K.S.Rangasamy College of Technology

CURRICULUM AND SYLLABI

of

B.Tech. Textile Technology

(For the batch admitted in 2024 – 2025)

R 2022

Courses Accredited by NBA, Accredited by NAAC A++ Grade, Approved by AICTE, Affiliated to Anna University, Chennai.

KSR Kalvi Nagar, Tiruchengode – 637 215. Namakkal District, Tamil Nadu, India.

B.Tech. Textile Technology

VISION OF THE DEPARTMENT

To be the center of excellence in textile education, training, research and service.

MISSION OF THE DEPARTMENT

- To enlighten the students about the latest technology in textile industries through innovative educational practices and a multi-disciplinary approach.
- To engage with the industry as solution providers through consultancy.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- **PEO1:** Production Process and Solutions to Problems: Graduates are competent in textile production processes and be able to identify problems and suggest suitable solutions.
- **PEO2:** Modern Tools & Technology and Ethics: Graduates use latest tools and technology for the production of textile materials and serve society in an ethical manner.
- **PEO3:** Skills, Entrepreneurship and Life Long Learning: Graduates will exhibit skills in their career and develop entrepreneurial culture through life-long learning.

PROGRAMME OUTCOMES (POs)

Engineering Graduates will be able to:

- PO1: **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2: **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3: **Design /development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4: **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5: **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- PO6: **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7: **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8: **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9: **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10: **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write

effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11: **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs):

Engineering Graduates will be able to:

PSO1: Application of Basic Concepts: Apply fundamental concepts in the areas of spinning, weaving, testing, garment making and processing.

PSO2: Solution for Industrial Problems: Solve industrial problems in textile industries considering environmental issues to improve quality and productivity.

PSO3: Moral Values: Demonstrate social and ethical responsibilities relevant to textile industries.

MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES (PEOs) WITH PROGRAMME OUTCOMES (POs)

^{*}CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

^{**}End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination and 40 marks for practical End semester Examination.

60 EN 001	PROFESSIONAL ENGLISH I	Category	L	T	Р	Credit
OU EN UUT	PROFESSIONAL ENGLISH I	HS	1	0	2	2

Objectives

- To help learners improve their vocabulary and to enable them to use words appropriately in different academic and professional contexts
- To help learners develop strategies that could be adopted while reading texts
- To help learners acquire the ability to speak effectively in English in real life and career related situations
- To equip students with effective speaking and listening skills in English
- To facilitate learners to enhance their writing skills with coherence and appropriate format effectively

Pre-requisites

• Basic knowledge of reading and writing in English.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and interpret complex academic texts	Understand
CO2	Recall the denotative and connotative meanings of technical texts	Remember
CO3	Interpret definitions, descriptions, narrations, and essays on various topics	Understand
CO4	Express fluently and accurately in formal and informal communicative contexts	Understand
CO5	Summarize their opinions effectively in both oral and written medium of communication	Understand

Course Contents and Lecture Schedule								
S. No.	Topics	No. of hours						
1.0	Introduction to Fundamentals of Communication							
1.1	Listening for general information and Specific details	1						
1.2	Self-introduction	1						
1.3	Narrating personal experiences	1						
1.4	Reading relevant to technical contexts and emails	1						
1.5	Writing letters – informal	1						
1.6	Writing letters - formal	1						
1.7	Present Tenses	1						
1.8	synonyms, antonyms and contranyms, and affixes	1						
1.9	phrasal verbs; abbreviations & acronyms	1						
2.0	Narration and Summation							
2.1	Listening to podcasts, documentaries and interviews with celebrities	1						
2.2	Narrating personal experiences	1						
2.3	Summarizing of documentaries	1						
2.4	Reading travelogues, and excerpts from literature	1						
2.5	Paragraph writing	1						
2.6	Short report on an event (field trip etc.).	1						
2.7	Past tenses	1						
2.8	Prepositions	1						
2.9	One-word substitution	1						
3.0	Description of a process / product	·						
3.1	Listen to a product and process descriptions	1						
3.2	Picture description	1						
3.3	Giving instruction to use the product	1						
3.4	Reading Advertisements, gadget reviews and user manuals	1						
3.5	Writing Definitions and instructions	1						
3.6	Future Tenses	1						
3.7	Homonyms and Homophones	1						
3.8	Imperatives	1						
3.9	comparative adjectives, and discourse markers	1						
4.0	Classification and Recommendations	<u> </u>						
4.1	Listening to TED Talks and educational videos	1						
4.2	Listening to scientific lectures	1						

4.3	Small Talk and mini presentations	1
4.4	Reading newspaper articles and journal reports	1
4.5	Note-making / Note-taking	1
4.6	Recommendations	1
4.7	Transferring information from non-verbal	1
4.8	Articles and Pronouns	1
4.9	Subject-verb agreement and collocations	1
5.0	Expression	
5.1	Listening to debates and panel discussions	1
5.2	Group discussions	2
5.3	Role plays	1
5.4	Reading editorials and opinion blogs	1
5.5	Essay Writing (Descriptive or narrative)	1
5.6	Punctuation and cause & effect expressions.	1
5.7	Compound Nouns	1
5.8	Simple, compound & complex sentences	1

60 MA 001	MATRICES AND CALCULUS	Category	L	Т	Р	Credit
OU WIA UUT	WATRICES AND CALCULUS	BS	3	1	0	4

Objectives

- To familiarize the basic concepts in Cayley-Hamilton theorem and orthogonal transformation
- To get exposed to the fundamentals of differentiation
- To acquire skills to understand the concepts involved in Jacobians and maxima and minima
- To solve various linear differential equations and method of variation of parameters
- To learn various techniques and methods in solving definite and indefinite integrals.

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

On the	Of the successful completion of the course, students will be able to							
CO1	Apply the concepts of Cayley-hamilton theorem and orthogonal transformation to the matrix	Apply						
CO2	Apply the concepts of differentiation in solving various Engineering problems	Apply						
CO3	Obtain Jacobians and maxima and minima of functions of two variables	Apply						
CO4	Employ various methods in solving differential equations	Apply						
CO5	Apply different techniques to evaluate definite and indefinite integrals	Apply

