K.S. Rangasamy College of Technology

(Autonomous Institution affiliated to Anna University, Chennai)

CURRICULUM & SYLLABUS

FOR

M.E. Structural Engineering

(For the batch admitted in 2024– 2025)

R 2022

Accredited by NAAC with A++ Grade,
Approved by AICTE, Affiliated to Anna University, Chennai.

KSR Kalvi Nagar, Tiruchengode – 637 215.
Namakkal District, Tamil Nadu, India.

R2/ w.e.f. 01.06.2024
Passed in the BOS Meeting Held on 22.05.2024
Approved in Academic Council Meeting held on 25.05.2024

CHAIRMAN
Board of Studies
Faculty of Civil Engineering
K.S.Rangasamy College of Technology
TIRUCHENGODE - 637 215

Department of Civil Engineering

VISION OF THE DEPARTMENT

To empower the graduates to excel as a competent Professional in the areas of Design and Development of Safe, Healthy, Sustainable and Eco friendly Infrastructure for overall development of the Society.

MISSION OF THE DEPARTMENT

- To provide quality education through interdisciplinary research and innovative practices for the Betterment of human society in teaching and learning.
- To develop creative solutions for a wide range of challenges in Civil Engineering by adopting modern Tools and Techniques.
-

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: Gain knowledge and skills in structural engineering which will enable them to have a career and professional accomplishment in the public or private sector organizations.

PEO2: Become consultants in Structural Engineering and solve complex real-life issues related to the analysis, design and maintenance of structures under various environmental conditions.

PEO3: Contribute to the enhancement of knowledge in Structural Engineering by performing quality research in institutions of international repute or Research organizations or Academia.

PROGRAMME OUTCOMES (POs)

Engineering Graduates will be able to:

PO1: Ability to individually carryout the STEM based (Science, Technology, Engineering, and Mathematics) research project.

PO2: Ability to write, present and publish technical articles in reputed international/national conferences and journals.

PO3: The skill developed by the student should be at a level of higher than the requirements in the appropriate bachelor program.

PO4: Ability to acquire in depth knowledge of engineering design concepts and application of the same to solve complex engineering problems.

PO5: Ability to find optimum safe and cost effective solutions in the development of mechanical systems taking into consideration sustainability, societal, environmental and public health aspects.

PO6: Ability to support professional ethics and social responsibilities consistent with their roles as design engineers.

MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES (PEOs) WITH PROGRAMMEOUTCOMES (POs)

The M.E. Structural Programme outcomes leading to the achievement of the objectives are summarized in the following Table.

Programme Educational Objectives	Programme Outcomes					
	PO1	PO2	PO3	PO4	PO5	PO6
PEO 1	3	2	3	3	2	1
PEO 2	3	2	3	3	2	1
PEO 3	3	2	3	3	2	1

Contributions: 1- low, 2- medium, 3- high

M.E. / M.Tech. Degree Programme

SCHEME OF EXAMINATIONS

(For the candidates admitted in 2024-2025)

FIRST SEMESTER

S.No.	Course Code	Name of the Course	Duration of Internal Exam	Weightage of Marks			Minimum Marks for Pass in End Semester Exam	
				Continuous Assessment *	End Semester Exam **	Max. Marks	End Semester Exam	Total
THEORY								
1	60 PSE 101	Applied Mathematics for Structural Engineering	2	40	60	100	45	100
2	60 PSE 102	Theory of Elasticity and Plasticity	2	40	60	100	45	100
3	60 PSE 103	Structural Dynamics and Earthquake Engineering	2	40	60	100	45	100
4	60 PED 001 / 60 PDB E26	Research Methodology and IPR	2	40	60	100	45	100
5	60 PSE E1*	Professional Elective I	2	40	60	100	45	100
6	60 PAC 001	English for Research Paper Writing	2	100	-	100		
PRACTICAL								
7	60 PSE 1P1	Advanced Construction Engineering and Experimental Techniques Laboratory	3	60	40	100	45	100
8	60 PSE 1P2	Technical Seminar	3	100	-	100	-	100

*CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department wills put a process in place to ensure that the actual test paper follow the declared pattern.

** End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination and 40 marks for practical End semester Examination.

		PC	3	1	0	4

Objectives

- To describe the concepts of solving system of equations.
- To understand the least square method to find the curve of best fit.
- To get exposed to the functional optimization related problems.
- To acquire knowledge of solving partial differential equations using Laplace transform.
- To familiarize the basic concepts on Fourier transform.

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply various iteration techniques to solve the algebraic, transcendental and linear equations.	Analyse
CO2	Use method of least square to find the best fit curves and Analyse interpolation problems.	Analyse
CO3	Compute the solutions for functional optimization problems.	Analyse
CO4	Solve partial differential equations using Laplace transform.	Analyse
CO5	Solve the boundary value problems using Laplace transform techniques.	Apply

Mapping with Programme Outcomes

COs	Pos					
	1	2	3	4	5	6

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	**Eigenvalue Problems**	
1.1	Matrix operations	1
1.2	Solution of system of linear equation by Gauss Seidal iterative method	1
1.3	Eigen value and eigen vector by iterative methods: Power method	1
1.4	Tutorial	2
1.5	Jacobi method	1
1.6	Given's method	2
1.7	House holder method	2
1.8	Tutorial	2
2.0	**Regression Analysis**	
2.1	Curve fitting by the method of least squares	2
2.2	Fitting a curve of the form $y = ax^b$ and $y = ae^{bx}$	2
2.3	Tutorial	2
2.4	Interpolation: polynomial approximation	1
2.5	Lagrange's method	1
2.6	Newton's method	2
2.7	Tutorial	2
3.0	**Calculus of Variations**	
3.1	Concept of variation and its properties	1
3.2	Euler's equation	1
3.3	Functional dependent on first and higher order derivatives	2
3.4	Functionals dependent on functions of several independent variables	1
3.5	Tutorial	2
3.6	Variational problems with moving boundaries	1
3.7	Isoperimetric problems	1
3.8	Ritz method	1
3.9	Tutorial	2
4.0	**Laplace Transform Techniques for Partial Differential Equations**	
4.1	Laplace transform: Definitions – Properties	1
4.2	Dirac delta function – Unit step functions	1
4.3	Convolution theorem	1
4.4	Tutorial	2
4.5	Inverse Laplace transform: Complex inversion formula	1
4.6	Solutions to partial differential equations: Heat equation	2
4.7	Solutions to partial differential equations: Wave equation	2
4.8	Tutorial	2
5.0	**Fourier Transform Techniques for Partial Differential Equations**	
5.1	Fourier transform: Definitions – Properties	1
5.2	Transform of elementary functions	1
5.3	Convolution theorem – Parseval's identity	1
5.4	Tutorial	2
5.5	Solutions to partial differential equations: Heat equation	1
5.6	Solutions to partial differential equations: Wave equation	1
5.7	Laplace's equation	2
5.8	Poisson's equation	1
5.9	Tutorial	1

		PC	3	1	0	4

Objectives

- To understand the concepts of stresses, strains and stress-strain relationships, basic theory of elasticity and failure criteria.
- To expose the two dimensional problems in Cartesian and polar coordinates.
- To make familiar with problem formulations and solution techniques.
- To familiarize with the principle of torsion of prismatic bars of non circular sections.
- To Learn different energy methods and also basics of plasticity.

Pre-requisites

Fundamentals of Mathematics, knowledge of basic Science

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the equilibrium equation and stress-strain relationship with various Coordinate Systems.	Analyse
CO2	Analyse the problem with bi-harmonic equations.	Analyse
CO3	Identify the different approaches for solving the torsional problems and thin walled open and closed sections	Analyse
CO4	Analyse the elasticity problems with various energy methods.	Analyse
CO5	State the assumptions of plasticity and solve plastic problems.	Apply

Elasticity Analysis of stress and strain, equilibrium equations – Compatibility equations – stress strain relationship. Generalized Hooke's law.	[9]
Elasticity Solution Plane stress and plane strain problems -Two dimensional problems in Cartesian and Polar co-ordinates - Airy's stress function – Bi harmonic equation – Saint Venant's principle.	[9]
Torsion of Non Circular Section St.venant's approach – Prandtl's approach – membrane analogy – Torsion of thin walled open and closed sections.	[9]
Energy Methods Strain energy - Principle of Virtual Work-Energy theorem - Rayleigh Ritz method-finite difference method – application to elasticity problems.	[9]
Plasticity Physical assumption – Yield criteria - Yield surface, Flow rule – Plastic stress strain relationship- Elastic – Plastic problems in bending - Torsion and Thick cylinders.	[9]

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	**Elasticity**	
1.1	Analysis of stress and strain in 2D and 3D system - Introduction	1
1.2	Longitudinal Vibrations Equation of motion, SDOF analysis	1
1.3	Equation of Equilibrium – 2D (Cartesian & Polar coordinate system) & Problems	1
1.4	Equation of Equilibrium - 3D (Cartesian system) & Problems	2
1.5	Compatibility equation	1
1.6	Analysis of stress – 2D(Cartesian & Polar coordinate system) & Problems	1
1.7	Analysis of strain – 2D(Cartesian & Polar coordinate system) & Problems	1
1.8	Specification of stress and strain –2D & 3D & Problems	1
1.9	Generalized Hook's law, Stress-Strain relationship- Mohr Circle	2
2.0	**Elasticity Solution**	
2.1	Plane Stress and Plane Strain Problems.	1
2.2	Derivation of Airy's stress functions in cartesian coordinate system	2
2.3	Derivation of Airy's stress functions in polar coordinate system	2
2.4	Application of Airy's stress functions	2
2.5	Problems in airy's stress functions	2
2.6	Thick cylinders under uniform pressure	1
2.7	Bi harmonic equation	1
2.8	Saint Venant's principle	1
2.9	Shrink & Force fit & Problems	2
2.10	Problem	2
3.0	**Torsion of Non Circular Section**	
3.1	Torsion of non-circular by St. Venant's approach	2
3.2	Torsion of circular Prismatic bar by St. Venant's approach	2
3.3	Torsion of non-circular by Prandtl approach & Problems	2
3.4	Torsion of Prismatic bar by Prandtl approach & Problems	2
3.5	Membrane analogy of torsion of Closed section	2
3.6	Torsion of thin walled open and closed sections	2
4.0	**Energy Methods**	
4.1	Introduction to energy theorem	1
4.2	Strain Energy for 2D & 3D stress system	1
4.3	Complimentary energy theorem	1
4.4	Principle of Virtual Work	1
4.5	Energy theorem	1
4.6	Rayleigh Ritz method	1
4.7	Finite difference method	1
4.8	Engesser's theorem & Castingliano's theorem	1
4.9	Problems in energy method	2
5.0	**Plasticity**	
5.1	Physical assumption	1
5.2	Yield criteria and Yield surface	2
5.3	**Plastic stress strain relations,** Flow rule	2
5.4	Tresca criteria & Problems	2
5.5	**Von mises criteria & Problems**	2
5.6	Plastic problems in bending	1
5.7	Plastic problems in Torsion	1
5.8	Plastic problems in Thick cylinders	1

