

K.S. Rangasamy College of Technology

(Autonomous)

CURRICULUM AND SYLLABI

of

B. Tech Biotechnology

(For the batch admitted in 2025– 2026)

R 2022

**Courses Accredited by NBA, Accredited by NAAC with 'A++' Grade,
Approved by AICTE, Affiliated to Anna University, Chennai.**

**KSR Kalvi Nagar, Tiruchengode – 637 215.
Namakkal District, Tamil Nadu, India.**

DEPARTMENT OF B.TECH., BIOTECHNOLOGY

VISION OF THE DEPARTMENT

- To produce competent Scientists, Technologists, Entrepreneurs and Researchers in Biotechnology through quality education.

MISSION OF THE DEPARTMENT

- To be recognized as a place of excellence in teaching-learning through continual improvement process (**Place of excellence** and **continual improvement**)
- To work in close liaison with the industry to achieve socio-economic development through biotechnological ventures (**Socio-economic development**)
- To facilitate students to perform as competent professional Biotechnologists (**Professional Competence**)

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- PEO1: Fundamentals:** Graduates are professionally competent in Biotechnology to solve problems in environmental, food, biochemical and biomedical engineering and technology.
- PEO2: Career Growth:** Graduates demonstrate proficiency in theory and practice of biotechniques through life-long learning.
- PEO3: Professional Practices:** Graduates perform as an individual and / or member of a team with professional and ethical behaviour.

PROGRAMME OUTCOMES (POs)

Engineering Graduates will be able to:

- PO1: Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2: Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3: Design /development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4: Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5: Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- PO6: The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7: Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8: Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9: Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10: Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- PO11: Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- PO12: Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs):

Engineering Graduates will be able to:

PSO1: Design and execute industry-oriented experiments in biotechnology using modern tools and techniques

PSO2: Apply the knowledge of Bioengineering and Technology to demonstrate research skills and develop technology for commercialization

MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES (PEOs) WITH PROGRAMME OUTCOMES (POs)

The B. Tech., Biotechnology Programme outcomes leading to the achievement of the objectives are summarized in the following Table.

Programme Educational Objectives (PEO)	Programme Outcomes (PO)												Programme Specific Outcomes (PSO)	
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
PEO 1	3	1	3	2	2	1	1	1	2	2	3	1	3	3
PEO 2	3	3	3	2	2	1	1	1	2	2	3	1	3	2
PEO 3	3	2	3	2	2	1	1	1	3	2	3	1	1	1

Contributions: 1- low, 2- medium, 3- high

30.	60 BT7P2	Downstream Processing Laboratory	PC	3	0	0	3	1.5	Unit operations, Fluid mechanics, Heat and Mass transfer Operations, Bioprocess Engineering

PROFESSIONAL ELECTIVE COURSES (PE)/ HONOURS

SEMESTER V, PROFESSIONAL ELECTIVE I

S.No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C	Pre-requisite
1.	60 BT E11	Bioresource Technology	PE	3	3	0	0	3	Environmental Biology and Microbiology
2.	60 BT E12	Intellectual Property Rights	PE	3	3	0	0	3	Biopharmaceutical Technology
3.	60 BT E13	Cancer Biotechnology	PE	3	3	0	0	3	Basic Knowledge on Cell Biology, Genetics and Molecular Biology
4.	60 BT E14	Biosensors	PE	3	3	0	0	3	Biomedical Engineering
5.	60 BT E15	Genomics and Proteomics	PE	3	3	0	0	3	Bioinformatics
6.	60 BT E16	Food Biotechnology	PE	3	3	0	0	3	Basics of Biology, Microbiology and Biochemistry

Note: Students may opt any elective course for honours degree

SEMESTER VI, PROFESSIONAL ELECTIVE II

S.No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C	Pre-requisite
1.	60 BT E21	Bioreactor Design	PE	3	3	0	0	3	Basic knowledge in Fluid flow, Heat and Mass transfer, Chemical Reaction Engineering and Bioprocess Engineering
2.	61 BT E22	Bioethics and Biosafety	PE	3	3	0	0	3	Nil
3.	60 BT E23	Stem Cell Technology	PE	3	3	0	0	3	Basic Knowledge on Cell Biology and Immunology
4.	60 BT E24	Marine Biotechnology	PE	3	3	0	0	3	Biodiversity and its conservation
5.	60 BT E25	Computational Biology	PE	3	3	0	0	3	Basic knowledge of biology and genetics
6.	60 BT E26	Organic Farming for Sustainable Agriculture	PE	3	3	0	0	3	Biology

Note: Students may opt any elective course for honours degree

SEMESTER VII, PROFESSIONAL ELECTIVE III

S.No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C	Pre-requisite
1.	60 BT E31	Translational Biotechnology	PE	3	3	0	0	3	Basic Biology
2.	60 BT E32	Environmental Hazards and Management	PE	3	3	0	0	3	Environment Science
3.	60 BT E33	Molecular Medicine	PE	3	3	0	0	3	Basic Biology
4.	60 BT E34	Pharmacology and Toxicology	PE	3	3	0	0	3	Biochemistry
5.	60 BT E35	Metabolomics and Metabolic Engineering	PE	3	3	0	0	3	Biochemistry, Stoichiometry, Bioprocess / Fermentation Technology
6.	60 BT E36	Biotechniques in Crop Improvement	PE	3	3	0	0	3	Biochemistry, Microbiology, Molecular Biology and Biology

Note: Students may opt any elective course for honours degree

SEMESTER VII, PROFESSIONAL ELECTIVE IV

S.No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C	Pre-requisite
1.	60 BT E41	Fermentation Technology	PE	4	2	0	2	3	Microbiology, Stoichiometry
2.	60 BT E42	Clinical Trials and Health Care Policies in Biotechnology	PE	4	2	0	2	3	Molecular biology
3.	60 BT E43	Human Epigenetics	PE	4	2	0	2	3	Molecular Biology, Cell Biology
4.	60 BT E44	Nanobiotechnology	PE	4	2	0	2	3	Chemistry Bioinformatics
5.	60 BT E45	Next Generation Sequencing and Data Analysis	PE	4	2	0	2	3	Biochemistry, Molecular Biology and Bioinformatics concepts
6.	60 BT E46	Agricultural Biotechnology	PE	4	2	0	2	3	Agricultural engineering and Plant Biotechnology

Note: Students may opt any elective course for honours degree

SEMESTER VIII, PROFESSIONAL ELECTIVE V

S. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C	Pre-requisite
1.	60 BT E51	Bioprocess Modeling and Simulation	PE	3	3	0	0	3	Stoichiometry, Bioprocess Technology
2.	60 BT E52	Regulatory Affairs in Biotechnology	PE	3	3	0	0	3	Biopharmaceutical Technology
3.	60 BT E53	Biomedical Instrumentation	PE	3	3	0	0	3	Basic Physics, Anatomy and Physiology
4.	60 BT E54	Biomaterials	PE	3	3	0	0	3	Basics of Biology, Microbiology and Biochemistry
5.	60 BT E55	Systems Biology	PE	3	3	0	0	3	Basic Biology
6.	60 BT E56	Biodiversity and its conservation	PE	3	3	0	0	3	Environmental Science, Plant and Animal Biotechnology
7.	60 BT E57	Crop Production Technology	PE	3	3	0	0	3	Basic Biology

Note: Students may opt any elective courses for honours degree

MANDATORY COURSES (MC)

S. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C	Pre-requisite
1.	60 MY 001	Environmental Studies and Climate Change	MC	2	2	0	0	0	Nil
2.	60 MY 002	Universal Human Values	MC	3	3	0	0	3 ^{\$}	Nil
3.	60 MY 003	Startups and Entrepreneurship	MC	2	2	0	0	2 ^{&}	Basic knowledge of reading and writing in English.
4.	60 MY 004	Disaster Management	MC	2	2	0	0	0	Nil

AUDIT COURSES (AC)

S.No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C	Pre-requisite

PRACTICAL								
8	60 PH 0P2	Applied Physics Laboratory	3	60	40	100	45	100
9	60 CH 0P1	Applied Chemistry Laboratory	3	60	40	100	45	100

* CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

** End Semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks theory end semester examination and 40 Marks for practical end semester examination.

60 EN 001	Professional English – I	Category	L	T	P	Credit
		HS	1	0	2	2

Objectives

- To help learners improve their vocabulary and to enable them to use words appropriately in different academic and professional contexts
- To help learners develop strategies that could be adopted while reading texts
- To help learners acquire the ability to speak effectively in English in real life and career related situations
- To equip students with effective speaking and listening skills in English
- To facilitate learners to enhance their writing skills with coherence and appropriate format effectively

Pre-requisites

- Basic Knowledge of reading and writing in English

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and interpret complex academic texts	Understand
CO2	Recall the denotative and connotative meanings of technical texts	Remember
CO3	Interpret definitions, descriptions, narrations, and essays on various topics	Understand
CO4	Express fluently and accurately in formal and informal communicative contexts	Understand
CO5	Summarize their opinions effectively in both oral and written medium of communication	Understand

Mapping with Programme Outcomes

COs	POs												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	-	-	-	-	-	-	-	2	3	3	2	3	3	2
CO2	-	-	-	-	-	-	-	2	3	3	2	3	2	2
CO3	-	-	-	-	-	-	-	2	3	3	2	3	3	2
CO4	-	-	-	-	-	-	-	2	3	3	2	3	2	3
CO5	-	-	-	-	-	-	-	2	3	3	2	3	1	3

3 - Strong; 2 - Medium; 1 – Some

Assessment Pattern

Create	-	-	-	-
Total	60	60	100	100

Syllabus								
K.S.Rangasamy College of Technology – Autonomous R2022								
B.Tech - Biotechnology								
60 EN 001 - Professional English I (Common to All Branches)								
Semester	Hours/Week			Total Hours	Credit	Maximum Marks		
	L	T	P			C	CA	ES
I	1	0	2	45	2	40	60	100
Introduction to Fundamentals of Communication* Listening: General Information-Specific Details-Conversation: Introduction to Classmates– Audio / Video (Formal & Informal). Speaking: Self Introduction; Introducing a Friend; Conversation - Politeness Strategies. Reading: Reading Brochures (Technical Context), Telephone Messages / Social Media Messages Relevant to Technical Contexts and Emails. Writing: Writing Letters – Informal and Formal – Basics and Format Orientation Language Focus: Present Tenses; Word Formation (Affixes); Synonyms, Antonyms and Contronyms, and Phrasal Verbs; Abbreviations & Acronyms (as used in Technical Contexts).								[9]
Narration and Summation* Listening: Podcast, Anecdotes / Stories / Event Narration; Documentaries and Interviews with Celebrities. Speaking: Narrating Personal Experiences / Events; Interviewing a Celebrity; Reporting / and Summarizing of Documentaries / Podcasts/ Interviews. Reading: Biographies, Travelogues, Newspaper Reports, Excerpts from Literature, and Travel & Technical Blogs. Writing: Paragraph Writing, Short Report on an Event (Field Trip Etc.). Language Focus: Past Tenses and Prepositions; One-Word Substitution.								[9]
Description of a Process / Product* Listening: Listen to a Product and Process Descriptions; Advertisements about Products or Services Speaking: Picture Description; Giving Instruction to Use the Product; Presenting a Product. Reading: Advertisements, Gadget Reviews and User Manuals. Writing: Definitions; Instructions; and Product /Process Description. Language Focus: Imperatives; Comparative Adjectives; Future Tenses. Homonyms; and Homophones, Discourse Markers (Connectives & Sequence Words)								[9]
Classification and Recommendations * Listening: TED Talks; Scientific Lectures; and Educational Videos. Speaking: Small Talk; Mini Presentations Reading: Newspaper Articles and Journal Reports Writing: Note-Making / Note-Taking; Recommendations; Transferring Information from Non Verbal (Chart, Graph Etc., to Verbal Mode) Language Focus: Articles; Pronouns -Possessive & Relative Pronouns; Subject-Verb Agreement;								[9]
Expression* Listening: Debates/ Discussions; Different Viewpoints on an Issue; and Panel Discussions. Speaking: Group Discussions, Debates & Role Plays. Reading: Editorials; and Opinion Blogs. Writing: Essay Writing (Descriptive or Narrative). Language Focus: Punctuation; Compound Nouns; Simple, Compound & Complex Sentences. Cause & Effect Expressions.								[9]
Total Hours:								45

Course Contents and Lecture Schedule		
S. No.	Topics	No. of hours
1.0	Introduction to Fundamentals of Communication	
1.1	Listening for General Information and Specific Details	1
1.2	Self-Introduction	1
1.3	Narrating Personal Experiences	1
1.4	Reading Relevant to Technical Contexts and Emails	1
1.5	Writing Letters – Informal	1
1.6	Writing Letters – Formal	1
1.7	Present Tenses	1
1.8	Synonyms, Antonyms and Contronyms, and Affixes	1
1.9	Phrasal Verbs; Abbreviations & Acronyms	1
2.0	Description of a Process / Product	
2.1	Listening to Podcasts, Documentaries and Interviews with Celebrities	1
2.2	Narrating Personal Experiences	1
2.3	Summarizing of Documentaries	1
2.4	Reading Travelogues, and Excerpts from Literature	1
2.5	Paragraph Writing	1
2.6	Short Report on an Event (Field Trip Etc.).	1
2.7	Past Tenses	1
2.8	Prepositions	1
2.9	One-Word Substitution	1
3.0	Description of a Process / Product	
3.1	Listen to a Product and Process Descriptions	1
3.2	Picture Description	1
3.3	Giving Instruction to use the Product	1
3.4	Reading Advertisements, Gadget Reviews and user Manuals	1
3.5	Writing Definitions and Instructions	1
3.6	Future Tenses	1
3.7	Homonyms and Homophones	1
3.8	Imperatives	1
3.9	Comparative Adjectives, and Discourse Markers	1
4.0	Classification and Recommendations	
4.1	Listening to TED Talks and Educational Videos	1
4.2	Listening to Scientific Lectures	1
4.3	Small Talk and Mini Presentations	1
4.4	Reading Newspaper Articles and Journal Reports	1
4.5	Note-Making / Note-Taking	1
4.6	Recommendations	1
4.7	Transferring Information from Non-Verbal	1
4.8	Articles and Pronouns	1
4.9	Subject-Verb Agreement and Collocations	1
5.0	Expression	

5.1	Listening to Debates and Panel Discussions	1
5.2	Group Discussions	2
5.3	Role Plays	1
5.4	Reading Editorials and Opinion Blogs	1
5.5	Essay Writing (Descriptive or Narrative)	1
5.6	Punctuation and Cause & Effect Expressions.	1
5.7	Compound Nouns	1
5.8	Simple, Compound & Complex Sentences	1

1. Dr.A.Palaniappan - palaniappan@ksrct.ac.in

60 MA 001	Matrices and Calculus	Category	L	T	P	Credit
		BS	3	1	0	4

Objectives

- To familiarize the basic concepts in Cayley-Hamilton theorem and orthogonal transformation
- To get exposed to the fundamentals of differentiation
- To acquire skills to understand the concepts involved in Jacobians and maxima and minima
- To solve various linear differential equations and method of variation of parameters
- To learn various techniques and methods in solving definite and indefinite integrals

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the concepts of Cayley-hamilton theorem and orthogonal transformation to the matrix	Apply
CO2	Apply the concepts of differentiation in solving various Engineering problems	Apply
CO3	Obtain Jacobians and maxima and minima of functions of two variables	Apply
CO4	Employ various methods in solving differential equations	Apply
CO5	Apply different techniques to evaluate definite and indefinite integrals	Apply

B.Tech - Biotechnology								
60 MA 001- Matrices and Calculus								
Common to MECH, ECE, EEE, CSE, MCT, CIVIL, IT, TXT, BT, FT, AI&DS, AI&ML								
Semester	Hours/Week			Total Hours	Credit	Maximum Marks		
	L	T	P			CA	ES	Total
I	3	1	0	60	4	40	60	100
Matrices Characteristic Equation - Eigen Values and Eigen Vectors of a Real Matrix - Properties of Eigen Values and Eigen Vectors - Cayley-Hamilton Theorem - Orthogonal Transformation of a Symmetric Matrix to Diagonal form - Reduction of Quadratic form to Canonical form by an Orthogonal Transformation - Nature of Quadratic form - Applications: Stretching of an Elastic Membrane. Hands-on: Matrix Operations - Addition, Multiplication, Transpose, Inverse and Rank								[9]
Differentiation Representation of Functions - Limit of a Function - Continuity - Derivatives - Differentiation Rules (Sum, Product, Quotient, Chain Rules) - Successive Differentiation - Leibnitz's Theorem - Applications: Maxima and Minima at Functions of One Variable* Hands-on: Determine the Solution of System of Linear Equations								[9]
Functions of Several Variables Partial Differentiation - Homogeneous Functions and Euler's Theorem - Jacobians - Taylor's Series for Functions of Two Variables - Applications: Maxima and Minima of Functions of Two Variables - Constrained Maxima and Minima: Lagrange's Method of Undetermined Multipliers* Hands-on: Compute the Eigen Values and Eigen Vectors of a Matrix								[9]
Differential Equations Linear Differential Equations of Second and Higher Order with Constant Coefficients - R.H.S is of the Form e^{ax} , $\sin ax$, $\cos ax$, x^n , $n > 0$ - Differential Equations with Variable Coefficients: Cauchy's and Legendre's form of Linear Equations - Method of Variation of Parameters. Hands-on: Solve the First and Second Order Ordinary Differential Equations								[9]
Integration Definite and Indefinite Integrals - Substitution Rule - Techniques of Integration: Integration by Parts, Integration of Rational Functions by Partial Fraction, Integration of Irrational Functions - Improper Integrals - Applications: Hydrostatic Force and Pressure, Moments and Centres of Mass. Hands-on: Compute the Maxima and Minima of a Function of One Variable								[9]

60 EE 001	Basic Electrical and Electronics Engineering	Category	L	T	P	Credit
		ES	3	0	0	3

Objectives

- To familiarize the basic concept on electrical circuits and its various parameters
- To facilitate the various types of electrical machines and their use
- To gain knowledge on electrical safety
- To provide exposure on the functions of various semiconductor devices
- To familiarize the use of various measuring instruments

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the basic laws of electric circuits to calculate the unknown quantities.	Apply
CO2	Acquire knowledge on different electrical machines and select suitable machines for industrial applications.	Apply
CO3	Express the significance of various components of low voltage electrical installations and create awareness on electrical safety.	Understand
CO4	Demonstrate the operation and characteristics of various semiconductor devices.	Understand
CO5	Interpret the operating principles of measuring instruments and choose suitable instrument for measuring the parameters.	Understand

60 PH 005	Physics for Biotechnology	Category	L	T	P	Credit
		BS	3	0	0	3

Objectives

- To analyze the crystal parameters to investigate crystal structures and to classify the type of the defect present in the crystal
- To enable the students in understanding the importance of quantum physics and its applications
- To introduce the basics of laser, optical fiber and its applications in biomedical field
- To study the basic concept of ultrasonic waves, production of ultrasonic waves and its applications
- To obtain fundamental concepts and current knowledge of biomaterials and nanotechnology for engineering applications

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the basics of crystallography, crystal imperfections and nucleation	Remember
CO2	Acquire the fundamentals of quantum mechanics and apply to one dimensional motion of particles.	Apply
CO3	Appraise a strong foundational knowledge in lasers and fiber optics and its applications	Understand
CO4	Realize the principle, production, properties and applications of ultrasonic waves	Understand
CO5	Infer the properties of bio materials and nano materials for potential applications ions	Understand

60 CH 005	Chemistry for Life Sciences	Category	L	T	P	Credit
		BS	3	0	0	3

Objectives

- To help the learners to analyze the hardness of water and its removal
- To study the behaviour of solutions based on their properties
- To analyze the factors influencing reaction rates and catalysis
- To study the concepts of electrochemistry and its applications
- To explain the characteristics and application of chemical sensors

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Identify the types of hardness of water and its removal	Apply
CO2	Summarize the characteristics of solutions and their applications	Apply
CO3	Illustrate the kinetics of reaction rates and catalysis	Understand
CO4	Interpret the applications of electro chemistry	Apply
CO5	Categorize the types of sensors for various applications	Understand

Water Technology* Introduction - Commercial and Industrial uses of Water - Hardness - Types – Estimation of Hardness by EDTA Method Internal Conditioning (Colloidal, Phosphate, Calgon and Carbonate Conditioning Methods) - External Conditioning (Zeolite Process, Demineralization Process) - Desalination Methods (Reverse Osmosis and Electro Dialysis) - Flash Evaporation.								
Solutions** Normality, Molarity, Molality, Percentage Solution, Mole Fraction (Simple Numerical Problems) - Buffer Solutions - Types - Applications - Henderson-Hasselbach Equation. Membrane Permeability - Principle of Diffusion & Osmosis - Donon Membrane Equilibrium. Definition of Osmotic Pressure, Isotonic, Hypotonic & Hypertonic Solutions. Relationship of Osmotic Pressure to Gas Laws. The General Equation for Dilute Solutions, The Influence of Ionization & Molecular Size on Osmotic Pressure - Biological Importance of Osmosis - Colloids - Definition and Types, Gold Number, Preparation and Properties of Colloids - Lyophilic and Lyophobic Sols - Brownian Movements and Tyndall Effect - Emulsion & Emulsifying Agents.								
Chemical Kinetics and Catalysis*** Rate of Reaction, Order and Molecularity - Derivation of First Order Rate Equation - Half-Life Period of First Order Reaction - Determination of Rate Constant of Hydrolysis of Ester - Factors Influencing Rate of Reaction - Activation Energy -Arrhenius Equation -Transition State Theory - Catalyst - Auto Catalyst - Enzyme Catalyst - Michaelis–Menten Equation and its Significance. Catalytic Promoters - Catalytic Poisons - Active Center, Homogeneous and Heterogeneous Catalysis - Reactivity - Coenzymes - Proton Transfer - Metal Ions -Intra Molecular Reactions - Covalent Catalysis - Inclusion Complexation - Industrial Application of Catalysts.								
Electrochemistry ** Electrode Potential - Nernst Equation - Derivation and Problems - Reversible and Irreversible Cells - Types of Electrodes and its Applications - Reference Electrodes - pH, Conductometric and Potentiometric Titrations.								
Chemical Sensors*** Sensors - Chemical Sensors - Characteristics - Elements and Characterization - Potentiometric Sensors - Amperometric Sensors - Sensors Based on Electrochemical Methods - Electrochemical Biosensors - Optical Biosensors: Enzyme Sensors - Bio Affinity Sensors - DNA Sensors. Chemical Sensors as Detectors and Indicators: Indicators for Titration Processes - Separation Methods - Nano Technology in Chemical Sensors.

