic Knowledge of reading and writing in English

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and interpret complex academic texts	Understand
CO2	Recall the denotative and connotative meanings of technical texts	Remember
CO3	Interpret definitions, descriptions, narrations, and essays on various topics	Understand
CO4	Express fluently and accurately in formal and informal communicative contexts	Understand
CO5	Summarize their opinions effectively in both oral and written medium of communication	Understand

Course Contents and Lecture Schedule								
S. No.	Topics	No. of hours						
1.0	Introduction to Fundamentals of Communication							
1.1	Listening for General Information and Specific Details	1						
1.2	Self-Introduction	1						
1.3	Narrating Personal Experiences	1						
1.4	Reading Relevant to Technical Contexts and Emails	1						
1.5	Writing Letters – Informal	1						
1.6	Writing Letters – Formal	1						
1.7	Present Tenses	1						
1.8	Synonyms, Antonyms and Contranyms, and Affixes	1						
1.9	Phrasal Verbs; Abbreviations & Acronyms	1						
2.0	Description of a Process / Product							
2.1	Listening to Podcasts, Documentaries and Interviews with Celebrities	1						
2.2	Narrating Personal Experiences	1						
2.3	Summarizing of Documentaries	1						
2.4	Reading Travelogues, and Excerpts from Literature	1						
2.5	Paragraph Writing	1						
2.6	Short Report on an Event (Field Trip Etc.).	1						
2.7	Past Tenses	1						
2.8	Prepositions	1						
2.9	One-Word Substitution	1						
3.0	Description of a Process / Product							
3.1	Listen to a Product and Process Descriptions	1						
3.2	Picture Description	1						
3.3	Giving Instruction to use the Product	1						
3.4	Reading Advertisements, Gadget Reviews and user Manuals	1						
3.5	Writing Definitions and Instructions	1						
3.6	Future Tenses	1						
3.7	Homonyms and Homophones	1						
3.8	Imperatives	1						
3.9	Comparative Adjectives, and Discourse Markers	1						
4.0	Classification and Recommendations	•						
4.1	Listening to TED Talks and Educational Videos	1						
4.2	Listening to Scientific Lectures	1						
4.3	Small Talk and Mini Presentations	1						
4.4	Reading Newspaper Articles and Journal Reports	1						
4.5	Note-Making / Note-Taking	1						
4.6	Recommendations	1						
4.7	Transferring Information from Non-Verbal	1						
4.8	Articles and Pronouns	1						
4.9	Subject-Verb Agreement and Collocations	1						

5.0	Expression	
5.1	Listening to Debates and Panel Discussions	1
5.2	Group Discussions	2
5.3	Role Plays	1
5.4	Reading Editorials and Opinion Blogs	1
5.5	Essay Writing (Descriptive or Narrative)	1
5.6	Punctuation and Cause & Effect Expressions.	1
5.7	Compound Nouns	1
5.8	Simple, Compound & Complex Sentences	1

60 MA 001	Matrices and Calculus	Category	L	Т	Р	Credit
00 MA 001	Wathces and Calculus	BS	3	1	0	4

Objectives

- To familiarize the basic concepts in Cayley-Hamilton theorem and orthogonal transformation
- To get exposed to the fundamentals of differentiation
- To acquire skills to understand the concepts involved in Jacobians and maxima and minima
- To solve various linear differential equations and method of variation of parameters
- To learn various techniques and methods in solving definite and indefinite integrals

Pre-requisites

• NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the concepts of Cayley-hamilton theorem and orthogonal transformation to the matrix	Apply
CO2	Apply the concepts of differentiation in solving various Engineering problems	Apply
CO3	Obtain Jacobians and maxima and minima of functions of two variables	Apply
CO4	Employ various methods in solving differential equations	Apply
CO5	Apply different techniques to evaluate definite and indefinite integrals	Apply

	Electronics Engineering	ES	3	0	0	3

Objectives

- To familiarize the basic concept on electrical circuits and its various parameters
- To facilitate the various types of electrical machines and their use
- To gain knowledge on electrical safety
- To provide exposure on the functions of various semiconductor devices
- To familiarize the use of various measuring instruments

Pre-requisites

• NIL

Course Outcomes

On the successful completion of the course, students will be able to

Off and bac		
CO1	Apply the basic laws of electric circuits to calculate the unknown quantities.	Apply
CO2	Acquire knowledge on different electrical machines and select suitable machines for industrial applications.	Apply
CO3	Express the significance of various components of low voltage electrical installations and create awareness on electrical safety.	Understand
CO4	Demonstrate the operation and characteristics of various semiconductor devices.	Understand
CO5	Interpret the operating principles of measuring instruments and choose suitable instrument for measuring the parameters.	Understand

60 FH 005	Biotechnology	BS	3	0	0	3

Objectives

- To analyze the crystal parameters to investigate crystal structures and to classify the type of the defect present in the crystal
- To enable the students in understanding the importance of quantum physics and its applications
- To introduce the basics of laser, optical fiber and its applications in biomedical field
- To study the basic concept of ultrasonic waves, production of ultrasonic waves and its applications
- To obtain fundamental concepts and current knowledge of biomaterials and nanotechnology for engineering applications

Pre-requisites

• NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the basics of crystallography, crystal imperfections and nucleation	Remember
CO2	Acquire the fundamentals of quantum mechanics and apply to one dimensional motion of particles.	Apply
CO3	Appraise a strong foundational knowledge in lasers and fiber optics and its applications	Understand
CO4	Realize the principle, production, properties and applications of ultrasonic waves	Understand
CO5	Infer the properties of bio materials and nano materials for potential applications ions	Understand

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	Crystallography	
1.1	Lattice - Unit Cell – Crystal Systems and Bravais Lattice	2
1.2	Crystal Planes and Miller Indices	1
1.3	D Spacing in Cubic Lattice	1

1.4	Packing Factor for HCP	1
1.5	Crystal Imperfections- Edge and Screw Dislocations, Burgers Vector and Elastic Strain Energy	2
1.6	Surface Imperfections – Grain and Twin Boundaries – Polymorphism	1
1.7	Phase Changes – Nucleation and Growth – Homogeneous and Heterogeneous Nucleation.	1
2.0	Quantum Mechanics	
2.1	Introduction to Quantum Mechanics	1
2.2	Wave Nature of Particles- De-Broglie Hypothesis – Matter Waves	2
2.3	Time-Dependent and Time Independent Schrodinger Equation for Wave Function	2
2.4	Applications: Particle in a Box (One Dimensional and Three Dimensional)	2
2.5	Uncertainty Principle and its Applications	1
2.6	Electron Microscope: Scanning Electron Microscope.	1
3.0	Laser and Fiber Optics	
3.1	Introduction - Characteristics	1
3.2	Einstein's Coefficients	1
3.3	Population Inversion - Nd:YAG Laser	1
3.4	CO2 Laser	1
3.5	Applications of Lasers in Therapy and Diagnosis – Endoscopy- Blood Flow Measurement.	1
3.6	Optical Fibre- Principle - Classification - Expression for Acceptance Angle and Numerical Aperture	2
3.7	Fiber Optic Sensors: Liquid Level Sensors, Temperature and Displacement Sensors	1
3.8	Optical Fibers in Bio-Sensing Applications	1
4.0	Ultrasonics and Applications	
4.1	Introduction-Properties	1
4.2	Production: Magnetostriction Effect, Magnetostriction Generator	1
4.3	Piezoelectric Effect, Piezoelectric Generator	1
4.4	Ultrasonic Detection- Acoustical Grating	1
4.5	Ultrasound Application in Medicine - Ultrasound Interactions with the Tissues (Reflection, Diffraction, Refraction, Absorption, Scattering)	2
4.6	Safety Aspects of Diagnostic and Therapeutic Ultrasound- Cardiology Neurology	2
4.7	Ultrasonic Imaging (A, B and TM-Scan)- Sonogram	1
5.0	Bio Materials and Nanotechnology	
5.1	Biocompatibility - Bio functionality- Classification of Biomaterials and its Application	2
5.2	Nanomaterials: Properties- Top-Down Process: Ball Milling Method	1
5.3	Bottom-up process: Vapour Phase Deposition Method	2
5.4	Carbon NanoTube (CNT): Properties, Preparation (Electric Arc Method)	1
5.5	CNT Applications: Anti- Cancer Treatment, Gene Therapy, Bio Molecule Sensor, Drug Delivery	2
5.6	Radioactive Nano Particles in Biomedical Applications	1

60 CH 005	Chemistry for Life Sciences	Category	L	Т	Ρ	Credit	
00 CH 005	Chemistry for Life Sciences	BS	3	0	0	3	

Objectives

- To help the learners to analyse the hardness of water and its removal
- To study the behaviour of solutions based on their properties
- To analyse the factors influencing reaction rates and catalysis
- To study the concepts of electrochemistry and its applications
- To explain the characteristics and application of chemical sensors

Pre-requisites

• NIL

Course Outcomes

On the suc	ccessful completion of the course, students will be able to	
CO1	Identify the types of hardness of water and its removal	Apply
CO2	Summarize the characteristics of solutions and their applications	Apply
CO3	Illustrate the kinetics of reaction rates and catalysis	Understand
CO4	Interpret the applications of electro chemistry	Apply
CO5	Categorize the types of sensors for various applications	Understand

Mapping with Programme Outcomes

61 GE 001	Heritage of Tamils (Common to all	Category	L	Т	Ρ	Credit
	Branches)	GE	1	0	0	1 ^β

- To learn the extensive literature of classical tamil
- To review the fine arts heritage of tamil culture
- To realize the contribution of tamils in indian freedom struggle

Pre-requisites

• NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the extensive literature of tamil and its classical nature.	Apply
CO2	Apprehend the heritage of sculpture, painting and musical instruments of ancient people.	Understand
CO3	Review on folk and martial arts of tamil people.	Understand
CO4	Insight thinai concepts, trade and victory of chozha dynasty.	Understand
CO5	Realize the contribution of tamil in indian freedom struggle, self- esteem movement and siddha medicine.	Understand

பாடத்தின் நோக்கங்கள்:

- தமிழ் மொழியின் இலக்கணச் செறிவைக் கற்றுணர்தல் ,வாழ்க்கைத் திறன்கள் மற்றும் நெறிமுறைகள் தெரிதல்.
- தமிழர் பண்பாட்டின் நுண்கலைகள் பற்றிய ஒரு மீள்பார்வை.
- தமிழர்களின் நாட்டுப்புறக்கலைகள் மற்றும் வீரவிளையாட்டுகள் குறித்து அறிதல்
- தமிழர்களின் திணைக் கோட்பாடுகள், சங்ககால வணிகம் மற்றும் சோழர்களின் வெற்றிகள் குறித்த தகவல்களை தெரிதல்.
- இந்திய சுதந்திரப் போராட்டத்தில் தமிழர்களின் பங்களிப்பை உணருதல் முன்கூட்டிய துறை சார் அறிவு
- தேவை இல்லை

பாடம் கற்றதின் விளைவுகள்

• பாடத்தை வெற்றிகரமாக கற்றுமுடித்த பின்பு, மாணவர்களால் முடியும் விளைவுகள்

CO1	தமிழ் மொழியின் செந்தண்மை மற்றும் இலக்கியம் குறித்தும் . வாழ்க்கைத் திறன்கள் மற்றும் நெறிமுறைகள் குறித்தும் தெரிதல்	செயல் படுத்துதல்
CO2	தமிழர்களின் சிற்பக்கலை, ஓவியக்கலை மற்றும் இசைக்கருவிகள் குறித்த தெளிவு.	புரிதல்
CO3	தமிழர்களின் நாட்டுப்புறக்கலைகள் மற்றும் வீரவிளையாட்டுகள் குறித்த தெளிவு.	புரிதல்
CO4	தமிழர்களின் திணைக் கோட்பாடுகள், சங்ககால வணிகம் மற்றும் சோழர்களின் வெற்றிகள் குறித்த தகவல்கள்.	புரிதல்
CO5	இந்திய தேசிய இயக்கம், சுயமரியாதை இயக்கம் மற்றும் சித்த மருத்துவம் பற்றிய புரிதல்.	புரிதல்

00 FH 0F2	Laboratory (BT)	BS	0	0	4	2

- To infer the practical knowledge by applying the experimental methods to correlate with the physics theory
- To demonstrate an ability to make physical measurements and understand the limits of precision in measurements
- To introduce different experiments to test basic understanding of physics concepts applied in optics and electronics
- To make ability to develop and fabricate engineering and technical equipment
- To analyze the behavior and characteristics of various materials for its optimum utilization

Pre-requisites

• NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the concept of stress, strain and elastic limit for a given sample to find their properties	Apply						
CO2	Recognize the concept of quantum Physics & magnetic properties by experimental verification	Apply						
CO3	Infer the knowledge of properties of light and fiber optic cable	Apply						
CO4	Realize the dielectric behavior of a given material	Apply						
CO5	Apply the photovoltaic effect to demonstrate the working of solar cell	Analyze

00 EN 002	Froressional English II	HS	1	0	2	2

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts
- To help learners develop strategies that could be adopted while reading texts
- To help learners acquire the ability to speak and write effectively in english in real life and career . related situations
- To improve listening, observational skills, and problem-solving capabilities
- To develop message generating and delivery skills •

Pre-requisites

Basic Knowledge of Reading and Writing in English and should have Completed Professional • English I

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and contrast products and ideas in technical texts.	Understand
CO2	Exemplify the cause and effects in events, industrial processes through technical texts.	Understand
CO3	Infer problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Understand
CO4	Relate events and the processes of technical and industrial nature.	Remember
CO5	Demonstrate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Understand

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	Making Comparisons	•
1.1	Evaluative Listening	1
1.2	Product Descriptions and Filling a Graphic Organiser	1
1.3	Marketing a Product by using Persuasive Techniques	2
1.4	Reading Advertisements, user Manuals and Brochures	1
1.5	Writing Professional Emails	1
1.6	Compare and Contrast Essay	1
1.7	Mixed Tenses and Prepositional Phrases	1
1.8	Same Words used in Different Contexts	1
2.0	Expressing Causal Relations in Speaking and Writing	
2.1	Listening to Longer Technical Talks	1
2.2	Listening to Process/Event Descriptions	1
2.3	Describing and Discussing the Reasons of Accidents or Disasters	1
2.4	Reading Longer Technical Texts- Cause and Effect Essays	1
2.5	Writing Responses to Complaints	1
2.6	Active Passive Voice Transformations	2
2.7	Infinitive and Gerunds	1
2.8	Word Formation (Noun-Verb-Adj-Adv), Adverbs.	1
3.0	Problem Solving	
3.1	Listening to Documentaries and Suggesting Solutions	1
3.2	Group Discussion (Based on Case Studies)	2
3.3	Reading Case Studies, Excerpts from Literary Texts and NewsReports	1
3.4	Letter to the Editor	1
3.5	Checklists	1
3.6	Problem Solution and Argumentative Essays	1
3.7	Error Correction and Sentence Completion	1
3.8	If Conditional Sentences	1
4.0	Reporting of Events and Research	
4.1	Listening Comprehension	1
4.2	Interviewing and Presenting Oral Reports	1
4.3	Mini Presentations on Select Topics	1
4.4	Reading Newspaper Articles	1
4.5	Recommendations	1
4.6	Transcoding	1
4.7	Precis Writing, Summarising and Plagiarism	1
4.8	Reported Speech, Modals	1
4.9	Conjunctions	1
5.0	The Ability to put Ideas or Information Coherently	I
5.1	Listening to Formal Job Interviews	1
5.2	Role Plays	2
5.3	Virtual Interviews	1
5.4	Reading Company Profiles	1
5.5	Writing Statement of Purpose (Sops)	1
5.6	Writing Résumé	1