60 PSE103	Structural Dynamics and Earthquake Engineering	Category	L	T	P	Credit
		PC	3	1	0	4

Objectives

- To know the fundamentals of vibrations of SDOF system
- To gain knowledge on free and forced vibration of MDOF system
- To understand the basic principles of dynamics, different methods of multi degree of freedom system and their dynamic response, modeling
- To evaluate the free and forced vibration analysis of continuous system
- To know the practical applications of structural dynamics

Pre-requisites

Fundamentals of Mathematics, knowledge of basic Science

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Analyse the single degree of freedom with free vibration.	Analyse
CO2	Analyse the single degree of freedom forced vibration with harmonic excitation.	Analyse
CO3	Analyse the two degree of freedom with free vibration.	Analyse
CO4	Analyse the Multi degree of freedom with free and forced vibration.	Analyse
CO5	Apply the principle of vibration to the sub structure design..	Apply

Course Contents and Lecture Schedule		
S. No.	**Topics**	**No. of hours**
1.0	**Principles of Vibration Analysis**	
1.1	Free vibration of single degree of freedom systems, Simple Harmonic motion	1
1.2	Longitudinal Vibrations Equation of motion, SDOF analysis	1
1.3	Undamped SDOFs- dynamic equation of motion with electrical equivalent	1
1.4	Tutorial	2
1.5	Newtons law of motion, D'Alemberts principle- equivalent stiffness	1
1.6	Springs are connected in series and parallel, frequency and period, problems	1
1.7	Amplitude of motion, Energy method for the equation of motion	1
1.8	Damped SDOFs- underdamped, overdamped and critically damped	1
1.9	Logarithmic decrement ,method of determining damping	1
1.10	Tutorial	2
2.0	**Multi Degree of Freedom System**	
2.1	Forced vibration of single degree of freedom system	1
2.2	Undamped harmonic excitation	2
2.3	Damped harmonic excitation with electrical equivalent	1
2.4	Tutorial	1
2.5	Response to support motion Torsional vibration and Dynamic Magnification Factor	2
2.6	Impulsive loading problems using Fourier series	1
2.7	Forced vibration problems using Laplace transform method	1
2.8	Numerical evaluation of Duhamel's integral for damped system	2
2.9	Tutorial	2
3.0	**Dynamic Analysis of Multi Degree of Freedom**	
3.1	Two degrees of freedom	2
3.2	Principle modes of vibration and equation of motion for two degree of freedom	2
3.3	Two degrees of freedom for torsional system, Vibrations of undamped Two degrees of freedom	2
3.4	Tutorial	2
3.5	Forced Vibrations and Undamped forced vibration for two degrees of freedom	2
4.0	**Multi Degree of Freedom**	
4.1	Stiffness, mass, damping matrices and Influence Coefficient	2
4.2	Modal analysis – damped undamped free vibration	2
4.3	Matrix Method and Matrix Iteration Method	2
4.4	Tutorial	2
4.5	Dunkerleys ,Stodola's , Rayleigh's and Holzer Method	2
4.6	Dynamic analysis method to evaluate lateral forces, Static and dynamic condensation	2
4.7	Tutorial	2
5.0	**Vibration Analyse in Sub Structure**	
5.1	Base Isolation and design of bearings	2
5.2	Machine foundation- types , basic and design criteria	2
5.3	MSD Method of analysis	2
5.4	Tutorial	2
5.5	EHS Method of Analysi	1
5.6	Tschebotarioff's reduced frequency method- design problems	2

		PC	0	0	4	2

Objectives

- To impart knowledge on various test of concrete making materials
- To perform mix design using IS and ACI method
- To learn the various test for self-compacting & hardened concrete
- To acquire skills on non- destructive test of concrete
- To conduct various durability test available for concrete

Pre-requisites

- Courses – Construction Materials & Concrete Technology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Identify the suitable test available for concrete making materials	Analyse
CO2	Execute mix design for manufacturing the concrete	Analyse
CO3	Perform various test for self - compacting & hardened concrete	Analyse
CO4	Examine the strength of existing structure by non - destructive testing methods	Analyse
CO5	Analyse the durability performance of concrete	Apply

60 PSE 1P2	TECHNICAL SEMINAR	Category	L	T	P	Credit
		CG	0	0	2	1

Objective

- To encourage the students to study advanced engineering developments.
- To prepare and present technical reports.
- To encourage the students to use various teaching aids such as overhead projectors, power point presentation and demonstrative models.
- To enrich the communication skills of the student and presentations of technical topics of interest, this course is introduced.
- To encouraged the students to use various teaching aids such as overhead projectors, power point presentation and demonstrative models.

Prerequisite

Basic knowledge about Civil Engineering Topics.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Establish motivation for any topic of interest and develop a thought process for technical presentation.	Analyse
CO2	Organize a detailed literature survey and build a document with respect to technical presentations.	Analyse
CO3	Analysis and comprehension of proof-of-concept and related data.	Analyse
CO4	Effective presentation and improve soft skills.	Analyse
CO5	Make use of new and recent technology (e.g. graphical abstract) for creating technical reports.	Apply

The students will work for two hours per week guided by a group of staff members. They will be asked to talk on any topic of their choice related to Structural Engineering and to engage in dialogue with the audience.

A brief copy of their talk also should be submitted. Similarly, the students will have to present a seminar of not less than fifteen minutes and not more than thirty minutes on the technical topic.

They will also answer the queries on the topic. The students as the audience also should interact.

Evaluation will be based on the technical presentation and the report and also on the interaction during the seminar.

K.S.RANGASAMY COLLEGE OF TECHNOLOGY, TIRUCHENGODE - 637215
(An Autonomous Institution affiliated to Anna University)

M.E. / M.Tech. Degree Programme
SCHEME OF EXAMINATIONS
(For the candidates admitted in 2024-2025)
SECOND SEMESTER

S.No.	Course Code	Name of the Course	Duration of Internal Exam	Weightage of Marks			Minimum Marks for Pass in End Semester Exam	
				Continuous Assessment *	End Semester Exam **	Max. Marks	End Semester Exam	Total
THEORY								
1	60 PSE 201	Advanced Steel Structures	2	40	60	100	45	100
2	60 PSE 202	Advanced Concrete Structures	2	40	60	100	45	100
3	60 PSE 203	Finite Element Analysis in Structural Engineering	2	40	60	100	45	100
4	60 PSE E2*	Professional Elective II	2	40	60	100	45	100
5	60 PSE E3*	Professional Elective III	2	40	60	100	45	100
6	60 PAC 002	Disaster Management	2	100	-	100	-	100
PRACTICAL								
7	60 PSE 2P1	Advanced Structural Engineering Laboratory	3	60	40	100	45	100
8	60 PSE 2P2	Computer Aided analysis and Design laboratory	3	60	40	100	45	100

*CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department wills put a process in place to ensure that the actual test paper follow the declared pattern.

** End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination and 40 marks for practical End semester Examination.

R2/ w.e.f. 01.06.2024
Passed in the BOS Meeting Held on 22.05.2024
Approved in Academic Council Meeting held on 25.05.2024

60 PSE 201	Advanced Steel Structures	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To know about the analysis and design of steel structures.
- To understand about the different types of steel connections
- To know about the analysis and design of cold formed steel structures
- To understand the analysis and design of special steel structures
- To demonstrate advanced design philosophies and concepts.

Pre-requisites

Courses –Strength of Materials, Design of Steel Structures

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Assess the general behaviour of beam –column employ them to design beam-column – crane column.	Analyse
CO2	Classify the different types of connection and identity suitable connections to apply for required situation.	Analyse
CO3	Analyse the cold formed steel sections and design them.	Analyse
CO4	Evaluate the various forces acting on self-supporting chimney guyed steel chimney and design them.	Analyse
CO5	Calculate the base shear and employ them to design a structure.	Apply

Mapping with Programme Outcomes

60 PSE 202	Advanced Concrete Structures	Category	L	T	P	Credit
		PC	3	0	0	3

Objectives

- To apply various limit states and design beams & columns
- To learn the design of special RC elements
- To perform the design of flat slab and grid floors
- To study the inelastic behavior of RC beams
- To gain knowledge in detailing codes

Pre-requisites

Courses –Structural Analysis &RCC Design

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Design the elements under flexure, shear, torsion and compression	Analyse
CO2	Perform the design of special RC elements	Analyse
CO3	Learn the design of flat slabs and grid floors	Analyse
CO4	Analyse the inelastic behavior of RC beams	Analyse
CO5	Draw the reinforcement detailing of structural elements	Apply

60 PSE 203	Finite Element Analysis in Structural Engineering	Category	L	T	P	Credit
		PC	3	1	0	4

Objectives

- To introduce the concepts of Mathematical Modeling of Engineering Problems.
- To know the procedure and to solve two dimensional problems
- To appreciate the use of FEM to a range of Engineering Problems.
- To learn the concept of material and geometric Non-linearity
- To know the realistic engineering problem through computational simulations.