^{*} SDG:4- Quality Education

S. No.	Contents and Lecture Schedule	No. of
	Topics	hours
1.0	LASERS	
1.1	Einstein's theory of matter radiation interaction and A and B coefficients	2
1.2	Amplification of light by population inversion	1
1.3	Different types of lasers: gas lasers (CO ₂)	1
1.4	Solid-state lasers (Nd: YAG)	1
1.5	Dye lasers	1
1.6	Semiconductor laser (Homojunction and Hetero junction)-	1
1.7	Properties of laser beams	1
1.8	Application of laser in engineering and garment manufacturing	
2.0	ULTRASONICS AND APPLICATIONS	T
2.1	Introduction-Properties	1
2.2	Production: Magnetostriction effect, Magnetostriction generator	1
2.3	piezoelectric effect, piezoelectric generator	1
2.4	Ultrasonic detection	1
2.5	Acoustical grating	1
2.6	Applications: Cavitation, cleaning, Textile Wet Processing	1
2.7	Non destructive testing: Pulse echo system, through transmission, resonance system	2
2.8	Ultrasonic imaging (A, B and TM- Scan).	1
3.0	FIBER OPTICS AND SENSORS	
3.1	Principles – cone of acceptance,	1
3.2	Numerical aperture (derivation)- Modes of propagation	1
3.3	Fabrication of optical fibre: Crucible-crucible technique	1
3.4	Classification: based on materials, modes and refractive index profile	1
3.5	Splicing : types of splicing	1
3.6	Fiber optical communication links (Block diagram)	1
3.7	Fiber optic sensors: liquid level sensors, Temperature	1
3.8	Displacement sensors	1
3.9	Applications of fiber optic sensor in textile technology	1
4.0	ELASTICITY, SURFACE TENSION AND VISCOSITY	
4.1	Stress - Strain - Hooke's law	1
4.2	Elastic Behavior of Material	1
4.3	Types of elastic moduli - Young's modulus - Bulk modulus - Rigidity modulus -	1
4.4	Non-uniform bending - Uniform bending - factors affecting elasticity.	1
4.5	Surface properties: cohesive & adhesive forces - factors affecting surface tension	1
4.6	Interfacial tension - emulsions - detergency - foaming - wettability-	1
4.7	Coefficient of viscosity – Poiseuilles law	1
4.8	Coefficient of viscosity of various liquids.	1
4.9	Properties of absorbent textiles for industrial applications.	1
5.0	CRYSTALLOGRAPHY AND NANOTECHNOLOGY	ı
5.1	Lattice - Unit cell – crystal systems and Bravais lattice	1
	Crystal planes and Miller indices	1

5.3	Nanomaterials: Properties- Top-down process: Ball Milling method	1
5.4	Bottom-up process: vapor phase deposition	2
5.5	Carbon Nano Tube (CNT): Properties, preparation by electric arc method,	1
5.6	Applications of carbon nano tubes in textile processing:	1
5.7	Water repellence, UV protection, Antimicrobial, Antistatic, Wrinkle resistance, Flame resistance	2

60 CH 006	CHEMISTRY FOR TEXTILE	Category	L	Т	Р	Credit
60 CH 006	CHEMISTRY FOR TEXTILE	BS	3	0	0	3

Objectives

- To help the learners to analyse the hardness of water and its removal
- To study the concepts of electrochemistry and corrosion control.
- To study the properties of lubricants and emulsions
- To explain the concepts of kinetics and surface chemistry
- To identify the type of polymer fabrication

Pre-requisites

Nil

On the successful or

On the successful completion of the course, students will be able to

_	O 11 11 10 00		
	CO1	Identify the types of hardness of water and its removal.	Apply
	CO2	Interpret the applications of electrochemistry, corrosion and its control	Apply
Ī	CO3	Identify the types of lubricants and their practical applications	Understand
	CO4	Interpret the kinetics of the reaction and surface chemistry	Understand
Ī	CO5	Explore the types of polymer fabrication.	Understand

Water Technology Introduction – Commercial and industrial uses of water - hardness - types – estimation of hardness by EDTA method- Internal conditioning (colloidal, phosphate, calgon and carbonate conditioning methods) – external conditioning (Zeolite process, demineralization process) - Desalination methods (Reverse Osmosis and Electro dialysis). Flash evaporation.											
Electrochemistry and Corrosion Electrode potential - Nernst Equation - derivation and problems - reversible and irreversible cells - Types of Electrodes and its applications - reference electrodes - pH, conductometric and Potentiometric titrations. Electrochemical corrosion, Corrosion due to dissimilar metal cells (galvanic cells), Corrosion due to differential aeration - Factors influencing corrosion - Corrosion control: cathodic protection (sacrificial anodic protection, impressed current cathodic prot									[9]		
Lubricants Functions - properties (viscosity index, oiliness, carbon residue, aniline point, cloud and pour point) - classification: Grease (calcium based, sodium based and lithium based) - solid lubricants (graphite and molybdenum disulphide). Grading of lubricants. Hydraulic oils – Lubricating Emulsions – Oil in water, Water in oil. Properties and applications - gas as a lubricant								[9]			
Kinetics and Surface Chemistry Kinetics: Reaction rate - order and molecularity - factors influencing rate of reaction - first order kinetics - Arrhenius equation. Adsorption: Types of adsorption - adsorption isotherms - Freundlich's adsorption isotherm - Langmuir's adsorption isotherm - applications of adsorption on pollution abatement.								adsorption	[9]		
Fabrication of Polymer Compounding- Additives for polymer – fillers – plasticizers – lubricants – accelerators – stabilizers - flame retarders – pigments - nucleating agents - blowing agents - adhesives. Fabrication of polymer - injection moulding - extrusion moulding - blow moulding – compression moulding - lamination.									[9]

OT WIE OUT	Engineering Drawing	ES	1	2	0	3

- To convey to acquire various concepts of dimensioning, conventions and standards.
- To impart the graphic skills for converting pictorial views of solids in to orthographic views.
- To learn the concept in projection of solids.
- To draws the section of solids and to know development of different types of surfaces.
- To learn the concept in isometric projection.

views and 2D drawing using drafting software.

Pre-requisites

Course Outcomes
On the successful completion of the course, students will be able to

CO1 Use the drafting instruments for construct the conic sections Apply
CO2 Convert the pictorial views of solids in to orthographic views Apply
CO3 Draw the projections of regular solids Apply

CO4 Draw the true shape of sections and develop the lateral surfaces of right solids.

Apply

Apply

Sketch the three-dimensional view of solids for given orthographic

^{*}SDG 9 - Industry Innovation and Infrastructure

Course C	Contents and Lecture Schedule	
S. No.	Topics	No. of hours
1.0	Introduction to Engineering Drawing and Plane Curves	
1.1	Use of drawing instruments	2
1.2	BIS conventions and specifications – Size, layout and folding of drawing sheets	2
1.3	Lettering and dimensioning -Drawing sheet layouts - Title block - Line types	2
1.4	Scales: plain, diagonal and vernier scales	1
1.5	Construction of ellipse	1
1.6	Construction of parabola	1
1.7	Construction hyperbola by eccentricity method	1
1.8	Practice class for ellipse, parabola and hyperbola	1
1.9	Construction of rectangular hyperbola	1
1.10	Construction of cycloids	1
1.11	Construction of epicycloids and hypocycloids	1
1.12	Practice class for cycloids and hypocycloids	1
2.0	Orthographic Projection	
2.1	Introduction to orthographic projections	2
2.2	Planes of projection	2
2.3	Projection of points	2
2.4	Projection of lines inclined to both planes	2
2.5	Projection of planes	2
2.6	Projection of planes Inclined to both planes	2
2.7	Conversions of pictorial views to orthographic views	1
2.8	Practice class for pictorial views to orthographic views	1
2.9	Practice class for pictorial views to orthographic views	1
3.0	Projection of Solids	
3.1	Projections of simple solids: prism	3
3.2	Projections of simple solids: cylinder	3
3.3	Projections of simple solids: pyramid	3
3.4	Projections of simple solids: Cone	2
3.5	Practice class for Projection of Solids	2
3.6	Axis of solid inclined to both HP and VP	2
4.0	Sections of solids and Development of surfaces	
4.1	Section of solids for Prism	2
4.2	Section of solids for Cylinder	2
4.3	Section of solids for Pyramid	2
4.4	Section of solids for Cone	2
4.5	Auxiliary Views - Draw the sectional orthographic views of geometrical solids	2
4.6	Draw the sectional orthographic views of objects from industry	2
4.7	Development of surfaces of Right solids Prism	1
4.8	Development of surfaces of Right solids Pyramid	1
4.9	Development of surfaces of Right solids Cylinder and Cone	1
5.0	Isometric Projection and Introduction to AutoCAD	
5.1	Principles of isometric projection	2

5.2	Isometric scale	2
5.3	Isometric projections of simple solids: Prism	2
5.4	Isometric projections of simple solids: Pyramid	2
5.5	Isometric projections of simple solids: Cylinder	2
5.6	Isometric projections of simple solids: Cone	2
5.7	Isometric projections of frustum	1
5.8	Isometric projections of truncated solids	1
5.9	Combination of two solid objects in simple vertical positions	1

61 GE 001	Heritage of Tamils	GE	1	0	0	1*

- To learn the extensive literature of classical Tamil.
- To review the fine arts heritage of Tamil culture.
- To realize the contribution of Tamils in Indian freedom struggle.