Course Contents and Lecture Schedule		
S. No.	Topics	No. of hours
1.0	Water Technology	
1.1	Introduction – Commercial and Industrial uses of Water	1
1.2	Hardness - Types	1
1.3	Estimation of Hardness of Water by EDTA Method	1
1.4	Internal Conditioning (Colloidal, Phosphate, Calgon and Carbonate)	1
1.5	External Conditioning (Zeolite Process)	1
1.6	Demineralization Process	1
1.7	Desalination Methods (Reverse Osmosis)	1
1.8	Electro dialysis	1
1.9	Flash Evaporation	1
2.0	Solutions	
2.1	Normality, Molarity, Molality, Percentage Solution, Mole Fractions (Simple Numerical Problems).	1
2.2	Buffer Solutions – Types - Applications-	1
2.3	Henderson-Hasselbach Equation	1
2.4	Membrane Permeability - Principle of Diffusion & Osmosis - Donon Membrane Equilibrium	1
2.5	Definition of Osmotic Pressure, Isotonic, Hypotonic & Hypertonic Solutions.	1
2.6	Relationship of Osmotic Pressure to Gas Laws.	1
2.7	The General Equation for Dilute Solutions, The Influence of Ionization & Molecular Size on Osmotic Pressure.	1
2.8	Colloids - Definition and Types, Gold Number, Preparation and Properties of Colloids – Lyophilic and Lyophobic Sols.	1
2.9	Brownian Movements and Tyndall Effect - Emulsion & Emulsifying Agents.	1
3.0	Chemical Kinetics and Catalysis	
3.1	Rate of Reaction, Order and Molecularity	1
3.2	Derivation of First Order Rate Equation – Half-Life Period of First Order Reaction	1
3.3	Determination of Rate Constant of Hydrolysis of Ester	1
3.4	Factors Influencing Rate of Reaction. Activation Energy -Arrhenius Equation- Transition State Theory	1
3.5	Catalyst– Auto Catalyst- Enzyme Catalyst – Michaelis–Menten Equation and its Significance	1
3.6	Catalytic Promoters – Catalytic Poisons	1
3.7	Active Center, Homogeneous and Heterogeneous Catalysis	1
3.8	Reactivity – Coenzymes – Proton Transfer – Metal Ions – Intra Molecular Reactions	1
3.9	Covalent Catalysis – Inclusion Complexation - Industrial Application of Catalysts	1
4.0	Electrochemistry	
4.1	Electrode Potential - Nernst Equation - Derivation and Problems	2
4.2	Reversible and Irreversible Cells	1
4.3	Types of Electrodes and its Applications	1
4.4	Reference Electrodes - pH	1
4.5	Conductometric and Potentiometric Titrations	1
4.6	Principles of Electro Plating and Electro Less Plating	2
4.7	Fabrication Process of Printed Circuit Board	1
5.0	Chemical Sensors	
5.1	Sensors – Chemical Sensors - Characteristics	1
5.2	Elements and Characterization	1

5.3	Potentiometric Sensors, Amperometric Sensors	1
5.4	Sensors Based on Electrochemical Methods	1
5.5	Electrochemical Biosensors	1
5.6	Optical Biosensors : Enzyme Sensors – Bio Affinity Sensors	1
5.7	DNA Sensors. Chemical Sensors as Detectors and Indicators	1
5.8	Indicators for Titration Processes	1
5.9	Separation Methods. Nano technology in Chemical Sensors	1

60 MY 001	Environmental Studies and Climate Change	Category	L	T	P	Credit
		MC	2	0	0	0

Objectives

- To understand the impact climate changes in ecosystem and biodiversity
- To analyze the impacts of pollution, control and legislation
- To explain the importance of sustainable development practices
- To explore the significance of organic farming
- To identify the Geo-spatial tools for resource management

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Interpret the impacts of pollution on climate change	Understand
CO2	Categorize the wastes and its management.	Analyze
CO3	Identify the different types of sustainable practices	Apply
CO4	Classify the organic farming techniques	Apply
CO5	Categorize the Geo-spatial tools for resource management	Analyze

Mapping with Programme Outcomes

Model Titles for Case Study

1. Environmental impacts of quarry industries in MelurTaluk.
2. A study on impacts of tanneries on ground water and soil quality in Bhavani, Erode district.
3. Effect of pharmaceutical industry on groundwater quality in oikaraipatty village, AlagarKovil.
4. Solid waste and waste water management in KSR hostel.
5. Environmental effect of Kudankulam atomic power plant.
6. Case study on effect of Sterlite industry
7. Effect of textile wastes in Tiruppur and Karur District.
8. Segregation of waste and its recycling by Pallipalayam Municipality at Nammakal
9. Effect of fire work waste on atmosphere in Sivakasi region.
10. Effect of noise pollution waste on atmosphere in Sivakasi region

60 GE 001	Heritage of Tamils (Common to all Branches)	Category	L	T	P	Credit
		GE	1	0	0	1 ^β

Objectives

- To learn the extensive literature of classical tamil
- To review the fine arts heritage of tamil culture
- To realize the contribution of tamils in indian freedom struggle

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the extensive literature of tamil and its classical nature.	Understand
CO2	Apprehend the heritage of sculpture, painting and musical instruments of ancient people.	Understand
CO3	Review on folk and martial arts of tamil people.	Understand
CO4	Insight thinai concepts, trade and victory of chozha dynasty.	Understand
CO5	Realize the contribution of tamil in indian freedom struggle, self-esteem movement and siddha medicine.	Understand

60 PH 0P2	Applied Physics Laboratory (BT)	Category	L	T	P	Credit
		BS	0	0	4	2

Objectives

- To infer the practical knowledge by applying the experimental methods to correlate with the physics theory
- To demonstrate an ability to make physical measurements and understand the limits of precision in measurements
- To introduce different experiments to test basic understanding of physics concepts applied in optics and electronics
- To make ability to develop and fabricate engineering and technical equipment
- To analyze the behavior and characteristics of various materials for its optimum utilization

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the concept of stress, strain and elastic limit for a given sample to find their properties	Apply
CO2	Recognize the concept of quantum Physics & magnetic properties by experimental verification	Apply
CO3	Infer the knowledge of properties of light and fiber optic cable	Apply
CO4	Realize the dielectric behavior of a given material	Apply
CO5	Apply the photovoltaic effect to demonstrate the working of solar cell	Analyze

60 CH 0P1	Applied Chemistry Laboratory (BT)	Category	L	T	P	Credit
		BS	0	0	4	2

Objectives

- To investigate the water quality parameters
- To develop experimental skills in determination of pH and emf
- To study the mobility of ions using conductivity meter
- To calculate the extent of adsorption using activated charcoal
- To study the kinetics of ester by hydrolysis

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Measure the hardness and dissolved oxygen in water sample	Apply
CO2	Determine the pH of acid and calculate the amount of ferrous ion	Apply
CO3	Calculate the amount acids in the mixture	Apply
CO4	Identify the rate of adsorption by activated charcoal	Apply
CO5	Determine the rate constant by ester hydrolysis.	Apply

List of Experiments: 1. Estimation of Hardness of Water Sample by Complexometric Method. 2. Determination of Dissolved Oxygen in Water Sample by Winkler's Method. 3. Estimation of HCL by pH Meter. 4. Estimation of Mixture of Acids by Conductivity Meter. 5. Determination of Ferrous Ion by Potentiometric Titration. 6. Determination of Rate Constant of Ester Catalyzed by an Acid. 7. Adsorption of Acetic Acid by Charcoal. Activity report: 1. Measurement of pH and Normality of Given Fruit Juice 2. Decolorization of Waste Water using Charcoal 3. Saponification- Soap Preparation using Vegetable Oil 4. Determination of Total Dissolved Solids. 5. Crystallization of Copper Sulphate Pentahydrate Content beyond the syllabus: 1. Make own slime/ jelly with simple household products To create slime/jelly with specific properties, students use the engineering design process and also observe chemical reactions that occur as they use different materials 2. Pineapple + Milk curdles Students learn about enzymes as they combine pineapple and milk and observe what happens and why. 3. Milk plastic Students use the chemical reaction between milk and vinegar to create casein milk plastic and learn about polymerization 4. Secret messages with invisible ink Students explore two different kinds of chemical reactions to see which works best for writing and decoding secret messages 5. Crystallization of sugar/ salt. Students know the solubility and saturation of salts / sugar

* CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

** End Semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory end semester examination and 40 Marks for practical end semester examination.

60 EN 002	Professional English II	Category	L	T	P	Credit
		HS	1	0	2	2

Objectives

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts
- To help learners develop strategies that could be adopted while reading texts
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations
- To improve listening, observational skills, and problem-solving capabilities
- To develop message generating and delivery skills

Pre-requisites

- Basic Knowledge of Reading and Writing in English and should have Completed Professional English I

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and contrast products and ideas in technical texts.	Understand
CO2	Exemplify the cause and effects in events, industrial processes through technical texts.	Understand
CO3	Infer problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Understand
CO4	Relate events and the processes of technical and industrial nature.	Remember
CO5	Demonstrate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Understand

Making Comparisons * Listening: Evaluative Listening: Advertisements, Product Descriptions, - Audio / Video; Filling a Graphic Organiser (Choosing a Product or Service by Comparison) Speaking: Marketing a Product, Persuasive Speech Techniques. Reading: Reading Advertisements, User Manuals and Brochures. Writing: Professional Emails, Email Etiquette - Compare and Contrast Essay. Language Focus: Mixed Tenses, Prepositional Phrases, Same Words used in Different Contexts and Discourse Markers								[9]
Expressing Causal Relations in Speaking and Writing* Listening: Listening to Longer Technical Talks and Completing– Gap Filling Exercises. Listening Technical Information from Podcasts – Listening to Process/Event Descriptions to identify Cause & Effects. Speaking: Describing and Discussing the Reasons of Accidents or Disasters Based on News Reports. Reading: Longer Technical Texts– Cause and Effect Essays, and Letters / Emails of Complaint, Writing: Writing Responses to Complaints Language Focus: Active Passive Voice Transformations, Infinitive and Gerunds – Word Formation (Noun-Verb-Adj-Adv), Adverbs.								[9]
Problem Solving* Listening: Listening to / Watching Movie Scenes/ Documentaries Depicting a Technical Problem and Suggesting Solutions. Speaking: Group Discussion (Based on Case Studies), - Techniques and Strategies. Reading: Case Studies, Excerpts from Literary Texts, News Reports Etc. Writing: Letter to the Editor, Checklists, Problem Solution Essay / Argumentative Essay Language Focus: Error Correction; If Conditional Sentences - Compound Words, Sentence Completion.								[9]
Reporting of Events and Research * Listening: Listening Comprehension Based on New Report and Documentaries Speaking: Interviewing, Presenting Oral Reports, Mini Presentations on Select Topics. Reading: Newspaper Articles. Writing: Recommendations, Transcoding, Accident Report, Precis Writing and Summarizing, and Plagiarism Language Focus: Reported Speech – Modals - Conjunctions- Use of Prepositions								[9]
The Ability to Put Ideas or Information Coherently* Listening: Listening to TED Talks, Presentations, Formal Job Interviews, (Analysis of the Interview Performance). Speaking: Participating in Role Plays, Virtual Interviews, Making Presentations with Visual Aids Reading: Excerpts of Interview with Professionals Writing: Job / Internship Application – Cover Letter & Résumé Language Focus: Numerical Adjectives, Question Types: Wh/ Yes or No/ and Tags; Relative Clause - Idioms.								[9]

60 MA 003	Integrals, Partial Differential Equations and Laplace Transform	Category	L	T	P	Credit
		BS	3	1	0	4

Objectives

- To acquire the knowledge about multiple integrals
- To familiarize the basic concepts of vector calculus
- To get exposed to the fundamentals of analytic functions
- To solve various types of partial differential equations
- To familiarize the concepts of Laplace transform

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Interpret the basic concepts of double and triple Integrals.	Apply
CO2	Interpret the basic concepts of vector calculus.	Apply
CO3	Construct the analytic functions and evaluate complex integrals.	Apply
CO4	Compute the solution of partial differential equations using different methods.	Apply
CO5	Apply Laplace transform techniques for solving differential equations.	Apply

Multiple Integrals Double Integration - Cartesian and Polar Co-Ordinates - Change of Order of Integration - Area as Double Integral - Triple Integration in Cartesian Co-Ordinates - Change of Variables - Cartesian to Polar Co-Ordinates and Cartesian to Cylindrical Co-Ordinates. Hands - on: Evaluating double integrals, triple integrals, area as double integrals and volume as triple integrals.								[9]
Vector Calculus* Introduction - Gradient of a Scalar Point Function - Directional Derivative - Angle of Intersection of Two Surfaces - Divergence and Curl (Excluding Vector Identities) - Solenoidal and Irrotational Vectors – Application : Green’s Theorem in the Plane - Gauss Divergence Theorem -Stokes’ Theorem (Statement Only) . Hands - on: Evaluating Gradient, divergence and curls.								[9]
Analytic Functions and Integrals Analytic Function – Necessary and Sufficient Conditions (Statement Only)- Properties – Harmonic Function – Construction of an Analytic Function – Cauchy’s Integral Theorem (Statement Only) – Cauchy’s Integral Formula – Classification of Singularities – Application: Cauchy’s Residue Theorem. Hands - on: Plotting and visualizing functions of single variable, two and three variables.								[9]
Partial Differential Equations* Formation of Partial Differential Equations by Eliminating Arbitrary Constants and Arbitrary Functions -Non-Linear Partial Differential Equations of First Order - Lagrange’s Linear Equations - Application: Homogeneous Linear Partial Differential Equations with Constant Coefficients. Hands - on: Calculate homogeneous linear partial differential equations.								[9]
Laplace Transform Conditions for Existence – Transforms of Elementary Functions – Basic Properties - Derivatives and Integrals of Transforms - Initial and Final Value Theorem – Transform of Periodic Functions. Inverse Laplace Transform – Convolution Theorem (Excluding Proof) –Application: Solution of Second Order Ordinary Differential Equations with Constant Co-Efficients. Hands - on: Evaluating laplace, Inverse laplace transforms and solve differential equations.								[9]

60 CS 001	C Programming	Category	L	T	P	Credit
		ES	3	0	0	3

Objectives

- To learn most fundamental element of the c language and to examine the execution of branching, looping statements,
- To examine the concepts of arrays, its characteristics and types and strings
- To understand the concept of functions, pointers and the techniques of putting them to use
- functions
- To apply the knowledge of structures and unions to solve basic problems in C language
- To enhance the Knowledge in File Handling Functions for Storage and Retrieval of Data

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Construct the fundamental building blocks of structured programming in C.	Apply
CO2	Implement the different operations on arrays and strings.	Apply
CO3	Develop simple real world applications utilizing functions, recursion and pointers.	Apply
CO4	Demonstrate the concepts of structures, unions, and user defined data types and pre-processor.	Apply
CO5	Interpret the file concepts using proper standard library functions for a given application.	Apply

***SDG 4- Quality Education**

Course Contents and Lecture Schedule		
S. No.	Topics	No. of hours
1.0	Basics of C, I/O, Branching and Loops	
1.1	Structure of A C Program, Keywords	1
1.2	Data Types, Type Qualifiers	1
1.3	Variables and Constants	1
1.4	Operators–Expressions and Precedence	1
1.5	Console I/O– Unformatted and Formatted Console I/O	1
1.6	Conditional Branching	1
1.7	Iteration and Loops	2

1.8	Writing and Evaluation of Conditionals and Consequent Branching	1
2.0	Arrays and Strings	
2.1	One Dimensional Array	1
2.2	Two-Dimensional Array and Matrix Manipulation	1
2.3	Character Arrays and Strings Basics	1
2.4	String Manipulation without String Handling Functions	2
2.5	String Manipulation with String Handling Functions	2
3.0	Functions and Pointers	
3.1	Scope of a Function – Library Functions, User Defined Functions and Function Prototypes	1
3.2	Function Call by Value and Function Call by Reference, Function Categorization	2
3.3	Arguments to Main Function	1
3.4	Recursion and Application	1
3.5	Passing Arrays to Functions	1
3.6	Storage Class Specifiers	1
3.7	Introduction to Pointer Variables - The Pointer Operators - Pointer Expressions	1
3.8	Pointers and Arrays - Generating a Pointer to an Array -Indexing Pointers	1
3.9	Function and Pointers	1
3.10	Dynamic Memory Allocation	1
4.0	Structures, Unions, Enumerations, Type def and Preprocessors	
4.1	Introduction to Structures and Initialization	1
4.2	Arrays and Structures, Arrays of Structures	1
4.3	Structures Within Structures, Passing Structures to Functions	2
4.4	Structure Pointers	1
4.5	Unions and Bit Fields.	1
4.6	Enumerations – Typedef	1
4.7	Preprocessor Commands	2
5.0	File Handling	
5.1	File Streams –Reading and Writing Characters - Reading andWriting Strings	2
5.2	File System Functions and File Manipulation	2
5.3	Sequential Access	2
5.4	Random Access Files	2
5.5	Command Line Arguments and Files	1

1. Dr.P.Kaladevi - kaladevi@ksrct.ac.in

60 ME 002	Engineering Graphics	Category	L	T	P	Credit
		ES	2	0	4	4

Objectives

- To acquire various concepts of dimensioning, conventions and standards.
- To impart the graphic skills for converting pictorial views of solids in to orthographic views.
- To learn the concept in projection of solids, section of solids and development of different types of surfaces.
- To learn the concept of isometric projection.
- To learn the geometry and topology of engineered components

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate the Impact of computer technologies on graphical communication	Apply
CO2	Convert the pictorial views in to orthographic views using drafting software	Apply
CO3	Draw the projection of simple solids, true shape of sections and development of surfaces	Apply
CO4	Construct the isometric projections of objects using drafting software.	Apply
CO5	Interpret a design project illustrating engineering graphical skills.	Apply

1. Dr.K.Mohan- mohank@ksrct.ac.in

60 ME 004	Engineering Mechanics	Category	L	T	P	Credit
		ES	3	1	0	4

Objectives

- To learn a process for analysis of static objects, concepts of force, moment, and mechanical equilibrium in two and three dimensions
- To learn the equilibrium of rigid bodies such as frames, trusses, beams
- To identify the properties of surfaces and solids by using different theorem
- To learn the principle of frictional forces at the contact surfaces and impart basic concept of dynamics of particles
- To acquire the concept of elements of rigid body dynamics

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Use scalar and vector analytical techniques for analysing forces in statically determinate structures	Apply
CO2	Apply basic knowledge of scientific concepts to solve real-world problems.	Apply
CO3	Calculate the properties of surfaces and solids using various theorems.	Apply
CO4	Determine the effect of frictional forces and the dynamic forces exerted in the particle.	Apply
CO5	Analysis of rigid body dynamics and calculation of member forces in the rigid body.	Apply

60 ME 0P1	Fabrication and Reverse Engineering Laboratory (Common to All branches)	Category	L	T	P	Credit
		ES	0	0	4	2

Objectives

- To acquire skills in operating hand tools and instruments.
- To provide hands-on training on Carpentry, Sheet metal, Fitting and Welding.
- To provide hands-on training on household wiring and electronic circuits.
- To offer real time activity on plumbing connections in domestic applications.
- To provide hands-on activities on dismantling, and assembling the Home Appliance, Center lathe operations, computer's internal components and peripherals.