Pre-requisites

Fundamentals of Mathematics, knowledge of forces and resolution and equilibrium concepts.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Construct and solve the element equation for one dimensional structural element.	Analyse
CO2	Describe the concept of two dimensional elements.	Analyse
CO3	Analyse the 2D problems using isoparametric quadrilateral elements and Implement the Gaussian Quadrature expression for numerical integration.	Analyse
CO4	Identify the concepts of Non-linear Analysis of the structures.	Analyse
CO5	Apply the knowledge on application of Finite Element method	Apply

60 PSE 2P1	Advanced Structural Engineering Laboratory	Category	L	T	P	Credit
		PC	0	0	4	2

Objectives

- To explain about the behavior of beams and slabs in flexure and shear
- To understand the concepts of Strain recording instruments
- To know about the measurement of vibration.
- To illustrate about the Dynamic testing of cantilever beams
- To identify the Static cyclic testing of single bay two storied frames

Pre-requisites

Strength of Materials, Structural Analysis, Design of Reinforced Concrete design, Design of Steel Structures, Experimental Methods and Model Analysis.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Construct the concrete beam and absorb the behavior of flexural member for different loading conditions.	Analyse
CO2	Demonstrate the testing for strength and deflection behavior of steel sections.	Analyse
CO3	Illustrates the behavior of column under axial load and compute the direct and bending stresses.	Analyse
CO4	Familiarize the behavior of cantilever beam under dynamic loading and evaluate the mode shapes.	Analyse
CO5	Employ the static cyclic testing on frames and predict the stiffness and energy dissipation of the frame.	Apply

List of Experiments:

1. 1. Fabrication, casting and testing of simply supported reinforced concrete beam for strength and deflection behaviour.
2. Testing of simply supported steel beam for strength and deflection behavior.
3. Fabrication, casting and testing of reinforced concrete column subjected to concentric and eccentric loading.
4. Dynamic testing of cantilever beams.
   a. To determine the damping coefficients from free vibrations.
   b. To evaluate the mode shapes.
5. Static cyclic testing of single bay two storied frames and evaluate
   a. Drift of the frame
   b. Stiffness of the frame.

Energy dissipation capacity of the frame

		PC	0	0	4	2

Objectives

- To learn the principles of computer graphics and application packages, optimization and artificial intelligence.
- To expose students to computer aided drafting.
- To familiarize students with 2D objects in drawing and enable them to prepare plan, elevation and sectional drawings.
- To expose students to 3D modelling.

Pre-requisites

Basic knowledge in computer operation and Civil Engineering design software's.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	To work on spreadsheets and worksheets.	Analyse
CO2	To understand regression and matrix inversion concepts.	Analyse
CO3	To arrive at C programs to solve problems using numerical techniques.	Analyse
CO4	To use computer methods of structural analysis to solve structural problems.	Analyse
CO5	To work on finite element programming to solve real time problems.	Apply

List of Experiments:

Module 1: Analysis, design and drafting with commercial software: (3 D modelling – RCC & STEEL).

(a) Modelling and analysis - applying known concepts of structural components, codal provisions for loads and dimensioning, analysis procedures etc.

(b) Design using software or manual designusing spreadsheets software or Macros.

(c) Drafting / detailing using commercial CAD software. (Different groups may be assigned different buildings/structures).

Module 2: Programming for structural engineering using MATLAB or any programming language choice of student. Exercises include, but not limited to: Solution using Newton Raphson method, Gauss elimination, Gauss-Jordan method, Linear Regression, Curve fitting by Polynomial Regression, Eigen value extraction by power method etc.

Module 3: Finite Element software fundamentals - modelling, analysis and postprocessing of simple planar, wire and shell models – introduction to different types of meshes, elements, analysis steps etc.

60 PSE 3P1	Project Work Phase - I	Category	L	T	P	Credit
		CG	0	0	16	8

Objectives

- To import the practical knowledge to the students
- To make them to carry out the technical procedures in their project work.
- To provide an exposure to the students to refer, read and review the research articles, journals and conference proceedings relevant to their project work.
- To learn about new product development
- To learn how to apply theoretical knowledge in the field.

Pre-requisites

Basic knowledge in computer operation and Civil Engineering design software's.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Survey the relevant literature such as books, national/international refereed journals and contact resource persons for the selected topic of research.	Analyse
CO2	Use different experimental techniques/different software/ computational / analytical tools.	Analyse
CO3	Design and develop an experimental set up/ equipment/test rig	Apply
CO4	Conduct tests on existing set ups / equipments and draw logical conclusions from the results after analyzing them.	Apply
CO5	Work in a research environment or in an industrial environment.	Apply

- The project work should preferably be a problem with research potential.
- The project should involve scientific research, design, generation/collection, and analysis of data, determining a solution, and must preferably bring out the individual contribution.
- The seminar should be based on the area in which the candidate has undertaken the dissertation work as per the common instructions for all branches of M.E/M. Tech.
- Three reviews will be conducted by a committee of subject experts.
- Each review has to be evaluated for 100 marks.
- Internal evaluation has to be done for 100 marks.
- The final examination shall consist of the preparation of a report consisting of a detailed problem statement and a literature review.
- The preliminary results (if available) of the problem may also be discussed in the report.
- The work has to be presented in front of the examiners panel set by the Head and PG Project Coordinator.

Objective(s)	• Make exposer for the students to actual working environment and enhance their knowledge • Provide students the opportunity to test their interest in a particular career before permanent commitments are made • To develop skills in the application of theory to practical work situations • Enhance the ability to improve student's creativity skills and sharing ideas • To cultivate student's leadership ability and responsibility to perform or execute the given task
Course Outcomes	**At the end of the course, the students will be able to** 1. Understand the psychology of the workers, their habits, attitudes and approach to problems along with the practices followed either at factory or at site 2. Familiarized with various Design, Manufacturing, Analysis, Automation and their appli cations along with relevant aspects of industry management 3. Understand the scope, functions and job responsibilities in various departments of an organization 4. Interpreting the theoretical knowledge with real time site conditions while executing projects 5. Develop detailed report of the complete project during the training.

- Students undergo in-plant training during second semester summer vacation (Minimum of Two weeks)
- Reports containing the observation of the students after the training with their personal comments/suggestion are to be prepared and submitted in the beginning of third semester
- A technical presentation to be done by the students immediately after submission of the report at the beginning of third semester

60 PSE 4P1	Project Work Phase - II	Category	L	T	P	Credit
		CG	0	0	32	16

Objectives

- To implement their innovative ideas in practical
- To retrieve the hazards by adopting suitable assessment methodologies and staring it to global.
- To strengthens the students to carry out the problems on their own
- To improve the leadership skills and work in a group
- To solve complex problems and obtaining solution for them

Pre-requisites

Basic knowledge in computer operation and Civil Engineering design software's.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop attitude of lifelong learning and will develop interpersonal skills to deal with people working in diversified field.	Analyse
CO2	Write technical reports and research papers to publish at national and international level.	Analyse
CO3	Develop strong communication skills to defend their work in front of technically qualified audience.	Apply
CO4	Learn about Patent filing and IPR	Apply
CO5	Gain knowledge about new business ideas and product development	Apply

Planning & performing experiments

Based on the project proposal submitted in earlier semester, students should be able to plan, and engage in, an independent and sustained critical investigation and evaluate a chosen research topic relevant to structural engineering and civil society challenges, such as earthquake-resistant design, advanced concrete technology, and structural health monitoring.. They should be able to systematically identify relevant theory and concepts, relate these to appropriate methodologies and evidence, apply appropriate techniques and draw appropriate conclusions. Senior researchers should be able to train the students such that they can work independently and are able to understand the aim of each experiment performed by them. They should also be able to understand the possible outcomes of each experiment.

Thesis writing

At the end of their project, thesis has to be written giving all the details such as aim, methodology, results, discussion and future work related to their project. Students may aim to get their research findings published in a peer-reviewed journal. If the research findings have application-oriented outcomes, the students may file patent application.

60PSE E11	Theory of Structural Stability	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To Learn behaviour of structural elements under compressive loads,
- To understand the stability of columns, beams and plates under various load conditions.
- To analyse beam column behaviour along with frames.
- To know the basic theory for buckling of beams for various applications.
- To Introduce numerical techniques

Pre-requisites

knowledge of Structural Analysis, Strength of Materials & Mathematical Logic.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Obtain the concept of structural stability of structures	Analyse
CO2	Compare the method and analysis of structures	Analyse
CO3	Design a beam column behaviour with the portal frame	Analyse
CO4	Explain the torsional buckling in beam	Analyse
CO5	Interpret the use of energy methods with numerical techniques	Apply

60PSE E12	Theory of Plates and Shells	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To study the behavior of the plates and shells with different geometry under various types of loads
- To illustrate design of several of plates.
- To enable the student Analyse and design thin shell structures including domes, hyperbolic, parabolic, elliptic and cylindrical shells.
- To knowledge about thin and thick shells.
- To understand design of cylindrical shells.

Pre-requisites

Fundamentals of Mathematics, knowledge of strength of materials and its mechanics and theory of elasticity and plasticity.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Analyse bending of long rectangular plates using thin plate theory	Analyse
CO2	Analyse circular plates with various loading conditions	Analyse
CO3	Analyse rectangular plates using classical approach and methods	Analyse
CO4	Analyse bending of Anisotropic plates	Analyse
CO5	Design of R. C. Cylindrical shells and long shells.	Apply

60PSE E13	Design of Tall Buildings	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- The design criteria of the tall buildings, materials used, modern concepts
- The different types of loads to be considered in designing, behaviour of structural systems, analysis.
- The design of tall structures using different methods.
- The stability analysis of the tall buildings.
- Design against wind loads as per BIS code of practice and special consideration in the design of tall structures.

Pre-requisites

Fundamentals of Mathematics, knowledge of basic Science

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Implement design philosophies for the development of high rise structures.	Analyse
CO2	Find out the design loads for high rise buildings.	Analyse
CO3	Analyse the behaviour of tall building subjected to lateral loading.	Analyse
CO4	Perform computerized general three dimensional analysis for high rise building.	Analyse
CO5	Perform stability analysis using various methods for tall buildings.	Apply

60PSE E14	Design of Structures for Dynamic Loads	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To Design factors, behaviour of structures in cyclic loads,
- To recap of structural dynamics with reference of different systems,
- To understand ductility, earth quake design of structures,
- To design of structures against blast and impact
- To Design against wind loads as per BIS code of practice and special consideration in the design of structures.