5.7	Numerical Adjectives and Relative Clause - Idioms	1
5.8	Question Types: Wh/ Yes or No/ and Tags	1

00 MA 005	Equations and LaplaceTransform	BS	3	1	0	4

- To acquire the knowledge about multiple integrals
- To familiarize the basic concepts of vector calculus
- To get exposed to the fundamentals of analytic functions
- To solve various types of partial differential equations
- To familiarize the concepts of Laplace transform

Pre-requisites

• NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Interpret the basic concepts of double and triple Integrals.	Apply
CO2	Interpret the basic concepts of vector calculus.	Apply
CO3	Construct the analytic functions and evaluate complex integrals.	Apply
CO4	Compute the solution of partial differential equations using different methods.	Apply
CO5	Apply Laplace transform techniques for solving differential equations.	Apply

60 ME 002	Engineering Graphics	Category	L	Т	Ρ	Credit
	Engineering Graphics	ES	2	0	4	4

- To acquire various concepts of dimensioning, conventions and standards.
- To impart the graphic skills for converting pictorial views of solids in to orthographic views.
- To learn the concept in projection of solids, section of solids and development of different types of surfaces.
- To learn the concept of isometric projection.
- To learn the geometry and topology of engineered components

Pre-requisites

• NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate the Impact of computer technologies on graphical communication	Apply
CO2	Convert the pictorial views in to orthographic views using drafting software	Apply
CO3	Draw the projection of simple solids, true shape of sections and development of surfaces	Apply
CO4	Construct the isometric projections of objects using drafting software.	Apply
CO5	Interpret a design project illustrating engineering graphical skills.	Apply

5.1	Geometry and Topology of Engineered Components:	2
5.2	Creation of Engineering Models and their Presentation in Standard 2D Blueprint Form,	2
5.3	3D Wire-Frame and Shaded Solids – Geometric Dimensioning and Tolerance – Use of Solid Modeling Software for Creating Associative Models	4
5.4	Floor Plans: Windows, Doors, and Fixtures Such as Water Closet (WC), Bath Sink, Shower, Etc.	2
5.5	Applying Colour Coding According to Building Drawing Practice	2
5.6	Drawing Sectional Elevation Showing Foundation to Ceiling	4
5.7	Introduction t o Building Information Modelling (BIM).	2

1. Dr.K.Mohan- mohank@ksrct.ac.in

Passed in BoS Meeting held on 21/05/2024 Approved in Academic Council Meeting held on 25/05/2024

60 ME 004	Engineering Mechanics	Category	L	Т	Ρ	Credit
	Engineering mechanics	ES	3	1	0	4

- To learn a process for analysis of static objects, concepts of force, moment, and mechanical equilibrium in two and three dimensions
- To learn the equilibrium of rigid bodies such as frames, trusses, beams
- To identify the properties of surfaces and solids by using different theorem
- To learn the principle of frictional forces at the contact surfaces and impart basic concept of dynamics of particles
- To acquire the concept of elements of rigid body dynamics

Pre-requisites

• NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Use scalar and vector analytical techniques for analysing forces in statically determinate structures	Apply
CO2	Apply basic knowledge of scientific concepts to solve real-world problems.	Apply
CO3	Calculate the properties of surfaces and solids using various theorems.	Apply
CO4	Determine the effect of frictional forces and the dynamic forces exerted in the particle.	Apply
CO5	Analysis of rigid body dynamics and calculation af member forces an the rigid body.	Apply

60 GE 002	தமிழரும் தொழில்நுட்பமும் (அனைத்து	Category	L	т	Ρ	Credit
	துறைகளும் பொதுவானது)	GE	1	0	0	1\$

பாடத்தின் நோக்கங்கள்:

- தமிழர்களின் சங்ககால நெசவு, பானை வனைதல் குறித்து அறிதல்
- தமிழர்களின் கட்டிடத் தொழில் நட்பம் குறித்து அறிதல்
- தமிழர்களின் உற்பத்தி முறைகள் குறித்து அறிதல்
- தமிழர்களின் சங்ககால வேளாண்மை, நீர்ப்பாசனம் குறித்து கற்றல்
- நவீன அறிவியல் தமிழ் மற்றும் கணித்தமிழ் குறித்த புரிதல்

முன்கூட்டிய துறை சார் அறிவு

• தேவை இல்லை

பாடம் கற்றதின் விளைவுகள்

பாடத்தை வெற்றிகரமாக கற்று முடித்த பின்பு, மாணவர்களால் முடியும் விளைவுகள்

CO1	சங்ககாலத் தமிழர்களின் நெசவு மற்றும் பானை வனைதல் தொழில்நுட்பம் குறித்த கற்றுணர்தல்	புரிதல்
CO2	சங்ககாலத் தமிழர்களின் கட்டிட தொழில்நுட்பம் கட்டுமானப் பொருட்கள் மற்றும் அவற்றை விளக்கும் தளங்கள் குறித்த அறிவு.	புரிதல்
CO3	சங்ககாலத் தமிழர்களின் உலோகத் தொழில் நாணயங்கள் மற்றும் மணிகள் சார்ந்த தொல்லியல் சான்றுகள் பற்றிய அறிவு	புரிதல்
CO4	சங்ககாலத் தமிழர்களின் வேளாண்மை, நீர்ப்பாசன முறைகள் மற்றும் முத்து குளித்தல் குறித்த தெளிவு.	புரிதல்
CO5		செயல்படுத்துத ல்

	Fabrication and Reverse Engineering Laboratory	Category	L	Т	Р	Credit
61 ME 0P1	Fabrication and Reverse Engineering Laboratory (Common to All branches)CategoryLTPCreditES0042	2				

- To provide hands-on training on Carpentry, Sheet metal, Fitting and Welding.
- To offer real time activity on plumbing connections and power tools in domestic applications.
- To provide hands-on training on CNC Wood Router and 3D Printing
- To provide hands-on training on household wiring and dismantling and assembling the home appliances.
- To offer real time activity on embedded programming using Arduino

Pre-requisites

-Nil-

Course Outcomes

On the suc	ccessful completion of the course, students will be able to	
CO1	Make a wooden model using carpentry, Sheet metal Process.	Apply
CO2	Mate a model using filing and joining using MS Plate and repair & maintenances of water lines, power tools for home applications.	Apply
СОЗ	Cultivate the skills necessary for developing innovative and desirable products, including the ability to integrate user needs, market trends and technological advancement into the design process.	Apply
CO4	Trouble shoot the electrical and electronic circuits, electrical appliances and facilitate the house wiring.	Apply
CO5	Acquire practical knowledge on embedded programming using Arduino.	Apply

60 CS 0P1	C Programming Laboratory	Category	L	Т	Р	Credit
00 C3 UF1	C Programming Laboratory	ES	0	0	4	2

- To enable the students to apply the concepts of C to solve simple problems
- To use selection and iterative statements in C programs
- To apply the knowledge of library functions in C programming
- To implement the concepts of arrays, functions, structures and pointers in C
- To implement the file handling operations through C

Pre-requisites

• NIL

Course Outcomes

On the su	ccessful completion of the course, students will be able to	
CO1	Implement computational problems using selection and iterative statements	Apply
CO2	Demonstrate C program to manage collection of related data	Apply
CO3	Design and implement different ways of passing arguments to functions, recursion and implement pointers concepts	Apply
CO4	Develop a C prcarogram to manage collection of different data using structures, union, user-defined data types and preprocessor directives	Apply
CO5	Demonstrate C program to store and retrieve data using file concepts	Apply

- To help learners improve their vocabulary and to enable them to use words appropriately in • different academic and professional contexts
- To help learners develop strategies that could be adopted while reading texts •
- To help learners acquire the ability to speak effectively in english in real life and career related • situations
- To equip students with effective speaking and listening skills in english ٠
- To facilitate learners to enhance their writing skills with coherence and appropriate • format effectively

Pre-requisites

Basic knowledge of reading and writing in English •

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Listen and comprehend complex academic texts	Understand
CO2	Read and infer the denotative and connotative meanings of technical texts	Analyze
CO3	Write definitions, descriptions, narrations, and essays on various topics	Apply
CO4	Speak fluently and accurately in formal and informal communicative contexts	Apply
CO5	Appraise the verbal ability skills in the career development and professional contexts	Analyze

* CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

** End Semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory end semester examination and 40 marks for practical end semester examination.

60 MA 012	Fourier Transform and	Category	L	Т	Ρ	Credit
80 MA 012	Numerical Methods	BS		4		

- To provide exposure and ability to use fourier series
- To familiarize the basic concepts of fourier transform
- To get exposed to various techniques to solve equations numerically
- To know the concepts of interpolation and numerical integration
- To learn the basics concepts of initial value problems

Pre-requisites

• NIL

Course Outcomes

On the suc	ccessful completion of the course, students will be able to	
CO1	Obtain the fourier series expansion for the periodic functions.	Apply
CO2	Apply fourier transform techniques for the continuousfunctions.	Apply
CO3	Employ various iteration techniques for solving algebraic, transcendental and system of linear equations.	Apply
CO4	Apply different techniques to find the intermediate values and to evaluate single definite integrals.	Apply
CO5	Compute the solution for initial value problems using single and Multi-step methods	Apply

61 BT 301	Biochemistry	Category	L	Т	Ρ	Credit
0181301	Biochemistry	PC	3	0	0	3

- To learn the basic chemical structure and biological functions of biomolecules
- To impart knowledge on role of biomolecules for orderly structures of the cells/tissues
- To illuminate the metabolism of essential biomolecules that are indispensable for life
- To dissipate the knowledge on formations of specialized products from biomolecules
- To learn the principles of bioenergetics and redox reactions of the cell

Pre-requisites

Basic Biology

Course Outcomes

On the suc	ccessful completion of the course, students will be able to	
CO1	Identify the structure of carbohydrates and understand their classification, synthesis, essential chemical characteristics that make them indispensable for life.	Apply
CO2	Explore the structure, classification, biological functions of lipids and their metabolism	Apply
CO3	Organize the structure and classification of amino acids, proteins, vitamins and its vital functions in the human body.	Apply
CO4	Experiment with the metabolism of the essential building blocks of life and its conversion to specialized products.	Apply
CO5	Examine the purpose of electron transport chain and how cellular ATP:ADP ratio regulates the rare of ATP production by oxidative phosphorylation	Apply

61 BT 302	Microbiology	Category	L	Т	Ρ	Credit
01 BT 302	Microbiology	PC	3	0	0	3

- To understand the basic and history of microbiology
- To impart the knowledge about the microorganisms and its classifications
- To understand the cellular organization of microbes and its identification system
- To study the nutritional requirements for the growth of microbes
- To learn about the basics of microbial growth, mode of infection and its control

Pre-requisites

Basic Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop the knowledge about history, contributions and various classification system the field of microbiology.	Apply
CO2	Build the basics knowledge about microscopy techniques and its identification using different staining methods.	Apply
CO3	Consider the structural organization and multiplication of microorganism.	Apply
CO4	Identify the nutritional requirements of microbial growth.	Apply
CO5	Examine the various industrial application of microorganisms and role in bioremediation justify the different processes of sterilization, disinfection and action mechanism of antimicrobial agents.	Apply

60 BT 303	Cell Biology and	Category	L	Т	Ρ	Credit
60 BT 303	Genetics	PC	3	0	0	3

- To build the knowledge on cell structure and functions of prokaryotes and eukaryotes at molecular level
- To provide an insight on the process of eukaryotic cell division, regulation of cellular processes via signaling molecules and cell cycle regulation
- To impart the concept of mendelian genetics and gene interactions
- To learn structure of chromosomes, ploidisim and concept of mutation in genetics
- To understand the concepts in population genetics and its application for species analysis

Pre-requisites

Basic Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Designate about cell organelles and transport of molecules across membrane	Understand
CO2	Deliberate the structure and functions of prokaryotic and eukaryotic cells and cellular components	Apply
CO3	Expound the concept of mendelism and chromosomal theory	Apply
CO4	Designate in techniques in cytogenetics and types of mutations with the concept of cancer	Apply
CO5	Validate the importance of population genetics and evolution	Apply

- To impart basic knowledge in unit conversion, and basic chemical calculations
- To understand the applications of material balance calculations
- To impart the basics of energy balance calculations
- To understand the fluid flow under various conditions
- To know mechanical operations and flow through columns

Pre-requisites

• Basic knowledge in Chemistry and Mathematics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Review the basis of unit conversion, unit operations and unit processes	Apply
CO2	Execute material balance calculations with and without chemical reactions	Apply
CO3	Interpret energy balance calculations and enthalpy changes accompanying chemical reactions	Apply
CO4	Enlighten the fluid behaviour, types and multiphase flow concept	Apply
CO5	Analyze the size reduction equipment and principle of packed and fluidized columns	Analyze

60 BT 305		Category	L	Т	Р	Credit
00 BT 305	Molecular Biology	PC	3	0	0	3

- Explain the fundamental chemistry and structure of nucleic acids.
- Explore DNA replication, transcription, and translation in both prokaryotes and eukaryotes.
- Analyze mechanisms of DNA mutation and repair.
- Review the regulation of gene expression including operon concepts.
- Apply knowledge to problem-solving scenarios in molecular biology.