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Perform power tools operations.	Apply
CO2	Make a wooden model using carpentry process	Apply
CO3	Make a model using sheet metal, filing and joining a MS Plate	Apply
CO4	Repair and Maintenances of water lines for home applications	Apply
CO5	Trouble shoots the electrical and electronic circuits, Electrical machines and realizes the reputation of house wiring, home Appliance, computer internal components and peripherals.	Apply

Performs of Power Tools* Drilling in different Walls and Materials Fitting of Hand shower mount, Shirt hanger, Towel hanger and Pipe with clamps. Carpentry Process* Design and Development of Wooden Model using the Carpentry Process T / Cross Joint / different joints Sheet Metal and Filling Process* Design and Development of Metal Model - Make a Tray Components using Sheet Metal Process and Mating of Square joint in MS Plate using the Filling Process Welding Process* Fabrication of Models with MS Plate using Arc Welding- Lap Joint, Butt Joint, T Joint Plumbing Process* Repair and Maintenances of Pipe Fitting for Home Applications Study of plumbing tools, assembly of G.I. pipes/ PVC and pipe fittings, cutting of threads in G.I. Pipes by thread cutting dies. Residential house wiring* Design and Excusion of Residential house wiring with and without UPS- 1 BHK - 2 BHK. Design and fabrication of domestic LED lamps - Circuit designing (calculation of components) Electronic Circuit wiring* PCB fabrication — Soldering - Assembling of Audio Amplifiers- Connecting USB/Bluetooth MP3 player board - Connecting Volume controllers - Connecting bass & treble filter boards - Connecting Surround and sub-woofer filter board Assembling and dismantling of Electronics Machines* Iron box, Induction stove, Water heater, Mixer, Table fan, Ceiling fan Study Exercises Demonstration of Centre Lathe Operations Facing, Turning, and drilling and its components. Assemble and dismantle of Vacuum Cleaner / Refrigerator and its components Computer Hardware Study Exercises Identify internal components of computer - Assemble and dismantle desktop computer systems List of Experiments: Fitting of Wall mounting Parts using Power Tools - Drilling in different Walls and Materials - Fitting of Hand shower mount, Shirt hanger, Towel hanger and Pipe with Clamps. Making of Wooden model using the Carpentry Process - T / Cross Joint - Mortise and Tenon Joint / different joints Making of Metal Model - Making of Components using Sheet Metal Process - Mating of Components using the Filling Process Fabrication of Welded model								

5. Repair and Maintenance of Pipe Fitting for Home Applications

- a) Assembly of GI pipes/PVC and Pipe Fitting
- b) Cutting of Threads in GI pipes by thread Cutting Dies

6. Assembling and dismantling of

- a) Iron box
- b) Induction stove
- c) Water heater
- d) Mixer
- e) Table fan
- f) Ceiling fan

7. Design and Execution of Residential house wiring

- a) 1 BHK
- b) 2 BHK

8. Design and Execution of Residential house wiring with UPS.

- a) 1 BHK
- b) 2 BHK

9. Design and fabrication of domestic LED lamps

- a) Circuit designing (calculation of components)
- b) PCB fabrication
- c) Soldering

10. Assembling of Audio Amplifiers

- a) Connecting USB/Bluetooth MP3 player board
- b) Connecting Volume controllers
- c) Connecting bass & treble filter boards
- d) Connecting Surround and sub-woofer filter board

Study Exercises

1. Demonstration of Centre Lathe and its operations like Facing, Turning, and drilling.
2. Dismantle and Assemble of Vacuum Cleaner / Refrigerator.
3. Study of components of computer. Dismantle and assemble of desktop computer systems

60 CS 0P1	C Programming Laboratory	Category	L	T	P	Credit
		ES	0	0	4	2

Objectives

- To enable the students to apply the concepts of C to solve simple problems
- To use selection and iterative statements in C programs
- To apply the knowledge of library functions in C programming
- To implement the concepts of arrays, functions, structures and pointers in C
- To implement the file handling operations through C

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Read, display basic information and use selection and iterative statements	Apply
CO2	Demonstrate C program to manage collection of related data	Apply
CO3	Design and implement different ways of passing arguments to functions, recursion and implement pointers concepts	Apply
CO4	Develop a C program to manage collection of different data using structures, union, user-defined data types and preprocessor directives	Apply
CO5	Demonstrate C program to store and retrieve data using file concepts	Apply

60 CG 0P1	Career Skill Development I	Category	L	T	P	Credit
		CG	0	0	2	1λ

Objectives

- To help learners improve their vocabulary and to enable them to use words appropriately in different academic and professional contexts
- To help learners develop strategies that could be adopted while reading texts
- To help learners acquire the ability to speak effectively in English in real life and career related situations
- To equip students with effective speaking and listening skills in English
- To facilitate learners to enhance their writing skills with coherence and appropriate format effectively

Pre-requisites

- Basic knowledge of reading and writing in English

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Listen and comprehend complex academic texts	Understand
CO2	Read and infer the denotative and connotative meanings of technical texts	Analyze
CO3	Write definitions, descriptions, narrations, and essays on various topics	Apply
CO4	Speak fluently and accurately in formal and informal communicative contexts	Apply
CO5	Appraise the verbal ability skills in the career development and professional contexts	Analyze

* CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

** End Semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory end semester examination and 40 Marks for practical end semester examination.

60 MA 012	Fourier Transform and Numerical Methods	Category	L	T	P	Credit
		BS	3	1	0	4

Objectives

- To provide exposure and ability to use fourier series
- To familiarize the basic concepts of fourier transform
- To get exposed to various techniques to solve equations numerically
- To know the concepts of interpolation and numerical integration
- To learn the basics concepts of initial value problems

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Obtain the fourier series expansion for the periodic functions.	Apply
CO2	Apply fourier transform techniques for the continuous functions.	Apply
CO3	Employ various iteration techniques for solving algebraic, transcendental and system of linear equations.	Apply
CO4	Apply different techniques to find the intermediate values and to evaluate single definite integrals.	Apply
CO5	Compute the solution for initial value problems using single and Multi-step methods	Apply

2. Ms.K.Geetha - geethak@ksrct.ac.in

60 BT 301	Biochemistry	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To learn the basic chemical structure and biological functions of biomolecules
- To impart knowledge on role of biomolecules for orderly structures of the cells/tissues
- To illuminate the metabolism of essential biomolecules that are indispensable for life
- To dissipate the knowledge on formations of specialized products from biomolecules
- To learn the principles of bioenergetics and redox reactions of the cell

Pre-requisites

- Basic Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Identify the structure of carbohydrates and understand their classification, synthesis, essential chemical characteristics that make them indispensable for life.	Apply
CO2	Explore the structure, classification, biological functions of lipids and their metabolism	Apply
CO3	Organize the structure and classification of amino acids, proteins, vitamins and its vital functions in the human body.	Apply
CO4	Experiment with the metabolism of the essential building blocks of life and its conversion to specialized products.	Apply
CO5	Examine the purpose of electron transport chain and how cellular ATP:ADP ratio regulates the rate of ATP production by oxidative phosphorylation	Apply

Carbohydrates* Carbohydrates: Basic Chemical Structure, Classification - Monosaccharide, Disaccharides, Polysaccharides, Structure and Function - Anaerobic Pathway of Glucose Metabolism: Glycolysis - Aerobic Pathway of Glucose Metabolism: Citric Acid Cycle - Alternate Pathways of Carbohydrate Metabolism: Pentose Phosphate Pathway - Synthesis of Carbohydrates from Various Sources: Gluconeogenesis.								[9]
Lipids* Lipids: Structure, Function of Fatty Acids and Lipids. Classification, Major Lipid Subclasses - Phospholipids, Glycolipids, Sphingolipids and Steroids - Lipoproteins: Types and Functions - Lipid Metabolism: Biosynthesis of Fatty Acid, Oxidation of Fattyacids - Beta Oxidation, Other Types of Fatty Acid Oxidation - Alpha and Omega Oxidation - Biosynthesis of Cholesterol.								[9]
Proteins and Vitamins* Amino Acids: Structure and Classification. Proteins: Structure and Classification: Primary, Secondary, Tertiary and Quaternary Structure. Properties - Denaturation and Renaturation. Oxidative Degradation of Amino Acids: Transamination, Oxidative Deamination, Decarboxylation, Biosynthesis of Urea, Conversion of Amino Acids in to Specialized Products: Dopa, Dopamine, Epinephrine and Norepinephrine. Vitamins: Classification, Sources, Functions and Deficiency Diseases.								[9]
Nucleic Acids* Nucleic Acids: Structure of Nitrogenous Bases: Purines and Pyrimidines, Nucleosides, Nucleotides,Formation of Phosphodiester Bonds - Structure of DNA and RNA - Biosynthesis of Purine and Pyrimidine Nucleotides: Denovo and Salvage Pathway - Purine and Pyrimidine Degradation.								[9]
Bioenergetics* Electrochemical Potential and Redox Reaction, Mitochondrial Electron Transport Chain: Electron Carriers, Sites of ATP Production, Inhibitors of Electron Transoprt Chain. Oxidative Phosphorylation: Structure of ATPase Complex, Chemiosmotic Theory, Uncouplers and Inhibitors of Oxidative Phosphorylation								[9]

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	Carbohydrates	
1.1	Carbohydrates: Basic Chemical Structure	2
1.2	Classification – Monosaccharide	1

1.3	Disaccharides, Polysaccharides, Structure and Function	2
1.4	Anaerobic Pathway of Glucose Metabolism: Glycolysis	1
1.5	Aerobic Pathway of Glucose Metabolism: Citric Acid Cycle	1
1.6	Alternate Pathways of Carbohydrate Metabolism: Pentose Phosphate Pathway	1
1.7	Synthesis of Carbohydrates from Various Sources: Gluconeogenesis.	1
2.0	Lipids	
2.1	Lipids: Structure and Function of Fatty Acids and Lipids,	1
2.2	Classification, Major Lipid Subclasses Phospholipids, Glycolipids, Sphingolipids and Steroids.	2
2.3	- Lipoproteins: Types and Functions	1
2.4	Lipid Metabolism: Biosynthesis of Fatty Acid,	1
2.5	Oxidation of Fatty acids - Beta Oxidation,	1
2.6	Other Types of Fatty Acid Oxidation - Alpha and Omega Oxidation	2
2.7	Biosynthesis of Cholesterol.	1
3.0	Proteins and Vitamins	
3.1	Amino Acids: Structure and Classification.	1
3.2	Proteins: Structure and Classification:	1
3.3	Primary, Secondary, Tertiary and Quaternary Structure	1
3.4	Properties - Denaturation and Denaturation	1
3.5	Oxidative Degradation of Amino Acids: Transamination, Oxidative Deamination, Decarboxylation	2
3.6	Biosynthesis of Urea, Conversion of Amino Acids into Specialized Products: DOPA, Dopamine, Epinephrine and Norepinephrine.	1
3.7	Vitamins: Classification, Sources, Functions and Deficiency Diseases	2
4.0	Nucleic Acids	
4.1	Nucleic Acids: Structure of Nitrogenous Bases: Purines and Pyrimidines,	1
4.2	Nucleosides, Nucleotides, Formation of Phosphodiester Bonds -	2
4.3	Structure of DNA and RNA	1
4.4	Biosynthesis of Purine and Pyrimidine Nucleotides- Denovo Pathway	2
4.5	Biosynthesis of Purine and Pyrimidine Nucleotides- Salvage Pathway	2
4.6	Purine and Pyrimidine Degradation	1
5.0	Bioenergetics	
5.1	Electrochemical Potential and Redox Reaction	2
5.2	Mitochondrial Electron Transport Chain: Electron Carriers, Sites of ATP Production, Inhibitors.	2
5.3	Oxidative Phosphorylation: Structure of ATPase Complex,	2
5.4	Chemiosmotic Theory, Uncouplers	2
5.5	Inhibitors of Oxidative Phosphorylation	1

Course Designer(s)

1. Dr.S.Sidhra - sidhra@ksrct.ac.in

60 BT 302	Microbiology	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To understand the basic and history of microbiology
- To impart the knowledge about the microorganisms and its classifications
- To understand the cellular organization of microbes and its identification system
- To study the nutritional requirements for the growth of microbes
- To learn about the basics of microbial growth, mode of infection and its control

Pre-requisites

- Basic Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop the knowledge about history, contributions and various classification system the field of microbiology.	Apply
CO2	Build the basics knowledge about microscopy techniques and its identification using different staining methods.	Apply
CO3	Consider the structural organization and multiplication of microorganism.	Apply
CO4	Identify the nutritional requirements of microbial growth.	Apply
CO5	Examine the various industrial application of microorganisms and role in bioremediation justify the different processes of sterilization, disinfection and action mechanism of antimicrobial agents.	Apply

1. Dr.Swathy J S - swathy@ksrct.ac.in

60 BT 303	Cell Biology and Genetics	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To build the knowledge on cell structure and functions of prokaryotes and eukaryotes at molecular level
- To provide an insight on the process of eukaryotic cell division, regulation of cellular processes via signaling molecules and cell cycle regulation
- To impart the concept of mendelian genetics and gene interactions
- To learn structure of chromosomes, ploidy and concept of mutation in genetics
- To understand the concepts in population genetics and its application for species analysis

Pre-requisites

- Basic Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Designate about cell organelles and transport of molecules across membrane	Understand
CO2	Deliberate the structure and functions of prokaryotic and eukaryotic cells and cellular components	Apply
CO3	Expound the concept of mendelism and chromosomal theory	Apply
CO4	Designate in techniques in cytogenetics and types of mutations with the concept of cancer	Apply
CO5	Validate the importance of population genetics and evolution	Apply

Objectives

- To impart basic knowledge in unit conversion, and basic chemical calculations
- To understand the applications of material balance calculations
- To impart the basics of energy balance calculations
- To understand the fluid flow under various conditions
- To know mechanical operations and flow through columns

Pre-requisites

- Basic knowledge in Chemistry and Mathematics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Review the basis of unit conversion, unit operations and unit processes	Apply
CO2	Execute material balance calculations with and without chemical reactions	Apply
CO3	Interpret energy balance calculations and enthalpy changes accompanying chemical reactions	Apply
CO4	Enlighten the fluid behaviour, types and multiphase flow concept	Apply
CO5	Analyze the size reduction equipment and principle of packed and fluidized columns	Analyze

3.5	Problems on Heat Capacities and Energy Balance Calculations	2
3.6	Adiabatic Process	1
3.7	Heat of Solution and Mixing	1
3.8	Tutorial	3
4.0	Flow of Fluids	
4.1	Nature of Fluids: Classification of Fluids	1
4.2	Concept of Viscosity	1
4.3	Laminar and Turbulent Flow	1
4.4	Equation of Continuity	1
4.5	Bernoulli's Equation and Applications	1
4.6	Friction Factor	1
4.7	Calculations	2
4.8	Multiphase Flow	1
4.9	Tutorial	3
5.0	Mechanical Operations and Flow Through Packed and Fluidized Bed	
5.1	Laws of Size Reduction	1
5.2	Differential and Cumulative Size Analysis	1
5.3	Size Reduction Equipment –Jaw Crusher, Roll Crusher, Ball Mill, Hammer Mill	1
5.4	Packed Bed: Flow Through Porous Media and Pressure Drop Calculations	1
5.5	Packed Bed: Ergun's Equation	1
5.6	Pressure Drop Calculations	1
5.7	Fluidization: Principle, Types and Applications	1
5.8	Calculations	2
5.9	Tutorial	3

Course Designer(s)

1. Dr.S.Poornima – spoornima@ksrct.ac.in

60 BT 305	Molecular Biology	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- Explain the fundamental chemistry and structure of nucleic acids.
- Explore DNA replication, transcription, and translation in both prokaryotes and eukaryotes.
- Analyze mechanisms of DNA mutation and repair.
- Review the regulation of gene expression including operon concepts.
- Apply knowledge to problem-solving scenarios in molecular biology.

Pre-requisites

- Chemistry, Biochemistry, Cell Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Interpret the chemistry and structure of nucleic acids, including DNA and RNA and their role in genetic information storage.	Apply
CO2	Explicate the process of DNA replication in prokaryotes and eukaryotes, and the functions of DNA polymerases.	Analyze
CO3	Designate the transcription process and its regulation in prokaryotes and eukaryotes.	Analyze
CO4	Interpret the genetic code and understand protein synthesis in both prokaryotic and eukaryotic ribosomes.	Analyze
CO5	Evaluate gene expression regulation mechanisms in prokaryotes and eukaryotes, including small noncoding RNAs and epigenetic modifications.	Analyze

III	3	0	0	45	3	40	60	100
Chemistry and Structure of Nucleic Acids Central Dogma of Molecular Biology, Basics of Nucleic Acid Chemistry: Nucleosides, Nucleotides, and Nucleic Acids, Base Pairing Rules, Hydrogen Bonding and Base Stacking in DNA and RNA, Primary Structure of Nucleic Acids: Sugar-Phosphate Backbone and Base Sequence, Secondary and Tertiary Structures: DNA Double Helix, Supercoiling, Quadruplex Structures, and RNA Structures. Structural Organization of Chromosomes: Nucleosome, Euchromatin, Chromatin and Heterochromatin.								[9]
DNA Replication and Repair * DNA Replication Models: Semiconservative, Conservative, and Dispersive, DNA Polymerases and their Functions in Replication, DNA Replication origins and Initiation, Molecular Mechanisms of DNA Replication in Prokaryotes and Eukaryotes, Telomeres and Telomerase, Types of DNA Mutations: Point Mutations, Frameshift Mutations, and In-dels, DNA Repair Pathways: Base Excision Repair, Nucleotide Excision Repair, and Mismatch Repair. Problem Solving: Case Studies on DNA Replication and Repair.								[9]
Transcription * Structure and Function of mRNA, rRNA and tRNA.Characteristics of Promoter and Enhancer Sequences. RNA Polymerase and its Subunits in Prokaryotes and Eukaryotes, RNA Synthesis: Initiation, Elongation and Termination, Termination of Transcription in Prokaryotes, Eukaryotic Transcription and its Regulation: Promoters, Enhancers and Transcription Factors, 5' Capping, 3' Polyadenylation, and Splicing in Eukaryotic RNA Processing, RNA Editing and Alternative Splicing. Problem Solving: Designing Experiments in Transcription.								[9]
Translation * Introduction to Genetic Code: Elucidation of Genetic Code, Codon Degeneracy, Wobble Hypothesis and its Importance, Prokaryotic and Eukaryotic Ribosomes. Steps in Translation: Initiation, Elongation and Termination of Protein Synthesis in Prokaryotes and Eukaryotes. Inhibitors of Protein Synthesis. Posttranslational Modifications and its Importance. Problem Solving: Deciphering the Genetic Code and Protein Synthesis.								[9]
Regulation of Gene Expression Operon Concepts in Prokaryotes, Lac Operon, Trp Operon, and Ara Operon, Role of Small Noncoding RNAs: miRNAs and siRNAs, Riboswitches: RNA-Based Genetic Regulation, Epigenetic Modifications and their Role in Gene Expression Control, DNA Methylation, Histone Modifications, and Chromatin Remodeling.Problem Solving: Case Studies in Gene Expression Regulation.								[9]

5.5	Epigenetic Modifications and their Role in Gene Expression Control	1
5.6	DNA Methylation, Histone Modifications	1

5.7	Chromatin Remodeling	1
5.8	Problem Solving: Case Studies in Gene Expression Regulation	2

Course Designer(s)

1. Dr.B.Kalpana – kalpana@ksrct.ac.in

60 BT 3P1	Biochemistry Laboratory	Category	L	T	P	Credit
		PC	0	0	4	2

Objectives

- To learn the fundamental approaches for experimental investigation
- To learn the theoretical foundations for the methods used for biochemical analysis
To determine the characteristics features of various molecules with reference to its analytical characters
- To evaluate and estimate the biological molecules through various methods
- To analyze the level of various elements through suitable standards

Pre-requisites

- Basic Biology and Biochemistry

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Describe the calibration of glass-ware and understand the preparation of solutions.	Apply
CO2	Standardize the pH meter and preparation of buffer solutions.	Apply
CO3	Evaluate the fundamental analysis of carbohydrates and lipids qualitatively and quantitatively	Apply
CO4	Examine and interpret the results by determining the amount of glycine, ascorbic acid, protein and cholesterol.	Apply
CO5	Estimate the amount of creatinine, urea and uric acid quantitatively	Analyze

60 BT 3P2	Microbiology Laboratory	Category	L	T	P	Credit
		PC	0	0	4	2

Objectives

- To understand the growth and development of microbes through various culturing methods
- To observe the differences in staining reactions in bacteria and fungi
- To learn the culture conditions of anaerobic microbes
- To understand the concept of quality analysis of water and milk samples
- To analyze the level of various elements through suitable standards

Pre-requisites

- Introductory Biology and Microbiology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Perform the aseptic methods to be followed in laboratory and preparation of liquid and solid media and cultivation of microorganisms	Apply
CO2	Interpret the differential staining techniques for identification of bacteria and fungi	Apply
CO3	Demonstrate anaerobic microbe culture techniques	Apply
CO4	Analysis for physiological identification of microorganisms	Apply
CO5	Examine the quality of water and milk, and carry out the antibiotic sensitivity test	Analyze

60 CG 0P2	Career Skill Development II	Category	L	T	P	Credit
		CG	0	0	2	1λ

Objectives

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts.
- To help learners develop strategies that could be adopted while reading texts.
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations.
- Improve listening, observational skills, and problem-solving capabilities
- Develop message generating and delivery skills

Pre-requisites

- Basic knowledge of reading and writing in English

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and contrast products and ideas in technical texts.	Analyze
CO2	Identify cause and effects in events, industrial processes through technical texts	Analyze
CO3	Analyze problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Analyze
CO4	Report events and the processes of technical and industrial nature.	Apply
CO5	Articulate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Apply

*CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

** End Semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory end semester examination and 40 Marks for practical end semester examination.