Pre-requisites

Basic knowledge of Earthquake, RCC Structures & Soil Mechanics.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explain the behavior of structures under dynamic loads	Apply
CO2	Design structures for earthquake, blast and impact loads	Analyse
CO3	Perform ductile detailing	Analyse
CO4	Design against wind load as per BIS Code	Apply
CO5	Ductility Detailing should be considering for vibrations structures	Analyse

Mapping with Programme Outcomes

60PSE E14 -Design of Structures for Dynamic Loads

Semester	Hours/Week			Total Hours	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
I	3	0	0	45	3	40	60	100

Introduction Factors affecting design against dynamic loads - Behaviour of concrete, steel, masonry and soil under impact and cyclic loads - Recap of Structural dynamics with reference to SDOF, MDOF and continuum systems – Ductility and its importance	[9]
Design Against Earthquakes Earthquake characterization - Response spectra - seismic co-efficient and response spectra methods of estimating loads - Response of framed, braced frames and shear wall buildings - Design as per BIS codes of practice - Ductility based design	[9]
Design Against Blast And Impact Displacement method for three dimensional Structure - Coordinate transformations - Analysis of space trusses and space frames	[9]
Design Against Wind Characteristics of wind - Basic and Design wind speeds - Pressure coefficient - Aero elastic and Aerodynamic effects - Design as per BIS code of practice including Gust Factor approach - tall buildings, stacks and chimneys	[9]
Special Considerations Energy absorption capacity - Ductility of the material and the structure - Detailing for ductility - Passive and active control of vibrations - New and favorable materials	[9]

60PSE E15	Fracture Mechanics of Concrete Structures	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To give an outline of the total field of fracture mechanics
- To familiarize students with problems that can be solved with fracture mechanics concepts.
- To impart knowledge on the mechanisms of failure and non linear fracture mechanics.
- To study crack criteria by using Griffith's Criteria, Stress Intensity Factors, R curves.
- To apply crack concepts & numerical modelling to high strength concrete & fibre reinforced concrete.

Pre-requisites

Fundamentals of Mathematics, knowledge of basic strength of material.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Evaluate the fracture failure parameters	Apply
CO2	Evaluate the linear elastic fracture mechanics problems	Analyse
CO3	Explain the concept of elastic plastic fracture mechanics	Analyse
CO4	Estimate the residual life of fatigue Crack Growth in structure.	Apply
CO5	Evaluate the fracture parameters using direct and indirect methods	Analyse

Semester	Hours/Week			Total Hours	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
I	3	0	0	45	3	40	60	100

Introduction: Courses of failures of structures – case studies Fracture Mechanics Approach to Design: Energy Criterion – Stress intensity approach – Time dependent crack growth – Effect of Material Properties on Fracture..	[9]
Linear Elastic Fracture Mechanics: An atomic view of fracture – Stress concentration Effect of Flows – The Griffith Energy Balance –Comparison with the Critical Stress Criterion – Modified Griffith equation – The Energy Release rate – Instability and the R Curve – Stress analysis of cracks – Crack tip plasticity – Plane strain fracture –Mixed mode fracture.	[9]
Elastic – Plastic Fracture Mechanics: Crack –tip- opening displacement – J contour integral – Crack growth resistance curves – J controlled fracture – Crack tip constraint under large –scale yielding – Sealing model for clearage fracture..	[9]
Dynamic and Time – Dependent Fracture: Dynamic fracture and crack arrest – Creep crack growth – Viscoelastic fracture mechanics. Material Behaviour: Fracture mechanisms in metals, plastics, ceramics, ceramic composites and concrete	[9]
Application to Structures : Linear Elastic Fracture Mechanics – Elastic plastic J – integral analysis – Failure Assessment Diagrams- Application to welded structures – Primary VS secondary stresses in the FAD Method – Ductile –Tearing analysis with FAD – Probabilistic Fracture Mechanics – Fatigue crack propagation – Environmentally assisted cracking in metals. 60PSE E16	Advanced Groundwater Hydrology	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- The basic knowledge of groundwater hydrogeology, hydrometeorology, aquifers and it parameter.
- Understand various theories and equations related to groundwater hydraulics.
- Locating the hydro geological boundaries through conducting pumping tests and analysis.
- Understanding the concepts well design criteria.
- Acquire knowledge about problem identification and also providing suitable remedy in terms of maintaining the local groundwater table.

Pre-requisites

Basic knowledge of Environmental Engineering courses

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Study the ground water hydrologic cycle and types of acquifiers.	Apply
CO2	Understand the ground water movement and principles of ground water flow and equation.	Analyse
CO3	Analyse the aquifer parameters and well characteristics.	Analyse
CO4	Discuss the construction of wells and design of wells.	Apply
CO5	Explain the methods of ground water recharge and assessment	Analyse

60PSE E17	Groundwater Modelling and Management	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- Understand the groundwater exploration techniques both surface and subsurface by remote sensing and geophysical methods.
- Acquire preliminary idea about different methods of groundwater modelling techniques.
- Understand the different equations and model formulation methods.
- Acquire knowledge about data required for design and run the model.
- Understand about the influence of modelling for attaining the effective groundwater m

Pre-requisites

Basic knowledge of Environmental Engineering courses

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Acquired knowledge on ground water exploration through various geophysical methods by surface and substance investigation.	Apply
CO2	Understand about the term model and it's types.	Analyse
CO3	Gain knowledge about different equations related to ground water modeling.	Analyse
CO4	Acquired knowledge on groundwater model design and development	Apply
CO5	Familiar to create the need based model and its development.	Analyse

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	**Groundwater Prospecting**	
1.1	Investigation and evaluation	1
1.2	Geophysical methods	1
1.3	Electrical Resistivity methods	2
1.4	Interpretation of data	2
1.5	Seismic method and Subsurface investigation	2
1.6	Application of remote sensing techniques	1
2.0	**Groundwater Flow Model**	
2.1	Physical models, Analog models and Mathematical modeling	1
2.2	Unsaturated flow models and Numerical modeling of groundwater flow	1
2.3	Finite Differential equations and Finite difference solution	2
2.4	Alternating direction implicit procedure	2
2.5	Crank Nicolson equation, Iterative methods and Direct methods	1
2.6	Finite element method	2
3.0	**Contaminant Transport Model**	
3.1	Contaminant transport theory, Advection, dispersion equation	3
3.2	Longitudinal and transverse dispersivity	2
3.3	Hydrodynamic dispersion and Analytical models	2
3.4	Solution methods - Sorption model, Subsurface mass transport through the vadose zone	1
3.5	Density driven flow - Heat transport.	1
4.0	**Model Development**	
4.1	Conceptual model design	1
4.2	Conceptualization of aquifer system its Parameters, Input-output stresses, Initial and Boundary conditions	2
4.3	Model design and execution	2
4.4	Time discretization and Transient simulation	1
4.5	Sensitivity analysis	1
4.6	Model validation and prediction	2
5.0	**Groundwater Management Model**	
5.1	Optimal groundwater development	2
5.2	Modeling multilayer groundwater flow system	2
5.3	Artificial recharge feasibility through modeling	1
5.4	Simulation of movements of solutes in unsaturated zone	2
5.5	Stochastic modeling of groundwater flow	2

60 PSE E18	Computational Fluid Dynamics	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To derive the governing differential equation with boundary conditions.
- To understand the concepts of turbulence flow.
- To get exposed to solve the diffusion problems.
- To acquire knowledge for solving convection–diffusion problems.
- To familiarize the different techniques for coupling pressure-velocity terms.

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the basics of fluid dynamics to form the governing equations.	Apply
CO2	Use the principle of turbulence model in fluid flow problems.	Analyse
CO3	Solve the diffusion problems by using finite volume method.	Analyse
CO4	Apply the different discretization schemes to solve convection-diffusion problems.	Apply
CO5	Employ the various finite volume methods to solve problems in complex geometries.	Analyse

Governing Equations and Boundary Conditions* Governing equation of fluid flow: Mass - Momentum and Energy equations - Equation of state; Navier- Stokes equations for a Newtonian fluid - Conservative form of equations of fluid flow - Differential and integral forms of the transport equation - Classification of PDE's and fluid flow equations – Viscous fluid flow equations.	[9]
Turbulence and it's Modeling* Turbulence – Transition to laminar to turbulent flow - Time-averaged equations for Turbulent Flow – Characteristics of simple turbulent flows – Turbulence models – Mixing length model – The k-ε model.	[9]
Finite Volume Method for Diffusion* Finite volume method for steady state one dimensional diffusion - Finite volume method for steady state two dimensional diffusion problems - Finite volume method for steady state three dimensional diffusion problems.	[9]
Finite Volume Method for Convection-Diffusion* Steady one-dimensional convection and diffusion – Properties of discretization schemes - The central differencing scheme – The upwind differencing scheme – The power-law scheme - Higher order differencing scheme for convection and diffusion problems – Quadratic upwind differencing scheme: the QUICK Scheme.	[9]
Solution Algorithms for Pressure – Velocity Coupling in Steady Flows* Introduction – The staggered grid – The SIMPLE algorithm – Assembly of a complete method - The SIMPLER algorithm – The SIMPLEC algorithm - General comments on SIMPLE, SIMPLER and SIMPLEC.	[9]

60PSE E22	Design of Sub Structures	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To impart knowledge in the selection of sites for investigate and procedure of sub surface exploration
- To determine the soil condition and provide the suitable foundation.
- To design the pile foundation based on capacity of super structure.
- To understand different types of foundations and their designing methods.
- Laying foundation for other miscellaneous structures like towers and different types of machine foundations and their design.

Pre-requisites

Basic knowledge of Soil Mechanics, Geology & Mathematical

Course Outcomes

On the successful completion of the course, students will be able to

CO1	State the knowledge on soil exploration	Apply
CO2	Analysis the concepts of safe bearing capacity of shallow foundation	Analyse
CO3	Explain pile foundation and their types	Understand
CO4	Estimation the well foundations and sheet pile wall	Analyse
CO5	Identify the general analysis of machine foundation and soil dynamics	Apply

60PSE E23	Structural Optimization	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To explain basics concepts of optimizing in structural design.
- To develop optimization techniques, and application of algorithms.
- To understand linear Programming methods for plastic design of frames.
- To apply Optimization theorems and using several methods.
- To evaluate different types of non – traditional optimization techniques.

Pre-requisites

Basic knowledge of Soil Mechanics, Geology & Mathematical

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the knowledge on the recent advances in optimization.	Apply
CO2	Write algorithm for Geometric and Dynamic programming.	Analyse
CO3	To know the basis of univariate and multivariate minimization.	Understand
CO4	Understand the concepts of optimization structural theorems.	Analyse
CO5	Understand the concepts of optimization problems in the Structural Engineering	Apply

60PSE E24	Bridge Engineering	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To identify the Classification of bridges
- To understand the roads on bridges, design of solid slab, bridges, R.C. girder bridges, long span girder bridge and plate girder bridges.
- To Design of prestressed concrete bridges.
- To learn bearing, sub structures and footings for bridges.
- To discuss about construction and maintenance of bridges.