Pre-requisites

• Chemistry, Biochemistry, Cell Biology

Course Outcomes

On the successful completion of the course, students will be able to

	becasial completion of the course, students will be able to	
CO1	Interpret the chemistry and structure of nucleic acids, including DNA and RNA and their role in genetic information storage.	Apply
CO2	Explicate the process of DNA replication in prokaryotes and eukaryotes, and thefunctions of dna polymerases.	Analyze
CO3	Designate the transcription process and its regulation in prokaryotes and eukaryotes.	Aanalyze
CO4	Interpret the genetic code and understand protein synthesis in both prokaryotic and eukaryotic ribosomes.	Analyze
CO5	Evaluate gene expression regulation mechanisms in prokaryotes and eukaryotes, including small noncoding RNAs and epigenetic modifications.	Analyze

*SDG 3 - Good Health and Well-Being

S. No.	Topics	No. of hours						
1.0	Chemistry and Structure of Nucleic Acids							
1.1	Central Dogma of Molecular Biology, Basics of Nucleic Acid Chemistry: Nucleosides, Nucleotides and Nucleic Acids	1						
1.2	Base Pairing Rules, Hydrogen Bonding and Base Stacking in DNA and RNA	1						
1.3	Primary Structure of Nucleic Acids: Sugar-Phosphate Backbone and Base Sequence	1						
1.4	Secondary and Tertiary Structures: DNA Double Helix, Supercoiling, Quadruplex Structures							
1.5	RNA Structures	1						
1.6	Structural Organization of Chromosomes	1						
1.7	Nucleosome, Euchromatin, Chromatin and Heterochromatin.	1						
1.8	Problem Solving: Analyzing the Structure of Nucleic Acids, Predicting DNA Secondary Structures and their Effects on Gene Expression.	2						
2.0	DNA Replication and Repair							
2.1	DNA Replication Models: Semiconservative, Conservative, and Dispersive	1						
2.2	DNA Polymerases and their Functions in Replication	1						
2.3	DNA Replication Origins and Initiation, Telomeres and Telomerase	1						
2.4	Molecular Mechanisms of DNA Replication in Prokaryotes and Eukaryotes	1						
2.5	Types of DNA Mutations: Point Mutations, Frameshift Mutations, and In-dels	1						
2.6	DNA Repair Pathways: Base Excision Repair	1						
2.7	Nucleotide Excision Repair, and Mismatch Repair	1						
2.8	Problem Solving: Case Studies on DNA Replication and Repair	2						
3.0	Transcription							
3.1	Structure and Function of mRNA, rRNA and tRNA. Characteristics of Promoter and Enhancer Sequences	1						
3.2	Termination of Transcription in Prokaryotes	1						
3.3	RNA Polymerase and its Subunits in Prokaryotes and Eukaryotes	1						
3.4	RNA Synthesis: Initiation, Elongation and Termination	1						
3.5	Transcription Initiation: Promoters and Transcription Factors	1						
3.6	Eukaryotic Transcription and its Regulation: Promoters, Enhancers and Transcription Factors	1						
3.7	RNA Capping, Polyadenylation	1						
3.8	Splicing in Eukaryotic RNA Processing, RNA Editing and Alternative Splicing	1						
3.9	Problem Solving: Designing Experiments in Transcription	1						
4.0	Translation							
4.1	Introduction to Genetic Code: Elucidation of Genetic Code	1						
4.2	Codon Degeneracy, Wobble Hypothesis and its Importance	1						
4.3	Prokaryotic and Eukaryotic Ribosomes	1						
4.4	Initiation, Elongation and Termination of Protein Synthesis in Prokaryotes	1						
4.5	Initiation, Elongation and Termination of Protein Synthesis in Eukaryotes	1						
4.6	Inhibitors of Protein Synthesis	1						
4.7	Posttranslational Modifications and its Importance	1						
4.8	Problem Solving: Deciphering the Genetic Code and Protein Synthesis	2						
5.0	Regulation of Gene Expression							
5.1	Operon Concepts in Prokaryotes, Lac Operon	1						
5.2	Trp Operon and Ara Operon	1						
5.3	Role of Small Noncoding RNAs: miRNAs and siRNAs	1						
5.4	Riboswitches: RNA-Based Genetic Regulation	1						
5.5	Epigenetic Modifications and their Role in Gene Expression Control	1						
5.6	DNA Methylation, Histone Modifications	1						

5.7	Chromatin Remodeling	1
5.8	Problem Solving: Case Studies in Gene Expression Regulation	2

01 B1 3F2	Microbiology Laboratory	PC	0	0	4	2

- To understand the growth and development of microbes through various culturing methods
- To observe the differences in staining reactions in bacteria and fungi
- To learn the culture conditions of anaerobic microbes
- To understand the concept of quality analysis of water and milk samples
- To analyze the level of various elements through suitable standards

Pre-requisites

• Introductory Biology and Microbiology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Perform the aseptic methods to be followed in laboratory and preparation of liquid and solid media and cultivation of microorganisms	Apply
CO2	Interpret the differential staining techniques for identification of bacteria and fungi	Apply
CO3	Demonstrate anaerobic microbe culture techniques	Apply
CO4	Analysis for physiological identification of microorganisms	Apply
CO5	Examine the quality of water and milk, and carry out the antibiotic sensitivity test	Analyze

*CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

** End Semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory end semester examination and 40 marks for practical end semester examination.

60 MA 021	Probability and Statistics	Category	L	Т	Р	Credit
00 IVIA 02 I	Probability and Statistics	BS	3	1	0	4

- To get exposed to the basic concepts of probability
- To familiarize the concepts of correlation and regression
- To familiarize various methods in hypothesis testing
- To get exposed to the fundamentals of analysis of variance
- To learn basics of descriptive statistics and control charts

Pre-requisites

• NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Interpret the basic concepts of probability	Apply
CO2	Calculate coefficient of correlation and regression	Apply
CO3	Apply Student's t test, F test and Chi-square test for testing the statistical hypothesis	Apply
CO4	Apply the concepts of ANOVA to test the equality of means for more than two populations	Apply
CO5	Compute measures of central tendency and measures of dispersion, and apply the concepts of control charts for decision making	Apply

60 BT 401	Genetic Engineering	Category	L	Т	Р	Credit
60 BT 401	Genetic Engineering	PC	3	0	0	3

- To discuss the methods, tools and techniques involved in genome analysis, expression of cloned genes in different host system
- To understand the production of recombinant proteins, mutation analysis and the importance of PCR in genome analysis
- To learn about various aspects of Genetic Engineering, its application and ethical issues
- To determine the strategies involved in gene cloning with the help of genomic libraries, cDNA libraries and other libraries
- To discuss the production of useful molecules like cytokines, vaccines and antibiotics and define thesafety guidelines for recombinant

Pre-requisites

• Molecular Biology and Biochemistry

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Comprehend restriction and modification system and their role in genetic engineering	Understand
CO2	Recognize about the cloning vectors used in manipulation of genes.	Apply
CO3	Examine the strategies involved in gene cloning and methods involved in screening of cloned genes to identify the targetgene.	Apply
CO4	Illustrate the PCR based techniques involved in genetic manipulation including mutagenesis and demonstrate various sequencing techniques	Apply
CO5	Comprehend the applications of rDNA technology and describe the role of knock out and RNA Interference technology in gene expression studies.	Apply

60 BT 402	Protein and Enzyme	Category	L	Т	Ρ	Credit
60 BT 402	Engineering	PC	3	0	0	3

- To impart concept on Protein engineering and Enzyme Engineering.
- To learn basic principles in Enzyme kinetics and catalysis
- To evaluate the Production and purification of Proteins and Enzymes
- To comprehend the various methods of protein and enzyme engineering
- To analyze the application of proteins and enzymes in various industries

Pre-requisites

• Basic knowledge on Chemistry, Cell Biology and Biochemistry

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate the basic, types and structural confirmation ofproteins and enzymes	Apply
CO2	Examine the concepts of enzyme activity and its catalysis	Apply
CO3	Illustrate the protein/ enzyme purification methods and factors affecting immobilization	Apply
CO4	Infer the strategies for protein/ enzyme engineering and rational enzyme design.	Apply
CO5	Examine the design of enzyme electrodes and applications ofprotein/ enzyme in various domain	Apply

60 BT 403	Biochemical	Category	L	Т	Ρ	Credit
00 BT 403	Thermodynamics	PC	3	1	0	4

- To learn about basic thermodynamic relations and properties of fluids
- To understand partial molar properties and property change of mixing
- To understand the concept of phase equilibria
- To know the application of chemical reaction equilibrium
- To apply the thermodynamics concepts in bioengineering

Pre-requisites

Basic knowledge of Engineering Mathematics Physics and Principles of Chemical Engineering

Course Outcomes

On the successful completion of the course, students will be able to Gain the basic laws of thermodynamics to predict the thermodynamic Understand CO1 properties of pure fluids Recognize various thermodynamic properties Understand the of CO2 solutions Identify the criteria of phase equilibria for single and multicomponent Understand CO3 systems Apply the concept of chemical reaction equilibria and equilibrium Apply CO4 conversion Analyze the bioenergetics and thermodynamics of biochemical Analyze CO5 reactions

61 BT 4P1	Molecular Biology and Genetic	ular Biology and Genetic Category L T P Credit	Credit			
01 DI 4FI	Engineering Laboratory	PC	0	0	4	2

- To understand steps involved in the isolation of DNA form bacteria, fungi and plant
- To understand the concepts of plasmid DNA extraction and transformation
- To provide hands-on experience in performing basic recombinant DNA techniques
- To develop the ability to design, conduct, analyze and interpret data related to genetic engineering experiments
- To inculcate the research aptitude and technical skills to fulfill the need of both industry and research

Pre-requisites

Molecular Biology ,Genetic Engineering and Cell Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the knowledge of DNA extraction to isolate DNA from different sources.	Apply
CO2	Analyse and interpret the data obtained from the agarose gel using graphical, UV spectrophotometric and software methods.	Apply
CO3	Identify the correct restriction enzymes to digest the vector DNA that give cohesive ends, ligate it to make recombinant DNA and transform it with <i>E.coli</i> DH5 αcells	Apply
CO4	Apply the knowledge of restriction digestion, ligation, transformation by cloning and screening and interpret the data obtained from the results	Analyze
CO5	Perform PCR at appropriate concentration and operate the thermocycler to amplify the DNA	Apply

	Engineering Laboratory	PC	0	0	4	2	1

- To extract and estimate extracellular proteins from bacterial sources, fostering hands-on skills in protein quantification techniques.
- To evaluate the production and activity of enzymes, emphasizing their industrial and biological applications.
- To explore protein digestion and amino acid quantification, connecting biochemical reactions to metabolic pathways.
- To determine the impact of pH and temperature on enzyme activity, providing insights into enzyme stability and functionality.
- To analyze enzyme kinetics, inhibition mechanisms, and protein purification methods for optimizing biocatalytic processes.

Pre-requisites

• Protein and Enzyme Engineering

Course Outcomes

On the suc	ccessful completion of the course, students will be able to	
CO1	Design and conduct experiments to extract and estimate extracellular	Apply
	proteins, interpreting results effectively.	
CO2	Demonstrate the ability to produce and estimate enzyme activity, correlating it to specific biological and industrial processes.	Apply
CO3	Quantify amino acids from digested milk protein, linking biochemical	Apply
	experiments to real-world applications.	
CO4	Assess the influence of pH, temperature, and inhibitors on enzyme	Analyse
	activity, drawing conclusions about enzyme behavior.	
CO5	Assess the kinetic parameters (Km, Vmax) and purification techniques using SDS PAGE and enzyme immobilization, comparing free and	
	immobilized enzyme efficiencies

- To help learners improve their logical reasoning skills at different academic and professional contexts.
- To help learners relate basic quantitative problems and solve them.
- To help learners Infer critically the statements with optimal conclusions and assumptions.
- To Solve the quantitative problems pertaining to calculations of averages, ratio and proportions, and profit and loss effectively
- To compute quantitative problems related to time and work, speed and distance, and simple and compound interest

Pre-requisites

• Basic knowledge of Arithmetic and Logical Reasoning

Course Outcomes

0.	obdisc outcomes								
Or	On the successful completion of the course, students will be able to								
CO1	Deduce the topics in logical reasoning at the preliminary and intermediate level.	Understand							
CO2	Relate basic quantitative problems and solve them effectively at the preliminary level	Apply							
CO3	Infer critically the statements with optimal conclusions and assumptions with the data and information given.	Analyze							
CO4	Solve the quantitative problems pertaining to calculations of averages, ratio and proportions, and profit and loss effectively at the pre- intermediate level.	Apply							
CO5	Compute quantitative problems related to time and work, speed and distance, and simple and compound interest at intermediate level.	Apply

* CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

** End Semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory end semester examination,50 marks for project based end semester examination and 40 marks for practical end semester examination.

BOS- Chairman

60 BT 501	Plant and Animal	Category	L	Т	Ρ	Credit
80 BT 501	Biotechnology	PC	3	0	0	3

- To develop the skills of the students in the area of Plant Biotechnology and its wide applications
- To widen the knowledge about the production and applications of transgenic plants and its use
- To study the animal cell culture techniques and types of media used in animal cell cultures
- To widen the knowledge about production and applications of transgenic animals
- To study the applications of Plant and Animal Biotechnology

Pre-requisites

• Basics of Biology, Cell biology and Genetics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Summarize the concepts of plant tissue culture, media preparation in the field of in vitro culture of plants.	Understand
CO2	Develop the process of conservation of plants for future posterity and production of hybrid plants.	Apply
CO3	Examine the crucial animal cell culture techniques and types of media used in animal cell cultures.	Apply
CO4	Utilize the concept of production of transgenic animals and ethical issues related to transgenic animals.	Apply
CO5	Organize the prospects and problems of GM crops along with the guidelines as well as safety Regulations for transgenic plants and exemplify the concept of cytotoxic and viability assessment using different assays.	Apply

60 BT 502	Bioinformatics	Category	L	Т	Ρ	Credit
00 81 302	Bioinformatics	PC	1	0	4	3

- To develop inter disciplinary skills in the application of computers in biotechnology and learn about the biological databases and machine learning techniques
- To learn about the bioinformatics databases, databanks, data format and data retrieval from the online sources
- To analyze the structure and functions of protein and DNA using *in silico* tools
- To understand the concepts involved in biological macromolecular structures and structure prediction methods
- To apply the acquired programming knowledge for in silico Biology applications

Pre-requisites

• Basics of Biochemistry and Molecular Biology

Course Outcomes

On the successful completion of the course, students will be able to

	,	
CO1	Get acquainted with various biological primary databases, secondary databases and different sequence formats	Analyse
CO2	Characterize the optimal alignment of sequences either by local or global algorithm and apply BLAST and FASTA algorithms in similarity search	Analyse
CO3	Classify the phylogenetic analysis, and categorize the protein and RNA structure prediction algorithms	Analyse
CO4	Describe and infer soft computing algorithms that are applied in protein structure prediction	Analyse
CO5	Acquire programming skills in Python and apply to solve in silico problems	Analyse

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	Basics of Heat Transfer Operations	
1.1	Modes of Heat Transfer Operation	1
1.2	Fourier's Law of Heat Conduction	1
1.3	Heat Transfer Resistance and Conductance, Thermal Conductivity	2
1.4	Steady State Conduction- Heat Flow Through Plane Wall	1
1.5	Heat Flow Through Composite Wall, Cylindrical Surface and Sphere	2
1.6	Individual Heat Transfer Coefficient and Overall Heat Transfer Coefficient	2
1.7	Tutorial	3
2.0	Heat Transfer with Phase Change and Heat Exchangers	
2.1	Heat Exchangers-Shell and Tube and Double Pipe Heat Exchangers	2
2.2	Flow Arrangements in Heat Exchangers	1
2.3	LMTD	1

2.4	Single and Multiple Effect Evaporators	1
2.5	Natural and Forced Circulation Evaporators	1
2.6	Heat Transfer with Phase Change	2
2.7	Case Studies	1
2.8	Tutorial	3
3.0	Diffusion, Vapour-liquid and Gas-liquid operations	
3.1	Molecular Diffusion in Gas, Liquid and Solids	1
3.2	Mass Transfer Coefficients & Interphase Mass Transfer	1
3.3	Diffusivity and Flux Calculations	1
3.4	Simple Distillation & Continuous Rectification- Binary Systems	2
3.5	Mccabe Thiele Analysis and Calculations	2
3.6	Absorption: Principle; Minimum Liquid-Gas Ratio	2
3.7	Industrial Absorbers. Case Studies	1
3.8	Tutorial	3
4.0	Liquid-liquid, Solid-liquid and Solid-fluid operations	
4.1	Liquid-Liquid Extraction-Distribution Co-Efficient	1
4.2	Solvent Selection Criteria for Extraction & Extraction Equipment	1
4.4	Solid-Liquid Extraction – Principle	1
4.5	Operation and Equipment	1
4.6	Adsorption: Principle; Batch and Fixed Bed Adsorption	2
4.7	Drying: Basic Principle, Drying Curve	1
4.8	Industrial Dryers	1
4.9	Case Studies	1
4.10	Tutorial	3
5.0	Applications of Heat and Mass Transfer in Biological Systems	
5.1	Heat Transfer in Bioreactors	1
5.2	Relationship Between Heat Transfer Cell Concentration and Stirring Conditions	1
5.4	Role of Diffusion in Bioprocess	2
5.5	Factors Affecting Oxygen Transfer in Fermenters	2
5.6	Mass Transfer Correlations for Oxygen Transfer	2
5.7	Case Studies	1
5.8	Tutorial	3

Course Designer(s) 1. Dr.S.Poornima - spoornima@ksrct.ac.in

60 BT 504	Chemical Reaction	Category	L	Т	Р	Credit
00 DT 304	Engineering	PC	3	1	0	4

- To learn chemical kinetics for different reactions.
- To impart knowledge on design of single and multiple reactors.
- To acquire knowledge to analyze non-ideal reactors.
- To understand catalysis and multiphase reactor systems.
- To apply reaction engineering concepts in various biochemical reaction systems.