60 MA 021	Probability and Statistics	Category	L	T	P	Credit
		BS	3	1	0	4

Objectives

- To get exposed to the basic concepts of probability
- To familiarize the concepts of correlation and regression
- To familiarize various methods in hypothesis testing
- To get exposed to the fundamentals of analysis of variance
- To learn basics of descriptive statistics and control charts

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Interpret the basic concepts of probability	Apply
CO2	Calculate coefficient of correlation and regression	Apply
CO3	Apply Student's t test, F test and Chi-square test for testing the statistical hypothesis	Apply
CO4	Apply the concepts of ANOVA to test the equality of means for more than two populations	Apply
CO5	Compute measures of central tendency and measures of dispersion, and apply the concepts of control charts for decision making	Apply

Course Contents and Lecture Schedule		
S. No.	Topics	No. of hours
1.0	Probability and Random Variable	
1.1	Axioms of Probability	1
1.2	Total Probability	1
1.3	Conditional Probability	1
1.4	Bayes Theorem	2

1.5	Discrete Random Variable - Probability Mass Function	2
1.6	Continuous Random Variable - Probability Density Function	2
1.7	Moment Generating Function	1
1.8	Tutorial	2
1.9	Hands-on	1
2.0	Two Dimensional Random Variables	
2.1	Joint Distribution	1
2.2	Marginal Distribution	1
2.3	Conditional Distribution	1
2.4	Covariance	1
2.5	Correlation	2
2.6	Rank Correlation	1
2.7	Regression	2
2.8	Tutorial	2
2.9	Hands-on	1
3.0	Testing of Hypothesis	
3.1	Student's 't' Test – Single Mean	1
3.2	Student's 't' Test - Difference of Means	2
3.3	F- Test	2
3.4	Chi-Square Test -Goodness of Fit	2
3.5	Chi-Square Test - Independence of Attributes	2
3.6	Tutorial	2
3.7	Hands-on	1
4.0	Design of Experiments	
4.1	Analysis of Variance - One Way Classification	2
4.2	Analysis of Variance - Completely Randomized Design	1
4.3	Analysis of Variance - Two Way Classification	2
4.4	Analysis of Variance - Randomized Block Design	2
4.5	Analysis of Variance - Latin Square	2
4.6	Tutorial	2
4.7	Hands-on	1
5.0	Statistics and Quality Control	
5.1	Mean, Median, Mode	2
5.2	Quartile Deviation	1
5.3	Standard Deviation	1
5.4	Coefficient of Variation	1
5.5	Mean $\bar{X}$ Chart and Range (R) Chart	2
5.6	nP Chart	1
5.7	C Chart	1

60 BT 401	Genetic Engineering	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To discuss the methods, tools and techniques involved in genome analysis, expression of cloned genes in different host system
- To understand the production of recombinant proteins, mutation analysis and the importance of PCR in genome analysis
- To learn about various aspects of Genetic Engineering, its application and ethical issues
- To determine the strategies involved in gene cloning with the help of genomic libraries, cDNA libraries and other libraries
- To discuss the production of useful molecules like cytokines, vaccines and antibiotics and define the safety guidelines for recombinant

Pre-requisites

- Molecular Biology and Biochemistry

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Comprehend restriction and modification system and their role in genetic engineering	Understand
CO2	Recognize about the cloning vectors used in manipulation of genes.	Apply
CO3	Examine the strategies involved in gene cloning and methods involved in screening of cloned genes to identify the target gene.	Apply
CO4	Illustrate the PCR based techniques involved in genetic manipulation including mutagenesis and demonstrate various sequencing techniques	Apply
CO5	Comprehend the applications of rDNA technology and describe the role of knock out and RNA Interference technology in gene expression studies.	Apply

61 BT 402	Protein and Enzyme Engineering	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To impart concept on Protein engineering and Enzyme Engineering.
- To learn basic principles in Enzyme kinetics and catalysis
- To evaluate the Production and purification of Proteins and Enzymes
- To comprehend the various methods of protein and enzyme engineering
- To analyze the application of proteins and enzymes in various industries

Pre-requisites

- Basic knowledge on Chemistry, Cell Biology and Biochemistry

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate the basic, types and structural confirmation of proteins and enzymes	Apply
CO2	Examine the concepts of enzyme activity and its catalysis	Apply
CO3	Illustrate the protein/ enzyme purification methods and factors affecting immobilization	Apply
CO4	Infer the strategies for protein/ enzyme engineering and rational enzyme design.	Apply
CO5	Examine the design of enzyme electrodes and applications of protein/ enzyme in various domain	Apply

60 BT 403	Biochemical Thermodynamics	Category	L	T	P	Credit
		PC	3	1	0	4

Objectives

- To learn about basic thermodynamic relations and properties of fluids
- To understand partial molar properties and property change of mixing
- To understand the concept of phase equilibria
- To know the application of chemical reaction equilibrium
- To apply the thermodynamics concepts in bioengineering

Pre-requisites

- Basic knowledge of Engineering Mathematics Physics and Principles of Chemical Engineering

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Gain the basic laws of thermodynamics to predict the thermodynamic properties of pure fluids	Understand
CO2	Recognize the various thermodynamic properties of solutions	Understand
CO3	Identify the criteria of phase equilibria for single and multicomponent systems	Understand
CO4	Apply the concept of chemical reaction equilibria and equilibrium conversion	Apply
CO5	Analyze the bioenergetics and thermodynamics of biochemical reactions	Analyze

60 MY 002	Universal Human Values	Category	L	T	P	Credit
		MC	3	0	0	3\$

Objectives

- To identify the essential complementarity between 'values' and 'skills'
- To ensure core aspirations of all human beings.
- To acquire ethical human conduct, trustful and mutually fulfilling human behaviour
- To enrich interaction with Nature
- To achieve holistic perspective towards life and professional

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the significance of value inputs in formal education and start applying them in their life and profession	Understand
CO2	Evaluate coexistence of the "I" with the body.	Analyze
CO3	Identify and evaluate the role of harmony in family, society and universal order.	Analyze
CO4	Classify and associate the holistic perception of harmony at all levels of existence and Nature	Analyze
CO5	Develop appropriate human conduct and management patterns to create harmony in professional and personal lives.	Create

2.4	Understanding Harmony in the Self	1
2.5	Harmony of the Self with the Body	2
2.6	Programme to Ensure Self-Regulation and Health	1
2.7	My Participation (Value) Regarding Self and my Body - Correct Appraisal of our Physical Needs	1
3.0	Harmony in the Family and Society	
3.1	Harmony in the Family - Understanding Values in Human Relationships	1
3.2	Family as the basic Unit of Human Interaction	1
3.3	Values in Human Relationships	1
3.4	Trust - the Foundation value in Relationship	1
3.5	Respect as the Right Evaluation, the Basis for Respect, Assumed Bases for Respect Today	1
3.6	Harmony from Family to World Family: Undivided Society	1
3.7	Extending Relationship from Family to Self, Identification of the Comprehensive Human Goal	1
3.8	Programs needed to Achieve the Comprehensive Human Goal: The Five Dimensions of Human Endeavour	1
3.9	Harmony from Family Order to World Family Order – Universal Human Order	1
4.0	Harmony in the Nature / Existence	
4.1	The Four Orders in Nature	1
4.2	Participation of Human Being in Entire Nature	1
4.3	Natural Characteristics - Tendency of Human Living with Animal Consciousness / The Holistic Perception of Harmony in Existence	1
4.4	Present day Problems	1
4.5	Recyclability and Self-Regulation in Nature	1
4.6	Relationship of Mutual Fulfillment	1
4.7	An Introduction to Space, Co-existence of Units in Space	1
4.8	Harmony in Existence – Understanding Existence as Co- Existence	1
4.9	Natural Characteristic of Human Living with Human Consciousness	1
5.0	Implications of the Holistic Understanding	
5.1	Natural Acceptance of Human Values	1
5.2	Definitiveness of Ethical Human Conduct - Development of Human Consciousness	1
5.3	Identification of Comprehensive Human Goal	1
5.4	Basis for Humanistic Education and Humanistic Constitution	1
5.5	Ensuring Competence in Professional Ethics	1
5.6	Issues in Professional Ethics-The Current Scenario	1
5.7	Holistic Technologies and Production Systems and Management Models - Typical Case Studies	2
5.8	Strategies for Transition Towards Value Based Life and Profession	1

61 BT 4P1	Molecular Biology and Genetic Engineering Laboratory	Category	L	T	P	Credit
		PC	0	0	4	2

Objectives

- To understand steps involved in the isolation of DNA from bacteria, fungi and plant
- To understand the concepts of plasmid DNA extraction and transformation
- To provide hands-on experience in performing basic recombinant DNA techniques
- To develop the ability to design, conduct, analyze and interpret data related to genetic engineering experiments
- To inculcate the research aptitude and technical skills to fulfill the need of both industry and research

Pre-requisites

- Molecular Biology ,Genetic Engineering and Cell Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the knowledge of DNA extraction to isolate DNA from different sources.	Apply
CO2	Analyze and interpret the data obtained from the agarose gel using graphical, UV spectrophotometric and software methods.	Apply
CO3	Identify the correct restriction enzymes to digest the vector DNA that give cohesive ends, ligate it to make recombinant DNA and transform it with <i>E. coli</i> DH5 α cells	Apply
CO4	Apply the knowledge of restriction digestion, ligation, transformation by cloning and screening and interpret the data obtained from the results	Analyze
CO5	Perform PCR at appropriate concentration and operate the thermocycler to amplify the DNA	Apply

61 BT 4P2	Protein and Enzyme Engineering Laboratory	Category	L	T	P	Credit
		PC	0	0	4	2

Objectives

- To extract and estimate extracellular proteins from bacterial sources, fostering hands-on skills in protein quantification techniques.
- To evaluate the production and activity of enzymes, emphasizing their industrial and biological applications.
- To explore protein digestion and amino acid quantification, connecting biochemical reactions to metabolic pathways.
- To determine the impact of pH and temperature on enzyme activity, providing insights into enzyme stability and functionality.
- To analyze enzyme kinetics, inhibition mechanisms, and protein purification methods for optimizing biocatalytic processes.

Pre-requisites

- Protein and Enzyme Engineering

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Design and conduct experiments to extract and estimate extracellular proteins, interpreting results effectively.	Apply
CO2	Demonstrate the ability to produce and estimate enzyme activity, correlating it to specific biological and industrial processes.	Apply
CO3	Quantify amino acids from digested milk protein, linking biochemical experiments to real-world applications.	Apply
CO4	Assess the influence of pH, temperature, and inhibitors on enzyme activity, drawing conclusions about enzyme behavior.	Analyze
CO5	Assess the kinetic parameters (Km, Vmax) and purification techniques using SDS PAGE and enzyme immobilization, comparing free and immobilized enzyme efficiencies	Analyze

60 CG 0P3	Career Skill Development III	Category	L	T	P	Credit
		CG	0	0	2	1λ

Objectives

- To help learners improve their logical reasoning skills at different academic and professional contexts.
- To help learners relate basic quantitative problems and solve them.
- To help learners Infer critically the statements with optimal conclusions and assumptions.
- To Solve the quantitative problems pertaining to calculations of averages, ratio and proportions, and profit and loss effectively
- To compute quantitative problems related to time and work, speed and distance, and simple and compound interest

Pre-requisites

- Basic knowledge of Arithmetic and Logical Reasoning

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Deduce the topics in logical reasoning at the preliminary and intermediate level.	Understand
CO2	Relate basic quantitative problems and solve them effectively at the preliminary level	Apply
CO3	Infer critically the statements with optimal conclusions and assumptions with the data and information given.	Analyze
CO4	Solve the quantitative problems pertaining to calculations of averages, ratio and proportions, and profit and loss effectively at the pre-intermediate level.	Apply
CO5	Compute quantitative problems related to time and work, speed and distance, and simple and compound interest at intermediate level.	Apply

* CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

** End Semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory end semester examination, 50 marks for project based end semester examination and 40 Marks for practical end semester examination.

60 BT 501	Plant and Animal Biotechnology	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To develop the skills of the students in the area of Plant Biotechnology and its wide applications
- To widen the knowledge about the production and applications of transgenic plants and its use
- To study the animal cell culture techniques and types of media used in animal cell cultures
- To widen the knowledge about production and applications of transgenic animals
- To study the applications of Plant and Animal Biotechnology

Pre-requisites

- Basics of Biology, Cell biology and Genetics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Summarize the concepts of plant tissue culture, media preparation in the field of in vitro culture of plants.	Understand
CO2	Develop the process of conservation of plants for future posterity and production of hybrid plants.	Apply
CO3	Examine the crucial animal cell culture techniques and types of media used in animal cell cultures.	Apply
CO4	Utilize the concept of production of transgenic animals and ethical issues related to transgenic animals.	Apply
CO5	Organize the prospects and problems of GM crops along with the guidelines as well as safety Regulations for transgenic plants and exemplify the concept of cytotoxic and viability assessment using different assays.	Apply

60 BT 502	Bioinformatics	Category	L	T	P	Credit
		PC	1	0	4	3

Objectives

- To develop inter disciplinary skills in the application of computers in biotechnology and learn about the biological databases and machine learning techniques
- To learn about the bioinformatics databases, databanks, data format and data retrieval from the online sources
- To analyze the structure and functions of protein and DNA using *in silico* tools
- To understand the concepts involved in biological macromolecular structures and structure prediction methods
- To apply the acquired programming knowledge for in silico Biology applications

Pre-requisites

- Basics of Biochemistry and Molecular Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Get acquainted with various biological primary databases, secondary databases and different sequence formats	Analyze
CO2	Characterize the optimal alignment of sequences either by local or global algorithm and apply BLAST and FASTA algorithms in similarity search	Analyze
CO3	Classify the phylogenetic analysis, and categorize the protein and RNA structure prediction algorithms	Analyze
CO4	Describe and infer soft computing algorithms that are applied in protein structure prediction	Analyze
CO5	Acquire programming skills in Python and apply to solve <i>in silico</i> problems	Analyze

1.5	Searching Sequence and Retrieve from Nucleic Acid and Protein Sequence Database	3
1.6	PDB: Protein Data Bank and Structure Visualization	3
1.7	Pattern Identification using Secondary Protein Databases	3
2.0	Sequence Analysis	
2.1	Sequence Analysis, Pairwise Alignment – Dot Matrix Analysis	2
2.3	Dynamic Programming Algorithms for Computing Edit Distance and String Similarity	3
2.4	Pair wise Alignment of the Sequences	3
2.5	Searching Sequence Database using BLAST and FASTA Algorithm	3
2.6	Multiple Sequence Alignment: CLUSTAL OMEGA, T-COFFEE, etc., Methods	3
2.7	Active Site Prediction from Macro Molecule Structures	1
3.0	Molecular Phylogeny	

3.1	Distance Matrix Methods- UPGMA,NJ, FM	3
3.2	Character Based Methods-Maximum Parsimony	3
3.3	Methods of Evaluating Phylogenetic Methods - Boot Strapping, Jackknifing	3
3.4	Evolutionary Relationship / Phylogenetic Analysis	3
3.5	Phylogeny Analysis using Phylip, iTOL, etc.,	3
4.0	Macromolecular Structure Analysis	
4.1	Protein Structure Visualization Tools Overview	3
4.2	Prediction of Protein Secondary Structure- Chou Fass Man, GOR, ML	3
4.3	Tertiary Structure Prediction- Homology Modeling using Modeller 19v7, Swiss Model	3
4.4	Ab initio Method and Fold Recognition Method with Tools	3
4.5	Predicted Structure Assessment and Validation Tools	3
5.0	Python Programming	
5.1	Simple Values and Expressions with Sample Codes	1
5.2	Names, Functions and Modules with Sample Codes	2
5.3	Sets, Sequences, Mappings, Streams with Examples	3
5.4	Align DNA and Protein Sequences, Identify Genetic Variations, and Perform Gene Expression Analysis using Biopython	3
5.5	Analysis and Visualization of Protein Structures using PyMol	3
5.6	Scikit-Learn a Machine Learning Approach to Classify Genes, Predict Protein Structures	3

1. Dr.Puniethaa Prabhu - punithaa@ksrct.ac.in

60 BT 503	Heat and Mass Transfer Operations	Category	L	T	P	Credit
		PC	3	1	0	4

Objectives

- To provide fundamental knowledge on heat transfer operations.
- To understand the principle of phase change operations and functions of heat exchangers
- To explore different vapour-liquid and gas-liquid operations
- To know the principle of various liquid-liquid and solid-fluid operations
- To apply the principle of heat and mass transfer operations in biological systems

Pre-requisites

- Basic knowledge in Unit operations & Fluid flow

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate different modes of heat transfer and understand heat transfer coefficient.	Understand
CO2	Quantify heat transfer for phase change operations and know types of heat exchangers and flow arrangements	Apply
CO3	Enlighten the principle of molecular diffusion, distillation and gas absorption.	Apply
CO4	Illuminate the operations of extraction, leaching, adsorption and drying	Analyze
CO5	Emphasize the heat and mass transfer correlations and their applications in bioreactors	Apply

1. Dr.S.Poornima - spoornima@ksrct.ac.in

60 BT 504	Chemical Reaction Engineering	Category	L	T	P	Credit
		PC	3	1	0	4

Objectives

- To learn chemical kinetics for different reactions.
- To impart knowledge on design of single and multiple reactors.
- To acquire knowledge to analyze non-ideal reactors.
- To understand catalysis and multiphase reactor systems.
- To apply reaction engineering concepts in various biochemical reaction systems.

Pre-requisites

- Thermodynamics, Fluid mechanics, Heat and Mass Transfer Operations

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop rate equation and to know concentration and temperature dependence of rate equation	Understand
CO2	Design single and multiple reactors and understand performance analysis of reactors	Apply
CO3	Identify the basics aspects, models and performance of non-ideal reactors	Apply
CO4	Demonstrate the mechanism of catalytic reactions and design of multiphase reactors	Apply
CO5	Apply various modes of fermentors in microbial and enzyme fermentation.	Apply

60 BT 5P1	Plant and Animal Biotechnology Laboratory	Category	L	T	P	Credit
		PC	0	0	3	1.5

Objectives

- To prepare growth media for the development of explant for initiating plant tissue culture
- To perform the technique of micropropagation using various explants
- To develop the production of aseptic synthetic seeds.
- To experiment the techniques in sterilization and maintenance of various animal cell culture and handling of animals
- To produce the haploid plant using anther, pollen and ovary culture

Pre-requisites

- Plant and Animal Biotechnology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Adapt the preparation of plant tissue culture media for plant cell, tissue and organ culture with effective and safe operation	Apply
CO2	Demonstrate the steps involved in developing a reliable protocol and required hormonal combination for <i>in vitro</i> culturing of plants.	Apply
CO3	Experiment the aseptic explant production through in vitro seed germination and micro propagation,	Apply
CO4	Adapt the various sterilization procedures followed in cell line laboratory and perform the cytotoxicity assay	Apply
CO5	Analyze the process of subculturing without and contamination and isolation of Primary cells from Chicken fibroblast.	Analyze

60 BT 5P3	Design Thinking and Innovation Laboratory	Category	L	T	P	Credit
		PC	0	0	2	1

Objectives

- Understand the principles of design thinking and their application in engineering innovation
- Identify real-world engineering problems through brainstorming and mind mapping
- Explore problem space using secondary research methods, including the 5Ws and 1H Matrix, and User participant mapping
- Conduct primary research from multiple perspectives to ensure a user-centered approach
- Define and analyze problem areas to develop clear and well-structured problem statements

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply design thinking principles to promote innovation.	Apply
CO2	Identify and articulate real-world engineering problems through brainstorming and mind map techniques.	Apply
CO3	Perform secondary research using tools 5Ws and 1H Matrix and user participant mapping to explore problem spaces.	Apply
CO4	Conduct primary research to gather insights from diverse perspectives, ensuring a user- centered approach in problem-solving.	Apply
CO5	Define and analyze problem areas to create precise and actionable problem statements.	Analyse

60 CG 0P4	Career Skill Development IV	Category	L	T	P	Credit
		CG	0	0	2	1λ

Objectives

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts.
- To help learners develop strategies that could be adopted while reading texts.
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations.
- Improve listening, observational skills, and problem-solving capabilities
- Develop message generating and delivery skills

Pre-requisites

- Basic knowledge of Arithmetic and Logical Reasoning

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and contrast products and ideas in technical texts.	Analyze
CO2	Identify cause and effects in events, industrial processes through technical texts	Analyze
CO3	Analyze problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Analyze
CO4	Report events and the processes of technical and industrial nature.	Apply
CO5	Articulate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Apply

13	60 CG 0P6	Internship	-	100	-	100	-	100

* CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

** End Semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for the award of terminal examination marks

Passed in BoS Meeting Held on 23/12/2025
Approved in Academic Council Meeting Held on 03/01/2026

BoS Chairman

SEMESTER VI

60 BT 601	Biopharmaceutical Technology	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To recognize the sources of drugs and basic concepts in pharmacology
- To be familiar with the drug manufacturing facilities and quality control
- To gain knowledge on the concepts of biotransformation of drugs
- To understand the concepts of dosage forms
- To understand the biopharmaceutical quality assurance

Pre-requisites

- Biology / Biochemistry

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Comprehend the pharmacological categories, sources, routes of administration and different modes of drug delivery	Understand
CO2	Experiment with drug manufacturing facility, importance of quality assurance and various methods of coating pharmaceutical dosage forms	Understand
CO3	Examine with the concepts of pharmacokinetics, clearance and bioavailability of drugs	Apply
CO4	Categorize pharmaceutical dosage forms and its routes of applications	Apply
CO5	Survey the role of quality assurance and regulatory affairs in biological evaluation of pharmaceutical dosage forms	Apply