Pre-requisites

Basic knowledge of RCC, Steel Structures and Prestressed Concrete & Concrete Technology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	List out the components and classification of a bridge.	Apply
CO2	Design a deep foundation and well foundation.	Analyse
CO3	List out the different forms of reinforced bridges.	Understand
CO4	List out the different forms of steel bridges.	Analyse
CO5	Show the rehabilitation for bridges.	Apply

Mapping with Programme Outcomes

II	3	0	0	45	3	40	60	100

Introduction Definition and components of a bridge – layout and planning of a bridge – classification – investigation of a bridge – preliminary data collection – choice and type of a bridge – hydraulic design of a bridge – traffic design – loading – highway and railway loading – specification	[9]
Analysis of Substructure Analysis and design of foundation – shallow foundation – open foundation – deep foundation – pile foundation – well foundation – caisson foundation – piers and abutments – bridge bearing – steel rocker and roller bearings – reinforced concrete rocker and roller bearings – elastomeric bearings.	[9]
Analysis of Superstructure Reinforced concrete and prestressed concrete bridge: Straight and curved bridge decks - decks of various types – slab hollow and voided slab – beam – slab box – reinforced concrete slab bridge – load distribution – Pigeaud's theory – skew slab deck – RC tee beam and slab bridge – continuous beam bridge – fixed point method – influence lines – balanced Cantilever bridge – rigid frame bridge – box girder bridge – bow string girder bridge – Pre-stressed concrete bridge – analysis and design for static, moving and dynamic loading.	[9]
Steel Bridge Plate girder bridge – box girder bridge – composite beam bridge – truss bridge – influence lines for forces in members – suspension bridge – cable stayed bridge – analysis for static, moving and dynamic loading.	[9]
Construction And Maintenance Construction methods – short span – long span - false work for concrete bridges – construction management – inspection and maintenance – lesson from bridge – rehabilitation of a bridge failures – load testing of bridges.	[9]

60PSE E25	Non Linear Analysis of Structures	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- Analyse the bar system considering the material and geometric nonlinearity.
- Perform inelastic analysis of flexural members.
- Perform vibration analysis of flexural members.
- Perform elastic and inelastic analysis of Plates.
- Perform nonlinear and instability analysis of elastically supported beams.

Pre-requisites

Basic knowledge of Soil Mechanics, Geology & Mathematical

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Describe the concept of Non-Linear Analysis of the structures	Apply
CO2	Analyse the members subjected to deformations and analysis of bars with and without restraints	Analyse
CO3	Apply the knowledge of vibration theory on flexural members and identify its behaviour under cyclic loading	Understand
CO4	Identify the Non-linear behaviour of plates.	Analyse
CO5	Solve the elemental equation of beams Non linear vibrations	Apply

60PSE E26	Environmental Monitoring Instruments	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To understand the chemical analysis of water
- To know the analysis of pollutants.
- To find the methods for toxic organics estimation.
- To learn the non-destructive methods of analysis.
- To provide knowledge about monitoring Analysers.

Pre-requisites

Basic knowledge of Environmental Engineering courses

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Able to select appropriate instrumental method for chemical analysis.	Apply
CO2	Explore spectroscopic methods of analysis of pollutants	Analyse
CO3	Select the correct method for toxic organics estimation using chromatography methods	Understand
CO4	Understand electro and nondestructive methods of analysis	Analyse
CO5	Identify the continuous monitoring instruments	Apply

60PSE E27	Municipal Solid Waste Management	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To know the types, sources, generation of municipal solid waste
- To understand the Storage, collection, transport, of municipal solid waste.
- To learn the design and operation aspects of sanitary landfills.
- To acquire knowledge on waste processing
- To study the source reduction and onsite storage methods.

Pre-requisites

Basic knowledge of properties learnt in waste management courses

Course Outcomes

On the successful completion of the course, students will be able to

CO1	. Identify the sources, types and characteristics of solid wastes.	Apply
CO2	Describe the health, environmental effects and solid waste management strategies	Analyse
CO3	Choose the on-site storage methods and segregation of municipal solid wastes	Understand
CO4	Summaries the methods of collection and operating, maintenance of transfer station	Analyse
CO5	Explain the off-site processing techniques and equipments.	Apply

60 PSE E28	Advanced Computational Fluid Dynamics	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To understand the concepts of boundary layer theory.
- To acquire knowledge for solving Navier-Stokes equations.
- To introduce the concepts of thermal boundary layer theory.
- To acquire knowledge of magnetohydrodynamics.
- To familiarize the different types of magnetohydrodynamic waves.

Pre-requisites

Basics of Fluid Dynamics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explain the concepts of laminar and turbulent boundary layer theory	Apply
CO2	Derive the exact solutions of Navier-Stokes equations in different flow regimes	Analyse
CO3	Explain the concepts of thermal boundary layer theory and exact solutions	Understand
CO4	Apply the concepts of magnetohydrodynamics in boundary layer theory	Analyse
CO5	Analyse the physical concepts of magnetohydrodynamic waves and instabilities	Apply

Boundary Layer Theory* Some features of viscous flows: Real and ideal fluids – Viscosity - Reynolds number – Laminar and turbulent flows – Asymptotic behaviour at large Reynolds number. Boundary layer theory: Boundary layer concepts – Laminar boundary layer on a flat plate – Turbulent boundary layer on a flat plate	[9]
Exact Solutions of the Navier-Stokes Equations* Field Equations for flows of Newtonian field : Continuity equation – Momentum equation – Navier Stokes equation – Energy equation – Equation of motion for arbitrary co-ordinate systems – Exact solution of Navier-stokes equation – Steady plane flows : Couette – Poiseuille flow – Flow past a circular cylinder – Steady axisymmetric flows – Circular Pipe flow	[9]
Thermal Boundary Layers* Thermal boundary layers in laminar flow: Derivation of the energy equation – Temperatureincrease through adiabatic compression - Stagnation temperature – Theory of similarity in heat transfer - Exact solutions for the problem of temperature distribution in a viscous flow - Boundary layer simplifications.	[9]
Magnetohydrodynamics* Magnetohydrodynamics: Electrodynamics of moving media – The electromagnetic effects andthe magnetic Reynolds number - Alfven's theorem – The magnetic energy - The mechanical equations - Basic equations for the incompressible MHD - Steady Laminar motion - Hartmann flow.	[9]
Magnetohydrodynamic Waves* Magnetohydrodynamic waves - waves in an infinite fluid of infinite electrical conductivity - Alfven waves - Magnetohydrodynamic waves in a compressible fluid - Magneto acoustic waves- Slow and Fast waves - Stability - Physical concepts – Linear Pinch-Kink - Sausage and Flute types of instability - Method of small oscillations.	[9]

60PSE E31	Soil Structure Interaction	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To know Soil foundation interaction problems, behaviors and models.
- To understand the elastic foundation soil models and plate on elastic medium
- To design plate types, numerical analysis of finite plates,
- To develop elastic analysis of single pile and group of piles based on settlement.
- Interaction analysis of piles and about the analysis of laterally loaded piles.

Pre-requisites

Basic knowledge of Soil Mechanics, Foundation Design & Geology.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Generate concepts of soil structure Interaction	Apply
CO2	Assess the soil models as isotropic elastic half-space	Analyse
CO3	Formulate winkler foundation model for elastic continum	Understand
CO4	Calculate elastic medium for rectangular and circular plates	Analyse
CO5	Estimate the load distribution in pile.	Apply

60PSE E32	Design of Shell and Spatial Structures	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- Classification of shells, membrane theory of shells, and design of folded plate structures
- Design philosophy of space frame, optimization techniques and structural theorems
- Study the behaviour and design of shells, folded plates, space frames and application of FORMIAN software.
- To expose the students the principles of design of folded plates.
- Students will be introduced to general principles of design Philosophy and behaviour.
  .

Pre-requisites

Fundamentals of Mathematics, knowledge of strength of materials and its mechanics and theory of elasticity and plasticity**.**

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Analyse various types of shells and using membrane theory.	Apply
CO2	Analyse various shapes of plates using various methods.	Analyse
CO3	Principles and design philosophy of space frames.	Understand
CO4	Analyse and design space frames.	Analyse
CO5	Analyse various optimization structural members.	Apply

1.0	**Membrane Theory of Shells**	
1.1	Shell surfaces	1
1.2	Classification of shell surfaces	1
1.3	Surfaces of revolution	1
1.4	Δ-forms of surfaces	2
1.5	Folded plates	2
1.6	Characteristics of shell surfaces.	2
2.0	**Design of Folded Plates**	
2.1	Surfaces and its related aspects	1
2.2	Curvatures of a surface	1
2.3	Curves and related aspects	1
2.4	Structural behaviour of shell	1
2.5	Stress-strain relationships	1
2.6	Equilibrium equations	1
2.7	Equilibrium equations for thin shell elements in membrane state	1
2.8	Curvilinear coordinate system	1
2.9	Shells of revolution	1
3.0	**Space Frame - Design Philosophy**	
3.1	Analysis of shells	2
3.2	Membrane analysis	2
3.3	Axisymmetric loading	1
3.4	Concentrated load – Self weight	1
3.5	Uniform loading – Pressure loading	1
3.6	Hydrostatic loading	1
3.7	Non-axisymmetric loading – Wind load	1
4.0	**Analysis of Space Frames**	
4.1	Spherical domes under concentrated load and under self-weight	2
4.2	Bending analysis	1
4.3	Axisymmetric case – Equilibrium equations for thin shells of revolution in bending	1
4.4	Equilibrium equations in orthogonal curvilinear coordinate system	1
4.5	Bending equation of spherical lattice domes	1
4.6	Cylindrical shells – Equilibrium equations – DKJ theory	1
4.7	Cylindrical shells – Equilibrium equations – Jenkin's theory	1
5.0	**Optimization**	
5.1	Beam method of analysis	2
5.2	Merits and demerits – Case studies for simply supported cylindrical shells – without and with edge beams	1
5.3	Design of shells based on membrane theory - Shells having semicircular directrix	1
5.4	Design of shells based on membrane theory - Shells with circular directrix	1
5.5	Design of shells based on beam theory	1
5.6	Design aspects of paraboloid, hyperboloid and hyperbolic paraboloid shells	1
5.7	Analysis and structural behaviour of folded plates and its various types	1
5.8	Design of folded plates by ACI-ASCE Task Committee method	1

60PSE E33	Off Shore Structures	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To understand the demand for coastal and offshore structures, overview of different types of ocean structures.
- To get exposed to structural geometry, analysis methods, design techniques, construction practice, different types of material, guidelines associated with selection of materials for marine environment.
- To learn various types of structural systems/forms, brief overview of various environmental loads.
- To be familiar with the problems associated with the material behavior in marine environment and various protection methods.
- To understand the inspection and testing methods, repair and rehabilitation processes.