Pre-requisites

• Thermodynamics, Fluid mechanics, Heat and Mass Transfer Operations

Course Outcomes

On the successful complet ion of the course, students will be able to Develop rate equation and to know concentration and temperature Understand CO1 dependence of rate equation Design single and multiple reactors and understand performance Apply CO₂ analysis of reactors Identify the basics aspects, models and performance of non-ideal Apply CO3 reactors Demonstrate the mechanism of catalytic reactions and design of Apply CO4 multiphase reactors Apply various modes of fermentors in microbial and enzyme Apply CO5 fermentation.

Course Contents and Lecture Schedule

S. No.	o. Topics				
1.0	Scope of Chemical Kinetics & Chemical Reaction Engineering				
1.1	Broad Outline of Chemical Kinetics- Rate Equation	1			
1.2	Concentration and Temperature Dependence of Rate Equation	1			
1.3	Development of Rate Equation for Irreversible Unimolecular Type First- Order Reactions	2			
1.4	Irreversible Bi-Molecular Type Second -Order Reactions	2			
1.5	Zero Order Reactions	1			
1.6	Pseudo First Order and Second Order Reactions	1			
1,7	Autocatalytic Reactions	1			

1.8	Tutorial	3
2.0	Ideal Reactors	
2.1	Design of Ideal Reactors	1
2.2	Performance Equation of Batch Reactor, Semi Batch Reactor,	2
2.3	Performance Equation of Mixed Flow Reactor, Plug Flow Reactor & Recycle Reactor	3
2.4	Performance Comparison of Single Reactors	1
2.5	Multiple-Reactor Systems	2
2.6	Tutorial	3
3.0	Non-Ideal Flow	
3.1	Basic Aspects of Non-Ideal Flow	1
3.2	Residence Time Distribution; C, E and F Curves	2
3.4	Conversion in Non-Ideal Flow Reactors	1
3.5	Non- Ideal Flow Models-Tank in Series Model	2
3.6	Non- Ideal Flow Models-Dispersion Model	1
3.7	Mean Concentration and Conversion in Non-Ideal Reactors	1
3.8	Case Studies	1
3.9	Tutorial	3
4.0	Heterogeneous Catalysis	
4.1	Catalytic Reactions-Mechanism	1
4.2	Pore Diffusion Resistance Combined with Surface Kinetics	1
4.3	Performance Equation of Porous Catalytic Reactors	2
4.4	Experimental Methods of Finding Rates	1
4.5	Multiphase Reactors	1
4.6	Design of Slurry Reactor	2
4.7	Design of Trickle Bed Reactor	1
4.8	Tutorial	3
5.0	Biochemical Reaction Systems	
5.1	General Reaction Kinetics for Biological Systems	2
5.2	Enzyme Fermentation- Batch, Plug Flow and Mixed Flow Fermentors	3
5.4	Microbial Fermentation-Batch, Plug Flow and Mixed Flow Fermentors	3
5.5	Case Studies	1
5.6	Tutorial	3

- To prepare growth media for the development of explant for initiating plant tissue culture
- To perform the technique of micropropagation using various explants
- To develop the production of aseptic synthetic seeds.
- To experiment the techniques in sterilization and maintenance of various animal cell culture and handling of animals
- To produce the haploid plant using anther, pollen and ovary culture

Pre-requisites

• Plant and Animal Biotechnology

Course Outcomes

On the successful completion of the course, students will be able to

On the su	On the successful completion of the course, students will be able to					
CO1	Adapt the preparation of plant tissue culture media for plant cell, tissue and organ culture with effective and safe operation	Apply				
CO2	Demonstrate the steps involved in developing a reliable protocol and required hormonal combination for <i>in vitro</i> culturing of plants.	Apply				
CO3	Experiment the aseptic explant production through in vitro seed germination and micro propagation,	Apply				
CO4	Adapt the various sterilization procedures followed in cell line laboratory and perform the cytotoxicity assay	Apply				
CO5	Analyze the process of subculturing without and contamination and isolation of Primary cells from Chicken fibroblast.	Analyze

- To understand the kinetic analysis of various mode of reactors.
- To analyze non-ideality in real reactors.
- To study the principles of fluid flow and flow measuring devices
- To learn the operation of size reduction equipment.
- To know the principles of heat and mass transfer operations.

Pre-requisites

• Unit operations, Fluid mechanics, Heat and Mass transfer Operations

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate kinetic studies and performance analysis of various reactors	Apply
CO2	Interpret non-ideal flow and residence time distribution in real reactors	Apply
CO3	Comprehend fluid flow operations and flow measuring devices.	Apply
CO4	Characterize mean particle size by size reduction and size separation operations.	Analyse
CO5	Utilize the concept of unit operations and estimation of heat and mass transfer co-efficients	Apply

Assessment Pattern

1,2 Hours: Introduction to Design Thinking

Duration	Activity	Materials			
	· · · · · · · · · · · · · · · · · · ·	Faculty	Students		
10 Minutes	Individual: Students have to write their thoughts to the following questions in the worksheet.	Worksheet: Space for writing Answer	Pen & File		
	1) What is Design?	whiting / thower			
	2) Who is a Designer?				
	3) What is Design Thinking?				
	4) What are the steps of Design Thinking Process?				
	5) Who is a Design Thinker?				

20 Minutes	 Individual: Students have to watch the video 1 and reflection the thought to the following questions in the work sheet. Video 1: Toilet Bed - https://www.youtube.com/watch?v=KJ5TRHE7 omU&ab_channel=sjkinnovations 1) What are the problems faced by the elderly/injured people? 2) How did Saravana Muthu solve the problem? 3) Where Saravana Muthu want updating/changes in the product? Why? 4) Saravana Muthu is a Designer? Justify the Statement. 5) Toilet Bed is a Design. Justify the Statement. 	Worksheet: QR Code contain Video Link Space for writing Answer	Cellphone , Headphone, Pen & File
20 Minutes	Individual: Students have to watch the video 2 and reflection the thought to the following questions in the work sheet. Video 2 : Jaipur Foot, India https://youtu.be/7W6ckXZbL40 1) What are the problem faced by the handicapped in India? 2) How did Ramachandra Sharma solve the problem? 3) Why Ramachandra Sharma used rubber material for foot? Where he got idea? 4) Dr.Mathur is a Designer? Justify the Statement 5) Jaipur is a Design? Justify the statement.	Worksheet: QR Code contain Video Link Space for writing Answer	Cellphone , Headphone, Pen & File
10 Minutes	Individual: Students have to share the thought written in the worksheet	Randomly Call any two or three student and ask him to share the thoughts with other students.	Communicat e the thoughts with clarity.
30 Minutes	Individual: Students have to watch the video 3 and reflection the thought to the following questions in the work sheet. Video 3: What you understand from the video? What are the rules to be followed by policeman on bandobast? How does the policeman doing bandobast? What the policeman feel while on the bandobast?	Worksheet: QR Code contain Video Link Space for writing Answer	Cellphone , Headphone, Pen & File

	What the policeman like to have on the bandobast? As a designer, what will you do to the policeman easy to do their bandobast duty?		
30 Minutes	Individual: Students have to watch the video 4 and reflection the thought to the following questions in the work sheet. Video 4: What you understand from the video? How the Parkinson's disease affect the Ali? Why Ali is not drinking coffee when surrounding by many people? What Ali feel while walking on the Staircase? What Ali feel while walking on the Staircase? What Ali like to do daily? As a designer, what will you do to Ali easy to do their daily activity?	Worksheet: QR Code contain Video Link Space for writing Answer	Cellphone , Headphone, Pen & File
10 Minutes	Individual: Students have to share the thought written in the worksheet	Randomly Call any two or three student and ask him to share the thoughts with other students.	Communicat e the thoughts with clarity.

After the class

Outcome: Students understand the design thinking process.

Students have to watch the videos in the playlist: It will enhance the understand ability of design thinking process

Design Thinking Series Playlist : Tamil. <u>https://www.youtube.com/playlist?list=PLf_-</u> <u>I5JEujRhJmOGcj8YOLZQI15cG7x7Z</u>

3,4 Hours: Mind-sets of Design Thinking

Duration	Activity	Mat	erials
		Faculty	Students
10 Minutes	Individual: Recap of Last Class Students have to share what they learned on last class	Randomly Call any two or three student and ask him to share the thoughts of design thinking process with other students.	Communic ate the thoughts with clarity.

70 Minutes	Team: Maximum 3 Students Design Challenge : Build a tower of spaghetti/straw noodles that will hold one marshmallow/rubber. Make the tallest tower possible from the materials supplied. The marshmallow/rubber must be able to sit on top without falling off. Time : 10 Minutes for Define the design challenge + 05 Minutes (Team Discussion) + 20 Minutes (Build) + 10 Minutes (Measurement and Compare) + 15 Minutes (Reflection of Thought) + 10 Minutes of watch Video	Define the design challenge Facilitate the students to do design challenge	Discuss the design ideas, discuss structures and strengths, and even sketch ideas before you begin.
	 20 sticks of (uncooked) spaghetti or straws per team One yard (36 inches) of masking tape per team One yard (36 inches) of string/thread per team (the string must be easily breakable by hand. If the string is thick, include scissors in your kit.) One marshmallow/ eraser per team: around 1.5 inches 		Build your design Measure Reflection the thought
	 one maintained of classer per team: around 1.5 metres in size across. Measuring tape to measure the height of the structures. Countdown Timer/ stopwatch to keep track of the time. Personal reflection: What was my role in the team? What worked well on Ideation/Prototype/ test? What would I improve next time in my team's work? What learning would you take away from this challenge? Are you a design thinker? Justify the Answer. Team reflection: What worked well on team/Collaboration? Please refer to the Faculty Guide: https://www.sessionlab.com/methods/marshmallow-challenge-with-debriefing https://static1.squarespace.com/static/57c6b79629687fde 090a0fdd/t/58ab5a6046c3c4e069a2842d/148762 4802348/SpaghettiMarshmallow.pdf 		to the questions in the work sheet
20 Minutes	Students watch VIDEO Tom Wujec - Build a Tower, Build a Team: https://www.ted.com/talks/tom_wujec_build_a_tow Individual: Students have to write their thoughts to the following	Workshee	Pen & File
	questions in the worksheet Do you make it something and what it? Where you do iterate? Why? Do you learn anything from failure? What? Are you an optimistic on your design? How? Do you have a confidence on your creative? How it help	t: Space for writing Answer	

	it? Design Kit: Mindset Videos: https://www.youtube.com/watch?v=_yWAllNI7E4&list=PLI eYpC- T18cbnZcjli2x9ScBABYL76n12&index=2&ab_channel=ID EO.org		
Additional	Team: Maximum 3 Students Design Challenge: Build a Strong Paper Structures that will hold many books. Time : 05 Minutes for Define the design challenge + 05 Minutes (Team Discussion) + 20 Minutes (Build) + 10 Minutes (Count and Compare) + 15 Minutes (Reflection of Thought) Materials: •Tape •Books	Define the design challenge Facilitate the students to do design challenge	Discuss the design ideas, discuss structures and strengths, and even sketch ideas before you begin.
	 Paper (regular copy paper will do) Please refer to the Faculty Guide: <u>https://littlebinsforlittlehands.com/strong-paper-structures/</u> Personal reflection: What was my role in the team? What worked well on Ideation/Prototype/ test? What failed on Ideation/Prototype/ test? What would I improve next time in my team's work? What learning would you take away from this challenge? Are you a design thinker? Justify the Answer. Team reflection: What was the team's strategy to solve the challenge? What worked well on team/Collaboration? 		Build your design Reflection the thought to the questions in the work sheet

After the class

Outcome: Students can ideate and make a thing and test it. Student understand the mind-set of design thinking

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts.
- To help learners develop strategies that could be adopted while reading texts.
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations.
- Improve listening, observational skills, and problem-solving capabilities
- Develop message generating and delivery skills

Pre-requisites

• Basic knowledge of Arithmetic and Logical Reasoning

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and contrast products and ideas in technical texts.	Analyze
CO2	Identify cause and effects in events, industrial processes through technical texts	Analyze
CO3	Analyze problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Analyze
CO4	Report events and the processes of technical and industrial nature.	Apply
CO5	Articulate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Apply

- To recognize the sources of drugs and basic concepts in pharmacology
- To be familiar with the drug manufacturing facilities and quality control
- To gain knowledge on the concepts of biotransformation of drugs
- To understand the concepts of dosage forms ٠
- To understand the biopharmaceutical quality assurance ٠

Pre-requisites

Biology / Biochemistry

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Comprehend the pharmacological categories, sources, routes of administration and different modes of drug delivery	Understand
CO2	Experiment with drug manufacturing facility, importance of quality assurance and various methods of coating pharmaceutical dosage forms	Understand
CO3	Examine with the concepts of pharmacokinetics, clearance and bioavailability of drugs	Apply
CO4	Categorize pharmaceutical dosage forms and its routes of applications	Apply
CO5	Survey the role of quality assurance and regulatory affairs in biological evaluation of pharmaceutical dosage forms	Apply

60 BT 602	Bioprocess Technology	Category	L	Т	Р	Credit
00 BT 002	Bioprocess Technology	PC	3	1	0	4

- To learn the product development and recovery in bioprocess technology
- To design a bioreactors and the strategy of scale up reactor for commercial prospects
- To develop and predict the construction of ancillaries for fermenter system
- To enable the knowledge of fluid behaviour and analyse the biodynamic property
- To understand the important concepts of software's in monitoring and validation of Bioprocess Technology

Pre-requisites

• Heat and Mass Transfer, Chemical Reaction Engineering and Biochemical Thermodynamics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Enumerate the historical development, types of fermentation process and bio product recovery	Apply
CO2	Design a kinetic parameters of cell growth of structured and unstructured model	Apply
CO3	Apply the concept of design and construction of reactor with its controlling strategies	Apply
CO4	Determine the scale up of the bioreactors with respect to mixing and power consumption	Analyze
CO5	Simulate and validate the protocol of bioprocess technology through soft wares	Apply

1. Ms.R.Krishnaveni - rkrishnaveni@ksrct.ac.in

	60	ΒT	603
--	----	----	-----

- To understand the process of drug discovery
- To learn the elements of small molecules and representations
- To impart knowledge on the approaches of modeling molecular dynamics •
- To understand the concepts involved in Ligand-based and Structure-based drug design •
- To apply the acquired rational drug designing Knowledge for in silico Biology applications •