Mapping with Programme Outcomes

Introduction to Pharmacology* Drug- Definition, Classification - Physiochemical Properties - Pharmaceutical Substances of Plant, Animal and Microbial Origin - Routes of Administration of Drug - Controlled Drug Delivery Systems.								[9]
The Drug Manufacturing Process* The Manufacturing Facility – Cleaning, Decontamination and Sanitation (CDS). Documentation – Specifications- Records - Compression and Granulation of Tablets - Coating of Pharmaceutical Dosage Forms- Film Coating: Modified Release Film Coating- Coating Procedure and Equipment. Quality Control and Practice.								[9]
Pharmacokinetics and Biotransformation Basic Concepts of Pharmacokinetics: Absorption - Mechanism of Drug Absorption - Distribution - Biotransformation of Drug - Non Synthetic and Synthetic Reaction. Elimination - Organ Clearance - Hepatic Clearance - Renal Clearance - Bioavailability and Bioequivalence								[9]
Pharmaceutical Dosage Forms Definition of Dosage forms, Classification of Dosage Forms -Solid Unit Dosages – Tablets, Capsules, Pills, Troches, Cachets, Liquids – Solutions, Lotions, Suspension, Elixirs, Emulsions, Inhalations and Inhalants Semi-Solid – Ointments, Creams, Gels. Extracts- Tinctures and Fluid extracts.								[9]
Biopharmaceuticals Quality Assurance The Role of FDA (Food and Drug Administration Process) - Role of Centre for Biological Evaluation and Research (CBER) - Role of Centre for Drug Evaluation and Research - Global Harmonization of Regulatory Affairs - European Medicine Evaluation Agency (EMA) - Indian Pharmacopeia (IP) - United States Pharmacopeia (USP). 61 BT 602	Bioprocess Technology	Category	L	T	P	Credit
		PC	3	1	0	4

Objectives

- To learn the product development and recovery in bioprocess technology
- To design a bioreactors and the strategy of scale up reactor for commercial prospects
- To develop and predict the construction of ancillaries for fermenter system
- To enable the knowledge of fluid behaviour and analyze the biodynamic property
- To understand the important concepts of software's in monitoring and validation of Bioprocess Technology

Pre-requisites

- Heat and Mass Transfer, Chemical Reaction Engineering and Biochemical Thermodynamics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Enumerate the historical development, types of fermentation process and bio product recovery	Apply
CO2	Design a kinetic parameters of cell growth of structured and unstructured model	Apply
CO3	Apply the concept of design and construction of reactor with its controlling strategies	Apply
CO4	Determine the scale up of the bioreactors with respect to mixing and power consumption	Analyze
CO5	Simulate and validate the protocol of bioprocess technology through soft wares	Apply

VI	3	1	0	60	4	40	60	100
Introduction to Bioprocess Technology Introduction to Bioprocessing - General Requirements and Types of Fermentation Processes: Designing of Media for Fermentation Process, Aerobic and Anaerobic Fermentation Process - Bio-Product Recovery Process: Filtration, Sedimentation, Centrifugation, Precipitation, and Cell disruption, Chromatography, Crystallization, Lyophilisation and Drying.								[9]
Fermentation Kinetics Medium Requirements for Fermentation Processes - Batch Growth, Balanced Growth, Effect of Substrate Concentration - Monod Model - Determining Cell Kinetic Parameters from Batch Data; Kinetics of Cell Growth- Structured and Unstructured Models. Growth Associated (Primary) and Non-Growth Associated (Secondary) Product Formation Kinetics.								[9]
Process Design and Control of Bioreactors* Bioreactor Design and Construction - Reactor Engineering in Perspective; Types of Reactors (Batch, Fed Batch and Continuous). Design of Stirrers and Impellers; Principles and Strategies for Control of Bioreactors (Feedback, Feed forward, Adaptive and Statistical, Fuzzy Logic Control). Bioprocess Design for Plant and Animal Cell Reactor.								[9]
Rheology, scale up and Heat Mass Transfer Newtonian and Non Newtonian Fluids - Effect of Scale on Oxygenation, Mixing, Sterilization, Nutrient Availability and Supply. Bioreactor Scale- up Based on Constant Power Consumption per Volume, Mixing Time, Impeller Tip Speed (Shear), Oxygen Transfer in Bioreactors, Measurement of Volumetric Mass Transfer Coefficient, Scale-up Criteria for Bioreactors Based on Oxygen Transfer.								[9]
Simulation in Bioprocess Technology Simulation Techniques (Software) - Reactor Design (AutoCAD) and Evaluation of Design of Experiments (DOE), Dynamic Simulation of the Bioreactor; Simulation of CSTR in Continuous and Batch reactor Using MATLAB. Application of Modelling and Simulation in Bioprocess Industries.								[9]
Total Hours: 45+ 15 (Tutorial)								60

1. Ms.R.Krishnaveni - rkkrishnaveni@ksrct.ac.in

60 BT 603	Computer Aided Drug Design	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To understand the process of drug discovery
- To learn the elements of small molecules and representations
- To impart knowledge on the approaches of modeling molecular dynamics
- To understand the concepts involved in Ligand-based and Structure-based drug design
- To apply the acquired rational drug designing Knowledge for in silico Biology applications

Prerequisite

- Biochemistry, Molecular Biology and Bioinformatics Concepts

Course Outcomes

CO1	Acquire the knowledge about protein structure prediction methods, structure visualizations and their importance	Remember
CO2	Explore the basics of bioinformatics, chemo-informatics and how useful for drug designing and discovery process	Understand
CO3	Illuminate the principle and applications of molecular dynamics simulation	Apply
CO4	Explore the concept and SAR, QSAR and their importance in ligand optimization	Apply
CO5	Comprehend the principle, types and various applications of computer aided drug designing and discovery process	Apply

61 BT 604	Immunology and Immunotechnology	Category	L	T	P	Credit
		PC	2	0	2	3

Objectives

- To learn the basic concepts of immune response towards various antigens in mammalian host system
- To impart the knowledge of various cells involved in immunity
- To study the mechanism and reactions of immunity towards infectious diseases
- To comprehend the interaction of immune cells during transplantation procedures
- To emphasize their significance in developing therapeutic modalities for immunological disorders of human beings

Pre-requisites

- Biochemistry, Cell Biology and Microbiology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Interpret the features of cells, tissues, organs of immune system and nature of antigens	Apply
CO2	Analyze the developmental behaviour of B cells and features of antigen and antibody interaction	Apply
CO3	Explore various stages in development of T cells and biology of antigen processing and presentation.	Apply
CO4	Identify the immune response against infectious diseases and immune deficiency diseases	Apply
CO5	Justify the mechanism of transplant acceptance, rejection and functions of tumor antigen	Analyze

Passed in BoS Meeting held on 20/06/2025

Approved in Academic Council Meeting held on 12/07/2025

BOS- Chairman

60 MY 003	Startups and Entrepreneurship	Category	L	T	P	Credit
		MC	2	0	0	2&

Objectives

- To Learn basic concepts in entrepreneurship, develop mind-set and skills necessary to explore entrepreneurship
- To provide practical proven tools for transforming an idea into a product or service that creates value for others.
- To Comprehend the process of opportunity identification through design thinking, identify market potential and customers while developing a compelling value proposition solution and prototypes
- To create business plan, conduct financial analysis and feasibility analysis to assess the financial viability of a venture ideas & solutions built with domain expertise
- To Prepare and present an investible pitch deck of their practice venture to attract stakeholders

Pre-requisites

- Basic knowledge of reading and writing in English

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop an entrepreneurial mindset and appreciate the concepts of design thinking, entrepreneurship and innovation	Understand
CO2	Apply process of problem -opportunity identification and validation through human centred approach to design thinking in building solutions	Apply
CO3	Understand market types, conduct market estimation, identify customers, create customer persona, develop the skills to create a compelling value proposition and build a Minimum Viable Product	Apply
CO4	Create business plan, conduct financial analysis and feasibility analysis to assess the financial viability of a venture	Apply
CO5	Prepare and deliver an investible pitch deck of their practice venture to attract stakeholders	Apply

S. No.	Topics	No. of hours
1.0	Introduction to Entrepreneurship & Entrepreneur	
1.1	Meaning and Concept of Entrepreneurship and the History of Entrepreneurship Development	1

1.2	The Entrepreneur: Meaning, the Skills Required to be an Entrepreneur, The Entrepreneurial Decision Process,	1
1.3	Myths of Entrepreneurship, How to Become a Successful Entrepreneur - Dr Romesh Wadhvani (Platform on Boarding)	1
1.4	Role Models, Mentors and Support System- Masterclass on my Story - Joshua Salins	1
1.5	Role of Entrepreneurship in Economic Development, Agencies in Entrepreneurship Management and Future of Entrepreneurship	1
1.6	Innovation and Creativity, Types of Innovations, Innovations in Current Scenario, Concepts of Entrepreneurial Thinking, General Enterprising Tendency Test	1
2.0	Problem-Opportunity Identification, Customers Discovery and Competitive Advantage	
2.1	Understanding the Problem and Opportunity, Define Problem using Design Thinking Principles and Validate Problem. Case Study and Fireside Chat – Desi Hangover	1
2.2	Identifying a Problem for Practice Venture and Filling Problem Statement Canvas (Handout Week 1 - Class Activity)	1
2.3	Customer and Markets Discovery , Knowing your Customer and Consumer, Customer Segmentation and Exploring Market Types and Estimating the Market Size. Case Study and Fireside Chat – Verloop	1
2.4	Creating Customer Personas & Market Estimation (Handout Week 2 - Class Activity)	1
2.5	Importance of Value Proposition, Introduce Value Proposition Canvas, Developing Problem-Solution Fit. Case Study and Fireside Chat – Honey Twigs	1
2.6	Competition Analysis, Blue Ocean Strategy, Competitive Positioning and understanding Unique Selling Points. Case Study and Fireside Chat on Inzipira Fill Value Proposition Canvas (Handout Week 3 - Class Activity) and Competition Analysis Framework (Handout Week 5 - Class Activity) Briefing On Assignment 1 - Milestone 1	1
3.0	Business Model and Build your MVP	
3.1	Introduction to Business Model and Types. Case Study and Fireside Chat – NUOS	1
3.2	Lean Approach, 9 Block Lean Canvas Model, Riskiest Assumptions to Business Models	1
3.3	Class Activity- Fill Lean Canvas For Your Idea And Understand Revenue Model (Handout Week 6)	1
3.4	Prototyping, Meaning of MLP , Difference Between MLP and MVP, How to Build an MLP? Different Types MLP that you Can Build. Case Study and Fireside Chat – KNORISH	1
3.5	Hypothesis Testing and MVP Validation, MVP Iteration-Importance of Build - Measure – Learn Approach	1
3.6	Class Activity- Fill MVP Framework (Handout Week 7) and Learn Validation	1
4.0	Business Plan, Financial Feasibility and Managing Growth	
4.1	Business Planning: Components of Business Plan- Sales Plan, People Plan and Financial Plan, Preparing a Business Plan. Case Study and Fireside Chat – Bodh Gems	1
4.2	Financial Planning: Types of Costs, Preparing the Financial Plan using Financial Template (Handout Week 9)	1
4.3	Class Activity - Starting up Costs, COGS, Sales Plan and People Plan Template.	1
4.4	Class Activity - One Year P&L Projection, Breakeven Analysis, Five Year Projection	1
4.5	Understanding Basics of Unit Economics and Analyzing Growth and the Financial Performance	1
4.6	Class Activity - Financial Template - Unit Economics (Handout Week 12)	1
5.0	Go to Market Strategies and Funding	
5.1	Introduction to Go to Market Strategies, Start-up Branding and its Elements, Selecting the Right Channel	1
5.2	Creating Digital Presence, Building Customer Acquisition Strategy.	1

5.3	Class Activity: Handout Week 10 - Create your GTM Strategy	1
5.4	Choosing a Form of Business Organization Specific to your Venture	1
5.5	Identifying Sources of Funds: Debt & Equity, Map the Start-up Lifecycle to Funding Options	1
5.6	Class Activity - Visit Relevant GOI Websites, Other Sites to Help Students Explore Funding Opportunities and Briefing on Final Submission of the Pitch Deck Build an Investor Ready Pitch Deck, What Should you Cover in your Pitch Deck? Art of Pitching and Story telling	1

60 MY 004	Disaster Management	Category	L	T	P	Credit
		MC	2	0	0	0

Objectives

- To understand the fundamental concepts of disasters, including hazard, vulnerability, risk, and capacity
- To recognise the different types of natural, biological, technological, and man-made disasters
- To explain the disaster management cycle and apply appropriate strategies for prevention, mitigation, preparedness, response, recovery, and rehabilitation.
- To know the disaster management frameworks and practices in India
- To recognise science, technology, and engineering approaches for disaster risk reduction

Pre-requisites

- Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand basic terms related to disasters, hazards, vulnerability, risk, and disaster management.	Understand
CO2	Recognize different types of natural, biological, technological, and man-made disasters.	Understand
CO3	Know the main stages of the disaster management cycle and the roles of people and authorities during disasters.	Understand
CO4	Summarize the disaster management systems, laws, and institutions in India.	Understand
CO5	Recognize the role of safety practices, science, and technology in reducing disaster risks.	Understand

60 BT 6P1	Computer Aided Drug Design Laboratory	Category	L	T	P	Credit
		PC	0	0	3	1.5

Objectives

- To understand the process of drug discovery
- To learn the elements of small molecules and representations
- To impart knowledge on the approaches of modeling molecular dynamics
- To understand the concepts involved in Ligand-based and Structure-based drug design
- To apply the acquired rational drug designing Knowledge for in silico Biology applications

Pre-requisites

- Biochemistry, Molecular Biology and Bioinformatics concepts

CO1	Comprehend the process of drug discovery pipeline.	Apply
CO2	Represent and prepare small molecules for drug design	Apply
CO3	Apply appropriate mathematical and statistical methods defining molecular dynamic simulation	Apply
CO4	Relate structural and functional data for molecule-based drug design	Analyze
CO5	Prepare and define active site for structure-based drug design	Apply

60 BT 6P2	Bioprocess Technology Laboratory	Category	L	T	P	Credit
		PC	0	0	3	1.5

Objectives

- To understand the industrial requirement of fermentation process for bio-product
- To study the different factors affecting the yield and biomass of product
- To empower the knowledge of mixed flow reactor and its estimation of KLa value
- To illustrate the various unit operation involved in product development
- To demonstrate the aspects of modelling and simulation in Bioprocess Technology

Pre-requisites

- Protein and Enzyme Engineering Laboratory

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Handle the techniques of media optimization and determine the KLa for bioprocess.	Apply
CO2	Illustrate the concept of microbial growth and its thermal death kinetics.	Apply
CO3	Demonstrate the kinetics of mixed flow reactor and the role of KLa through sodium oxidation method.	Apply
CO4	Determine the biomass coefficient of yeast and demonstrate the simulation software for bioreactor.	Apply
CO5	Demonstrate the production of industrial enzymes through modelling in the system.	Analyze

60 BT 6P3	Design Thinking and Product Development Laboratory	Category	L	T	P	Credit
		PC	0	0	2	1

Objectives

- Ideate and develop innovative solutions for the given problem statement
- Develop soft prototype and visualize user scenarios for early-stage product validation
- Develop medium and hard prototype, integrating technical, ergonomic, and aesthetic considerations
- Conduct testing, gather user feedback, and apply iterative design processes
- Document, publish and present their solution

Pre-requisites

- Design Thinking and Innovation Laboratory

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Generate innovative solutions to address specific problem statements.	Apply
CO2	Create and evaluate soft prototype, including paper prototypes and storyboards, to test initial design concepts.	Create
CO3	Create medium and hard prototype using 3D modelling and printing, incorporating human factors and system design.	Create
CO4	Perform usability studies, analyze user feedback, and iterate their designs to finalize user-centered solutions.	Analyse
CO5	Prepare professional documentation, and deliver a comprehensive project report and presentation.	Apply

60 CG 0P5	Comprehension Test*	Category	L	T	P	Credit
		CG	0	0	2	1\$

Objectives

- To evaluate the knowledge gained in core courses relevant to the programme of study
- To assess the technical skill in solving complex engineering problems

Prerequisite

- Fundamental knowledge in all core subjects.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Infer knowledge in their respective programme domain	Apply
CO2	Attend interviews for career progression	Apply
CO3	Exhibit professional standards to solve engineering problems	Apply
CO3	Promote holistic approach to problem solving	Apply
CO5	Examine the competency of graduates in specific programme domain	Apply

Mapping with Programme Outcomes

8	60 BT 7P1	Biological Data Analysis Laboratory	3	60	40	100	45	100
9	60 BT 7P2	Downstream Processing Laboratory	3	60	40	100	45	100
10	60 BT 7P3	Project Work - Phase 1	3	60	40	100	45	100
11	60 CG 0P6	Internship	-	100	-	100	-	100

* CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

** End Semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory end semester examination ,50 marks for theory cum practical end semester examination and 40 Marks for practical end semester examination.

Passed in BoS Meeting held on 21/05/2024
Approved in Academic Council Meeting held on 25/05/2024

BOS- Chairman

60 HS 002	Engineering Economics and Financial Accounting	Category	L	T	P	Credit
		HS	3	0	0	3

Objectives

- To know about the economic principles underlying demand, supply, and market structure
- To understand the concept related to types of business organization and types of banking
- To know about concepts in financial accounting and capital budgeting
- To understand the different methods of pricing and appraisal of projects
- To know the application of break-even analysis in engineering projects

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apprehend the basic concepts of economics, demand, supply, and market structure	Understand
CO2	Comprehend the forms of business organization and functions of commercial and central bank	Understand
CO3	Comprehend the basis of financial accounting and capital budgeting techniques	Understand
CO4	Apply different types of pricing strategies and comprehensive project feasibility in diverse business	Apply
CO5	Apply break even analysis in engineering projects and business	Apply

60 BT 701	AI for Biotechnology	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To introduce the concepts of Artificial Intelligence (AI) and Machine Learning (ML) in the context of biotechnology
- To explore applications of AI in genomics, transcriptomics, proteomics, and metabolomics
- To provide exposure to AI tools and methods used in drug discovery and molecular modelling
- To understand systems and network biology through AI-based methods
- To evaluate model performance and address ethical and reproducibility concerns in AI-driven biological research

Pre-requisites

- Basics of Molecular Biology, Biostatistics, and Programming (Python/R preferred)

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop the foundational principles of Artificial Intelligence (AI) and Machine Learning (ML) and their relevance to solving complex problems in biotechnology	Understand
CO2	Apply the role of AI in multi-omics studies, including genomics, transcriptomics, proteomics, and metabolomics, to interpret biological data effectively	Apply
CO3	Demonstrate the application of AI-based tools and algorithms in drug discovery and molecular modelling, including structure-based and ligand-based approaches	Apply
CO4	Apply the AI techniques in systems and network biology to model biological networks, identify key interactions, and predict system behavior	Apply
CO5	Critically assess the performance of AI models in biological research and address challenges related to ethical use, transparency, and reproducibility of AI in life sciences	Apply

60 BT 702	Downstream Processing	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To learn various unit operations and their applications in downstream processing of bioproducts
- To provide knowledge on downstream processing economics
- To emphasize the need for separation techniques in downstream processing
- To acquire knowledge in recovery, purification and formulation of bioproducts of commercial interest
- To understand the final purification strategies adopted in industrial operations

Pre-requisites

- Basic knowledge in Unit operations, Fluid mechanics, Chemical kinetics and Bioprocess Engineering

Course Outcomes

CO1	Comprehend cost cutting strategies and bioproduct release kinetics	Apply
CO2	Interpret the design and principle of filtration and centrifugation	Apply
CO3	Identify suitable unit operation for bioproduct recovery and concentration	Apply
CO4	Demonstrate and apply the principles and operation of chromatographic Techniques	Apply
CO5	Discuss the operational requirements of industrial crystallizers and lyophilizer	Apply

2.5	Calculations in Batch and Continuous Filtration	2
2.6	Centrifugation: Principle and Types of Industrial Centrifuges	1
2.7	Scale up of Centrifugation	1
2.8	Case Studies	1
3.0	Product Recovery and Concentration	
3.1	Adsorption: Isotherms	1
3.2	Batch, Continuous Operations	1
3.3	Aqueous Two- Phase Extraction	1
3.4	Supercritical Fluid Extraction	1
3.5	Membrane Separation Processes: Microfiltration, Ultrafiltration	1
3.6	Reverse Osmosis and Dialysis,	1
3.7	Precipitation of Proteins by Different Methods	2
3.8	Case Studies	1
4.0	Product Purification by Chromatography	
4.1	Principle and Practice of Ion Exchange Chromatography	1
4.2	Size Exclusion Chromatography	1
4.3	Bioaffinity Chromatography	1
4.4	Hydrophobic Interaction Chromatography	1
4.5	Reverse Phase Chromatography & Pseudo Affinity Chromatography	1
4.6	High Performance Liquid Chromatography	1
4.7	Gas Chromatography	1
4.8	Flash Chromatography	1
4.9	Case Studies	1
5.0	Final product Formulation and Finishing Operations	
5.1	Crystallization: Nucleation, Crystal Growth, Crystal Size Distribution, Kinetics of Crystallization	2
5.2	Industrial Crystallizers	1
5.3	Drying - Drying Terminologies & Drying Curve	2
5.4	Industrial Dryers	1
5.5	Freeze Drying Principles and Applications	2
5.6	Case Studies	1

Course Designer(s)

1. Dr.S.Poornima - spoornima@ksrct.ac.in

60 AC 001	Research Skill Development	Category	L	T	P	Credit
		AC	1	0	0	0

Objectives

- To identify research problems, formulate hypotheses, collect data and test hypotheses
- To prepare and submit quality manuscripts and understand peer review process
- To utilize software tools for effective manuscript preparation and visualization of research data
- To familiarize different journal metrics and author-level quality indicators
- To protect creative works, inventions, and branding elements using IPR