Pre-requisites

Fundamentals of Mathematics, knowledge of Mechanics of Materials, Statics, Concrete Technology and Concrete Design

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the functions and behaviour of offshore structures	Apply
CO2	Identify the different types of loads acting on the structures	Analyse
CO3	Understand the behaviour of waves and its effects on structures	Understand
CO4	Evaluate the behaviour of structures for its dynamic loads	Analyse
CO5	Design of offshore structures with failure probability	Apply

Force and Strain Measurements Basic Concept – Measurements of displacement, strain pressure, force, torque etc, Strain gauges (Mechanical, Electrical, Acoustical etc) – Strain gauge circuits – potentiometer and wheat stone bridge – Rosette analysis. Hydraulic Jack, Load cell and Proving Ring.	[9]
Vibration Measurements Linear Variable Differential Transducers (LVDT) – Transducers for velocity and acceleration measurements. Vibration meter – Seismographs.	[9]
Data Acquisition Systems Indicating and recording devices – Static and dynamic data recording –Data acquisition and processing systems – Cathode Ray Oscilloscope – XY Plotter – Chart plotters – Digital data acquisition systems.	[9]
Photoelasticity Photoelasticity – Optics of photoelasticity – Polariscope – Isoclinics and Isochromatics– Methods of stress separation	[9]
Non Destructive Testing Methods Ultrasonic testing principles and application – Rebound Hammer – Holography – Use of laser for structural testing – Advanced NDT methods – Ultrasonic pulse echo, impact echo, impulse radar techniques, GECOR, Ground penetrating radar (GPR).	[9]

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	**Force and Strain Measurements**	
1.1	Introduction to force and strain measurements	1
1.2	Explanation of displacement , strain pressure, force & torque	1
1.3	Various strain gauges – Mechanical Strain gauges - Principle & Working	1
1.4	Electrical Strain gauges - Principle & Working	1
1.5	Acoustical Strain gauges - Principle & Working	1
1.6	Working of potentiometer	1
1.7	Working of Wheat stone bridge	1
1.8	Rosette analysis concepts and formulas	1
1.9	Rosette analysis problems	2
1.10	Use of Hydraulic jack, load cell and proving ring	1
2.0	**Vibration Measurements**	
2.1	Introduction to transducers	1
2.2	Linear Variable Differential Transducers – Operation and use	1
2.3	Transducers for velocity measurements	1
2.4	Transducers for acceleration measurements	1
2.5	Vibration meter – Principle and working	1
2.6	Working principle of Seismographs	1
2.7	Seismogram and its inference	1
3.0	**Data Acquisition Systems**	
3.1	Introduction to data acquisition systems	1
3.2	Static data recording devices	2
3.3	Dynamic data recording devices	1
3.4	Data acquisition and processing systems	1
3.5	Cathode Ray Oscilloscope – Operation and use	1
3.6	XY Plotter – Principle & Construction	1
3.7	Chart plotter	1
3.8	Digital data acquisition systems	1
4.0	**Photoelasticity**	
4.1	Introduction to photoelasticity& Principles	1
4.2	Optics of photoelasticity	1
4.3	Plane Polariscope – Working principle	1
4.4	Circular Polariscope – Working principle	1
4.5	Isoclinics and isochromatics – Properties & importance	1
4.6	Methods of stress seperation	2
5.0	**Non Destructive Testing Methods**	
5.1	Introduction to NDT and its scope	1
5.2	Ultrasonic testing principles and application	1
5.3	Rebound hammer – Working Principle	1
5.4	Holography& its uses	1
5.5	Use of laser for structural testing	1
5.6	Advanced NDT methods- Ultrasonic pulse echo method	2
5.7	Impact echo method	1
5.8	Impulse radar techniques	1
5.9	GECOR	1
5.10	Ground penetrating radar (GPR).	1

60PSE E35	Matrix Method of Structural Analysis	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To learn the basics in measurements, strain gauge types, and applications
- To understand various devices for vibration measurement
- To acquire knowledge in data acquisition systems
- To learn photo elasticity and its applications
- To perform nondestructive testing methods in structures

Pre-requisites

Fundamentals of Mathematics, knowledge of basic Science

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the concepts of energy theorems	Apply
CO2	Formulation of stiffness and flexibility matrix for various co-ordinates	Analyse
CO3	To solve the beam using stiffness and flexibility methods	Understand
CO4	To solve the frame using stiffness and flexibility methods	Analyse
CO5	To understand the concepts of solving the truss using stiffness and flexibility methods	Apply

60PSE E36	Secondary Treatment of Wastewater	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- Process analysis and kinetics of secondary treatment
- To understand the process kinetics
- Suspended and attached growth treatment of wastewater
- To study the digestion process
- To find the attached growth treatment process

Pre-requisites

Fundamentals of Mathematics, knowledge of properties of construction materials and itsmechanics and concrete technology.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Identify the biological treatment process and analysis	Apply
CO2	Evaluate the bio kinetic coefficients	Analyse
CO3	Recognize the common physical, chemical and biological unit operations encountered in treatment process	Understand
CO4	Characterize the treatment process	Analyse
CO5	Formulate the application of the attached growth treatment process.	Apply

Introduction, Process Analysis and Selection Biological treatment processes – objectives - Choice of treatment method – Environmental impact and other considerations in planning the treatment – Cost of Wastewater treatment – Reactors used for the treatment – mass balance analysis – Reactions, Reaction rates – Enzyme reaction. Modeling of ideal flow and non ideal flow reactors – Reactors in parallel – Reactors in series – Tracer tests – Estimation of dispersion coefficient.	[9]
Fundamentals of Process Kinetics Role of microorganisms – Microbial growth kinetics - Biological oxidation process - loading – MCRT - F/ M ratio - Determination of biokinetic coefficients – Modelling of suspended growth treatment process – Description, Design and operating parameters – Modelling of plug flow reactors.	[9]
Suspended Growth Treatment Process - Activated Sludge Process and Ponds Treatment Process Loading – Biological & solids retention time – F/M ratio – Determination of Bio-kinetic constants – application of kinetics to Biological Treatment - Suspended Growth Treatment Process – Modelling of Suspended Growth Treatment Process – CFSTR – PFR - Design of Activated Sludge Process – Modifications (only theory) – Oxidation pond – Aerated lagoons – Oxygen requirements – arrangement for transfer of oxygen – Secondary clarifier - design features. Stabilization ponds – Classification – Application – Process design, flow pattern and analysis of Aerobic ponds – Facultative ponds – Anaerobic ponds – maturation ponds – Construction and performance.	[9]
Suspended Growth Treatment Process - Digestion Process Sludge Digestion – Sources of sludge – Characteristics – Quantities – Anaerobic digestion – Process – Kinetic relationship – gas production – design considerations. Anaerobic treatment of liquid wastes – Anaerobic sludge blanket process – design considerations. Aerobic Digestion – Kinetics – Oxygen requirements – Design considerations.	[9]
Attached Growth Treatment Process Attached Growth Treatment Process – Substrate Removal in Attached Growth Treatment Process - Trickling Filter – Process – Classification - design based on popular design equations – NRC, Rankine's and Eckenfelder equation - Rotating Biological contactors – Anaerobic attached growth treatment processes – up flow packed bed – up flow expanded bed – Fluidized bed – Down flow bed. (Only theory)	[9]

60PSE E37	Industrial Wastewater Pollution - Prevention and Control	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To know the industrial wastewater and laws
- To identify techniques and approaches for minimizing the generation.
- To find the treatment of physio chemical and biological treatment methods.
- To identify an Application of physio chemical and biological treatment methods for recovery, reuse and disposal.
- To know the supported with case studies under Indian situations.

Pre-requisites

Fundamentals of Mathematics, knowledge of properties of construction materials and its mechanics and concrete technology.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Discuss about the source and environmental impact of industrial waste water	Apply
CO2	Able to develop the methods for prevention and control of industrial pollution	Analyse
CO3	Formulate the various methods for industrial waste water treatment	Understand
CO4	Know about the design of effluent treatment plant	Analyse
CO5	Identify the various case studies associated in industrial wastewater treatment	Apply

Introduction Industrial scenario in India– Industrial activity and Environment - Uses of Water by industry – Sources and types of industrial wastewater – Nature and Origin of Pollutants - Industrial wastewater and environmental impacts – Regulatory requirements for treatment of industrial wastewater – Industrial waste survey – Industrial wastewater monitoring and sampling -generation rates, characterization and variables –Toxicity of industrial effluents and Bioassay tests – Major issues on water quality management	[9]
Industrial Pollution Prevention Prevention and Control of Industrial Pollution – Benefits and Barriers – Waste management Hierarchy - Source reduction techniques – Pollution Prevention of Assessment - Material balance - Evaluation of Pollution prevention options –Cost benefit analysis – payback period - Waste minimization Circles	[9]
Industrial Wastewater Treatment Equalisation - Neutralisation – Oil separation – Flotation – Precipitation – Heavy metal Removal– Aerobic and anaerobic biological treatment – Sequencing batch reactors – High Rate reactors - Chemical oxidation – Ozonation – carbon adsorption - Photocatalysis – Wet Air Oxidation – Evaporation – Ion Exchange – Membrane Technologies – Nutrient removal.- Treatability studies.	[9]
Wastewater Reuse And Residual Management Individual and Common Effluent Treatment Plants – Joint treatment of industrial and domestic wastewater - Zero effluent discharge systems - Quality requirements for Wastewater reuse – Industrial reuse , Present status and issues - Disposal on water and land – Residuals of industrial wastewater treatment – Quantification and characteristics of Sludge – Thickening, digestion, conditioning, dewatering and disposal of sludge – Management of RO rejects.	[9]
Case Studies Attached Growth Treatment Process – Substrate Removal in Attached Growth Treatment Process - Industrial manufacturing process description, wastewater characteristics, source reduction options and waste treatment flow sheet for Textiles – Tanneries – Pulp and paper – metal finishing – Oil Refining – Pharmaceuticals – Sugar and Distilleries	[9]