Prerequisite

Biochemistry, Molecular Biology and Bioinformatics Concepts •

Course Outcomes

CO1	Acquire the knowledge about protein structure prediction methods, structure visualizations and their importance	Remember					
CO2	Explore the basics of bioinformatics, chemo-informatics and how useful for drug	Understand					
002	designing and discovery process						
CO3	Illuminate the principle and applications of molecular dynamics simulation	Apply					
CO4	Explore the concept and SAR, QSAR and their importance in ligand optimization	Apply					
CO5	Comprehend the principle, types and various applications of computer aided drug designing and discovery process	Apply

60 BT 604	Immunology and Immunotechnology	Category	Г	Т	Ρ	Credit	
00 81 004	initiatiology and initiation contrology	PC	2	0	2	3	1

- To learn the basic concepts of immune response towards various antigens in mammalian host system
- To impart the knowledge of various cells involved in immunity
- To study the mechanism and reactions of immunity towards infectious diseases
- To comprehend the interaction of immune cells during transplantation procedures
- To emphasize their significance in developing therapeutic modalities for immunological disorders of human beings

Pre-requisites

• Biochemistry, Cell Biology and Microbiology

Course Outcomes

On the successful completion of the course, students will be able to

	,	
CO1	Interpret the features of cells, tissues, organs of immune system and nature of antigens	Apply
CO2	Analyze the developmental behaviour of B cells and features of antigen and antibody interaction	Apply
CO3	Explore various stages in development of T cells and biology of antigen processing and presentation.	Apply
CO4	Identify the immune response against infectious diseases and immune deficiency diseases	Apply
CO5	Justify the mechanism of transplant acceptance, rejection and functions of tumor antigen	Analyze

00 141 1 003	Entrepreneurship	MC	2	0	0	2 ^{&}

- To Learn basic concepts in entrepreneurship, develop mind-set and skills necessary to explore entrepreneurship
- To provide practical proven tools for transforming an idea into a product or service that creates value for others.
- To Comprehend the process of opportunity identification through design thinking, identify market potential and customers while developing a compelling value proposition solution and prototypes
- To create business plan, conduct financial analysis and feasibility analysis to assess the financial viability of a venture ideas & solutions built with domain expertise
- To Prepare and present an investible pitch deck of their practice venture to attract stakeholders

Pre-requisites

• Basic knowledge of reading and writing in English

Course Outcomes

On the successful completion of the course, students will be able to

0	cecessial completion of the course, stadents will be able to	
CO1	Develop an entrepreneurial mindset and appreciate the concepts of design thinking, entrepreneurship and innovation	Understand
CO2	Apply process of problem -opportunity identification and validation through human centred approach to design thinking in building solutions	Apply
CO3	Understand market types, conduct market estimation, identify customers, create customer persona, develop the skills to create a compelling value proposition and build a Minimum Viable Product	Apply
CO4	Create business plan, conduct financial analysis and feasibility analysis to assess the financial viability of a venture	Apply
CO5	Prepare and deliver an investible pitch deck of their practice venture to attract stakeholders	Apply

Course Contents and Lecture Schedule

S. No.	Topics					
1.0	Introduction to Entrepreneurship & Entrepreneur					
1.1	Meaning and Concept of Entrepreneurship and the History of Entrepreneurship Development	1				
1.2	The Entrepreneur: Meaning, the Skills Required to be an Entrepreneur, The Entrepreneurial Decision Process,	1				

1.3	Myths of Entrepreneurship, How to Become a Successful Entrepreneur -	1
1.0	Dr Romesh Wadhwani (Platform on Boarding)	•
1.4	Role Models, Mentors and Support System- Masterclass on my Story - Joshua Salins	1
1.5	Role of Entrepreneurship in Economic Development, Agencies in Entrepreneurship Management and Future of Entrepreneurship	1
1.6	Innovation and Creativity, Types of Innovations, Innovations in Current Scenario, Concepts of Entrepreneurial Thinking, General Enterprising Tendency Test	1
2.0	Problem-Opportunity Identification, Customers Discovery and Competitive Advantage	
2.1	Understanding the Problem and Opportunity, Define Problem using Design Thinking Principles and Validate Problem. Case Study and Fireside Chat – Desi Hangover	1
2.2	Identifying a Problem for Practice Venture and Filling Problem Statement Canvas (Handout Week 1 - Class Activity)	1
2.3	Customer and Markets Discovery, Knowing your Customer and Consumer, Customer Segmentation and Exploring Market Types and Estimating the Market Size. Case Study and Fireside Chat – Verloop	1
2.4	Creating Customer Personas & Market Estimation (Handout Week 2 - Class Activity)	1
2.5	Importance of Value Proposition, Introduce Value Proposition Canvas, Developing Problem-Solution Fit. Case Study and Fireside Chat – Honey Twigs	1
2.6	Competition Analysis, Blue Ocean Strategy, Competitive Positioning and understanding Unique Selling Points. Case Study and Fireside Chat on Inzpira Fill Value Proposition Canvas (Handout Week 3 - Class Activity) and Competition Analysis Framework (Handout Week 5 - Class Activity) Briefing On Assignment 1 - Milestone 1	1
3.0	Business Model and Build your MVP	
3.1	Introduction to Business Model and Types. Case Study and Fireside Chat – NUOS	1
3.2	Lean Approach, 9 Block Lean Canvas Model, Riskiest Assumptions to Business Models	1
3.3	Class Activity- Fill Lean Canvas For You Idea And Understand Revenue Model (Handout Week 6)	1
3.4	Prototyping, Meaning of MLP, Difference Between MLP and MVP, How to Build an MLP? Different Types MLP that you Can Build. Case Study and Fireside Chat — KNORISH	1
3.5	Hypothesis Testing and MVP Validation, MVP Iteration-Importance of Build - Measure — Learn Approach	1
3.6	Class Activity- Fill MVP Framework (Handout Week 7) and Learn Validation	1
4.0	Business Plan, Financial Feasibility and Manging Growth	
4.1	Business Planning: Components of Business Plan- Sales Plan, People Plan and Financial Plan, Preparing a Business Plan. Case Study and Fireside Chat – Bodh Gems	1
4.2	Financial Planning: Types of Costs, Preparing the Financial Plan using Financial Template (Handout Week 9)	1
4.3	Class Activity - Starting up Costs, COGS, Sales Plan and People Plan Template.	1
4.4	Class Activity - One Year P&L Projection, Breakeven Analysis, Five Year Projection	1
4.5	Understanding Basics of Unit Economics and Analyzing Growth and the Financial Performance	1
4.6	Class Activity - Financial Template - Unit Economics (Handout Week 12)	1
5.0	Go to Market Strategies and Funding	
F A	Introduction to Go to Market Strategies, Start-up Branding and its Elements, Selecting the Right Channel	1
5.1		
5.1	Creating Digital Presence, Building Customer Acquisition Strategy.	1
	Creating Digital Presence, Building Customer Acquisition Strategy. Class Activity: Handout Week 10 - Create your GTM Strategy	1 1

5.5	Identifying Sources of Funds: Debt & Equity, Map the Start-up Lifecycle to Funding Options	1
5.6	Class Activity - Visit Relevant GOI Websites, Other Sites to Help Students Explore Funding Opportunities and Briefing on Final Submission of the Pitch Deck Build an Investor Ready Pitch Deck, What Should you Cover in your Pitch Deck? Art of Pitching and Story telling	1

1. Dr.N.Tiruvenkadam - tiruvenkadam@ksrct.ac.in

60 BT 6P1	Computer Aided Drug Design	Category	L	Т	Ρ	Credit	
	Laboratory	PC	0	0	3	1.5	

- To understand the process of drug discovery
- To learn the elements of small molecules and representations
- To impart knowledge on the approaches of modeling molecular dynamics
- To understand the concepts involved in Ligand-based and Structure-based drug design
- To apply the acquired rational drug designing Knowledge for in silico Biology applications

Pre-requisites

• Biochemistry, Molecular Biology and Bioinformatics concepts

CO1	Comprehend the process of drug discovery pipeline.	Apply
	Represent and prepare small molecules for drug design	Apply
CO3	Apply appropriate mathematical and statistical methods defining molecular dynamic simulation	Apply
CO4	Relate structural and functional data for molecule-based drug design	Analyse
CO5	Prepare and define active site for structure-based drug design	Apply

60 BT 6P2	Bioprocess Technology	Category	L	Т	Ρ	Credit
00 BT 0F2	Laboratory	PC	0	0	3	1.5

- To understand the industrial requirement of fermentation process for bio-product
- To study the different factors affecting the yield and biomass of product
- To empower the knowledge of mixed flow reactor and its estimation of KLa value
- To illustrate the various unit operation involved in product development
- To demonstrate the aspects of modelling and simulation in Bioprocess Technology

Pre-requisites

• Protein and Enzyme Engineering Laboratory

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Handle the techniques of media optimization and determine the Kla for bioprocess.	Apply
CO2	Illustrate the concept of microbial growth and its thermal death kinetics.	Apply
CO3	Demonstrate the kinetics of mixed flow reactor and the role of Kla through sodium oxidation method.	Apply
CO4	Determine the biomass coefficient of yeast and demonstrate the simulation software for bioreactor.	Apply
CO5	Demonstrate the production of industrial enzymes through modelling in the system.	Analyze

	Comprehension Test*	CG	0	0	2	1\$

- To evaluate the knowledge gained in core courses relevant to the programme of study
- To assess the technical skill in solving complex engineering problems

Prerequisite

• Fundamental knowledge in all core subjects

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Infer knowledge in their respective programme domain	Apply
CO2	Attend interviews for career progression	Apply
CO3	Exhibit professional standards to solve engineering problems	Apply
CO3	Promote holistic approach to problem solving	Apply
CO5	Examine the competency of graduates in specific programme domain	Apply

60 HS 002	Financial Accounting	HS	3	0	0	3

- To know about the economic principles underlying demand, supply, and market structure
- To understand the concept related to types of business organization and types of banking
- To know about concepts in financial accounting and capital budgeting
- To understand the different methods of pricing and appraisal of projects
- To know the application of break-even analysis in engineering projects

Pre-requisites

• NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apprehend the basic concepts of economics, demand, supply, and market structure	Understand
CO2	Comprehend the forms of business organization and functions of commercial and central bank	Understand
CO3	Comprehend the basis of financial accounting and capital budgeting techniques	Understand
CO4	Apply different types of pricing strategies and comprehensive project feasibility in diverse business	Apply
CO5	Apply break even analysis in engineering projects and business	Apply

60 BT 701	Al for Biotochnology	Category	L	Т	Р	Credit
60 BT 701	Al for Biotechnology	PC	3	0	0	3

- To identify problems where artificial intelligence techniques are applicable
- To apply selected basic AI techniques; judge applicability of more advanced techniques
- To participate in the design of systems that act intelligently and learn from experience
- To provide a basic understanding of machine learning on molecular data
- To learn how to use deep learning for understanding biophysical systems

Pre-requisites

• Bioinformatics concepts

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop semantic-based and context-aware systems to acquire, organize process, share and use the knowledge embedded in multimedia content	Understand						
CO2	Research will aim to maximize automation of the complete knowledge lifecycle							
	and achieve semantic interoperability between Web resources and services	Understand						
CO3	Predict the interaction of drug-like molecules with protein.							
CO4	Apply molecular descriptor properties for new ligand molecule	Apply						
CO5	Apply deep learning in a genetics, drug discovery, and medical diagnosis applications	Apply

60 BT 702	Downstroom Broossing	Category	L	Т	Р	Credit
00 61 702	Downstream Processing	PC	3	0	0	3

- To learn various unit operations and their applications in downstream processing of bioproducts
- To provide knowledge on downstream processing economics
- To emphasis the need for separation techniques in downstream processing
- To acquire knowledge in recovery, purification and formulation of bioproducts of commercial interest.
- To understand the final purification strategies adopted in industrial operations

Pre-requisites

Basic knowledge in Unit operations, Fluid mechanics, Chemical kinetics and Bioprocess
Engineering

Course Outcomes

000130	outcomes	
CO1	Comprehend cost cutting strategies and bioproduct release kinetics	Apply
CO2	Interpret the design and principle of filtration and centrifugation	Apply
CO3	Identify suitable unit operation for bioproduct recovery and concentration	Apply
CO4	Demonstrate and apply the principles and operation of chromatographic Techniques	Apply
CO5	Discuss the operational requirements of industrial crystallizers and lyophilizer	Apply

Mapping with Programme Outcomes

00 AC 001	Research Skill Development	AC	1	0	0	0	ĺ

- To identify research problems, formulate hypotheses, collect data and test hypotheses
- To prepare and submit quality manuscripts and understand peer review process
- To utilize software tools for effective manuscript preparation and visualization of research data
- To familiarize different journal metrics and author-level quality indicators
- To protect creative works, inventions, and branding elements using IPR

Pre-requisites

• NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop structured scientific approach to plan and execute research work	Apply
CO2	Comply with the journal requirements to publish research findings effectively	Understand
CO3	Apply various software tools during the manuscript preparation	Apply
CO4	Select suitable journals to publish the work using different publication metrics	Analyse
CO5	Apply the appropriate form of IP protection to a specific invention or creation	Apply

60 BT 7D1	Biological Data Analysis	Category	L	Т	Ρ	Credit
60 BT /P1	Laboratory	PC	0	0	3	1.5

- To introduce students to basic biostatistics concepts and techniques for organizing and visualizing biological data
- To familiarize students with hypothesis testing methods including T-tests, F-test, and Chi-square test
- To teach students to conduct analysis of variance (ANOVA) for comparing means across different groups
- To provide students with skills to perform regression analysis for modelling relationships between variables
- To enable students to utilize advanced data analysis tools like Minitab®, Design Expert®, and MATLAB® for various biological applications

Pre-requisites

• Knowledge on Basic Mathematics, Probability and Statistics

Course Outcomes

On the successful completion of the course, students will be able to

	cessiti completion of the course, students will be able to	
CO1	Apply biostatistical methods for organizing data, computing descriptive measures, and creating statistical visualizations to analyze biological datasets effectively	Apply
CO2	Analyze hypotheses and perform statistical tests such as one-sample T-test, paired sample T-test, F-test, and Chi-square test to evaluate significance and draw conclusions from biological data	Analyze
CO3	Evaluate variance using one-way ANOVA and two-way ANOVA techniques to assess differences between groups and analyze experimental designs effectively	Evaluate
CO4	Create and interpret regression models including single linear regression and multiple linear regression to predict and understand relationships within biological datasets	Create
CO5	Design experiments using tools like Minitab®, Design Expert®, and MATLAB® to optimize experimental conditions, solve systems of ODEs, and interpolate data in biological research	Create

60 BT 7P2	Downstream Processing	Category	L	Т	Р	Credit
00 BT 7F2	Laboratory	PC	0	0	3	1.5

- To acquire knowledge on purification strategies of bioproducts
- To design separation processes for the recovery and purification of bioproducts.
- To provide hands on knowledge on bioproduct concentration and recovery
- To understand the working principle of various unit operations involved in bioseparation
- To demonstrate sequence of downstream processing operations for bioproduct recovery

Pre-requisites

• Unit operations, Fluid mechanics, Heat and Mass transfer Operations, Bioprocess Engineering

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Determine cell disruption kinetics for intracellular release kinetics by ultrasonication and know the principle of solid-liquid separation techniques	Apply
CO2	Execute and verify the adsorption isotherms and understand leaching characteristics	Apply
CO3	Discuss the principle of ammonium sulphate, isoelectric and aqueous two-phase extraction methods forrecovery	Apply
CO4	Analyze separation of biomolecules by chromatographic techniques	Analyze
CO5	Demonstrate the operating procedure of freeze dryer and final purification strategies	Apply