Pre-requisites

• Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the extensive literature of Tamil and its classical nature.	Understand
CO2	Apprehend the heritage of sculpture, painting and musical instruments of ancient people.	Understand
CO3	Review on folk and martial arts of Tamil people.	Understand
CO4	Insightthinai concepts, trade and victory of Chozha dynasty.	Understand
CO5	Realize the contribution of Tamil in Indian freedom struggle, self- esteem movement and siddha medicine.	Understand

	LABORATORY (FT & TEXT)	BS	0	0	4	2

- To infer the practical knowledge by applying the experimental methods to correlate with the Physics theory.
- To demonstrate an ability to make physical measurements and understand the limits of precision in measurements
- Test the knowledge of theoretical concepts and develop the experimental skills of the learners.
- To facilitate data interpretation and expose the learners to various industrial and environmental applications
- To enhance the students to handle the instruments

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Realize the concept of youngs modulus, rigidity modulus and dielectric constant of the given materials	Apply
CO2	Recognize the knowledge of properties of light using laser and ordinary light source	Apply
CO3	Apply the concepts of chemistry and develop analytical skills for applications in engineering.	Apply
CO4	Analyse the pH, electromotive force, conductance by using instrumental methods.	Apply
CO5	Apply the Freundlich's adsorption isotherm and Langmuir's adsorption isotherm using acetic acid on activated charcoal	Analyse

List of Experiments:

PHYSICS LABORATORY

- 1. Determination of Young's modulus of a given material Uniform bending
- 2. Determination of rigidity modulus of a wire -Torsional pendulum.
- 3. Determination of dielectric constant.
- 4. Determination of wavelength of mercury spectral lines spectrometer grating
- 5. (a) Laser- Determination of the wave length of the laser using grating.
- 6. (b) Optical fibre -Determination of Numerical Aperture and acceptance angle.

CHEMISTRY LABORATORY

- 1. Estimation of hardness of water sample by complexometric method.
- 2. Estimation of HCl by pH meter.
- 3. Estimation of mixture of acids by conductivity meter.
- 4. Determination of ferrous ion by Potentiometric titration.
- 5. Adsorption of acetic acid by Charcoal.

Case studies/Activity report

- 1. Prepare a report on hardness of water samples in and around your area and suggest your idea for removal of hardness.
- 2. Apply the knowledge of pH determination for health drinks, beverages, soil, effluent and other biological samples and prepare a case study report

^{*} CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

^{**}End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination and 40 marks for practical End semester Examination.

60 EN 002	PROFESSIONAL ENGLISH II	Category	L	Т	Р	Credit
00 EN 002	FROFESSIONAL ENGLISH II	HS	1	0	2	2

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts.
- To help learners develop strategies that could be adopted while reading texts.
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations.
- Improve listening, observational skills, and problem-solving capabilities
- Develop message generating and delivery skills

Pre-requisites

 Basic knowledge of reading and writing in English and should have completed Professional English I

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and contrast products and ideas in technical texts.	Understand							
CO2	CO2 Illustrate cause and effects in events, industrial processes through technical texts								
CO3	O3 Infer problems in order to arrive at feasible solutions and communicate them orally and in the written format.								
CO4	Relate events and the processes of technical and industrial nature.	Remember							
CO5	Demonstrate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Understand

^{*}SDG 4 – Quality Education

S. No.	Topics	No. of hours						
1	Making Comparisons	1						
1.1	Evaluative Listening	1						
1.2	Product Descriptions and filling a graphic organiser							
1.3	Marketing a product by using persuasive techniques	2						
1.4	Reading advertisements, user manuals and brochures	1						
1.5	Writing professional emails	1						
1.6	Compare and contrast essay	1						
1.7	mixed tenses and prepositional phrases	1						
1.8	Same words used in different contexts	1						
2	Expressing Causal Relations in Speaking and Writing							
2.1	Listening to longer technical talks	1						
2.2	Listening to process/event descriptions	1						
2.3	Describing and discussing the reasons of accidents or disasters	1						
2.4	Reading longer technical texts- cause and effect essays	1						
2.5	Writing responses to complaints	1						
2.6	Active Passive Voice transformations	2						
2.7	Infinitive and Gerunds	1						
2.8	Word Formation (Noun-Verb-Adj-Adv), Adverbs.	1						
3	Problem Solving							
3.1	Listening to documentaries and suggesting solutions	1						
3.2	Group Discussion (based on case studies)	2						
3.3	Reading Case Studies, excerpts from literary texts and news reports	1						
3.4	Letter to the Editor	1						
3.5	Checklists	1						
3.6	Problem solution and argumentative essays	1						
3.7	Error correction and Sentence Completion	1						
3.8	If conditional sentences	1						
4	Reporting of Events and Research							
4.1	Listening Comprehension	1						
4.2	Interviewing and presenting oral reports	1						
4.3	Mini presentations on select topics	1						
4.4	Reading newspaper articles	1						
4.5	Recommendations	1						
4.6	Transcoding	1						
4.7	Precis writing, Summarising and Plagiarism	1						
4.8	Reported Speech, Modals	1						
4.9	Conjunctions	1						
5	The Ability to put Ideas or Information Coherently							
5.1	Listening to Formal job interviews	1						
5.2	Role plays	2						
5.3	Virtual interviews	1						

5.4	Reading Company profiles	1
5.5	Writing Statement of Purpose (SoPs)	1
5.6	Writing Résumé	1
5.7	Numerical Adjectives and Relative Clauses - Idioms	1
5.8	question types: Wh/ Yes or No/ and Tags	1

- palaniappan@ksrct.ac.in

60 MA 003	Integrals, Partial Differential Equations and	Categ ory	L	Т	Р	Credit
	Laplace Transform	BS	3	1	0	4

- To acquire the knowledge about multiple integrals.
- To familiarize the basic concepts of vector calculus.
- To get exposed to the fundamentals of analytic functions.
- To solve various types of partial differential equations.
- To familiarize the concepts of Laplace transform.