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop structured scientific approach to plan and execute research work	Apply
CO2	Comply with the journal requirements to publish research findings effectively	Understand
CO3	Apply various software tools during the manuscript preparation	Apply
CO4	Select suitable journals to publish the work using different publication metrics	Analyze
CO5	Apply the appropriate form of IP protection to a specific invention or creation	Apply

Passed in BoS Meeting held on 21/05/2024
Approved in Academic Council Meeting held on 25/05/2024

BOS- Chairman

60 AB 001	National Cadet Corps (Air Wing)	Category	L	T	P	Credit
		HS	2	0	2	3

Objectives

- To designed especially for NCC Cadets to educate basic military knowledge
- To develop character, camaraderie, discipline, secular outlook
- To inculcate spirit of adventure, sportsman spirit
- To teach selfless service amongst cadets by working in teams
- To learning military subjects including weapon training and motivate them to join in tri-services

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Display sense of patriotism, secular values and shall be transformed into motivated youth who will carry out nation building through national unity and social cohesion	Remember
CO2	Demonstrate the sense of discipline with smartness and have basic knowledge of weapons and their use and handling	Remember
CO3	Illustrate various forces and moments acting on aircraft	Understand
CO4	Outline the concepts of aircraft engine and rocket propulsion	Understand
CO5	Design, build and fly chuck gliders/model airplanes and display static models	Create

60 BT 7P1	Biological Data Analysis Laboratory	Category	L	T	P	Credit
		PC	0	0	3	1.5

Objectives

- To introduce students to basic biostatistics concepts and techniques for organizing and visualizing biological data
- To familiarize students with hypothesis testing methods including T-tests, F-test, and Chi-square test
- To teach students to conduct analysis of variance (ANOVA) for comparing means across different groups
- To provide students with skills to perform regression analysis for modelling relationships between variables
- To enable students to utilize advanced data analysis tools like Minitab®, Design Expert®, and MATLAB® for various biological applications

Pre-requisites

- Knowledge on Basic Mathematics, Probability and Statistics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply biostatistical methods for organizing data, computing descriptive measures, and creating statistical visualizations to analyze biological datasets effectively	Apply
CO2	Analyze hypotheses and perform statistical tests such as one-sample T-test, paired sample T-test, F-test, and Chi-square test to evaluate significance and draw conclusions from biological data	Analyze
CO3	Evaluate variance using one-way ANOVA and two-way ANOVA techniques to assess differences between groups and analyze experimental designs effectively	Evaluate
CO4	Create and interpret regression models including single linear regression and multiple linear regression to predict and understand relationships within biological datasets	Create
CO5	Design experiments using tools like Minitab®, Design Expert®, and MATLAB® to optimize experimental conditions, solve systems of ODEs, and interpolate data in biological research	Create

60 BT 7P2	Downstream Processing Laboratory	Category	L	T	P	Credit
		PC	0	0	3	1.5

Objectives

- To acquire knowledge on purification strategies of bioproducts
- To design separation processes for the recovery and purification of bioproducts.
- To provide hands on knowledge on bioproduct concentration and recovery
- To understand the working principle of various unit operations involved in bioseparation
- To demonstrate sequence of downstream processing operations for bioproduct recovery

Pre-requisites

- Unit operations, Fluid mechanics, Heat and Mass transfer Operations, Bioprocess Engineering

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Determine cell disruption kinetics for intracellular release kinetics by ultrasonication and know the principle of solid-liquid separation techniques	Apply
CO2	Execute and verify the adsorption isotherms and understand leaching characteristics	Apply
CO3	Discuss the principle of ammonium sulphate, isoelectric and aqueous two-phase extraction methods for recovery	Apply
CO4	Analyze separation of biomolecules by chromatographic techniques	Analyze
CO5	Demonstrate the operating procedure of freeze dryer and final purification strategies	Apply

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Identify the problem and select a topic of the research.	Apply
CO2	Competence in research design and planning.	Apply
CO3	Create, analyze and critically evaluate different technical solutions.	Apply
CO4	Interpret the obtained research data and conclude the experiment.	Analyze
CO5	Develop skills of project management, report writing, problem solving, communication and interpersonal.	Apply

Semester	Hours/Week			Total Hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
VIII	0	0	16	240	8	60	40	100
Methodology: • Three reviews have to be conducted by the committee that constitutes minimum of three members one of which should be guide. • Research problem should be selected. • Students have to collect and bound about 50 research papers related to their work. • Objectives and title of the work has to be finalized at the end of the Project Work - Phase I. • Preliminary Implementation can be done if possible. • Report has to be prepared as per the format and submitted by the students • Internal evaluation has to be done for 100 marks								

60 CG 0P6	Internship	Category	L	T	P	Credit
		CG	0	0	0	1/2/3 [#]

Objectives

- To expose the students to understand the processes at industry and R&D
- To identify the existing and evolving problems at industry
- To solve the problems at industry and environment need
- To prepare the report of solved problems for further action
- To summarize the data in a presentation mode

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Identify the root cause and problem-solving process	Understand
CO2	Design the experiment from literature survey	Analyze
CO3	Execute and trouble shoot through pilot study	Apply
CO4	Interpret the raw and calculated data to conclude the problem	Apply
CO5	Writing the reports and documenting the data for publication	Analyze

ELECTIVE I

60 BT E11	Bioresource Technology	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To make the students to understand about the bio resource and its sustainable utilization
- To familiarize the bioenergy production methods through cost effective methods
- To understand the role of microorganisms in bioenergy production
- To equip the students to use the resource wisely through advanced technologies
- To facilitate the students to adopt the sophisticated technology for bio resource management

Pre-requisites

- Environmental Biology and Microbiology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explore the different types of bioresources and the roles of bioprospecting, ecotourism and biodiversity policies.	Understand
CO2	Analyze the cell growth and the kinetics of product formation and enzymatic conversions	Apply
CO3	Design a bioreactor for efficient bio-energy production and scaling-up procedures.	Apply
CO4	Interpret and analyze the optimization yield, recycle and minimize the waste generation	Apply
CO5	Elucidate the concepts of activated sludge, digestion, biodegradation and bio filtration.	Apply

60 BT E12	Intellectual Property Rights	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To familiarize graduates with the fundamental concepts, principles, and significance of Intellectual Property Rights (IPR) in various industries and sectors.
- To equip graduates with both technical and legal expertise required to effectively navigate and contribute to the complex field of Intellectual Property Rights
- To deepen graduates' understanding of the unique challenges, ethical considerations, and regulatory frameworks surrounding the patenting of biotechnological innovations
- To enable graduates to utilize and leverage IPR databases effectively for research, patent searches, and analysis
- To educate graduates on biosafety protocols, regulations, and ethical considerations relevant to biotechnological research and development

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Characterize the basic concepts of the types of IPR and their importance.	Apply
CO2	Appraise the knowledge on various organizations involved in IPR maintenance.	Apply
CO3	Categorize on the patent law and procedures for filing a patent	Understand
CO4	Comprehend the various database of IPR.	Apply
CO5	Identify the biological safety cabinets and biosafety guidelines.	Apply

60 BT E13	Cancer Biotechnology	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To impart knowledge on fundamentals of cancer biology.
- To determine the root cause and identifications of various cancer.
- To understand various molecular tools for diagnosis and treatment of cancer.
- To evaluate the origin and metastatic colonization and angiogenesis of cancer.
- To describe the various diagnostic and treatment procedure for the cancer disease.

Pre-requisites

- Basic Knowledge on Cell Biology, Genetics and Molecular Biology.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Describe the cancer, modulation of cell cycle and importance of diets in cancer	Understand
CO2	Illustrate the mechanism of chemical and physical agents causing carcinogenesis	Apply
CO3	Experiment with the importance of DNA damage and cross link repair and activation of kinases.	Apply
CO4	Organize the clinical significance of invasion and heterogeneity of metastatic colonization	Apply
CO5	Identify the various form of diagnostic tools and therapy in cancer research	Apply

1.2	Generations of Biosensors	1
1.3	Basic Principle and Instrumentation of Different Biosensors	2
1.4	Biological Recognition Systems: Enzyme, Antibody, Nucleic Acid, Cell, and Tissue	2
1.5	Properties of Ideal Materials for Biosensors	1
1.6	Classes o Materials for Biosensors	2
2.0	Biological Sensors	
2.1	Study of Biological Sensors in the Human Body	1

2.2	Neuronal Mechanism: Pacinian and it's Functions	1
2.3	Chemoreceptor	1
2.4	Hot and Cold Receptors	1
2.5	Baro Receptors	1
2.6	Sensors for Smell, Sound and Vision	1
2.7	Sensors for Osmolality and Taste	1
2.8	Immune Based Sensors	1
2.9	Enzymatic Sensors	1
3.0	Principles of Transducers	
3.1	Classification of transducers	1
3.2	Characteristics for selection of transducers	1
3.3	Resistive transducers: RTD and Strain Gauge	1
3.4	Thermistor	1
3.5	Working and Construction of Piezoelectric Effect Transducer	1
3.6	Working and Construction of Hall Effect Transducer	2
3.7	Capacitive Transducers	1
3.8	Inductive Transducers	1
4.0	Modern Biosensors in Medical Diagnosis	
4.1	Biocatalysts Based Biosensor	2
4.2	Enzyme Immobilisation	2
4.3	Glucose Biosensor	1
4.4	Bio Affinity Based Biosensor	2
4.5	Microorganism Based Biosensors	1
4.6	Advantages and Limitations of Biosensor	1
5.0	Advancement in Biosensors	
5.1	Fiber Optic Sensors	2
5.2	Introduction of Smart Sensors	1
5.3	Working and its Application of Smart Sensors	1
5.4	Introduction to Lab on a chip	2
5.5	Advantages and Disadvantages of Lab on a chip	1
5.6	Application of eNose	2

1. Ms.K.Abinayaa – abinayaa@ksrct.ac.in

60 BT E15	Genomics and Proteomics	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To know the overview of genome and genetic analysis
- To learn the implication of genome sequencing by learning the techniques
- To impart idea on tools available for proteomic and genomic approaches
- To have wide knowledge on applications of functional genomics and proteomics
- To update the latest development in the field of genetics

Pre-requisites

- Bioinformatics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Acquire knowledge on genome sequence and structure through genetic mapping, analysis and its expression	Understand
CO2	Detail the precise order of nucleotides by sequencing methods and it leads to predict mutations.	Understand
CO3	Analyze the information of gene expression and similarity among protein sequences and mine data from different database.	Apply
CO4	Handle the functional genomics in disease diagnosis and probe the interaction among proteins and ligands.	Apply
CO5	Interpret and analyze the proteins with reference to 2D, IEF, MALDI-TOF and protein mass Fingerprinting	Apply

Mapping with Programme Outcomes

		PE	3	0	0	3

Objectives

- To gain basic knowledge in select various aspects of food processing principles, equipments and food engineering operations in food industries
- To interpret the characteristics of various for preservation techniques
- To recognize and label the role of various agencies applied in food processing
- To gain knowledge in various aspects of Food processing and its importance for industrial applications
- To take up higher studies in the area of Food technology and to become an entrepreneur

Pre-requisites

- Basics of Biology, Microbiology and Biochemistry

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Illustrate the basic concepts of food processing technology and quality improvement.	Apply
CO2	appraise the types of various food processing techniques in milk and milk products.	Apply
CO3	Categorize vegetables, fruits and processing of meat.	Understand
CO4	Comprehend the different operations involved in food conversion.	Apply
CO5	Identify the Sensory evaluation of food quality and various organizations dealing with inspection and food safety standards.	Apply

Elective II

60 BT E21	Bioreactor Design	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To comprehend the basics of bioreactor hydrodynamics and fluid rheology.
- To identify the heat and mass transfer principles in bioreactors
- To recognize the process stability analysis and control of bioreactors
- To study about the scale up methods and mechanical aspects of reactor design.
- To apprehend the applications of bioreactors in various biochemical operations

Pre-requisites

- Basic knowledge in Fluid flow, Heat and Mass transfer, Chemical Reaction Engineering and Bioprocess Engineering

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Comprehend the basics of bioreactors and rheological behavior of culture broth	Understand
CO2	Recognize the significance of heat and mass transfer principles in bioreactor operations	Apply
CO3	Comprehend the criteria for bioreactor analysis and online control of bioreactors	Apply
CO4	Apprehend the bioreactor geometry and challenges in bioreactor scale up	Apply
CO5	Review the bioreactor design and principles in various bioprocessing applications	Apply

Mapping with Programme Outcomes

Objectives

- To learn about Intellectual Property and related Rights.
- To provide knowledge on patent law and patent application process
- To disseminate knowledge on copy right and trade mark registration process
- To learn various database for the search of patent
- To summarize the need for biosafety and their management

Pre-requisites

- NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Review the types of IPR, various conventions for the protection of intellectual property rights.	Understand
CO2	Formulate a patent according to the patent law and procedures for filing a patent.	Understand
CO3	Assess the procedure for applying copy right and trade mark	Apply
CO4	Practice the database for searching the patents	Apply
CO5	Investigate the role of GMOs and LMOs and their risk assessment and management.	Analyze

1.5	The Patent Co-Operation Treaty, 1970, The TRIPS Agreement, 1994.	2
2.0	Patents	
2.1	Patent Law; New Developments in Patent Law	1
2.2	Patent Requirements - Ownership and Transfer	2
2.3	Patentable and Non Patentable Inventions	2
2.4	Patent Application Process and Granting of Patent	2
2.5	Restoration of Lapsed Patent; Surrender and Revocation of Patent - Patent Infringement	2
3.0	Copy Rights and Trade Marks	
3.1	Copy Right; Fundamental of Copy Right Law	1
3.2	Registration Procedure; Terms and Conditions for the Grant of Copy Right	2
3.3	Extent of Rights Exception to Copy Right Protection	1
3.4	Licence of Copyright; Infringement.	2
3.5	Trade Mark - Procedure for Registration of Trademark	2
3.6	Acquisition of Trade Mark Rights; Purpose and Function of Trademarks, Trademark infringement	1
4.0	IPR Database Patent database	
4.1	National, International, Country-Wise Patent Searches (USPTO, EPO),	1
4.2	Patent Scope (WIPO, IPO)	2
4.3	Commercial and Free Patent Databases, Search Tools and Functions	1
4.4	Database for Trademark and Industrial Design	1
4.5	Data Security, Confidentiality, Privacy	2
4.6	International Aspects of Computer and Online Crime.	2
5.0	Bioresource Utilisation	
5.1	Introduction to Biological Safety Cabinets	1
5.2	Primary Containment for Biohazards - Biosafety Levels	2
5.3	Biosafety Levels of Specific Microorganisms	1
5.4	Biosafety Guidelines -Definition of GMOs & LMOs	1
5.5	Roles of Institutional Biosafety Committee	2
5.6	GMO Applications in Food and Agriculture	1
5.7	Environmental release of GMOs - Risk analysis, risk management and communication.	1

Course Designer(s)

1. Dr.S.Sidhra – sidhra@ksrct.ac.in

60 BT E23	Stem Cell Technology	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To familiarize the basic knowledge on embryology and developmental biology.
- To learn the different developmental phases of stem cells and establishment of stem cell banks.
- To develop the skills in the area of stem cell research and its applications.
- To widen the knowledge about the isolation.
- To develop the culturing procedure and applications of stem cells to treat diseases.

Pre-requisites

- Basic Knowledge on Cell Biology and Immunology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Highlight the origin, types, sources, characterization and applications of stemcells.	Understand
CO2	Illuminate the sources, properties and challenges in establishing the human embryonic stem cell banks	Apply
CO3	Interpret the isolation neural stem cells, preparation of complete neuroculture and Immunolabeling procedures.	Apply
CO4	Identify the novel stem cell based gene therapy and genetically engineered stem cells in animal cloning.	Apply
CO5	Validate the role of stem cells in cellular assay, drug discovery and haematopoietic stem cell Transplantation	Apply

60 BT E24	Marine Biotechnology	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To provide the knowledge about the marine diversity
- To know about the marine microbes and the aquatic animals
- To impart the biomedical importance of marine organisms.
- To learn the bioproducts derived from marine biodiversity
- To understand the environmental impacts of the aquatic biotechnology

Pre-requisites

- Biodiversity and its conservation

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Enlighten the different habitats of marine biodiversity and its nutrient requirements.	Understand
CO2	Describe the aquaculture related to artificial insemination, eye stalk ablation, transgenic fish technology and the role of probiotic bacteria in aquaculture.	Understand
CO3	Substantiate the use of bioactive compounds from different marine organisms.	Apply
CO4	Identify the marine sources that produces the biopolymers, biomaterials, antifouling compounds and bio potential use of halophile bacteria.	Apply
CO5	Discuss the bioremediation using microbes, environmental risks and benefits	Apply

60 BT E25	Computational Biology	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To study the basic concepts and role of computation in biology
- To learn about the importance of biological databases and analyze complex biological networks
- To study the principles and algorithms behind sequence alignment methods
- To explain the computational methods for protein structure prediction and Drug design
- To understand the concepts of machine learning tools and its application for biological analysis

Pre-requisites

- Basic knowledge of biology and genetics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Comprehend the basic structure of biological macromolecules	Remember
CO2	Acquire the knowledge of biological databases and its importance	Understand
CO3	Experiment with sequence analysis such as pair wise and multiple sequence alignment	Apply
CO4	Make use of secondary and tertiary structure of proteins for drug design	Apply
CO5	Examine application of the machine learning approaches in computational biology and potential applications in drug discovery	Analyze

60 BT E26	Organic Farming for Sustainable Agriculture	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To impart the principles and importance of organic farming for sustainable agriculture
- To learn about the soil fertility and manures
- To learn the production technology of organic compost and to practice the its design criteria.
- To provide the better understanding about organic standard certificates
- To discuss about the future perspectives of organic farming

Pre-requisites

- Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the principles, various types of farming and the challenges for organic agriculture.	Understand
CO2	Comprehend the various components of soil fertility and the technique manage the soil fertility	Apply
CO3	Exemplify the production of organic compost and the method of its spreading.	Apply
CO4	Comprehend the history and development of organic standards and certification	Apply
CO5	Analyze the future perspective of organic farming for sustainable agriculture	Apply

Elective III

60 BT E31	Translational Biotechnology	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To provide a solid foundation in molecular and cellular biology, genomics, and proteomics
- To introduce the process of translational research and development, including clinical trials and biomarker discovery
- To educate on advanced technologies and tools in translational biotechnology
- To explain the industrial and commercial aspects of biotechnology
- To explore emerging trends and future directions in biotechnology

Pre-requisites

- Basic Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate understanding of molecular biology, genomics, and proteomics in translational biotechnology.	Understand
CO2	Develop skills to design and conduct translational research and clinical trials.	Apply
CO3	Gain proficiency in advanced biotechnological tools and technologies.	Apply
CO4	Acquire knowledge about the biotechnology industry and commercialization processes.	Apply
CO5	Critically analyze and evaluate emerging biotechnological trends and their societal impacts	Apply

Approved in Academic Council Meeting held on 25/05/2024

BOS- Chairman

60 BT E32	Environmental Hazards and Management	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To understand the concepts of environmental hazards and the causative agents
- To differentiate the potential hazards and disaster
- To identify the suitable framework followed by a national and international agency to mitigate the hazards and disasters
- To comprehend the different aspects of technology for reducing and managing the risk
- To create awareness about hazards management

Pre-requisites

- Environment Science

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recite the concepts of environmental hazards and its impact	Understand
CO2	Distinguish the potential role of elements causing health risk	Apply
CO3	Categorize the types of environmental hazards and disasters	Apply
CO4	Express the management and framework of hazards and disaster management	Apply
CO5	Choose the technologies that can be employed in the risk reduction and management	Apply

60 BT E33	Molecular Medicine	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To provide foundational knowledge of the human genome, chromosomes, genes, and genetic engineering techniques.
- To introduce the process of transmission, diagnosis, and genetic counseling of human genetic diseases.
- To educate on molecular mechanisms underlying human diseases, including oncology and infectious agents.
- To explain the molecular signaling pathways and their roles in disease progression.
- To explore advanced diagnostic and therapeutic approaches in the treatment of human diseases, emphasizing personalized medicine.