OUBLEII	Bioresource Technology	PE	3	0	0	3

- To make the students to understand about the bio resource and its sustainable utilization •
- To familiarize the bioenergy production methods though cost effective methods
- To understand the role of microorganisms in bioenergy production
- To equip the students to use the resource wisely through advanced technologies
- To facilitate the students to adopt the sophisticated technology for bio resource management

Pre-requisites

Environmental Biology and Microbiology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explore the different types of bioresources and the roles of bioprospecting, ecotourism and biodiversity policies.	Understand
CO2	Analyze the cell growth and the kinetics of product formation and enzymatic conversions	Apply
CO3	Design a bioreactor for efficient bio-energy production and scaling-up procedures.	Apply
CO4	Interpret and analyse the optimization yield, recycle and minimize the waste generation	Apply
CO5	Elucidate the concepts of activated sludge, digestion, biodegradation and bio filtration.	Apply

60 BT E12	Intellectual Property Rights	Category	L	Т	Ρ	Credit
00 DI EIZ		PE	3	0	0	3

- To familiarize graduates with the fundamental concepts, principles, and significance of Intellectual Property Rights (IPR) in various industries and sectors.
- To equip graduates with both technical and legal expertise required to effectively navigate and contribute to the complex field of Intellectual Property Rights
- To deepen graduates' understanding of the unique challenges, ethical considerations, and regulatory frameworks surrounding the patenting of biotechnological innovations
- To enable graduates to utilize and leverage IPR databases effectively for research, patent searches, and analysis
- To educate graduates on biosafety protocols, regulations, and ethical considerations relevant to biotechnological research and development

Pre-requisites

• NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Characterize the basic concepts of the types of IPR and their importance.	Apply
CO2	Appraise the knowledge on various organizations involved in IPR maintenance.	Apply
CO3	Categorize on the patent law and procedures for filing a patent	Understand
CO4	Comprehend the various database of IPR.	Apply
CO5	Identify the biological safety cabinets and biosafety guidelines.	Apply

- To know the overview of genome and genetic analysis
- To learn the implication of genome sequencing by learning the techniques
- To impart idea on tools available for proteomic and genomic approaches
- To have wide knowledge on applications of functional genomics and proteomics
- To update the latest development in the field of genetics

Pre-requisites

• Bioinformatics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Acquire knowledge on genome sequence and structure through genetic mapping, analysis and its expression	Understand
CO2	Detail the precise order of nucleotides by sequencing methods and it leads to predict mutations.	Understand
CO3	Analyze the information of gene expression and similarity among protein sequences and mine data from different database.	Apply
CO4	Handle the functional genomics in disease diagnosis and probe the interaction among proteins and ligands.	Apply
CO5	Interpret and analyze the proteins with reference to 2D, IEF, MALDI- TOF and protein mass Fingerprinting	Apply

00 BT E10	Food Biotechnology	PE	3	0	0	3

- To gain basic knowledge in select various aspects of food processing principles, equipments and food engineering operations in food industries
- To interpret the characteristics of various for preservation techniques
- To recognize and label the role of various agencies applied in food processing
- To gain knowledge in various aspects of Food processing and its importance for industrial applications
- To take up higher studies in the area of Food technology and to become an entrepreneur

Pre-requisites

• Basics of Biology, Microbiology and Biochemistry

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Illustrate the basic concepts of food processing technology and quality improvement.	Apply
CO2	appraise the types of various food processing techniques in milk and milk products.	Apply
CO3	Categorize vegetables, fruits and processing of meat.	Understand
CO4	Comprehend the different operations involved in food conversion.	Apply
CO5	Identify the Sensory evaluation of food quality and various organizations dealing with inspection and food safety standards.	Apply

60 BT E21	Piercenter Design	Category	L	Т	Р	Credit
00 BT E21	Bioreactor Design	PE	3	0	0	3

- To comprehend the basics of bioreactor hydrodynamics and fluid rheology.
- To identify the heat and mass transfer principles in bioreactors
- To recognize the process stability analysis and control of bioreactors
- To study about the scale up methods and mechanical aspects of reactor design.
- To apprehend the applications of bioreactors in various biochemical operations

Pre-requisites

 Basic knowledge in Fluid flow, Heat and Mass transfer, Chemical Reaction Engineering and Bioprocess Engineering

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Comprehend the basics of bioreactors and rheological behavior of culture broth	Understand
CO2	Recognize the significance of heat and mass transfer principles in bioreactor operations	Apply
CO3	Comprehend the criteria for bioreactor analysis and online control of bioreactors	Apply
CO4	Apprehend the bioreactor geometry and challenges in bioreactor scale up	Apply
CO5	Review the bioreactor design and principles in various bioprocessing applications	Apply

- To learn about Intellectual Property and related Rights.
- To provide knowledge on patent law and patent application process
- To disseminate knowledge on copy right and trade mark registration process
- To learn various database for the search of patent
- To summarize the need for biosafety and their management

Pre-requisites

• NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Review the types of IPR, various conventions for the protection of intellectual property rights.	Understand
CO2	Formulate a patent according to the patent law and procedures for filing a patent.	Understand
CO3	Assess the procedure for applying copy right and trade mark	Apply
CO4	Practice the database for searching the patents	Apply
CO5	Investigate the role of GMOs and LMOs and their risk assessment and management.	Analyze

00 BT E23	Stem Cell Technology	PE	3	0	0	3	ĺ

- To familiarize the basic knowledge on embryology and developmental biology.
- To learn the different developmental phases of stem cells and establishment of stem cell banks.
- To develop the skills in the area of stem cell research and its applications.
- To widen the knowledge about the isolation.
- To develop the culturing procedure and applications of stem cells to treat diseases.

Pre-requisites

• Basic Knowledge on Cell Biology and Immunology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Highlight the origin, types, sources, characterization and applications of stemcells.	Understand
CO2	Illuminate the sources, properties and challenges in establishing the human embryonic stem cell banks	Apply
CO3	Interpret the isolation neural stem cells, preparation of complete neuroculture and Immunolabeling procedures.	Apply
CO4	Identify the novel stem cell based gene therapy and genetically engineered stem cells in animal cloning.	Apply
CO5	Validate the role of stem cells in cellular assay, drug discovery and haematopoietic stem cell Transplantation	Apply

60 BT E24	Marina Biotochnology	Category	L	Т	Р	Credit
00 BT E24	Marine Biotechnology	PE	3	0	0	3

- To provide the knowledge about the marine diversity
- To know about the marine microbes and the aquatic animals
- To impart the biomedical importance of marine organisms.
- To learn the bioproducts derived from marine biodiversity
- To understand the environmental impacts of the aquatic biotechnology

Pre-requisites

• Biodiversity and its conservation

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Enlighten the different habitats of marine biodiversity and its nutrient requirements.	Understand
CO2	Describe the aquaculture related to artificial insemination, eye stalk ablation, transgenic fish technology and the role of probiotic bacteria in aquaculture.	
CO3	Substantiate the use of bioactive compounds from different marine organisms.	Apply
CO4	Identify the marine sources that produces the biopolymers, biomaterials, antifouling compounds and bio potential use of halophile bacteria.	Apply
CO5	Discuss the bioremediation using microbes, environmental risks and benefits	Apply

60 BT E25	Computational Piology	Category	L	Т	Ρ	Credit	
	Computational Biology	PE	3	0	0	3	

- To study the basic concepts and role of computation in biology
- To learn about the importance of biological databases and analyze complex biological networks
- To study the principles and algorithms behind sequence alignment methods
- To explain the computational methods for protein structure prediction and Drug design
- To understand the concepts of machine learning tools and its application for biological analysis

Pre-requisites

• Basic knowledge of biology and genetics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Comprehend the basic structure of biological macromolecules	Remember
CO2	Acquire the knowledge of biological databases and its importance	Understand
CO3	Experiment with sequence analysis such as pair wise and multiple sequence alignment	Apply
CO4	Make use of secondary and tertiary structure of proteins for drug design	Apply
CO5	Examine application of the machine learning approaches in computational biology and potential applications in drug discovery	Analyze

Course Com								
S. No.	Topics	No. of hours						
1.0	Basics of Biology							
1.1	Biomolecules of life - Structure and Composition of DNA	2						
1.2	Structure and Composition of RNA	2						
1.3	Structure and Composition of Protein	1						
1.4	Protein Structure Basics -Primary- Secondary and Tertiary Structure of Protein	2						
1.5	Role of Computation in BIOLOGY: NGS	2						
2.0	Biological Databases							
2.1	Concept of Relational Database- Data Archiving- Data Mining	2						

2.2	Primary Databases-NCBI-EMBL- DDBJ	2
2.3	Structure Databases-PDB	2
2.4	Graph Theory and Network Properties	1
2.5	Analysis of Gene Regulatory Networks and Metabolic Networks	2
3.0	Sequence Analysis	
3.1	Pairwise Alignment Tools-Dot Matrix Analysis	2
3.2	Dynamic PROGRAMMING-Smith Waterman and Needleman Wunsch Algorithm	2
3.3	Heuristic Methods- BLAST, FASTA	2
3.4	Multiple Sequence Alignment Methods-Progressive Alignment (Clustal)	2
3.5	RASMOL, PYMOL : Phylogenetic Analysis:	1
4.0	Structure Analysis and Drug Design	
4.1	Protein Secondary Prediction-Chou Fasman Method	1
4.2	Protein Secondary Prediction- GOR Method	1
4.3	Tertiary Structure Prediction	1
4.4	Homology Modelling	1
4.5	Ab initio Modelling	1
4.6	Computer Aided Drug Design	2
4.7	Hydrophobicity Profiling-Kyte-Doolittle, Hopp-Woods:Hydrophobicity Plots and. Interpretation	1
4.8	Contact Maps-Types of Contact Maps (Binary, Distance)-Methods for Generating Contact Maps: Long and Short Range Contacts.	1
5.0	Machine learning, Genomics and Proteomics Techniques, Application	ons
5.1	Artificial Neural Networks in Protein Secondary Structure Prediction - Hidden Markov Models for Gene Finding	1
5.2	Decision Trees, Support Vector Machines	1
5.3	Introduction to Systems Biology and Synthetic Biology	1
5.4	Microarray Analysis - DNA Computing	2
5.5	Bioinformatics Approaches for Drug Discovery - Assembling the Genome	1
5.6	STS Content Mapping for Clone Contigs - Functional Annotation	2
5.7	Peptide Mass Fingerprinting	1

	Organic Farming for	Category	L	т	Ρ	Credit
60 BT E26	Sustainable Agriculture	PE	3	0	0	3

- To impart the principles and importance of organic farming for sustainable agriculture
- To learn about the soil fertility and manures
- To learn the production technology of organic compost and to practice the its design criteria.
- To provide the better understanding about organic standard certificates
- To discuss about the future perspectives of organic farming

Pre-requisites

Biology

Course Outcomes

On the su	On the successful completion of the course, students will be able to							
CO1	Recognize the principles, various types of farming and the challenges for organic agriculture.	Understand						
CO2	Comprehend the various components of soil fertility and the technique manage the soil fertility							
CO3	Exemplify the production of organic compost and the method of its spreading.	Apply						
CO4	Comprehend the history and development of organic standards and certification	Apply						
CO5	Analyse the future perspective of organic farming for sustainable agriculture	Apply

60 BT E21	Translational	Category	L	Т	Р	Credit
60 BT E31	Biotechnology	PE	3	0	0	3

- To provide a solid foundation in molecular and cellular biology, genomics, and proteomics
- To introduce the process of translational research and development, including clinical trials and biomarker discovery
- To educate on advanced technologies and tools in translational biotechnology
- To explain the industrial and commercial aspects of biotechnology
- To explore emerging trends and future directions in biotechnology

Pre-requisites

Basic Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate understanding of molecular biology, genomics, and proteomics in translational biotechnology.	Understand
CO2	Develop skills to design and conduct translational research and clinical trials.	Apply
CO3	Gain proficiency in advanced biotechnological tools and technologies.	Apply
CO4	Acquire knowledge about the biotechnology industry and commercialization processes.	Apply
CO5	Critically analyze and evaluate emerging biotechnological trends and their societal impacts	Apply

60 BT E32	Environmental Hazards	Category	L	Т	Р	Credit
	and Management	PE	3	0	0	3

- To understand the concepts of environmental hazards and the causative agents
- To differentiate the potential hazards and disaster
- To identify the suitable framework followed by a national and international agency to mitigate the hazards and disasters
- To comprehend the different aspects of technology for reducing and managing the risk
- To create awareness about hazards management •

Pre-requisites

Environment Science •

Course Outcomes

On the suc	On the successful completion of the course, students will be able to									
CO1	Recite the concepts of environmental hazards and its impact	Understand								
CO2	Distinguish the potential role of elements causing health risk	Apply								
CO3	Categorize the types of environmental hazards and disasters	Apply								
CO4	Express the management and framework of hazards and disaster management	Apply								
CO5	Choose the technologies that can be employed in the risk reduction and management	Apply

60 BT E33	Molecular Medicine	Category	L	Т	Ρ	Credit
00 BT E35		PE	3	0	0	3

- To provide foundational knowledge of the human genome, chromosomes, genes, and genetic engineering techniques.
- To introduce the process of transmission, diagnosis, and genetic counseling of human genetic diseases.
- To educate on molecular mechanisms underlying human diseases, including oncology and infectious agents.
- To explain the molecular signaling pathways and their roles in disease progression.
- To explore advanced diagnostic and therapeutic approaches in the treatment of human diseases, emphasizing personalized medicine.