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

on the edecederal completion of the educed; etadonic will be able to									
	CO1	Interpret the basic concepts of double and triple integrals.	Apply						
	CO2	Interpret the basic concepts of vector calculus.	Apply						
	CO3	Construct the analytic functions and evaluate complex integrals.	Apply						
	CO4	Compute the solution of partial differential equations using different methods.	Apply						
	CO5	Apply Laplace transform techniques for solving differential equations.	Apply

Course (Contents and Lecture Schedule	
S. No.	Topics	No. of hours
1	MULTIPLE INTEGRALS	110410
1.1	Double integration	1
1.2	Cartesian and polar coordinates	1
1.3	Change of order of integration	1
1.4	Area as double integral	1
1.5	Triple integration in Cartesian coordinates	1
1.6	Change of variables	2
1.7	Cartesian to polar coordinates	1
1.8	Cartesian to Cylindrical coordinates	1
1.9	Tutorial	2
1.10	Hands on	1
2	VECTOR CALCULUS	!
2.1	Introduction: Gradient of a scalar point function	1
2.2	Directional derivative	1
2.3	Angle of intersection of two surfaces	1
2.3	Divergence and curl (excluding vector identities)	1
2.4	Solenoidal and irrotational vectors	1
2.6	Application: Green's theorem in the plane	1
2.7	Gauss divergence theorem	2
2.8	Stokes' theorem (statement only)	1
2.9	Tutorial	2
2.10	Hands on	1
3	ANALYTIC FUNCTIONS AND INTEGRALS	
3.1	Analytic function	1
3.2	Necessary and Sufficient conditions (statement only)	1
3.3	Properties Liganosis function	1
3.4 3.5	Harmonic function Construction of an analytic function	1
3.6	Cauchy's Integral theorem (statement only), Cauchy's integral formula	2
3.7	Classification of singularities	1
3.8	Applications : Cauchy's residue theorem.	1
3.9	Tutorial	2
3.10	Hands on	1
4	PARTIAL DIFFERENTIAL EQUATIONS	4
4.1	Formation of partial differential equations by eliminating arbitrary constants	1
4.2	Formation of partial differential equations by eliminating arbitrary functions	2
4.3	Non- linear partial differential equations of first order	3
4.4	Lagrange's linear equations	1
4.5	Application: Homogeneous Linear partial differential equations with constant coefficients.	2
4.6	Tutorial	2
4.7 5	Hands on LAPLACE TRANSFORM	1
	Conditions for existence	1
5.1 5.2	Transforms of elementary functions	1
U.2	Transforms of dismontary fullotions	•

5.3	Basic properties	1
5.5	Derivatives and integrals of transforms, Initial and final value theorem	1
5.6	Transform of periodic functions	1
5.7	Inverse Laplace transform	1
5.8	Convolution theorem (excluding proof)	1
5.9	Application: Solution of second order ordinary differential equation with constant co-efficient.	2
5.10	Tutorial	2
5.11	Hands on	1

BASIC ELECTRICAL, ELECTRONICS AND INSTRUMENTATION

Category	L	Т	Р	Credit
ES	3	0	0	3

Objectives

- To familiarize the basic concept on electrical circuits and its various parameters
- To facilitate the various types of electrical machines and their uses
- To provide exposure on the functions of analog electronic devices
- To familiarize the use of various measuring instruments
- To gain knowledge on microprocessor and microcontroller

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

011 1110 00	on the edecederal completion of the educacy education will be able to							
CO1	Compute the electric circuit parameters for simple problems.	Apply						
CO2	Interpret the working principle of electrical machines.	Understand						
CO3	Demonstrate the characteristics of analog electronic devices.	Apply						
CO4	Illuminate the types and operating principles of transducers, sensors and instruments.	Understand						
CO5	Apply the basic concept of microprocessor and microcontroller.	Apply

Course C	Contents and Lecture Schedule				
S. No.	Topics	No. of hours			
1	ELECTRICAL CIRCUITS				
1.1	Basic circuit components -Resistor-Inductors-Capacitors	1			
1.2	Ohm's Law - Kirchhoff's Laws	1			
1.3	Ohm's Law - Kirchhoff's Laws - Problems	1			
1.4	Nodel analysis & Problems	1			
1.5	Mesh analysis & Problems	1			
1.6	Introduction to AC circuits — waveforms & RMS value — power & power factor	1			
1.7	Single phase and three-phase balanced circuits	1			
1.8	Three phase loads	1			
1.9	Housing wiring, industrial wiring, materials of wiring	1			
2	ELECTRICAL MACHINES				
2.1	Construction of DC Machines	1			
2.2	Types of DC Machines	1			
2.3	Operation of DC Machines	1			
2.4	Characteristics of DC Machines	1			
2.5	Three phase induction motors	1			
2.6	Single-phase induction motors	1			
2.7	Construction of single-phase Transformers	1 1			
2.8	Operation of single-phase Transformers				
2.9	Construction and Operation of three phase Transformers	1			
3	ELECTRONIC DEVICES & CIRCUITS				
3.1	PN Diodes	1			
3.2	Zener diode	1			
3.3	Bipolar Junction Transistor	1			
3.4	SCR	1			
3.5	Introduction to operational Amplifier	1			
3.6	Inverting Amplifier	1			
3.7	Non Inverting Amplifier	1			
3.8	DAC	1			
3.9	ADC	1			
4	TRANSDUCERS, SENSORS & INSTRUMENTS				
4.1	Introduction to transducers — Classification of Transducers:	1			
4.2	Resistive- Strain Gauge. Inductive-LVDT,	1			
4.3	Capacitive. Thermoelectric, piezoelectric, photoelectric,	1			
4.4	Hall effect, Proximity- Sensors.	1			
4.5	Classification of instruments — Types of indicating Instruments	1			
4.6	Multimeters	1			
4.7	Oscilloscopes three phase newer measurements	1			
4.8	three-phase power measurements— instrument transformers (CT and PT).	1			
4.9	MICROPROCESSOR AND MICROCONTROLLER	1			
5		1			
5.1	Introduction to Architecture of 8086 microprocessor	1			
5.2	Register				

5.3	Addressing modes	1
5.4	Instruction set	1
5.5	Simple programming	1
5.6	Introduction to Architecture of 8051 microcontroller	2
5.7	Interfacing peripheral devices	1
5.8	Design a microcontroller-based system.	1

60 ME 004	ENGINEERING MECHANICS	Category	L	Т	Р	Credit
60 IVIE 004		ES	3	1	0	4

This course aims to convey to the student

- To learn a process for analysis of static objects, concepts of force, moment, and mechanical equilibrium in two and three dimensions.
- To learn the equilibrium of rigid bodies such as frames, trusses, beams.
- To identify the properties of surfaces and solids by using different theorem.
- To impart basic concept of dynamics of particles.
- To acquire the concept of friction and elements of rigid body dynamics

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Use scalar and vector analytical techniques for analysing forces in statically determinate structures.	Apply
CO2	Apply basic knowledge of scientific concepts to solve real-world problems.	Apply
CO3	Calculate the properties of surfaces and solids using various theorems.	Apply
CO4	Analyse and solve problems on kinematics and kinetics.	Apply
CO5	Analysis of rigid body dynamics and calculation of frictional forces on contact surfaces.	Apply