60PSE E41	CADD for Structures	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To gain knowledge on Computer graphics and drafting software packages
- To Analyse the structure using computer methods
- To acquire knowledge on computer aided designing and detailing
- To know Project scheduling using CPM and PERT
- To learn theartificial intelligence systems

Pre-requisites

Courses –Structural Analysis, RCC and Steel Design

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Choose software packages for 2D drafting	Apply
CO2	Perform structural analysis using software	Analyse
CO3	Design the structures with computer methodologies	Understand
CO4	Optimize the structural design with the help of software	Analyse
CO5	Apply artificial intelligence in construction industry	Apply

Mapping with Programme Outcomes

60PSE E42	Design of Industrial Structure	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- Design of Steel Gantry Girders.
- Design of Steel Portal, Gable Frames.
- Design of Steel Bunkers and Silos.
- Design of Chimneys and Water Tanks.
- Design of Tubular Structures

Pre-requisites

Knowledge of portal frame analysis, structural steel design, foundation design

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explain the planning and functional requirements of Industrial Structures	Apply
CO2	Design the Pre – Engineered structures and foundations	Analyse
CO3	Demonstrate the structural aspects of machine foundation and containment structures.	Understand
CO4	Design the Turbo generator foundations & conveyor systems.	Analyse
CO5	Design of offshore structures with failure probability	Apply

Mapping with Programme Outcomes

60PSE E43	Disaster Resistant Structures	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To analyses the behavior of life line structures during disasters.
- To study about the safety analysis of community structures.
- To assess the procedure for damaged structures, along with ground improvement techniques.
- To gain the knowledge of detailing of Structures and Components
- To understand the concept of designing structures to withstand disaster.

Pre-requisites

Courses –Disaster Management

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the design philosophy for resisting natural calamities.	Apply
CO2	Evaluate the response of dams, bridges and identify strengthening techniques.	Analyse
CO3	Discuss the damage assessment and retrofitting.	Understand
CO4	Describe the use of modern analysis, design and detailing for life line structures.	Analyse
CO5	Evaluate the techniques of damage assessment.	Apply

60PSE E44	Industrial Steel Structures	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To learn guidelines for industrial structures
- To acquire knowledge in design of roof and gantry girders
- To learn the design of special structures in industries
- To perform the design of tower structures
- To learn the behavior and design of pre engineering buildings

Pre-requisites

Courses –Strength of Materials, Design of Steel Structures

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Classify the different types of industrial structures based on planning and functional requirements.	Apply
CO2	Assess the general behavior of steel shell roofs and design of gantry girders and gantry columns.	Analyse
CO3	Evaluate the various forces acting on Bunkers, silos, chimney's, cooling towers steel storage tanks and design them.	Understand
CO4	Calculate the different types of forces acting on towers and design the tower foundations.	Analyse
CO5	Analysis and design of pre-engineered structures	Apply

		PE	3	0	0	3

Objectives

- To rationalize the periodic properties such as corrosive environments
- To recall the basics of Electrochemical and Polarization
- To endow with an overview of Corrosive concentration
- To enable the students with various concepts like corrosion testing
- To implement the principles of corrosion prevention

Pre-requisites

Courses –Strength of Materials, Design of Steel Structures, Concrete Technology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Define the basic concepts on corrosion.	Apply
CO2	Discuss the testing and evaluation of forms of corrosion	Analyse
CO3	Describes the different types of corrosive environments.	Understand
CO4	Illustrate the concepts of corrosion testing.	Analyse
CO5	Apply the corrosion prevention.	Apply

Introduction Cost of Corrosion – Corrosion Engineering – Definition of Corrosion – Environments – Corrosion Damage – Classification of Corrosion. Corrosion Principles : Introduction – Corrosion Rate Expressions. Electrochemical Aspects : Electrochemical Reactions – Polarisation – passivity, Environmental Effects: Effect of oxygen and oxidizers – Effect of Velocity – Effect of temperature – Effects of Corrosive concentration – Effect of Galvanic Coupling – Metallurgical Aspects.	[9]
Forms of Corrosion Galvanic Corrosion : EMF and Galvanic Series – Environmental Effects – Distance Effect – Area Effect – Prevention. Crevice Corrosion: Environmental Factors – Mechanism – Combating Crevice Corrosion – Filiform Corrosion. Pitting – Solution composition – Velocity – Metallurgical Variables – Evaluation & Prevention of pitting damage. Intergranularcorrosion .Austentic Stainless Steels – Weld Decay – Knife Line Attack. Selective Leaching: Dezincification Characteristics, Mechanism, prevention – Graphitization – Other Alloy systems. Erosion Corrosion: Surface Films – Velocity – Turbulence – Impingement - Galvanic Effect – Combating Erosion corrosion. Stress corrosion: crack morphology – Stress effects – time to cracking – Environmental & Metallurgical factors – Mechanism – methods of prevention – corrosion Factors – Hydrogen Blistering – Hydrogen Embrittlement – Prevention.	[9]
Corrosive Environments Mineral Acids: Sulfuric Acid – Nitric Acid – Hydrochloric Acid – Hydrofluoric Acid – Phosphoric Acid. Organic Acids – Alkalies – Atmosphere Corrosion – Sea water – Fresh water – High purity water – soils – Aerospace – Biological corrosion – Human body – Corrosion of metals by halogens – Liquid metals and fused salts – sewage and plant – waste treatment – Dew point corrosion – liquid metal embrittlement of cracking – Hydrogen peroxide – Rebar corrosion.	[9]
Corrosion Testing Introduction – Classification – Purpose – Materials and specimens – surface preparation – Measuring & Weighing – Exposure Techniques – Duration – Planned Interval Tests Aeration – Cleaning specimens after exposure – temperature – Standard expressions for corrosion rate – Galvanic corrosion high temperature and pressure – Erosion – Intergranular corrosion – pitting & stress corrosion – NACE Test methods – Linear polarization – paint Tests – Sea water tests – Miscellaneous tests of metals.	[9]
Corrosion Prevention Materials Selection: Metals & Alloys – Metal purification. Alteration of Environment: changing mediums – Inhibitors. Design: Wall Thickness – Design Rules. Cathodic& Anodic protection – comparison. Coatings: Metallic & other Inorganic coatings – Organic coatings – corrosion control standards – Failure Analysis.	[9]

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	**Planning and Functional Requirements**	
1.1	Cost of Corrosion	1
1.2	Corrosion Engineering	1
1.3	Definition of Corrosion – Environments	1
1.4	Corrosion Damage – Classification of Corrosion.	1
1.5	Corrosion Principles.	1
1.6	Introduction – Corrosion Rate Expressions.	1
1.7	Electrochemical Aspects: Electrochemical Reactions – Polarisation – passivity.	1
1.8	Environmental Effects: Effect of oxygen and oxidizers – Effect of Velocity – Effect of temperature	1
1.9	Effects of Corrosive concentration – Effect of Galvanic Coupling – Metallurgical Aspects	1
2.0	**FORMS OF CORROSION**	
2.1	Galvanic Corrosion : EMF and Galvanic Series – Environmental Effects – Distance Effect – Area Effect	1
2.2	Prevention. Crevice Corrosion: Environmental Factors – Mechanism – Combating Crevice Corrosion	1
2.3	Filiform Corrosion. Pitting – Solution composition – Velocity – Metallurgical Variables	1
2.4	Evaluation & Prevention of pitting damage. Intergranularcorrosion .Austentic Stainless Steels – Weld Decay – Knife Line Attack.	1
2.5	Selective Leaching: Dezincification Characteristics, Mechanism, prevention – Graphitization – Other Alloy systems.	1
2.6	Erosion Corrosion: Surface Films – Velocity – Turbulence – Impingement - Galvanic Effect	1
2.7	Combating Erosion corrosion. Stress corrosion: crack morphology	1
2.8	Stress effects – time to cracking – Environmental & Metallurgical factors	1
2.9	Mechanism – methods of prevention – corrosion Factors – Hydrogen Blistering – Hydrogen Embrittlement – Prevention.	1
3.0	**CORROSIVE ENVIRONMENTS**	
3.1	Mineral Acids: Sulfuric Acid – Nitric Acid	1
3.2	Hydrochloric Acid – Hydrofluoric Acid	1
3.3	Phosphoric Acid. Organic Acids – Alkalies	1
3.4	Atmosphere Corrosion – Sea water – Fresh water	1
3.5	High purity water – soils – Aerospace	1
3.6	Biological corrosion – Human body – Corrosion of metals by halogens	1
3.7	Liquid metals and fused salts – sewage and plant – waste treatment	1
3.8	Dew point corrosion – liquid metal embrittlement of cracking	1
3.9	Hydrogen peroxide – Rebar corrosion	1
4.0	**CORROSION TESTING**	
4.1	Introduction – Classification – Purpose – Materials and specimens	1
4.2	surface preparation – Measuring & Weighing – Exposure Techniques	1
4.3	Duration – Planned Interval Tests Aeration	1
4.4	Cleaning specimens after exposure	1
4.5	temperature – Standard expressions for corrosion rate	1
4.6	Galvanic corrosion high temperature and pressure – Erosion	1
4.7	Intergranular corrosion pitting & stress corrosion	1
4.8	NACE Test methods – Linear polarization	1
4.9	Paint Tests – Sea water tests – Miscellaneous tests of metals.	1
5.0	**CORROSION PREVENTION**	
5.1	Materials Selection: Metals & Alloys	1

60PSE E46	Principles and Design of Biological Treatment System	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To know the Principles of Aerobic and anaerobic treatment of waste water.
- To design the Aerobic treatment of waste water.
- To identify the anaerobic treatment of waste water.
- To find out the solution of sludge treatment.
- To Know the Construction, operation and maintenance of waste water treatment units

Pre-requisites

Basic knowledge of properties learnt in basics of Biological treatment system

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Able to develop conceptual schematics required for biological treatment of wastewater	Apply
CO2	Ability to translate pertinent criteria into system requirements	Analyse
CO3	Analyse the and best solution for anaerobic treatment of wastewater	Understand
CO4	Design the sludge digestion process.	Analyse
CO5	Identify the construction operation and maintenance aspects	Apply