Pre-requisites

Basic Biology

Course Outcomes

On the suc	ccessful completion of the course, students will be able to	
CO1	Demonstrate understanding of the organization of the human genome and genetic engineering techniques.	Understand
CO2	Apply knowledge of molecular diagnostics and genetic counseling in clinical settings.	Apply
CO3	Enlighten the molecular mechanisms of human diseases and their implications for treatment.	Apply
CO4	Analyze molecular signaling pathways and their roles in disease progression.	Apply
CO5	Utilize advanced diagnostic and therapeutic approaches in the treatment of human diseases, emphasizing personalized medicine.	Apply

Course Contents and Lecture Schedule	
--------------------------------------	--

S. No.	Topics	No. of hours
1.0	Basic Concepts in Molecular Medicine	
1.1	An Overview of the Orgnaisation of the Human Genome,	2
1.2	Chromosome and Genes; R-DNA and Genetic Engineering Techniques used in Molecular Medicine	1
1.3	Transcriptional Control of Gene Expression	1
1.4	Transmission of Human Genetic Disease	1
1.5	The Human Genome Project; Oncogenes and Tumor Suppressor Genes	2
1.6	Molecular Diagnostic Testing	1
1.7	Genetic Counseling; Transgenic Mice as Modelso Human Diseases	1
2.0	Development of Molecular Medicine *	
2.1	Molecular Mechanisms of Human Disease.	2

2.2	Infectious Agents- Biological Aspects and Clinical Implications	2
2.3	Molecular Hematology and Oncology. Selection and Evolution	1
2.4	Implications for Molecular Medicine	1
2.5	Molecular Basis of Development of Medicine	1
2.6	Diagnostic and Therapeutic Potential. Human Embryonic Stem Cells: Biology and Clinical Implications	2
3.0	Molecular Signaling Mechanism in Human Diseases	
3.1	Molecular Signaling Mechanism in Human Diseases. P27kip1-Connecting Oncogenes to Cell Cycle Control"	1
3.2	"Roles of Micro RNAs in Animal Development and Human Cancer" "Epigenic Programming of the Genome in Embryos and Germ Cells"	1
3.3	Ubiquitin Mediated Proteolysis in Senescence and Immune Signalling"	1
3.4	"Nucleocytoplasmic Shuttling and Transcriptional Regulation	2
3.5	An Analysis of the STAT Signaling System"	2
3.6	"Nuclear Organisation of Transcription"	1
3.7	"Ubiquitination and Disposal of Cell Surface Receptors- Lessons from Viruse	1
4.0	Molecular Diagnostic and Therapeutic Approaches for Human Diseases	
4.1	Role of DNA Micro Array and Protein Chips	2
4.2	Biotherapy; Probiotic; Phage Therapy	2
4.3	Virotherapy with (Replicationelective or Conditionally Replicating)	1
4.4	Lytic Viruse; si RNA the Rapeutics	1
4.5	Concept of Personalised Medicine and Pharmacogenomics	2
4.6	Photodynamic Therapy	1
5.0	Emerging Trends: Industrial Applications of Molecular Medicine	
5.1	Emerging Trends in Molecular Medicine	2
5.2	Expert Reviews on Molecular Medicine Related to Vaccine Design	3
5.3	Systemic Diseases	2
5.4	Developments as Updated From Time to Time	2

1. Dr.M.Nithya - nithyam@ksrct.ac.in

60 BT E34	Pharmacology and	Category	L	Т	Ρ	Credit
	Toxicology	PE	3	0	0	3

- To describe basic toxicological phenomena in the light of normal cellular and biochemical conditions
- To explain the central principles regarding scientific communication, philosophy of science and bioethics
- To identify and discuss strengths and limitations of different methods to study toxicological effects, and their areas of application
- To analyse and critically review scientific articles in the field of toxicology
- To use the structure and language style appropriate for a scientific article

Pre-requisites

• Biochemistry

Course Outcomes

CO1	Designate basic toxicological principles and describe how different chemicals are taken up by processed in and eliminated from the body	Understand
CO2	Differentiate the importance of different organs for detoxification/ toxification of chemicals, and describe mechanisms for chemically induced neurotoxicity and endocrine toxicity	
CO3	Entitle the different behaviour tests and their importance to discover of different neurological and endocrinological disturbances	Understand
CO4	Describe when different chemicals are most toxic, and mechanisms behind the effects.	Apply
CO5	Apply different toxicological frameworks within the professional disciplines.	Apply

60 BT E35	Metabolomics and	Category	L	Т	Ρ	Credit
60 BT E35	Metabolic Engineering	PE	3	0	0	3

- To analyse metabolomics' role in systems biology for understanding biological networks
- To understand cellular metabolism fundamentals, including transport and biosynthetic reactions
- To apply material balances and data standards for accurate metabolic analysis •
- To evaluate metabolic regulation mechanisms for optimizing cellular processes •
- To utilize computational tools for modeling metabolic pathways and flux analysis

Pre-requisites

Biochemistry, Stoichiometry, Bioprocess / Fermentation Technology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Utilize metabolomics techniques to examine dynamic metabolic networks.	Apply			
CO2	Describe cellular metabolism and its regulatory mechanisms.	Understand			
CO3	Demonstrate competency in material balances and data analysis.	Apply			
CO4	Execute metabolic engineering strategies to enhance bioproduction.	Apply			
CO5	Analyse metabolic fluxes using computational methods.	Analyse

60 BT E36	Biotechniques in Crop	Category	L	Т	Р	Credit
60 BT E36	Improvement	PE	3	0	0	3

- To develop crops with enhanced resistance to biotic stresses such as pests, diseases, and weeds
- To utilize molecular markers to assess genetic diversity within crop germplasm collections
- To develop biotechnological approaches to increase crop yields through improved genetics
- To widen the knowledge about biotechnological interventions to enhance the productivity of major crops
- To Generate transgenic plants as genetic resources for molecular breeding programs

Pre-requisites

Biochemistry, Microbiology, Molecular Biology and Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Gain a comprehensive understanding of the molecular mechanisms underlying plant resistance to pests and diseases.	Understand
CO2	Summarize the understanding of molecular markers to select appropriate marker systems for specific crop improvement objectives.	Understand
CO3	Demonstrate the ability to construct genetic linkage maps using molecular markers and various mapping populations.	Apply
CO4	Apply interdisciplinary approaches, integrating knowledge from fields such as genetics, agronomy.	Apply
CO5	Utilize their comprehension of genetic engineering principles to devise and assemble transgenes	Apply

*SDG 3 – Good Health and Well Being

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	Biotechnological Approach for Crop Improvement	
1.1	Biotechnological Approaches for Disease Resistance, Protection Against Fungal Pathogens and Drought Tolerance	2
1.2	Modification of Crop-Plant Nutritional Content (Vitamins, Amino Acids and Lipids	2
1.3	Modification of Crop-Plant Taste and Appearance (Sweetness, Starch and Preventing Discoloration	2

1.4	Polyploidy: Induction of Polyploidy by Artificial Methods	2
1.5	Role of Polyploidy in Crop Improvement	1
2.0	Molecular Markers and Crop Improvement	
2.1	Types of Molecular Markers used in Analyzing Genetic Diversity for Crop Improvement	2
2.2	Molecular Mapping and Tagging of Agronomically Important Traits	2
2.3	Molecular Cytogenetic Markers: FISH and GISH, Their Application in Crop Improvement	1
2.4	Transposable Elements: Mechanism of Action and Their Role in Crop Improvement	1
2.5	Quantitative Trait Loci (QTL) Mapping: Introduction	1
2.6	Types of Mapping Populations	2
3.0	Application of Molecular Markers	
3.1	Construction of Molecular Maps (Using F2, DH, Rils)	2
3.2	Gene Tagging Using Bulked Segregant Analysis (BSA) and Near Isogenic Lines (Nils);	2
3.3	QTL Analysis; Map-Based Cloning of Genes	2
3.4	Elementary Idea of Marker	2
3.5	Assisted Selection (MAS) in Plant Breeding	1
4.0	Molecular Mapping and Tagging of Agronomically Important Traits	
4.1	Statistical Tools in Marker Analysis, Robotics	2
4.2	Marker-Assisted Selection for Qualitative and Quantitative Traits	1
4.3	Qtls Analysis in Crop Plants	1
4.4	Gene Pyramiding	1
4.5	Marker Assisted Selection and Molecular Breeding	1
4.6	Genomics and Genoinformatics for Crop Improvement	1
4.7	Integrating Functional Genomics Information on Agronomically / Economically Important Traits in Plant Breeding.	2
5.0	Production of Transgenic Plants in Various Field Crops	
5.1	Cotton, Wheat, Maize, Rice, Soybean, Oilseeds, Sugarcane etc. Commercial Releases	1
5.2	Biotechnology Applications in Male Sterility/Hybrid Breeding	1
5.3	Molecular farming. Mos and Related Issues (Risk and Regulations)	1
5.4	GMO; International Regulations	2
5.5	Biosafety Issues of GMOs; Regulatory Procedures in Major Countries Including India	1
5.6	Ethical, Legal and Social Issues	1
5.7	Intellectual Property Rights. Bioinformatics & Bioinformatics Tools	1
5.8	Nanotechnology and Its Applications in Crop Improvement Programmes	1

Course Designer(s) 1. Dr.M. Nithya - nithyam@ksrct.ac.in

60 BT E/1	Fermentation	Category	L	Т	Ρ	Credit
60 BT E41	Technology	PE	2	0	2	3

- To define fermentation methods and their application in industry
- To identify techniques for primary metabolite recovery from fermentation
- To explain the mechanism and optimization of secondary metabolite production
- To analyse growth kinetics and microbial transformations in fermentation
- To evaluate modern fermentation technologies and their applications

Pre-requisites

• Microbiology, Stoichiometry

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Comprehend the fundamental principles and methods of industrial fermentation.	Understand
CO2	Apply product recovery techniques such as centrifugation, filtration, and chromatography to isolate primary metabolites.	Apply
CO3	Evaluate the production mechanisms of secondary metabolites, including antibiotics and vitamins.	Evaluate
CO4	Analyse growth kinetics in different fermentation processes (batch, fed- batch, continuous).	Analyse
CO5	Analyse the role of fermentation technology in producing chemicals, pharmaceuticals.	Analyse

60 BT E42	Clinical Trials and Health Care	Category	L	Т	Ρ	Credit
00 DI E42	Policies in Biotechnology	PE	2	0	2	3

- To understand the basic requirements in clinical research
- To highlight the epidemiologic methods, study design, protocol preparation and gain knowledge in the basic bio-statistical techniques involved in clinical research
- To describe the principles involved in ethical, legal and regulatory issues in clinical trial
- To gain knowledge in the basic of the health care system
- To describe health care policies and planning

Pre-requisites

Molecular biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate proficiency in handling and managing documentation related to clinical trials, including protocols, informed consent forms, and regulatory submissions.	Understand
CO2	Implement safety monitoring strategies in clinical trials to ensure the welfare and safety of participants, including adverse event reporting and risk management protocols.	Apply
СОЗ	Comply with regulatory requirements and guidelines for the preparation, maintenance, and documentation of clinical trial-related documents to ensure adherence to Good Clinical Practice (GCP) standards	Apply
CO4	Analyze the production of medical services within the healthcare system, including factors influencing the supply and distribution of healthcare providers, technologies, and facilities.	Analyze
CO5	Apply knowledge of health care policies to critically assess current issues, trends, and debates in healthcare delivery and financing.	Apply

- To learn inheritance patterns of genes
- To get clear idea about sex determination
- To have knowledge about extra chromosomal inheritance
- To understand the genetic mapping
- To learn chromosomal abnormalities

Pre-requisites

• Molecular Biology, Cell Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Comprehend inheritance patterns, can predict the likelihood of certain traits or disorders appearing in offspring and make informed decisions about genetic counselling or medical interventions.	Understand
CO2	Recognize sex determination helps explain the biological basis of sexual dimorphism and can provide insights into reproductive biology and medical conditions related to sex development.	Understand
CO3	Awareness of extra chromosomal inheritance helps explain the inheritance patterns of certain traits, such as mitochondrial disorders, and provides insights into cellular biology and evolution.	Apply
CO4	Analyse the genes involved and their locations on chromosomes. This information can lead to the development of targeted therapies and diagnostic tests.	Analyse
CO5	Considerate the abnormalities helps diagnose genetic disorders, predict their outcomes, and guide medical management and genetic counselling.	Apply

		PE	2	0	2	3

- To develop the fundamental understanding about nano molecules in biological systems. ٠
- To learn a b o ut the various n a no particles and methods to prepare it. •
- To a n a l ys e s the different techniques to characterize the nano materials. •
- To widen the knowledge about the applications of nano particles in environment and pollution control system.
- To identify the application of nano materials in medical field.

Pre-requisites

Chemistry, Bioinformatics •

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recall the basic concepts, systems and synthesize of different types	
001	of nano particles	Understand
CO2	Classify the methods for the preparation of nano scale materials and its characterization	Understand
CO3	Identify the mechanism and role of biomolecules as nano materials.	Apply
CO4	Analyze the application of transducing elements in bionanotechnology and understand the mechanism of nanomaterials as drug delivery systems.	Analyze
CO5	Analyze the importance of nanotechnology for human health, environmental remediation, waste water treatment and food industry.	Analyze

1.1	Lipids as Nanobricks and Mortar -Lipid Structure	1
1.2	Self-Organizing Supramolecular Structures	1
1.3	Proteins-S Layer Proteins; Nanoscale Motors- Based on Bacteriorhodopsin	1
1.4	Ion Channels as Sensors	1
1.5	DNA - DNA Based Artificial Nanostructures - DNA as Nanowires - DNA as Molecular Tweezers	1
1.6	Nanobodies for Vaccine and Cancer Cell Detection	1
2.0	Introduction to Nanobiotechnology and Synthesis**	
2.1	Nanoparticles - Types and Properties	1
2.2	Carbon Nanotubes: Quantum Dots: Fullerenes: Nanopores	1
2.3	Nanoshells: Nanocomposites: Synthesis Of Nanoscale Materials - Top Down and Bottom Up Approaches	1
2.4	Physical Method- Ball Milling -Plasma Arcing - Laser Ablation Method	1
2.5	Chemical Method- Sol Gels - Chemical Vapour Deposition	1
2.6	Green Synthesis of Nanoparticles: Nanoparticle Synthesis by Fungi, Bacteria and Actinomycetes.	1
3.0	Nano biotechnological applications in drug delivery detection systems	•
3.1	Types of Transducing Element and Its Applications in Bio-Nanotechnology	1
3.2	Electrochemical Transducer- Optical Transducer	1
3.3	Nano Biosensor -DNA Detection	1
3.4	Small Scale Systems of Drug Delivery - Gels, Scaffolds	1
3.5	Nanofibers: Stents	1
3.6	Composites and Magnetic Particles	1
4.0	Characterization of Nanomaterials**	
4.1	Types of Characterization- Optical Probe - CLSM, SNOM, 2PFM, DLS	1
4.2	Electron Probe - SEM, TEM, HRTEM, AES, STEM	1
4.3	Scanning Probe - AFM, CFM, MFM, STM, APM	1
4.4	Spectroscopy Probe - UPS, UVVS, AAS, LSPR	1
4.5	Ion-Particle Probe - XRD, EDX, NMR	1
4.6	Thermodynamic - TGA, DSC, BET	1
5.0	Biomimetic synthesis, Characterization and application of nano particle	es
5.1	Green Synthesis of Nanoparticles	1
5.2	Nanoparticle Synthesis by Fungi, Bacteria and Actinomycetes	2
5.3	Characterization of Nanoparticles	1
5.4	Application of Nanoparticles	1
5.5	Soft Nanotechnology for Drug Delivery System	1
Practical:		
1.	Chemical Synthesize Silver Nanoparticles Using Co- Precipitation Method	4
2.	Green Synthesis of TiO2 Nanoparticle Using Plant Extract	4
3.	Green Synthesis of Zn Oxide Nanoparticle Using Microorganism	4
4.	Synthesis of Aqueous Ferrofluid Nanoparticles	2
5.	Absorption Spectroscopy Analysis of Metal Oxide Nanoparticles	4
6.	Particle size analyzer of metal oxide nanoparticles	4
7.	Determination of Biological Activity of Nanoparticles Using Bacteria	4
8.	Surface Morphology Analysis of Synthesized Nanoparticle Using AFM	4

60 BT E45	Next Generation Sequencing	Category	L	Т	Ρ	Credit
00 DT E43	and Data Analysis	PE	2	0	2	3

- To identify the different NGS technologies in the market
- To evaluate the main variables that influence the design of a sequencing project
- To differentiate between a good and a bad data set
- To describe the different workflows in the analysis of NGS data
- To interpret the results from the different NGS applications

Pre-requisites

•

Biochemistry, Molecular Biology and Bioinformatics concepts

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Describe the step-by-step process to analyze the data generated by NGS platforms along with relevant hands-on experience.	Apply
CO2	Analysis single nucleotide polymorphisms (snps) and indels.	Apply
CO3	Describe the complexities involved in the analysis of transcriptomic data in details.	Apply
CO4	An overview of other applications of the NGS technologies - genome assembly and epigenomics.	Apply
CO5	Comprehend the concepts of Big Data And High Performance Computing In Omics	Analyse