60 CS 001	C PROGRAMMING	Category	L	T	Р	Credit
00 03 001	CPROGRAMMING	ES	3	0	0	3

- To learn most fundamental element of the C language and to examine the execution of branching, looping statements,
- To examine the concepts of arrays, its characteristics and types and strings.
- To understand the concept of functions, pointers and the techniques of putting them to use
- To apply the knowledge of structures and unions to solve basic problems in C language
- To enhance the knowledge in file handling functions for storage and retrieval of data

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Construct the fundamental building blocks of structured Programming in C	Apply
CO2	Implement the different operations on arrays and strings	Apply
CO3	Develop simple real world applications utilizing functions, recursion and pointers.	Apply
CO4	Demonstrate the concepts of structures, unions, user defined data types and preprocessor	Apply
CO5	Interpret the file concepts using proper standard library functions for a given application	Apply

60 TT 201	Fibre Science	PC	3	0	0	3

- To study the basics of production of natural and regenerated fibers
- To impart knowledge on applications and properties of natural fibres
- To familiarize on the applications and properties of regenerated fibres
- To recall on the applications and properties of protein fibres
- To study the analysis of various fibres

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Classify the textile fibres and its properties	Understand
CO2	Cultivation / extraction process, properties and applications of Natural cellulosic fibres and their structure.	Understand
CO3	Manufacturing, properties and applications of regenerated cellulosic fibres and their structure.	Apply
CO4	Production, properties and applications of protein and other regenerated fibres with their structure and applications of high performance fibres.	Apply
CO5	Identification of various fibres and blend proportion by various methods.	Apply

Course	Contents and Lecture Schedule	
S.No	Topic	No. of Hours
1.0	INTRODUCTION	
1.1	Definition - staple fibre, filament	1
1.2	classification of textile fibres	1
1.3	High performance fibres Essential and desirable properties of fibre	1
1.4	Requirements of fibre forming polymers. Types of polymers	1
1.5	Intra polymer bonding, inter polymer forces of attraction	1
1.6	Degree of polymerization, glass transition temperature	1
1.7	Principle of manmade spinning systems – Dry, Wet	1
1.8	Melt and Gel spinning	2
2.0	NATURAL CELLULOSIC FIBRES	
2.1	Cultivation, properties and applications of cotton	1
2.2	Brief study about BT, coloured and organic cotton	2
2.3	Extraction, properties and application of flax, jute	1
2.4	Extraction, properties and application of ramie, hemp	1
2.5	Extraction, properties and application of sisal, coir	1
2.6	Extraction, properties and application of banana and pine apple fibres	1
2.7	Morphological and chemical structure of natural cellulosic fibres	2
3.0	REGENERATED CELLULOSIC FIBRES	
3.1	Production, properties and applications of viscose rayon, cuprammonium rayon	2
3.2	Production, properties and applications of acetate rayon, bamboo	2
3.3	Production, properties and applications of modal and lyocell fibres	2
3.4	Study of morphological regenerated cellulosic fibres	2
3.5	Study of chemical structures of regenerated cellulosic fibres	1
4.0	PROTEIN AND OTHER REGENERATED FIBRES	
4.1	Morphological structure and chemical constitution of wool	2
4.2	Morphological structure and chemical constitution of silk	2
4.3	Types, production, properties and applications of wool, silk	1
4.4	Types, production, properties and applications of soya bean, casein	1
4.5	Types, production, properties and applications of alginate, chitin	1
4.6	Types, production, properties and applications of chitosan fibres	1
4.7	Study on spider silk	1
5.0	IDENTIFICATION OF FIBRES	
5.1	Fibre identification – microscope, chemical	1
5.2	Fibre identification – burning, feeling	1
5.3	Fibre identification –staining, density measurement methods	1
5.4	Determination of blend proportion	2
5.5	Determination of moisture content	2
5.6	Determination of moisture regain	2

60 EE 0P2	Basic Electrical, Electronics and	Category	Г	Т	Р	Credit
60 EE 0P2	Instrumentation Laboratory	ES	0	0	4	2

- To provide knowledge on the basic electric circuital laws
- To practice the students in conducting load tests on DC & AC machines
- To gain practical experience in experimentally obtaining the characteristics of electronic devices
- To train the students to measure displacement using suitable transducer.
- To acquire knowledge in microprocessor and microcontroller

Pre-requisites

• Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply basic circuital laws to analyse the electrical circuits.	Apply
CO2	Analyse the performance of DC and AC Machines.	Analyse
CO3	Demonstrate the VI characteristics of analog electronic devices.	Apply
CO4	Express the suitable transducers to measure the physical quantities.	Understand
CO5	Apply the basic concept of microprocessor and microcontroller.	Apply

- To enable the students to apply the concepts of C to solve simple problems
- To use selection and iterative statements in C programs
- To apply the knowledge of library functions in C programming
- To implement the concepts of arrays, functions, structures and pointers in C
- To implement the file handling operations through C

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Implement computational problems using selection and iterative statements	Apply
CO2	Demonstrate C program to manage collection of related data.	Apply
CO3	Design and Implement different ways of passing arguments to functions, Recursion and implement pointers concepts.	Apply
CO4	Develop a C program to manage collection of different data using structures, Union, user-defined data types and preprocessor directives.	Apply
CO5	Demonstrate C program to store and retrieve data using file concepts.	Apply

^{*} CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

^{**} End Semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory end semester examinations and 40 marks for the practical end semester examination.

60 MA 011	OPTIMIZATION TECHNIQUES AND	Category	L	Т	Р	Credit
00 1111 (0 1 1	NUMERICAL METHODS	BS	3	1	0	4

- To familiarize basic concepts of linear programming problems.
- To get exposed to transportation and assignment problems.
- To know about sequencing and replacement problems.
- To get exposed to various techniques to solve equations numerically.
- To know the concepts of interpolation and numerical integration.

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Formulate the linear programming models and solve by simplex algorithms	Apply
CO2	Apply the suitable method to predict the optimum solution for transportation and assignment problems	Apply
CO3	Determine the optimal order in which n jobs can be processed and optimal replacement policy for machineries	Apply
CO4	Apply various iteration techniques for solving algebraic, transcendental and system of linear equations.	Apply
CO5	Apply different techniques to find the intermediate values and to evaluate single definite integrals.	Apply

60 ME 008	Elements of Mechanical Engineering	Category	L	Т	Р	Credit
		ES	3	1	0	4

- Learn the basic components and layout of linkages in the assembly of a system machine.
- Gain basic knowledge of the strength of materials and power transmissions essential for understanding textile machinery.
- Highlight basic properties of steam and functions of steam boilers used in textile industries.
- Understand the basic functions of pumps and hydraulic devices used in textile industry processes.
- Utilize various air compressors, clutches, and brakes used in automobiles

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Design and construct the various cam profile and follower using various follower motions.	Analyse
CO2	Describe the concepts of stresses and strains, their significant effects in engineering applications.	Analyse
CO3	Select and design the appropriate power transmission drives for various requirements	Analyse
CO4	Explain the properties of steam and different kind of steam boilers.	Apply
CO5	Explain the working principles of pumps, hydraulic devices, air compressors, clutches and brakes.	Apply

60 TT 301	Structure and Proportion of Fibers	Category	L	Т	Р	Credit
00 11 301	Structure and Properties of Fibers	PC	3	1	0	4

- To expose the students to the various methods in structural investigation of fibers.
- To enable the students to understand the moisture absorption properties of fibers.
- To enable the students to understand the mechanical properties of fibers.
- To enable the students to understand the optical and frictional properties of fibers.
- To enable the students to understand the thermal and electrical properties of fibers.