Pre-requisites

- Basic Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate understanding of the organization of the human genome and genetic engineering techniques.	Understand
CO2	Apply knowledge of molecular diagnostics and genetic counseling in clinical settings.	Apply
CO3	Enlighten the molecular mechanisms of human diseases and their implications for treatment.	Apply
CO4	Analyze molecular signaling pathways and their roles in disease progression.	Apply
CO5	Utilize advanced diagnostic and therapeutic approaches in the treatment of human diseases, emphasizing personalized medicine.	Apply

60 BT E34	Pharmacology and Toxicology	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To introduce the fundamental concepts and processes involved in drug discovery and development, including sources, methodologies, and regulatory frameworks
- To provide foundational knowledge of modern pharmacology, including pharmacogenomics, molecular targets, biopharmaceuticals, nanotechnology, and emerging tools like AI and bioinformatics
- To introduce the fundamental principles of pharmacokinetics, including absorption, distribution, elimination, biotransformation, and toxicokinetic modeling
- To provide basic toxicological understanding of how chemicals affect vital organs, detoxification processes, and their impact on the nervous and endocrine systems
- To introduce various drug screening methods and natural drug sources, along with approaches for concentration optimization and the application of toxicology in research

Pre-requisites

- Biochemistry

Course Outcomes

CO1	Explain the stages of drug development and demonstrate knowledge of preclinical studies, clinical trials, and regulatory compliance.	Understand
CO2	Describe advanced pharmacological concepts, analyze drug targeting and resistance mechanisms, and evaluate modern technologies and ethical considerations in drug research.	Apply
CO3	Entitle how substances move through the body, describe biotransformation processes, and apply basic toxicokinetic models.	Understand
CO4	Describe the effects of chemicals on major organs and communication systems, and distinguish between detoxification and toxification mechanism.	Apply
CO5	Apply different <i>in vitro</i> , <i>in vivo</i> , and <i>in silico</i> drug screening techniques, explain natural drug preparation methods, and apply toxicological principles in research.	Apply

3.0	General Toxicological Principles and Overview of Toxic Substances	
3.1	Introduction to Pharmacokinetics	2
3.2	Absorption of Substances	1
3.3	Distribution of Substances	1
3.4	Elimination of Substances	1
3.5	Toxicokinetic Models, Biotransformation (Metabolism)	2
3.6	Integration of Pharmacokinetics in Drug Development and Toxicology	2
4.0	Toxicity in Specific Target Organs, Effects and Mechanisms	
4.1	Introduction to Toxicology and Organ-Specific Toxicity	2
4.2	Organs Involved in Uptake, Elimination, and Metabolism	2
4.3	Detoxification and Toxicification	1
4.4	Impact of Chemicals on the Nervous System	1
4.5	Impact of Chemicals on the Endocrine System	1
4.6	Integration and Applications in Toxicological Assessment.	2
5.0	Pharmacological and Toxicological application	
5.1	Screening Methods for New Drugs– <i>In vitro</i> , <i>In vivo</i> , and <i>In silico</i> Approaches to Identify Pharmacological Activity	2
5.2	Use of High-Throughput Screening (HTS)	1
5.3	Preparation of Drugs from Plants	1
5.4	Bacteria, Fungus – Drug Concentration	1
5.5	Optimization through <i>In Vitro</i> and <i>In Vivo</i> Studies and Animal Experiments	2
5.6	Application of Toxicology in Research Field.	2

- Ms. Kalaiarasi M S - kalaiarasims@ksrct.ac.in

60 BT E35	Metabolomics and Metabolic Engineering	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To analyze metabolomics' role in systems biology for understanding biological networks
- To understand cellular metabolism fundamentals, including transport and biosynthetic reactions
- To apply material balances and data standards for accurate metabolic analysis
- To evaluate metabolic regulation mechanisms for optimizing cellular processes
- To utilize computational tools for modeling metabolic pathways and flux analysis

Pre-requisites

- Biochemistry, Stoichiometry, Bioprocess / Fermentation Technology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Utilize metabolomics techniques to examine dynamic metabolic networks.	Apply
CO2	Describe cellular metabolism and its regulatory mechanisms.	Understand
CO3	Demonstrate competency in material balances and data analysis.	Apply
CO4	Execute metabolic engineering strategies to enhance bioproduction.	Apply
CO5	Analyze metabolic fluxes using computational methods.	Analyze

60 BT E36	Biotechniques in Crop Improvement	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To develop crops with enhanced resistance to biotic stresses such as pests, diseases, and weeds
- To utilize molecular markers to assess genetic diversity within crop germplasm collections
- To develop biotechnological approaches to increase crop yields through improved genetics
- To widen the knowledge about biotechnological interventions to enhance the productivity of major crops
- To Generate transgenic plants as genetic resources for molecular breeding programs

Pre-requisites

- Biochemistry, Microbiology, Molecular Biology and Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Gain a comprehensive understanding of the molecular mechanisms underlying plant resistance to pests and diseases.	Understand
CO2	Summarize the understanding of molecular markers to select appropriate marker systems for specific crop improvement objectives.	Understand
CO3	Demonstrate the ability to construct genetic linkage maps using molecular markers and various mapping populations.	Apply
CO4	Apply interdisciplinary approaches, integrating knowledge from fields such as genetics, agronomy.	Apply
CO5	Utilize their comprehension of genetic engineering principles to devise and assemble transgenes	Apply

Elective IV

60 BT E41	Fermentation Technology	Category	L	T	P	Credit
		PE	2	0	2	3

Objectives

- To define fermentation methods and their application in industry
- To identify techniques for primary metabolite recovery from fermentation
- To explain the mechanism and optimization of secondary metabolite production
- To analyze growth kinetics and microbial transformations in fermentation
- To evaluate modern fermentation technologies and their applications

Pre-requisites

- Microbiology, Stoichiometry

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Comprehend the fundamental principles and methods of industrial fermentation.	Understand
CO2	Apply product recovery techniques such as centrifugation, filtration, and chromatography to isolate primary metabolites.	Apply
CO3	Evaluate the production mechanisms of secondary metabolites, including antibiotics and vitamins.	Evaluate
CO4	Analyze growth kinetics in different fermentation processes (batch, fed-batch, continuous) .	Analyze
CO5	Analyze the role of fermentation technology in producing chemicals, pharmaceuticals.	Analyze

Introduction to Fermentation Technology* Introduction to Industrial Fermentation - Substrates in Fermentation - Fermentation Methods: Batch, Fed Batch, Continuous - Stages of Fermentation - Fermentation Medium - Microorganism Isolation and Screening: Primary and Secondary.								[6]
Production and Recovery of Primary Metabolites** Product Recovery Techniques: Centrifugation, Filtration, Chromatography, Sedimentation – Fermentation-Derived Primary Metabolites: Ethanol, Acetone, Organic Acids, Amino Acids - Yield Calculations.								[6]
Production of Secondary Metabolites and Process Optimization*** Mechanism of Secondary Metabolite Production - Antibiotics: Chloramphenicol or any other Macrolide - Vitamins: Vitamin B12, Riboflavin - Role of Metabolic Engineering in Process Improvement.								[6]
Growth Kinetics and Microbial Transformation** Growth Kinetics - Batch, Fed-Batch and Continuous Fermentation - Microbial Transformation: Types, Applications, Procedures - Single Cell Protein (SCP): Spirulina, Yeast Production.								[6]
Modern Fermentation Technology* Chemicals and Pharmaceuticals from Fermentation - Fermented Food Products - Genetically Modified Organisms (GMOs) – Precision Fermentation - Future of Fermentation Technology.								[6]
Practical: 1. Measurement of cell biomass concentration by cell dry weight method 2. Determination of specific growth rate and specific substrate utilization rate 3. Determination of growth kinetics at various substrate concentration 4. Batch operation in a bioreactor to study bacterial growth kinetics 5. Bioprocess media optimization techniques – Plackett Burman design 6. Bioprocess media optimization techniques – Response surface methodology 7. Designing, modelling and simulation of batch reactor data 8. Demonstration of SuperPro Designer software Tools used: MATLAB / SuperPro Designer / Minitab / Design Expert softwares								[30]

60 BT E42	Clinical Trials and Health Care Policies in Biotechnology	Category	L	T	P	Credit
		PE	2	0	2	3

Objectives

- To understand the basic requirements in clinical research
- To highlight the epidemiologic methods, study design, protocol preparation and gain knowledge in the basic bio-statistical techniques involved in clinical research
- To describe the principles involved in ethical, legal and regulatory issues in clinical trial
- To gain knowledge in the basic of the health care system
- To describe health care policies and planning

Pre-requisites

- Molecular biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate proficiency in handling and managing documentation related to clinical trials, including protocols, informed consent forms, and regulatory submissions.	Understand
CO2	Implement safety monitoring strategies in clinical trials to ensure the welfare and safety of participants, including adverse event reporting and risk management protocols.	Apply
CO3	Comply with regulatory requirements and guidelines for the preparation, maintenance, and documentation of clinical trial-related documents to ensure adherence to Good Clinical Practice (GCP) standards	Apply
CO4	Analyze the production of medical services within the healthcare system, including factors influencing the supply and distribution of healthcare providers, technologies, and facilities.	Analyze
CO5	Apply knowledge of health care policies to critically assess current issues, trends, and debates in healthcare delivery and financing.	Apply

*SDG 3 - Good Health and Well-being

Course Contents and Lecture Schedule		
S. No.	Topics	No. of Hours
1.0	Requirements in Clinical Research	

1.1	Good Clinical Practice (ICH GCP E6)	1
1.2	Clinical Trial Materials- Documentation	1
1.3	Clinical Trial Materials- Investigational drugs	2
1.4	Clinical Trial Materials- logistical Materials	1
1.5	NDCT 2019, Indian Regulatory Relevance	1
2.0	Types and Designs in Clinical Research and Safety Monitoring in Clinical Trials	
2.1	Types of Research Designs Based on Controlling Method (Experimental and Quasi Experimental, Observational Methods))	1
2.2	Randomization Techniques (Simple Randomization, Restricted Randomization, Blocking Method and Stratification)	1
2.3	Time Sequences (Prospective and Retrospective),	1
2.4	Sampling Methods (Cohort Study and Case Control Study, Cross Sectional Study)	1
2.5	Health Outcome Measures (Clinical , Physiological, Humanistic and Economic).	2
3.0	Clinical Trial Study and Governing Regulations	
3.1	Roles and Responsibilities of: Investigator, Study Coordinator	1
3.2	Sponsor, Monitor, Contract Research Organization	1
3.3	Site Management Organizations Guidelines to the Preparation of Following Documents: Protocol	1
3.4	Investigator's Brochure, Informed Consent Form, Case Report Forms, Contracts and Agreements	1
3.5	Trial Master File Preparation and Maintenance, Investigator Site File, Pharmacy File, Dairy Cards	1
3.6	Audit Preparedness, Mock Inspections and Indian Ethics Committee Processes.	1
4.0	Overview to Understanding the Healthcare System	
4.1	Health Care System Components	1
4.2	Elements of a Health Care System	1
4.3	The Role and Financing Methods of Third-Party Payers	1
4.4	The Production of Medical Services	1
4.5	An Overview of Clinical Trial Documentation and Data Handling	1
4.6	Excel-Based CRF Filling, Basic Analysis	1
5.0	Health Care Policies	
5.1	Health Care Policy- Overview	1
5.2	Private Health Care Sectors	1
5.3	Health Policy and Planning	1
5.4	Government Health Insurance Programs: Medicaid, CHIP, Medicare	1
5.5	Health care Quality and the Law	1
5.6	Ayushman Bharat, Budget Impact Assessment, Indian Law Highlights	1
Practical:		
1.	Drafting a Clinical Trial Protocol	4
2.	Preparing Informed Consent Form	4
3.	Randomization using Excel or Online Tools	4
4.	CRF Format Creation and Mock Data Entry using Excel	4
5.	Data Analysis using Excel (Mean, Charts, Chi-Square)	4
6.	ICER Model using Excel Formulas	4
7.	Mock Ethics Committee Submission	4
8.	Policy Proposal Drafting (Case-Based)	2

Passed in BoS Meeting held on 21/05/2024
Approved in Academic Council Meeting held on 25/05/2024

BOS- Chairman

60 BT E43	Human Epigenetics	Category	L	T	P	Credit
		PE	2	0	2	3

Objectives

- To learn inheritance patterns of genes
- To get clear idea about sex determination
- To have knowledge about extra chromosomal inheritance
- To understand the genetic mapping
- To learn chromosomal abnormalities

Pre-requisites

- Molecular Biology, Cell Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Comprehend inheritance patterns, can predict the likelihood of certain traits or disorders appearing in offspring and make informed decisions about genetic counselling or medical interventions.	Understand
CO2	Recognize sex determination helps explain the biological basis of sexual dimorphism and can provide insights into reproductive biology and medical conditions related to sex development.	Understand
CO3	Awareness of extra chromosomal inheritance helps explain the inheritance patterns of certain traits, such as mitochondrial disorders, and provides insights into cellular biology and evolution.	Apply
CO4	Analyze the genes involved and their locations on chromosomes. This information can lead to the development of targeted therapies and diagnostic tests.	Analyze
CO5	Considerate the abnormalities helps diagnose genetic disorders, predict their outcomes, and guide medical management and genetic counselling.	Apply

Mendelian Genetics and Extensions* Physical basis of Heredity – Structure and Function of Cell, Nucleus and Chromosome Mendelian Principles of Inheritance – Law of Segregation, Law of Dominance, Law of Independent Assortment – Animal Examples; Mendelian Inheritance of Human Traits; Chromosome Theory of Inheritance. Incomplete Dominance and Co dominance; Multiple Alleles, Lethal Alleles - Human examples- Hardy-weinberg equilibrium.								[6]
Sex Linked inheritance and Sex Determination Sex Linked Inheritance - Sex Linked Inheritance in Drosophila and Human; Sex Limited and Sex Influenced Inheritance with examples. Sex Determination - Sex Determination in Drosophila – Genic Balance Theory. Sex Determination in Eukaryotes – Heterogametic, Homogametic, Haplo-diploidy, Role of Environmental Factors, Mosaics. Sex determination in mammals- and role of human Y chromosome, Dosage compensation.								[6]
Extra-Chromosomal Inheritance Mitochondrial inheritance (petite mutations); Mitochondrial Inheritance in Man; Maternal Inheritance - Shell Coiling in Snail, Ephestia Pigmentation - Infective Heredity- Symbionts in Drosophila, Kappa Particles in Paramecium - Epigenetics and Genome Imprinting in Humans.								[6]
Linkage, crossing over and chromosome mapping* Linkage, Crossing Over and Recombination - CRISPR technique. Linkage and Chromosome Mapping in Eukaryotes – Cytological Basis of Crossing Over; Recombination Frequency, Two Factor and Three Factor Crosses; Interference and Coincidence; Mitotic Recombination - Linkage and Chromosome Mapping in Prokaryotes – Bacteria and Bacteriophages – Transformation, Transduction, Conjugation; Gene Mapping in Bacteria. Techniques for characterization of phenotypes associated with human genetic diseases.								[6]
Variation in Chromosome number and structure Specialized chromosomes - Lamp brush chromosomes. Polygene Chromosomes: Supernumerary Chromosomes. Variation in Chromosome Structure - Deletion, Duplication, Inversion, Translocation; Position effect - Variation in Chromosome Number - Euploidy and Aneuploidy in Man.								[6]
Practical: 1. Mitosis & Meiosis through temporary squash preparation 2. Mendel's laws through seed ratios & Drosophila mutants 3. Study of linkage, recombination, chromosome mapping using test cross data 4. Study of human genetic traits: Sickle cell anaemia, Xeroderma Pigmentosum, Albinism. Tests for red-green Colour blindness, Widow's peak, Rolling of tongue, Hitchhiker's thumb and Attached ear lobe 5. Incomplete dominance and gene interaction through seed ratios 6. Blood Typing: ABO groups & Rh factor 7. Case Study of aneuploidy: Down's, Klinefelter's and Turner's syndromes 8. Smear technique to demonstrate sex chromatin in buccal epithelial cells								[30]

60 BT E44	Nanobiotechnology	Category	L	T	P	Credit
		PE	2	0	2	3

Objectives

- To develop the fundamental understanding about nano molecules in biological systems.
- To learn about the various nano particles and methods to prepare it.
- To analyze the different techniques to characterize the nano materials.
- To widen the knowledge about the applications of nano particles in environment and pollution control system.
- To identify the application of nano materials in medical field.

Pre-requisites

- Chemistry, Bioinformatics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recall the basic concepts, systems and synthesis of different types of nano particles	Understand
CO2	Classify the methods for the preparation of nano scale materials and its characterization	Understand
CO3	Identify the mechanism and role of biomolecules as nano materials.	Apply
CO4	Analyze the application of transducing elements in bionanotechnology and understand the mechanism of nanomaterials as drug delivery systems.	Analyze
CO5	Analyze the importance of nanotechnology for human health, environmental remediation, waste water treatment and food industry.	Analyze

60 BT E45	Next Generation Sequencing and Data Analysis	Category	L	T	P	Credit
		PE	2	0	2	3

Objectives

- To identify the different NGS technologies in the market
- To evaluate the main variables that influence the design of a sequencing project
- To differentiate between a good and a bad data set
- To describe the different workflows in the analysis of NGS data
- To interpret the results from the different NGS applications

Pre-requisites

- Biochemistry, Molecular Biology and Bioinformatics concepts

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Describe the step-by-step process to analyze the data generated by NGS platforms along with relevant hands-on experience.	Apply
CO2	Analysis single nucleotide polymorphisms (snps) and indels.	Apply
CO3	Describe the complexities involved in the analysis of transcriptomic data in details.	Apply
CO4	An overview of other applications of the NGS technologies - genome assembly and epigenomics.	Apply
CO5	Comprehend the concepts of Big Data And High Performance Computing In Omics	Analyze

2.1	<i>de novo</i> Assembly: Overlap-Layout-Consensus (OLC) Approach (Arachne, Phusion)	1
2.2	De Bruijn And Euler Path Approach (Euler, Soapdenovo)	1
2.3	String Graph Assembler (SGA)	1
2.4	Scaffolding: Supercontig	1
2.5	Contig Orientation, Contig Ordering, Contig Distancing	1
2.6	Gap Closing Using SOAPdenovo, ABySS, OPERA and RACA	1
3.0	R Package in NGS Analysis	
3.1	Application of R in NGS analysis	1
3.2	Introduction to Bioconductor, Reading of RNA-seq Data (ShortRead)	1
3.3	Rsamtools, GenomicRanges	1
3.4	Annotation (biomaRt, genomeIntervals)	1
3.5	Reads Coverage and Assign Counts (IRanges, GenomicFeatures)	1
3.6	Differential Expression (DESeq)	1
4.0	Applications of NGS	
4.1	Biological Applications of NGS	1
4.2	Whole-Genome Sequencing	1
4.3	Exome Sequencing	1
4.4	Transcriptome Sequencing	1
4.5	Epigenome, Interactome Sequencing	1
4.6	Methylome Sequencing	1
5.0	BIG Data and High Performance Computing in OMICS	
5.1	BIG DATA in OMICS:Big Data Industry Standards	1
5.2	Data Acquisition, Cleaning, Distribution	1
5.3	Best Practices, Visualization and Design Principles of Big Data	1
5.4	Infrastructures, Biological databases for Big Data Management	1
5.5	High Performance Computing, Grid, Cloud Computing for Omics Sciences.	2
Practical:		
1.	Apply Bioinformatics Tools and Platforms for Integrating and Accessing Multiple Biological Databases	4
2.	Bioinformatics Tools and Platforms used for Integrating and Accessing Multiple Biological Databases	4
3.	Perform Quality Control on Raw NGS Data and Describe the Key Metrics you Would Evaluate.	4

4.	Perform GATK Tool For Variant Calling, and Analyze the Results.	4
5.	Execute RNA-Seq Analysis from Raw Data to Analyze Differential Expression Analysis	4
6.	Using Bioconductor / R Package Perform Genomic Features for the Raw Sequence	4
7.	Perform Pre-Processing for the <i>de novo</i> Genome Assembly Sequence	2
8.	Analyze Error Correction for the <i>de novo</i> Genome Assembly Sequence	2
9.	Perform Scaffolding in Genome Assembly for the Raw Sequence	2

1. Dr.Puniethaa Prabhu - punithaa@ksrct.ac.in

60 BT E46	Agricultural Biotechnology	Category	L	T	P	Credit
		PE	2	0	2	3

Objectives

- To learn the basic concepts in the current practices of Agronomy
- To discuss the importance of agricultural structures and irrigation methods
- To understand the plant tissue culture techniques
- To facilitate the knowledge and mechanism involved in transgenic plants
- To elaborate the applications of agricultural biotechnology

Pre-requisites

- Agricultural engineering and Plant Biotechnology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Determine the principles of agronomy for managing the environmental impact of agriculture and tilth practices.	Understand
CO2	Outline the design and construction of farm shed, fences and canals, pipeline systems to moderate depression created to channel water.	Remember
CO3	Elaborate the techniques involved in plant tissue cultures.	Apply
CO4	Examine the different methods of creating transgenic plants and its ethical implications.	Analyze
CO5	Critically evaluate the applications of agricultural biotechnology in greenhouse construction, biofertilizer production, and biocontrol agent development.	Evaluate

ELECTIVE V

60 BT E51	Bioprocess Modelling and Simulation	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- Understand Process Design Principles.
- Comprehend physical and mathematical modelling concepts.
- Apply Kinetics and Reactor Modelling.
- Develop Mathematical Models for Fermentation.
- Identify models from experimental data and apply numerical techniques for model solution.