Course Contents and Lecture Schedule

S. No.	Topics	No. of Hours
1.0	Principles of agronomy	
1.1	Definition of agriculture and agronomy	1
1.2	Factors affecting crop growth	1

1.3	Climate and weather parameters	1						
1.4	Soil fertility and productivity-tillage	1						
1.5	Tilth, it's different kinds of tillage	1						
1.6	Agriculture and climate change							
2.0	Agricultural Infrastructure	-						
2.1	Site selection, design and construction of farmstead	1						
2.2	Farm house, cattle shed, dairy bam, poultry shed, hog housing	1						
2.3	Machinery and implement shed, storage structures for food grains, feed and forage	1						
2.4	Sources of water for irrigation	1						
2.5	Methods of irrigation – surface, sprinkler and drip, fertigation	1						
2.6	Irrigation efficiencies and their estimation	1						
3.0	Plant Tissue Culture techniques							
3.1	Preparation of Plant tissue culture media	1						
3.2	Plant growth regulators	1						
3.3	Sterilization of explants	1						
3.4	Callus and suspension cultures	1						
3.5	Micropropagation, meristem culture	1

4.6	Ethical issues in transgenic plants	1						
5.0	Applications of agricultural biotechnology							
5.1	Hardening, Green house construction	1						
5.2	Field plantation, Irrigation	1						
5.3	Production of Biofertilizer& Biocontrol agents	2						
5.4	Azolla cultivation, Spirulina cultivation and Mushroom cultivation	2						
Practica	:							
1.	Determination of pH of soil samples	2						
2.	Determination of pH of water sample	2						
3.	Determination of water holding capacity of the soil	4						
4.	Study of different types of soil through water flow and absorption test	4						
5.	Preparation of biofertilizer using symbiotic Rhizobium bacteria	2						
6.	Cultivation of Azolla as biofertilizer	4						
7.	Cultivation of Spirulina – blue green algae	4						
8.	Surface sterilization of Explant	4						
9.	Preparation of Murashige and Skoog medium for plant tissue culture	4						

1. Ms. K. Abinayaa - abinayaa@ksrct.ac.in

60 BT E51	Bioprocess Modelling	Category	L	Т	Ρ	Credit
	and Simulation	PE	3	0	0	3

- Understand Process Design Principles.
- Comprehend physical and mathematical modelling concepts.
- Apply Kinetics and Reactor Modelling.
- Develop Mathematical Models for Fermentation.
- Identify models from experimental data and apply numerical techniques for model solution.

Pre-requisites

• Stoichiometry, Bioprocess Technology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize process synthesis and design strategies using optimization techniques.	Understand
CO2	Formulate mathematical models incorporating physical and cybernetic principles.	Apply
CO3	Evaluate kinetics and reactor behaviour applying Michaelis-Menten and Monod models.	Apply
CO4	Interpret fermentation processes, considering kinetics, stoichiometry, and physiological aspects.	Analyse
CO5	Apply numerical techniques to identify, formulate, and solve bioprocess models accurately.	Apply

60 BT E52	Regulatory Affairs in	Category	L	Т	Ρ	Credit
00 BT E32	Biotechnology	PE	3	0	0	3

- To introduce QA and QC, stressing CGMP and environmental controls' significance in biological products manufacturing
- To explain IND, NDA, and ANDA submission processes, with an overview of DPCO and its implications
- To provide insights into Drugs and Cosmetics Act, 1940, and Rules, 1945, and pertinent safety and clinical efficacy guidelines
- To introduce validation concepts and types in biological products manufacturing, detailing its importance and procedural steps
- To explain industrial safety principles, risk management, and diverse accreditation processes in the biotechnology sector

Pre-requisites

• Biopharmaceutical Technology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recall the basic principles of QA, QC, and cGMP, and describe the environmental controls necessary for biological products manufacturing.	Remember
CO2	Explore the procedures for IND, NDA, and ANDA submissions and explain the impact of the DPCO on pharmaceutical pricing.	Understand
CO3	Outline the Drugs and Cosmetics Act and Rules and apply quality guidelines to ensure compliance with safety and efficacy standards.	Apply
CO4	Comprehend the various types of validation processes and apply the steps of validation to ensure the quality and consistency of biological products.	Apply
CO5	Apply principles of industrial safety management, conduct hazard assessments, and manage risk to ensure safe and compliant manufacturing environment	Apply

60 BT E53	Biomedical Instrumentation	Category	L	Т	Р	Credit	
00 DT E33	Biomedical instrumentation	PE	3	0	0	3	

- To learn about the instrumental analysis of human physiology and anatomy.
- To familiarize about the various electrical and non-electrical measurements aids
- To identify the applications of chemicals in the synthesis of implant materials.
- To understand the concepts of imaging in diagnosis and monitoring effectiveness of the treatments.
- To acquire knowledge on the existing life assisting and robotic devices.

Pre-requisites

Basic Physics, Anatomy and Physiology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the basic bio-potential and biomechanical rhythm of human physiology with its characteristics	Understand
CO2	Quantify the electrical parameters measurement in correlation to the instruments and the role of physiological signals and transducers	Understand
CO3	Identify the role of non-electrical parameters measurement in correlation to the human physiology	Apply
CO4	Study various biomaterials for various biomedical applications	Apply
CO5	Examine and interpret the imaging equipment principles and output signals	Apply

Course Designer(s) 1. Dr. Swathy J S - swathy@ksrct.ac.in

60 PT E54	Piomotoriala	Category	L	Т	Р	Credit
60 BT E54	Biomaterials	PE	3	0	0	3

- Recognize the fundamental principles of biomaterials science and the concept of biocompatibility.
- Identify and describe the physical, chemical, and biological properties of metals, polymers, ceramics, and composites.
- Explain the mechanical, tribological, and physical properties of biomaterials and their clinical significance.
- Describe the interactions between biomaterials and blood components, cells, and tissues, including relevant assays.
- Summarize the degradation processes and toxicological aspects of biomaterials in biological environments and their medical applications.

Pre-requisites

• Basics of Biology, Microbiology and Biochemistry

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Sketch the key concepts of biomaterials science and explain the importance of biocompatibility in medical use.	Understand
CO2	Classify different biomaterials and describe their physical, chemical, and biological properties.	Understand
CO3	Enlighten mechanical and tribological properties like elasticity, toughness, and wear resistance of biomaterials.	Understand
CO4	Designate interactions between biomaterials and biological systems and explain relevant assay methods.	Apply
CO5	Deliberate degradation mechanisms, toxicity, and various medical applications like cardiovascular devices and drug delivery systems.	Analyse

60 BT E55	Systems Biology	Category	L	Т	Ρ	Credit
00 BT E35	Systems Biology	PE	3	0	0	3

- To provide foundational knowledge in phylogenetic analysis, including methods and models.
- To teach methods and techniques for performing parsimony analysis and optimization alignment.
- To introduce traditional and advanced techniques for analyzing large phylogenetic data sets.
- To educate on partitioning and evaluating multiple datasets in phylogenetic analysis.
- To explore comparative phylogenomics, including genome databases and evolutionary analysis techniques.

Pre-requisites

Basic Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate proficiency in phylogenetic analysis methods and tree construction.	Understand
CO2	Apply parsimony analysis techniques effectively in phylogenetic studies.	Understand
CO3	Explain large phylogenetic data sets using various traditional and advanced techniques.	Understand
CO4	Evaluate and partition multiple datasets in phylogenetic analysis.	Apply
CO5	Perform comparative phylogenomic analysis using complex genome databases and bioinformatics tools.	Analyse

OPEN ELECTIVE

60 BT I 01	Agricultural Engineering	Category	L	Т	Р	Credit
	Agricultural Engineering	OE	3	0	0	3

Objectives

- To lean the basic concepts in the current practices of Agronomy.
- To discuss the importance of agricultural structures and irrigation methods.
- To understand the post-harvest procedures for the improvement of marketing strategy.
- To facilitate the knowledge for Post-harvest technology development
- To empower the students to became agro pruners.

Pre-requisites

• Physics, Chemistry, and Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Determine the principles of agronomy for managing the environmental impact of agriculture and tilth practices.	Understand						
CO2	Comprehend the design and construction of farm shed, fences and structures for plant environment	Apply						
		م میل ا						
CO3	Elaborate the design and construction of canals, pipeline systems to	Apply						
000	moderate depression created to channelwater.							
004	Clarify the concept of designing, operation and testing of various machines	Apply						
CO4	used in post harvesting and storagepractices.	11.5						
005	Design the industrial oriented agro products production plant and project	Apply						
CO5	report preparation

61 BT L02	Animal Studies in	Category	L	Т	Ρ	Credit
61 BT LU2	Research	OE	3	0	0	3

- To understand the functional food concept as related to ingredient efficacy and its nutraceutical properties.
- To widen the knowledge on role of food in disease management.
- To provide basic concepts on clinical trials.
- To Familiarize the principles of pharmacological research.
- To extent scientific knowledge on the regulations for animal research

Pre-requisites

Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Designate the components of functional foods and nutraceuticals	Understand
CO2	Assess the functions of food in preventing and managing diseases.	Understand
CO3	Interpret the understandings on toxicology and different animals used in preclinical testing	Apply
CO4	Analyze the pharmacological parameters and management of laboratory animals.	Apply
CO5	Provide understanding on regulations for the usage of animals in research	Apply

60 BT L03	Production Technology of Agricultural and Food	Category	L	Т	Р	Credit
00 BT 203	Processing Machinery	OE	3	0	0	3

- To improve the level of understanding of agriculture and food processing machinery
- To help the agriculture farmers for selecting the appropriate machinery based on crops
- To know the various bakery products and its importance in machinery planning
- To enhance the knowledge of modern machinery in fruits and vegetable set up
- To apply the modern packing solution for various industry needs

Pre-requisites

• Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Employ the different production tools involved in the agriculture and food processing machinery	Understand
CO2	Analyse the different machinery involved in post harvest processing set up	Understand
CO3	Interpret the strategy of planning of different machinery for bakery products	Apply
CO4	Enhance the knowledge of machinery involved in fruits and vegetable processing	Apply
CO5	Recall the modern technology involved in food packing machinery	Apply

60 BT L05	Organic Farming for	Category	L	Т	Ρ	Credit
00 01 203	Sustainable Agriculture	OE	3	0	0	3

- To impart the principles and importance of organic farming for sustainable agriculture
- To learn about the soil fertility and manures
- To learn the production technology of organic compost and to practice the its design criteria.
- To provide the better understanding about organic standard certificates
- To discuss about the future perspectives of organic farming

Pre-requisites

• Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Comprehend the principles, various types of farming and the challenges for organic agriculture.	Understand
CO2	Comprehend the various components of soil fertility and the technique manage the soil fertility	Understand
CO3	Exemplify the production of organic compost and the method of its spreading.	Apply
CO4	Recognize the history and development of organic standards and certification	Apply
CO5	Analyse the future perspective of organic farming for sustainable agriculture	Analyze

S.No	Торіс	No. of Hours
1	Overview of Organic Farming	
1.1	Origin and Principles of Organic Farming - Indian Agriculture before the Green Revolution	2
1.2	The Green Revolution - Impact of Green Revolution on the Environment	2
1.3	Types of Farming: Pure Organic, Integrated and Mixed Farming System	2
1.4	Needs and Challenges for Organic Agriculture	1
1.5	Key Indicators of Sustainable Agriculture.	1
2	Soil Fertility and Production of Organic Compost	

		1
2.1	Components of Soil Fertility - Physical, Chemical and Biological	1
2.2	Managing Soil Fertility in Organic Farming Systems	1
2.3	Organic Manures: Farmyard, Compost Sheep And Goat, Poultry, Oil-Cakes, Sewage, Sludge and Sullage Manure.	2
2.4	Composting - Importance of Composting - Method of Spreading Compost	1
2.5	Microbes Involved in Composting - Design Criteria - Rate and Time of Application	2
2.6	Kinetics Of Composting - Type and Amount of Compost	1
2.7	Practical Method of Making Compost.	2
3	Sustainable Agriculture	
3.1	SWOT Analysis of Organic Farming	2
3.2	Sustainable Agriculture	2
3.3	Key Indicators of Sustainable Agriculture	2
3.4	Organic Farming and Climate Change	3
4	Organic Standards and Certification	
4.1	History and Development of Organic Standards and Certification	2
4.2	Organic Standards Setting Processes	2
4.3	Conformity Assessment Processes (International Verification Processes)	2
4.4	Key Challenges for The Future of Organic Regulation	2
5	Perspectives of Organic Farming	
5.1	Economic Management in Organic Agriculture	1
5.2	Understanding the Market for Organic Food-Supply Chain Management	2
5.3	Social Responsibility in Organic Agriculture: Learning, Collaboration and Regulation	2
5.4	Organic Fertilizer	1
5.5	Supplementary Nutrient Source for Rice, Sugarcane, Sorghum and Banana	2
5.6	Marketing of Organic Products	2
5.7	Pest Management	2

1. Dr.Swathy J S - swathy@ksrct.ac.in

60 BT L06	Basics of Bioinformatics	Category	L	Т	Р	Credit
60 BT L06	Basics of Bioinformatics	OE	3	0	0	3

- To develop inter disciplinary skills in the application of computers in biotechnology and learn aboutthebiological data
- To learn about the bioinformatics databases, databanks, data format of Biological databases
- To understand the concept of data processing and data retrieval from the online sources
- To analyze the optimal alignment using methods of sequence analysis
- To acquire the applications and scope of in-silico biology

Pre-requisites

Biology/ Computer Science

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Get acquainted with biological data acquisition methods and file formats	Understand
CO2	Recite various biological primary databases, secondary databases and different sequence file formats	Understand
CO3	Characterize the optimal alignment of sequences either by local or global algorithm	Apply
CO4	Designate the methods involved in pairwise and Multiple sequence alignment and analysis the conserved regions	Apply
CO5	Recognize the major applications of Bioinformatics and scope	Apply

Mapping with Programme Outcomes

COs	POs										PSOs

2.1 Biological Database and its Types Introduction

2

2.2	To Data Types and Source - General Introduction of Biological Databases	2
2.3	Nucleic Acid Databases (NCBI, DDBJ, and EMBL)	1
2.4	Protein Databases (Primary, Composite, and Secondary)	2
2.5	Specialized Genome Databases: (SGD,TIGR, and ACEDB)	1
2.6	Structure Databases (CATH, SCOP, and PDB SUM).	1
3.0	Data Processing	
3.1	Data – Access, Retrieval and Submission	1
3.2	Standard Search Engines	1
3.3	Data Retrieval Tools	1
3.4	ENTREZ, DBGET and SRS - Submission of (New and Revised) Data	2
3.5	Sequence Similarity Searches	1
3.6	Local Versus Global -Distance Metrics- Similarity and Homology	2
3.7	Scoring Matrices.	1
4.0	Methods of Analysis	
4.1	Dynamic Programming Algorithms	1
4.2	Needleman-Wunsch and Smith-Waterman	2
4.3	Heuristic Methods of Sequence Alignment	1
4.4	FASTA, and PSI BLAST	1
4.5	Multiple Sequence Alignment and Software tools	2
4.6	Pairwise and Multiple Sequence Alignment	2
5.0	Applications	
5.1	Genome Annotation and Gene Prediction	2
5.2	ORF Finding; Phylogenetic Analysis	2
5.3	Comparative Genomics Orthologs - Paralogs	2
5.4	Genome Analysis	2
	Genome Annotation.	1