Pre-requisites

60 TT 201

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Examine the different methods in the investigation of fibres	Understand
CO2	Describe the moisture absorption properties of fibres.	Understand
CO3	Discuss the concepts of mechanical properties of fibres.	Understand
CO4	State the optical and frictional properties of fibres.	Understand
CO5	Interpret the thermal and electrical properties of fibres	Analyse

^{*}SDG 12: Responsible Consumption and Production

Course Contents and Lecture Schedule									
S. No.	Topics	No. of hours							
1.0	Structural Investigation of Fibres								
1.1	Basic requirements for fibre formation	1							
1.2	Fringed micelle Model	1							
1.3	Fringed Fibril Model	1							
1.4	Fringed lamellar Model	1							
1.5	X-Ray Diffraction metho	1							
1.6	SEM	1							
1.7	TEM	1							
1.8	STEM	1							
1.9	FTIR NMR	1							
	Tutorial	3							
2.0	Moisture Absorption Properties of Fibres								
2.1	Definitions- humidity, relative humidity, standard testing atmosphere	1							
2.2	Moisture content and regain; hysteresis in moisture absorption	2							
2.3	Moisture absorption behavior of textile fibres	1							
2.4	Influence of various factors on regain	1							
2.5	Absorption in crystalline and amorphous regions	1							
2.6	Density gradient column	1							
2.7	Heats of sorption-Integral and differential	1							
2.8	Measurement, effects of heats of sorption & Factors influencing the rate of conditioning	1							
2.9	Conditioning of fibres and Mechanism of conditioning & Swelling of fibres, types of swelling and its measurement.	1							
	Tutorial	4							
3.0	Mechanical Properties of Fibres								
3.1	Definitions related to tensile property;	1							
3.2	Stress strain curves of various textile fibres and its importance	2							
3.3	Influence of moisture and temperature on tensile characteristics	1							
3.4	Weak- link effect	1							
3.5	Introduction to dynamic mechanical properties.	1							
3.4	Elastic recovery and its relation to stress and strain of various textile fibres	2							
3.5	Mechanical conditioning of fibres	1							
3.6	Time dependent effects- creep and stress relaxation phenomena	2							
3.7	Brief study on flexural and torsional rigidity of fibres.	2							
3.8	Compression and shear properties	1							
	Tutorial	3							
4.0	Optical and Frictional Properties of Fibres								
4.1	Optical property - Refractive index and its measurement	2							
4.2	Birefringence and its measurement	2							
4.3	Absorption and dichroism	1							
4.4	Reflection and lustre of fibres	2							
4.5	Amonton's and Bowden's law of friction	1							
4.6	Various influencing factors- load, area of contact, speed of sliding, state of surface and regain	2							

4.7	Directional frictional effect of wool.	2
	Tutorial	3
5.0	Thermal and Electrical Properties of Fibres	
5.1	Thermal property- structural changes in fibres on heating	1
5.2	Thermal transitions and melting	2
5.3	Heat setting of fibres and its importance	1
5.4	Electrical property- mass specific resistance	2
5.5	Influence of moisture, temperature and impurities on resistance	2
5.6	Dielectric properties-factors influencing dielectric properties	2
5.7	Static electricity – Theory of static charge generation.	1
5.8	Problems and elimination techniques for Static Electricity	1
	Tutorial	3

 - Regenerated cellulose fibres
 - Polyamide fibres & Polyester fibres
- 4. Determination of fibre maturity using caustic soda swelling method.*
- 5. Determination of wax content of the cotton fibres*.
- 6. Determination of denier of synthetic fibres by gravimetric method.*
- 7. Determination of density of various fibres by density gradient column*.
- 8. Determination of moisture regain and moisture content of fibers.*
- 9. Estimation of percentage of spin finishes in synthetic fibers through Soxhlet extraction.*
- 10. Determination of blend proportion of P/C blends by solubility method.*
- 11. Determination of blend proportion of C/V blends by solubility method.*
- 12. Determination of blend proportion of P/V blends by solubility method.*
- 13. Determination of blend proportion of P/W blends by solubility method.*

Design Experiments:

- 14. Thermo gravimetric analysis of fibres using thermo grams.*
- 15. FTIR analysis of polymers and fibres from spectrum

60 TT 3P2	Yarn Manufacturing Technology	Category	L	Т	Р	Credit
60 11 3P2	Laboratory I	PC	0	0	4	2

- To provide the knowledge of basic machineries of Blow room
- To understand the principles involved in processing fibers thro Carding
- To analyse the process of Drawing
- To provide the knowledge about Speed frame process.
- To provide the knowledge for selection machinery with respect to the material

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

On the su	ccessial completion of the course, students will be able to	
CO1	Explain the ginning machine's material passage and carryout speed calculations	Apply
CO2	Discuss the material passage through blow room and carryout its production calculations	Apply
CO3	Explain the material passage in carding, assess the setting between various parts and carryout speed, draft and production calculations.	Apply
CO4	Discuss the material passage through draw frame and carryout its production calculations	Apply
CO5	Explain the material passage in speed frame and carryout speed, draft, twist and production calculations.	Apply

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts.
- To help learners develop strategies that could be adopted while reading texts.
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations.
- Improve listening, observational skills, and problem-solving capabilities
- · Develop message generating and delivery skills

Pre-requisites

Basic knowledge of reading and writing in English.

Course Outcomes

CO1	Compare and contrast products and ideas in technical texts.	Analyse
CO2	Identify cause and effects in events, industrial processes through technical texts	Analyse
CO3	Analyse problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Analyse
CO4	Report events and the processes of technical and industrial nature.	Apply
CO5	Articulate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Apply

^{*}CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

^{**}End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination, 50 marks for theory cum practical End Semester Examination and 40 marks for practical End semester Examination.

60 MA 022	APPLIED STATISTICS	Category	L	Т	Р	Credit
OU WIA UZZ	APPLIED STATISTICS	BS	3	1	0	4

- To get exposed to the basics of probability and distributions.
- To familiarize various methods in hypothesis testing.
- To learn basics of correlation, regression and control charts.
- To get exposed to the fundamentals of analysis of variance.
- To construct an appropriate model using time series approach.

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply the basics of probability and distributions in engineering problems.	Apply
CO2	Compute measures of central tendency and measures of dispersion, and apply various methods to test the statistical hypothesis.	Apply
CO3	Calculate correlation and apply control charts for decision making	Apply
CO4	Apply the concepts of ANOVA to test the equality of means for more than two populations.	Apply
CO5	Apply suitable method to measure the trend values.	Apply

60 TT 401	Yarn Manufacturing	Category	L	T	Р	Credit
	Technology - II	PC	3	0	0	3

- To explain the working principle, yarn structure, and properties of ring spinning.
- To understand the working principle, yarn structure, and properties of compact spinning.
- To explain the principles of open-end spinning and the rotor spinning process.
- To study in detail the working principles of friction spinning, air-jet spinning, air-vortex spinning, and other modern spinning processes.
- To understand yarn plying, twisting, the types of fancy yarn, and their methods of production.