Pre-requisites

- Stoichiometry, Bioprocess Technology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize process synthesis and design strategies using optimization techniques.	Understand
CO2	Formulate mathematical models incorporating physical and cybernetic principles.	Apply
CO3	Evaluate kinetics and reactor behaviour applying Michaelis-Menten and Monod models.	Apply
CO4	Interpret fermentation processes, considering kinetics, stoichiometry, and physiological aspects.	Analyze
CO5	Apply numerical techniques to identify, formulate, and solve bioprocess models accurately.	Apply

1. Dr.S.Poornima - spoornima@ksrct.ac.in

60 BT E52	Regulatory Affairs in Biotechnology	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To introduce QA and QC, stressing CGMP and environmental controls' significance in biological products manufacturing
- To explain IND, NDA, and ANDA submission processes, with an overview of DPCO and its implications
- To provide insights into Drugs and Cosmetics Act, 1940, and Rules, 1945, and pertinent safety and clinical efficacy guidelines
- To introduce validation concepts and types in biological products manufacturing, detailing its importance and procedural steps
- To explain industrial safety principles, risk management, and diverse accreditation processes in the biotechnology sector

Pre-requisites

- Microbiology
- Biochemistry
- Fundamentals of Biotechnology
- Basic laboratory practices and biosafety concepts
- Biopharmaceutical Technology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explain fundamental principles of QA, QC, and cGMP in biological manufacturing	Understand
CO2	Apply biosafety, in-process control, and validation procedures in laboratory practices	Apply
CO3	Analyze regulatory frameworks, submission processes, and compliance case studies.	Analyze
CO4	Evaluate digital compliance, audit readiness, and industrial safety measures.	Evaluate
CO5	Integrate knowledge of regulatory, legal, validation, and quality practices to ensure compliance in biological product manufacturing.	Evaluate

60 BT E53	Biomedical Instrumentation	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To learn about the instrumental analysis of human physiology and anatomy.
- To familiarize about the various electrical and non-electrical measurements aids
- To identify the applications of chemicals in the synthesis of implant materials.
- To understand the concepts of imaging in diagnosis and monitoring effectiveness of the treatments.
- To acquire knowledge on the existing life assisting and robotic devices.

Pre-requisites

- Basic Physics, Anatomy and Physiology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the basic bio-potential and biomechanical rhythm of human physiology with its characteristics	Understand
CO2	Quantify the electrical parameters measurement in correlation to the instruments and the role of physiological signals and transducers	Understand
CO3	Identify the role of non-electrical parameters measurement in correlation to the human physiology	Apply
CO4	Study various biomaterials for various biomedical applications	Apply
CO5	Examine and interpret the imaging equipment principles and output signals	Apply

* SDG 3 – Good Health and Well Being

** SDG 9 – Industry Innovation and Infrastructure

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	Basic Electro-Physiology and Biomechanics of Human System	
1.1	Electrical Potentials in the Human Body and the Origin of Bio-mechanics	1
1.2	Neuromuscular System	1

1.3	Neurons-Synapses and Muscles	1
1.4	Electrical Properties of Nerves and Muscles	1
1.5	Basic components of a Biomedical System	1
1.6	Cardiovascular systems	1
1.7	Respiratory systems -Kidney and Blood Flow	1
1.8	Biomechanics of Bone - Biomechanics of Soft Tissues	1
1.9	Basic Mechanics of Spinal Column and Limbs.	1
2.0	Electrical Parameter Measurements	
2.1	Basic Mechanisms and Principles of Biomedical/ Biosensors and Biopotential Amplifiers	1
2.2	Bio-potential Electrodes- Biological Amplifiers- ECG, EEG, EMG, ERG	2
2.3	Lead Systems and Recording Methods	1
2.4	Typical Waveforms and Signal Characteristics	1
2.5	Physiological Signals and Transducers	1
2.6	Transducers – Selection Criteria – Piezo electric	1
2.7	Ultrasonic Transducers - Temperature Measurements	1
2.8	Fibre Optic Temperature Sensors.	1
3.0	Non-electrical Parameter Measurements	
3.1	Measurement of Blood Pressure	1
3.2	Cardiac Output- Heart Rate and Heart Sound	1
3.3	Pulmonary Function Measurement	1
3.4	Spirometer- Photo Plethysmography and Body Plethysmography	2
3.5	Blood Gas Analyzers	1
3.6	pH of Blood: Measurement of Blood pCO ₂ , pO ₂ ,	1
3.7	Finger- Tip oxymeter - ESR, GSR Measurements.	2
4.0	Biomaterials	
4.1	Definition and Classification of Bio-Materials	1
4.2	Wound Healing Process- Body Response to Implants- Blood Compatibility	1
4.3	Implant Materials: Metallic Implant Materials	1
4.4	Polymeric Implant Materials	1
4.5	Polymerization- Polyamides- Acrylic Polymers- Rubbers	1
4.6	Bio polymers: Collagen and Elastin	1
4.7	Medical Textiles	1
4.8	Silica- Chitosan- PLA Composites	1
4.9	Sutures and Wound Dressings	1
4.10	Biocompatibility Testing of Medical Devices (ISO Standard 10993)	1
5.0	Diagnostic Imaging and Therapeutic Devices	
5.1	Ionizing Radiation- Diagnostic x-ray Equipment	1
5.2	Use of Radio Isotope in Diagnosis- Medical Image Modalities	1
5.3	MRI, PET, SPECT and CT	1
5.4	Endoscopy- Bronchoscope- Gastro Scope- Colonoscope – Ultrasonography –Thermography	2
5.5	Different Types of Biotelemetry Systems and Patient Monitoring System	1
5.6	Therapeutic Devices: Pacemakers	1
5.7	Defibrillators- Hearing Aids- Heart lung Machine ECMO- Ventilators- Diathermy- Dialysers- Lithotripsy	1
5.8	Nano Robots: Surgery- 3D Surgical Techniques and Orthopedic Prostheses Fixation	1

Course Designer(s)

1. Dr. Swathy J S - swathy@ksrct.ac.in

60 BT E54	Biomaterials	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- Recognize the fundamental principles of biomaterials science and the concept of biocompatibility.
- Identify and describe the physical, chemical, and biological properties of metals, polymers, ceramics, and composites.
- Explain the mechanical, tribological, and physical properties of biomaterials and their clinical significance.
- Describe the interactions between biomaterials and blood components, cells, and tissues, including relevant assays.
- Summarize the degradation processes and toxicological aspects of biomaterials in biological environments and their medical applications.

Pre-requisites

- Basics of Biology, Microbiology and Biochemistry

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Sketch the key concepts of biomaterials science and explain the importance of biocompatibility in medical use.	Understand
CO2	Classify different biomaterials and describe their physical, chemical, and biological properties.	Understand
CO3	Enlighten mechanical and tribological properties like elasticity, toughness, and wear resistance of biomaterials.	Understand
CO4	Designate interactions between biomaterials and biological systems and explain relevant assay methods.	Apply
CO5	Deliberate degradation mechanisms, toxicity, and various medical applications like cardiovascular devices and drug delivery systems.	Analyze

1. Dr.S.Poornima - spoornima@ksrct.ac.in

60 BT E55	Systems Biology	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To provide foundational knowledge in phylogenetic analysis, including methods and models.
- To teach methods and techniques for performing parsimony analysis and optimization alignment.
- To introduce traditional and advanced techniques for analyzing large phylogenetic data sets.
- To educate on partitioning and evaluating multiple datasets in phylogenetic analysis.
- To explore comparative phylogenomics, including genome databases and evolutionary analysis techniques.

Pre-requisites

- Basic Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate proficiency in phylogenetic analysis methods and tree construction.	Understand
CO2	Apply parsimony analysis techniques effectively in phylogenetic studies.	Understand
CO3	Explain large phylogenetic data sets using various traditional and advanced techniques.	Understand
CO4	Evaluate and partition multiple datasets in phylogenetic analysis.	Apply
CO5	Perform comparative phylogenomic analysis using complex genome databases and bioinformatics tools.	Analyze

60 BT E56	Biodiversity and its Conservation	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To develop the knowledge of students in Biodiversity and its management
- To widen the knowledge about the sustainable utilization of natural resources
- To understand the regulatory authorities and their role about Biodiversity and its conservation
- To recognize the threats to the Biodiversity.
- To distinguish the roles and responsibilities of the regulatory authorities in Biodiversity and its conservation

Pre-requisites

- Environmental Science, Plant and Animal Biotechnology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Summarize the concepts and types of Biodiversity and its management.	Understand
CO2	Annotate the losses and methods of estimating biodiversity loss.	Understand
CO3	Analyze the significance of bioresources and aesthetic use biodiversity.	Apply
CO4	Examine the various methods used conservation of biodiversity	Apply
CO5	Categorize the sustainable management and conservation of Biodiversity.	Apply

60 BT E57	Crop Production Technology	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To introduce the students to principles of agricultural and horticultural crop production
- To understand the crop selection and establishment procedures
- To learn about the different management practices during crop establishment and growth
- To introduce the production practices of agricultural and horticultural crops
- To delineate the role of agricultural engineers in relation to various crop production practices

Pre-requisites

- Basic Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Extend the knowledge on basic principles of crop production.	Understand
CO2	Identify suitable crops and decide upon its establishment procedures.	Understand
CO3	Express the knowledge on the different crop management practices.	Apply
CO4	Discuss about the area of production of agricultural and horticultural crops.	Apply
CO5	Discriminate their role in relation to various crop production practices.	Apply

1.2	Geographical Distribution of Crops and Cropping Systems	1
1.3	Economic Importance- Cereals, Pulses	2
1.4	Oilseeds, Fiber Crops	2
1.5	Forage Crops, Medicinal	2
1.6	Aromatic Crops and Horticultural Crops	1

2.0	Crop Selection and Establishment	
2.1	Regional and Seasonal Selection of Crops	1
2.2	Systems of Crop Production; Competition among Crop Plants	2
2.3	Field Preparation for Crops Including Systems of Tillage	2
2.4	Establishment of an Adequate Crop Stand and Ground Cover	3
2.5	Including Selection and Treatment of Seed and Nursery Growing	1
3.0	Crop Management	
3.1	Crop Water Management; Crop Nutrition Management	1
3.2	Need for Supplementation to Soil Supplied Nutrients, Sources	2
3.3	Generalized Recommendations, Methods and Timing of Application of Supplemental Nutrients Including Fertigation Scheduling	2
3.4	Crop Protection Including Management of Weeds, Pests and Pathogens	1
3.5	Integrated Methods of Managing Water	1
3.6	Nutrients and Plant Protection	1
3.7	Types and Methods of Harvest	1
4.0	Production Practices of Agricultural Crops	
4.1	Generalized Management and Cultivation Practices for Important Groups of Field Crops in Tamilnadu	1
4.2	Cereal Crops, Grain Legumes	3
4.3	Oil Seed Crops, Sugarcane	3
4.4	Fiber Crops and Special Purpose Crops such as those Grown for Green Manure and Fodder	2
5.0	Production Practices of Horticultural Crops	
5.1	Important Groups of Horticultural Crops in Tamil Nadu Such as Vegetable Crops	1
5.2	Flower Crops	2
5.3	Cultivation Practices of Representatives of Each Group	2
5.4	Special Features of Production of Horticultural Crops	2
5.5	Green House Cultivation	2

1. Dr.M.Nithya - nithyam@ksrct.ac.in

OPEN ELECTIVE

60 BT L01	Agricultural Engineering	Category	L	T	P	Credit
		OE	3	0	0	3

Objectives

- To learn the basic concepts in the current practices of Agronomy.
- To discuss the importance of agricultural structures and irrigation methods.
- To understand the post-harvest procedures for the improvement of marketing strategy.
- To facilitate the knowledge for Post-harvest technology development
- To empower the students to become agro pruners.

Pre-requisites

- Physics, Chemistry, and Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Determine the principles of agronomy for managing the environmental impact of agriculture and till practices.	Understand
CO2	Comprehend the design and construction of farm shed, fences and structures for plant environment	Apply
CO3	Elaborate the design and construction of canals, pipeline systems to moderate depression created to channelwater.	Apply
CO4	Clarify the concept of designing, operation and testing of various machines used in post harvesting and storagepractices..	Apply
CO5	Design the industrial oriented agro products production plant and project report preparation	Apply

61 BT L02	Animal Studies in Research	Category	L	T	P	Credit
		OE	3	0	0	3

Objectives

- To understand the functional food concept as related to ingredient efficacy and its nutraceutical properties.
- To widen the knowledge on role of food in disease management.
- To provide basic concepts on clinical trials.
- To Familiarize the principles of pharmacological research.
- To extent scientific knowledge on the regulations for animal research

Pre-requisites

- Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Designate the components of functional foods and nutraceuticals	Understand
CO2	Assess the functions of food in preventing and managing diseases.	Understand
CO3	Interpret the understandings on toxicology and different animals used in preclinical testing	Apply
CO4	Analyze the pharmacological parameters and management of laboratory animals.	Apply
CO5	Provide understanding on regulations for the usage of animals in research	Apply

61 BT L03	Production Technology of Agricultural and Food Processing Machinery	Category	L	T	P	Credit
		OE	3	0	0	3

Objectives

- To improve the level of understanding of agriculture and food processing machinery
- To help the agriculture farmers for selecting the appropriate machinery based on crops
- To know the various bakery products and its importance in machinery planning
- To enhance the knowledge of modern machinery in fruits and vegetable set up
- To apply the modern packing solution for various industry needs

Pre-requisites

- Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Employ the different production tools involved in the agriculture and food processing machinery	Understand
CO2	Analyze the different machinery involved in post harvest processing set up	Understand
CO3	Interpret the strategy of planning of different machinery for bakery products	Apply
CO4	Enhance the knowledge of machinery involved in fruits and vegetable processing	Apply
CO5	Recall the modern technology involved in food packing machinery	Apply

60 BT L05	Organic Farming for Sustainable Agriculture	Category	L	T	P	Credit
		OE	3	0	0	3

Objectives

- To impart the principles and importance of organic farming for sustainable agriculture
- To learn about the soil fertility and manures
- To learn the production technology of organic compost and to practice the its design criteria.
- To provide the better understanding about organic standard certificates
- To discuss about the future perspectives of organic farming

Pre-requisites

- Biology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Comprehend the principles, various types of farming and the challenges for organic agriculture.	Understand
CO2	Comprehend the various components of soil fertility and the techniques to man the soil fertility	Understand
CO3	Exemplify the production of organic compost and the method of its spreading.	Apply
CO4	Recognize the history and development of organic standards and certification	Apply
CO5	Analyze the future perspective of organic farming for sustainable agriculture	Analyze

IV/ V/ VI	3	0	0	45	3	40	60	100
Overview of Organic Farming Origin and Principles for Organic Farming - Indian Agriculture Before the Green Revolution - Green Revolution - Impact of Green Revolution on the Environment - Types of Farming: Pure Organic, Integrated and Mixed Farming System - Needs and Challenges for Organic Agriculture- Key Indicators of Sustainable Agriculture.								[9]
Soil Fertility and Production of Organic Compost* Components of Soil Fertility - Physical, Chemical and Biological - Managing Soil Fertility in Organic Farming Systems - Organic Manures: Farmyard, Compost Sheep and Goat, Poultry, Oil-Cakes, Sewage, Sludge and Sullage Manure. Composting - Importance of Composting - Method of Spreading Compost - Microbes Involved in Composting - Design Criteria - Rate and Time of Application - Kinetics of Composting - Type and Amount of Compost - Practical Method of Making Compost.								[9]
Sustainable Agriculture SWOT Analysis of Organic Farming- Sustainable Agriculture- Key Indicators of Sustainable Agriculture- Organic Farming and Climate Change								[9]
Organic Standards and Certification History and Development of Organic Standards and Certification - Organic Standards Setting Processes - Conformity Assessment Processes (International Verification Processes) - Key Challenges for the Future of Organic Regulation.								[9]
Perspectives of Organic Farming** Economic Management in Organic Agriculture - Understanding the Market for Organic Food-Supply Chain Management — Social Responsibility in Organic Agriculture: Learning, Collaboration and Regulation - Organic Fertilizer:Supplementary Nutrient Source for Rice, Sugarcane, Sorghum and Banana - Marketing of Organic Products- Pest Management								[9]
Total Hours:								45
Text Book(s):

Course Content and Lecture Schedule

S.No	Topic	No. of Hours
1	Overview of Organic Farming	
1.1	Origin and Principles of Organic Farming - Indian Agriculture before the Green Revolution	2
1.2	The Green Revolution - Impact of Green Revolution on the Environment	2
1.3	Types of Farming: Pure Organic, Integrated and Mixed Farming System	2
1.4	Needs and Challenges for Organic Agriculture	1
1.5	Key Indicators of Sustainable Agriculture.	1

2	Soil Fertility and Production of Organic Compost	
2.1	Components of Soil Fertility - Physical, Chemical and Biological	1
2.2	Managing Soil Fertility in Organic Farming Systems	1
2.3	Organic Manures: Farmyard, Compost Sheep And Goat, Poultry, Oil-Cakes, Sewage, Sludge and Sullage Manure.	2
2.4	Composting - Importance of Composting - Method of Spreading Compost	1
2.5	Microbes Involved in Composting - Design Criteria - Rate and Time of Application	2
2.6	Kinetics Of Composting - Type and Amount of Compost	1
2.7	Practical Method of Making Compost.	2
3	Sustainable Agriculture	
3.1	SWOT Analysis of Organic Farming	2
3.2	Sustainable Agriculture	2
3.3	Key Indicators of Sustainable Agriculture	2
3.4	Organic Farming and Climate Change	3
4	Organic Standards and Certification	
4.1	History and Development of Organic Standards and Certification	2
4.2	Organic Standards Setting Processes	2
4.3	Conformity Assessment Processes (International Verification Processes)	2
4.4	Key Challenges for The Future of Organic Regulation	2
5	Perspectives of Organic Farming	
5.1	Economic Management in Organic Agriculture	1
5.2	Understanding the Market for Organic Food-Supply Chain Management	2
5.3	Social Responsibility in Organic Agriculture: Learning, Collaboration and Regulation	2
5.4	Organic Fertilizer	1
5.5	Supplementary Nutrient Source for Rice, Sugarcane, Sorghum and Banana	2
5.6	Marketing of Organic Products	2
5.7	Pest Management	2

60 BT L06	Basics of Bioinformatics	Category	L	T	P	Credit
		OE	3	0	0	3

Objectives

- To develop inter disciplinary skills in the application of computers in biotechnology and learn about the biological data
- To learn about the bioinformatics databases, databanks, data format of Biological databases
- To understand the concept of data processing and data retrieval from the online sources
- To analyze the optimal alignment using methods of sequence analysis
- To acquire the applications and scope of in-silico biology

Pre-requisites

- Biology/ Computer Science

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Get acquainted with biological data acquisition methods and file formats	Understand
CO2	Recite various biological primary databases, secondary databases and different sequence file formats	Understand
CO3	Characterize the optimal alignment of sequences either by local or global algorithm	Apply
CO4	Designate the methods involved in pairwise and Multiple sequence alignment and analysis the conserved regions	Apply
CO5	Recognize the major applications of Bioinformatics and scope	Apply

Mapping with Programme Outcomes

Biological Data Acquisition* The Form of Biological Information- Retrieval Methods for DNA Sequence - Protein Sequence and Protein Structure Information- Scope of Bioinformatics- Data File Formats- Data Life Cycle and Database - Management System Models.								[9]
Databases* Biological Database and its Types Introduction - To Data Types and Source - General Introduction of Biological Databases - Nucleic Acid Databases (NCBI, DDBJ, and EMBL) - Protein Databases (Primary, Composite, and Secondary)- Specialized Genome Databases: (SGD,TIGR, and ACEDB). - Structure Databases (CATH, SCOP, and PDB								[9]
Data Processing Data — Access, Retrieval and Submission -Standard Search Engines - Data Retrieval Tools – ENTREZ, DBGET and SRS - Submission of (New and Revised) Data - Sequence Similarity Searches - Local Versus Global -Distance Metrics - Similarity and Homology - Scoring Matrices.								[9]
Methods of Analysis Dynamic Programming Algorithms - Needleman-Wunsch and Smith-Waterman- Heuristic Methods of Sequence Alignment - FASTA, and PSI BLAST - Multiple Sequence Alignment and Software tools for - Pairwise and Multiple Sequence Alignment								[9]
Applications Genome Annotation and Gene Prediction- ORF Finding; Phylogenetic Analysis- Comparative Genomics - Orthologs - Paralogs Genome Analysis – Genome Annotation.								[9]
Total Hours:								45

Course Contents and Lecture Schedule		
S. No.	Topics	No. of hours
1.0	Biological Data Acquisition	
1.1	The Form of Biological Information	1
1.2	Retrieval Methods for DNA Sequence	1
1.3	Protein Sequence and Protein Structure Information	2
1.4	Scope of Bioinformatics	1
1.5	Data File Formats	1
1.6	Data Life Cycle and Database	2
1.7	Management System Models	1
2.0	Databases	
2.1	Biological Database and its Types Introduction	2

2.2	To Data Types and Source - General Introduction of Biological Databases	2
2.3	Nucleic Acid Databases (NCBI, DDBJ, and EMBL)	1
2.4	Protein Databases (Primary, Composite, and Secondary)	2
2.5	Specialized Genome Databases: (SGD, TIGR, and ACEDB)	1
2.6	Structure Databases (CATH, SCOP, and PDB SUM).	1
3.0	Data Processing	
3.1	Data – Access, Retrieval and Submission	1
3.2	Standard Search Engines	1
3.3	Data Retrieval Tools	1
3.4	ENTREZ, DBGET and SRS - Submission of (New and Revised) Data	2
3.5	Sequence Similarity Searches	1
3.6	Local Versus Global -Distance Metrics- Similarity and Homology	2
3.7	Scoring Matrices.	1
4.0	Methods of Analysis	
4.1	Dynamic Programming Algorithms	1
4.2	Needleman-Wunsch and Smith-Waterman	2
4.3	Heuristic Methods of Sequence Alignment	1
4.4	FASTA, and PSI BLAST	1
4.5	Multiple Sequence Alignment and Software tools	2
4.6	Pairwise and Multiple Sequence Alignment	2
5.0	Applications	
5.1	Genome Annotation and Gene Prediction	2
5.2	ORF Finding; Phylogenetic Analysis	2
5.3	Comparative Genomics Orthologs - Paralogs	2
5.4	Genome Analysis	2
5.5	Genome Annotation.	1