Mapping with Programme Outcomes

Cos	Pos

60PSE E47	Transportation of Water and Waste Water	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To understand the fluid characteristics
- To know concepts related to water transmission mains
- To find the water distribution system, sewer networks and
- To design the storm water drain, with emphasis on computer application.
- To know the Case studies on transportation of water and waste water

Pre-requisites

Basic knowledge of Environmental Engineering courses

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the general hydraulics and principles of flow measurements.	Apply
CO2	Describe the components of water transmission system.	Analyse
CO3	Analyse the water distribution networks plan the wastewater collection from various sources	Understand
CO4	Evaluate the conveyance of wastewater and various appurtenances	Analyse
CO5	Estimate the storm water drainage quantity by various methods.	Apply

Mapping with Programme Outcomes

III	3	0	0	45	3	40	60	100

General Hydraulics and Flow Measurement Fluid properties; fluid flow – continuity principle, energy principle and momentum principle; frictional head loss in free and pressure flow, minor heads losses, Carrying Capacity–Flow measurement.	[9]
Water Transmission and Distribution Need for Transport of water and waste water-Planning of water system-Selection of pipe materials-Water transmission main design-gravity and pumping main, selection of pumps-characteristics-economics; specials, jointing and maintenance, water hammer analysis, water distribution pipe network design, analysis and optimization-appurtenances-corrosion prevention-minimization of water losses-leak detection, storage reservoir.	[9]
Wastewater Collection and Conveyance Planning factors – Design of sanitary sewer; partial flow in sewers, economics of sewer design; Wastewater pumps and pumping stations- sewer appurtenances; material, construction, inspection and maintenance of sewers; Design of sewer outfalls-mixing conditions; conveyance of corrosive wastewaters.	[9]
Storm Water Drainage Necessity- combined and separate system; Estimation of storm water run off Formulation of rainfall intensity duration and frequency relationships- Rational methods.	[9]
Case Studies and Software Applications Use of computer software in water transmission, water distribution and sewer design – LOOP version 4.0, SEWER, BRANCH, Canal ++ and GIS based soft ware's.	[9]

60PSE E51	Prestressed Concrete Structures	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- Understand the principles and general mechanical behavior of prestressed concrete
- To Analyse the transfer of prestress and time dependent factors like losses of prestress
- Design of prestressed concrete flexural members
- Design of tension and compression members in prestressed concrete.
- Analyse and design of composite members and special structural elements like water tank, poles, pipes.

Pre-requisites

Fundamentals of Mathematics, knowledge in mechanics.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Evaluate the internal forces and deflection in prestressed concrete.	Apply
CO2	Design the pre-stressing layout and understand the behavior of pre-stressed concrete elements under practical loading conditions	Analyse
CO3	Practice the Analysis and design of continuous beams and extend the knowledge on concept of linear transformation.	Understand
CO4	Outline the design of tension and compression members in prestressing.	Analyse
CO5	Illustrates the design of composite members and partial prestressing.	Apply

Objectives

- To understand the knowledge of properties of durability of concrete.
- To conduct various tests on properties of special concretes.
- To gain knowledge about formwork and quality control.
- To gain knowledge about the properties of concreting under special circumstances.
- To understand the Mix design using IS method.

Pre-requisites

Basic knowledge of properties of concrete making materials.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Discuss about the methods of concrete mix design	Apply
CO2	Describe the special concretes	Analyse
CO3	Outline the durability of concrete.	Understand
CO4	Identify the concepts form work and quality control	Analyse
CO5	Illustrate the behavior of concreting under special circumstances.	Apply

60 PSE E53	Aseismic Design of Structures	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To learn the fundamentals of seismology and basic earthquake mechanisms, tectonics types of ground motion, and propagation of ground motion.
- Determine the maximum dynamic response of an elastic vibrating structure to a given forcing function
- Learn the fundamentals of building code based structural design
- Determine the static design base shear based on the type of structural system, irregularity, location and occupancy
- Recognize special conditions such as irregular buildings, building separation, P-delta

Pre-requisites

Fundamentals of Mathematics, knowledge of basic Science

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Identify the causes and effects of earthquake and describe the terms related to earthquake.	Apply
CO2	Define the basic concepts of elements of vibration and behavior of structures under cyclic loading.	Analyse
CO3	Practice the codal provisions for design and detailing of earthquake resistant structures.	Understand
CO4	Formulate the design principles for Non-engineered buildings and design provisions for bridges and dams.	Analyse
CO5	Categorize the new concepts on different types of base isolation techniques.	Apply

60PSE E54	Maintenance and Rehabilitation of Structures	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To study the quality assurance for concrete construction, causes of deterioration of concrete structures.
- To study the different types of techniques for repair and rehabilitation of structure.
- To design and suggest repair strategies for deteriorated concrete structures including repairing with composites.
- To understand the strength and durability properties, their effects due to climate and temperature.
- To understand the mechanism of deterioration of concrete, damage assessment, repair materials

Pre-requisites

Fundamentals of Mathematics, knowledge of properties of construction materials and itsmechanics and concrete technology.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Learn the properties related to mechanics of deterioration of concrete.	Apply
CO2	Evaluate the basic concepts of the corrosion.	Analyse
CO3	Point out various types of techniques to repair crack, wear, fire and leakage.	Understand
CO4	Study the various types and properties of repair materials.	Analyse
CO5	Describe the various demolition techniques and demolition methods	Apply

60PSE E56	Remote Sensing and GIS For Hydrology and Water Resources	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- The fact related to hydrology
- Acquired the knowledge about important terms and definitions related to drainage basin.
- Familiar to use the remote sensing and GIS as a tool in the field of assessing the water resources.
- Groundwater quality and potential can be studied through modeling.
- Knowledge on effective management over the surface groundwater by mapping and modeling.

Pre-requisites

Basic knowledge of Remote Sensing and GIS courses

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand about hydrological cycle and its various stages.	Apply
CO2	Acquired knowledge on remote sensing and GIS techniques effective usage in water resources application oriented data interpretation model creation.	Analyse
CO3	Understand the fundamental procedure which are most necessary for water shed management	Understand
CO4	Familiar to GIS mapping concept through which multiple levels of assessment could be done in the field of natural disasters.	Analyse
CO5	Understand about thematic mapping preparation for groundwater related GIS analysis of spatial and temporal distribution	Apply

60PSE E57	Principles and Design of Physico-Chemical Treatment Systems	Category	L	T	P	Credit
		PE	3	0	0	3

Objectives

- To know the working principles and characteristics of physio-chemical treatment.
- To design of various physical treatment systems for water and wastewater.
- To find the chemical treatment systems for water and wastewater.
- To understand and design of municipal water treatment plant
- To design the wastewater treatment plant

.

Pre-requisites

Basic knowledge of Environmental Engineering courses

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Know about pollutant in water and wastewater	Apply
CO2	Able to develop conceptual schematics required for the physical treatment of water and wastewater	Analyse
CO3	Ability to create the principles and applications of chemical treatment	Understand
CO4	Formulate the preliminary design of municipal water treatment plant	Analyse
CO5	To gain knowledge about design of wastewater treatment plant	Apply

III	3	0	0	45	3	40	60	100

Classification of Pollutants Pollutants in water and wastewater – characteristics, Standards for performance Significance of physico-chemical treatment – Selection criteria-types of reactor- reactor selection-batch-continuous type-kinetics.	[9]
Physical Treatment Principles Principles of Screening – Mixing, Equalization – Sedimentation – Filtration – Modeling back washing – Evaporation – Incineration – gas transfer – mass transfer coefficient Adsorption – Isotherms – Principles, kinetics, regeneration membrane separation, Reverse Osmosis, nano filtration, ultra filtration and hyper filtration electrodialysis, distillation – stripping and crystallization – Recent Advances.	[9]
Chemical Treatment Principles Principles of Chemical treatment – Coagulation flocculation – Precipitation – flotation solidification and stabilization – Disinfection, Ion exchange, Electrolytic methods, Solvent extraction – advanced oxidation /reduction – Recent Trends	[9]
Design of Municipal Water Treatment Plant Selection of Treatment – Design of municipal water treatment plant units – Aerators – chemical feeding – Flocculation – clarifies – tube settling – filters – Rapid sand filters slow sand filter, pressure filter, Dual media inlets Displacement and gaseous type. Design of Industrial Water Treatment Units- Selection of process – Design of softeners – Demineralisers –Reverse osmosis plants –flow charts – Layouts –Hydraulic Profile PID construction and O&M aspects – case studies, Residue management – Upgradation of existing plants – Recent Trends – Software application.	[9]
Design of Wastewater Treatment Plants Design of municipal wastewater treatment units-screens-detritors-grit chamber-settling tanks-sludge thickening-sludge dewatering systems-sludge drying beds - Design of Industrial Wastewater Treatment Units-Equalization- Neutralization-Chemical Feeding Devices-mixers-floatation units-oil skimmer- flow charts – Layouts –Hydraulic Profile PID construction and O&M aspects – case studies, Residue management – Upgradation of existing plants – Recent Trends – Software application. 60 PAC 001	English for Research Paper Writing	Category	L	T	P	Credit
		PC	2	0	0	0

Objectives

- Teach how to improve writing skills and level of readability
- Tell about what to write in each section
- Summarize the skills needed when writing a Title
- Infer the skills needed when writing the Conclusion
- Ensure the quality of paper at very first-time submission

Pre-requisites

-NIL-

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand that how to improve your writing skills and level of readability	Apply
CO2	Learn about what to write in each section	Analyse
CO3	Understand the skills needed when writing a Title	Understand
CO4	Understand the skills needed when writing the Conclusion	Analyse
CO5	Ensure the good quality of paper at very first-time submission	Apply

60 PAC 003	Constitution Of India	Category	L	T	P	Credit
		PC	2	0	0	0

Objectives

- Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- To address the growth of Indian opinion regarding modern Indian intellectuals' constitutional. Role and entitlement to civil and economic rights as well as the emergence nation hood in the early years of Indian nationalism.
- To address the role of socialism in India after the commencement of the Bolshevik Revolutionin1917and its impact on the initial drafting of the Indian Constitution.

Pre-requisites

-NIL-

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.	Apply
CO2	Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India	Analyse
CO3	Discuss the circumstances surrounding the foundation of the Congress Socialist Party [CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.	Understand
CO4	Discuss the passage of the Hindu Code Bill of 1956.	Analyse
CO5	Discuss the role and functioning of election commission of India.	Apply