Pre-requisites

• 60TT 302 - Yarn Manufacturing Technology - I

Course Outcomes

CO1	Discuss the yarn formation, process parameters, draft, twist and production calculation in ring spinning.	Understand
CO2	Explain the principle, properties and different methods of condensed yarn spinning.	Understand
CO3	Discuss the principle of yarn formation, process parameters, structure and properties of rotor spun yarn.	Understand
CO4	Explain the friction, air jet, vortex, self-twist, core and wrap yarn production methods.	Analyse
CO5	Describe the yarn plying and production methods of fancy yarn.	Apply

Course Contents and Lecture Schedule								
S. No.	Topics	No. of hours						
1.0	Ring Spinning							
1.1	Principle of yarn formation in ring spinning machines	1						
1.2	Working of ring spinning machine	2						
1.3	Design features of important elements used in ring spinning machine	3						
1.4	Cop building	2						
1.5	Draft, twist and production calculations in ring spinning machine	2						
1.6	End breakage rate – causes and remedies	1						
1.7	Yarn faults- causes and remedies	1						
2.0	Condensed Yarn Spinning							
2.1	Condensed yarn spinning – principle	1						
2.2	Different methods of condensed yarn spinning methods	3						
2.3	Properties of condensed yarn	1						
2.4	Comparison with ring spun yarn	1						
3.0	Rotor Spinning							
3.1	Principle of open-end spinning	1						
3.2	Principle of yarn production by rotor spinning system	2						
3.3	Design features of important elements used in rotor spinning	4						
3.4	Structure and properties of rotor yarn	2						
4.0	Other Spinning Systems							
4.1	Principle of friction spinning.	1						
4.2	Principle of yarn production by friction spinning system	1						
4.3	Principle of yarn production by air jet spinning system	1						
4.4	Principle of yarn production by air vortex spinning system	1						
4.5	Raw material used, structure, properties and applications	1						
4.6	Principle of yarn production by self-twist and core yarn spinning	2						
4.7	Principle of yarn production by wrap, siro and solo spinning system	2						
5.0	Yarn Plying							
5.1	Merits of plying of yarns	1						
5.2	Methods of plying of yarns by TFO	1						
5.3	Methods of plying of yarns by Ring doubling	1						
5.4	Selection of twist level for plying	1						
5.5	Calculation of resultant count of plied yarns	1						
5.6	Types of fancy yarns	2						
5.7	Method of production of Fancy yarns	2

00 TT 400	Fabric Manufacturing Technology II	Category	L	T	Р	Credit
60 TT 402	rabile mailulaetuiliig reciliology ii	PC	3	0	0	3

- To impart basic knowledge in the concepts involved in various mechanisms used in weaving
- To train on the aspects of different mechanisms in loom.
- To educate on the features of jacquard, dobby and drop box mechanism.
- To make the students understand the selection and control of process variables during fabric formation
- To give the knowledge about the different shuttle less looms.

Pre-requisites

Fabric Manufacturing Technology I

Course Outcomes

CO1	Explain the functioning of weaving machine and its parts.	Understand
CO2	Comprehend the various types of shedding mechanism and its requirements.	Remember
CO3	Knowledge on primary and secondary motions of weaving machines.	Understand
CO4	Acquire the knowledge of Auxiliary motion, drop box and terry mechanism.	Remember
CO5	Describe requirements and weft insertion principles of different shuttle less looms.	Apply

^{**}SDG 9: Industry, Innovation, and Infrastructure ***SDG 4: Quality Education

Course (Contents and Lecture Schedule	
S. No.	Topics	No. of hours
1.0	Introduction	
1.1	Principles of weaving	1
1.2	Classification of looms, passage of material through a loom	1
1.3	Types of weaving motions - primary, secondary and auxiliary motions	1
1.4	Loom timing diagram for different motions, Driving of plain power loom	2
1.5	Yarns quality requirements for different types of shuttle looms	1
1.6	Weaving accessories and Types and function of heald wires	2
1.7	Heald frames, reeds, shuttle, picker, Temples.	1
2.0	Shedding	
2.1	Shedding and Types of shedding	11
2.2	Shedding mechanisms of positive and Negative	1
2.3	Principle and types of tappet, dobby and jacquard mechanism	1
2.4	Dobby shedding- climax, cross-border	1
2.5	Cam and electronic dobby	1 1
2.6	Jacquard shedding -Single lift, Double lift	1
2.7	Cross-border and electronic jacquard	2
2.8	Harness mounting and card punching	11
3.0	Picking, Beat up and Secondary Motion	<u> </u>
3.1	Cone over pick and Under pick	1 1
3.2	Side lever and side shaft	1 1
3.3	Shuttle flight and timing Checking Devices	1 1
3.4	swell checking and hydraulic swell checking	1
3.5	Cam beat up mechanism	1
3.6	Sley eccentricity and loom timing diagram	1
3.7	Take up motion of Negative and Positive	1
3.8	Let-off motion: Negative - Positive	1
3.9	Types of Back rest	1
4.0	Auxiliary Motions	
4.1	Different types and feelers	1
4.2	Side weft fork and centre weft fork mechanisms	1
4.3	Warp protector mechanism	1
4.4	Loose reed and fast reed	1
4.5	Mechanical and electrical warp stop motion	1
4.6	Shuttle changing mechanism	1
4.7	Cop changing mechanism	1 2
4.8	Drop box mechanism - 2x1, 4x1 and 4 x 4	
5.0	Shuttle less Loom Vern quelity requirements for shuttle less loom	1 4
5.1	Yarn quality requirements for shuttle less loom	1 1
5.2	Weft preparation for shuttle less loom	1 1
5.3	Shuttle less looms in projectile	1
5.4	Weft insertion of rapier loom Weft insertion of air jet	1 1
5.5	,	1 1
5.6 5.7	Weft insertion of Wultiphase John	1 1
	Weft insertion of Multiphase loom	2
5.8	Type of nozzles in air jet and weft accumulators

60 TT402	Toytile Chemical Processing I	Category	L	Т	Р	Credit
60 TT403	Textile Chemical Processing I	PC	2	0	2	3

- To impart technical knowledge on desizing and scouring process.
- To impart technical knowledge on bleaching and mercerizing process.
- To impart technical knowledge on cellulosic material dyeing process.
- To impart technical knowledge on synthetic material dyeing process.
- To impart knowledge on the construction and working principles of wet processing and machineries.

Pre-requisites

Course Outcomes

CO1	Explain the wet process sequences for various fabrics and summarize the pretreatment processes and their efficiency for cotton, wool and silk material.	Analyse					
CO2	Describe the objectives and types of bleaching and mercerization of different materials also evaluate their efficiency and select suitable chemicals and other auxiliaries.	Analyse					
CO3	Explain the classification and applications of various dyes and analyze their fastness properties.	Apply					
CO4	Summarize the principle of dyeing of synthetic fibres with various techniques.	Apply					
CO5	Demonstrate the working principles involved in preparatory and dyeing machineries.	Apply

Course Contents and Lecture Schedule									
S. No.	Topics	No. of Hours							
1	Singeing, Desizing and Scouring								
1.1	Singeing: Singeing methods, types of singeing Machines	1							
1.2	Desizing: Desizing methods	1							
1.3	Enzymatic desizing-mechanism	1							
1.4	Desizing efficiency.								
1.5	Scouring: objectives and mechanism	1							
1.6	Nool carbonizing and degumming of silk								
2	Bleaching and Mercerizing								
2.1	Bleaching: Hypochlorite and hydrogen peroxide bleaching								
2.2	per-acidic, sodium chlorite bleaching	1							
2.3	Ozone, enzymatic bleaching;	1							
2.4	Mercerization: objectives and methods,	1							
2.5	Yarn mercerizer; fabric mercerizing machines	1							
2.6	Chainless and circular mercerizing machines	1							
3	Dyeing of Cellulose Fibres and Protein Fibres								
3.1	Classification of Dyes, Pigments and their properties;								
3.2	Theory of dyeing.	1							
3.3	Affinity and Substantivity of dyes.	1							
3.4	Dyeing of cellulosic materials with direct dyes	1							
3.5	Dyeing of cellulosic materials with reactive dyes	1							
3.6	Dyeing mechanism of wool and silk materials with acid dyes	1							
4	Dyeing of Synthetic Fibres								
4.1	Dyeing of polyester with Disperse dyes-Carrier dyeing methods.								
4.2	Dyeing of polyester with Disperse dyes-HTHP and Thermosol dyeing methods.	1							
4.3	Dyeing of acrylic with cationic dyes,	2							
4.4	Dyeing of P/C blends.	1							
5	Dyeing Machineries								
5.1	Scouring, bleaching and dyeing machines	1							
5.2	Hank, package, jigger dyeing machines	1							
5.3	Soft flow dyeing machines	1							
5.4	Soft-over flow dyeing machines;	1							
5.5	Padding mangles;	1							
5.6	Advanced garment dyeing machines-paddle and rotary drum dyeing machine								
Practical									
1.	Desizing of grey cotton fabric using enzymes	2							
2.	Scouring of cotton	4							
3.	Bleaching of cotton using hypochlorite and hydrogen peroxide	4							
4.	Dyeing of cotton with Reactive dyes.	2							
5.	Dyeing of polyester with disperse dyes.	2							
6.	Dyeing of polyester/cotton blends with disperse/reactive dyes	4							
7.	Dyeing of Wool and Silk Fibres and Fabrics with Acid Dyes	4							
8.	Dyeing of Wool and Silk fibres and Fabrics with Base Dyes	2							
9.	Mini project	4

60 MV 002	HANVEDOAL BUIMAN VALUES	Category	L	Т	Р	Credit
60 MY 002	UNIVERSAL HUMAN VALUES	PC	3	0	0	3

- To identify the essential complementarily between 'values' and 'skills'
- To ensure core aspirations of all human beings.
- To acquire ethical human conduct, trustful and mutually fulfilling human behaviour
- To enrich interaction with Nature
- To achieve holistic perspective towards life and profession

Pre-requisites

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the significance of value inputs in formal education and start applying them in their life and profession	Understand
CO2	Evaluate coexistence of the "I" with the body.	Analyse
CO3	Identify and evaluate the role of harmony in family, society and universal order.	Analyse
CO4	Classify and associate the holistic perception of harmony at all levels of existence and Nature	Analyse
CO5	Develop appropriate human conduct and management patterns to create harmony in professional and personal lives.	Apply

60 TT 4P2	Fabric Manufacturing Technology	Category	L	Т	Р	Credit
00 11 4F2	Laboratory	PC	0	0	4	2

- To develop skills in the operation and maintenance of weaving preparatory machines.
- To develop practical knowledge of dismantling, assembling and setting of basic weaving mechanisms.
- To prepare the pattern card for a given design.
- To develop the design using drop box mechanism.
- To know about the working principles of circular weft knitting machine.

Pre-requisites

• Fabric Manufacturing Technology II

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Set the optimum process variables and carry out winding using supply package winding machine and calculate the production.	Understand
CO2	Practice dismantling, assembling and setting of primary motions.	Apply
CO3	Perform dismantling, assembling and setting of secondary motions.	Apply
CO4	Perform dismantling, assembling and setting of auxiliary motions.	Apply
CO5	CO5 Comprehend the production in circular weft knitting machine.

- To help learners improve their logical reasoning skills at different academic and professional contexts.
- To help learners relate basic quantitative problems and solve them.
- To help learners Infer critically the statements with optimal conclusions and assumptions.
- To Solve the quantitative problems pertaining to calculations of averages, ratio and proportions, and profit and loss effectively
- To compute quantitative problems related to time and work, speed and distance, and simple and compound interest

Pre-requisites

• Basic knowledge of Arithmetic and Logical Reasoning

Course Outcomes

CO1	Deduce the topics in logical reasoning at the preliminary and intermediate level.	Analyse
CO2	Relate basic quantitative problems and solve them effectively at the preliminary level	Apply
CO3	Infer critically the statements with optimal conclusions and assumptions with the data and information given.	Analyse
CO4	Solve the quantitative problems pertaining to calculations of averages, ratio and proportions, and profit and loss effectively at the pre-intermediate level.	Apply
CO5	Compute quantitative problems related to time and work, speed and distance, and simple and compound interest at intermediate level.	Apply

- To comprehend the basics of advanced spinning technology
- To know various methods of manufacturing high performance fibres
- To acquire knowledge on their applications in various fields
- To gain concepts on testing procedure of materials
- To obtain information on special fibres

Pre-requisites

• Fibre Science & Structure and Properties of Fibres

Course Outcomes

CO1	Compare the conventional and advanced spinning process.	Understand
CO2	Demonstrate the manufacturing process of high performance fibres.	Understand
CO3	Analyze the properties of fabrics produced using chemical and thermal resistant fibres	Understand
CO4	Explain the application of high performance fibres in Medical field	Understand
CO5	Evaluate the performance of specialty fibres	Understand

60 TT E 12	Man Made Fibre Technology	PE	3	0	0	3	

- To enable the students to learn about the polymer rheology and the laws
- To acquire knowledge on melt spinning
- To gain knowledge on solution spinning
- To comprehend the post spinning operations
- To obtain ideas on new developments in fibre spinning

Pre-requisites

Structure and Properties of Fibres

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Discuss polymer rheology and the laws	Understand
CO2	List various spinning techniques of polymers and parameter involved in spinning syntheticyarn	Understand
CO3	Explain Properties and application of synthetic yarns	Understand
CO4	Outline the need of various post spinning operations	Understand
CO5	Categorize the advances in the spinning process	Analyse

60 TT E 14	Process Control in Spinning	Category	L	Т	Р	Credit
60 TT E 14	Frocess Control in Spinning	PE	3	0	0	3

- Study process and quality control in spinning, including relevant statistical tools.
- Explore inspection techniques and contamination control in raw materials and processes.
- Control waste and enhance raw material conservation for better yarn quality and productivity.
- Choose suitable materials and machinery for desired yarn and fabric quality.
- Understand customer needs and implement quality and audit processes in spinning mills

Pre-requisites

• Yarn Manufacturing Technology - I & II

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Know the process control, key variables, and statistical methods in spinning.	Understand		
CO2	Develop skills for raw material quality control and optimizing spinning performance.	Analyse		
CO3	Learn waste minimization, yarn realization optimization, and contamination control.	Analyse		
CO4	Analyze yarn quality metrics and conduct end-use performance simulations.	Analyse		
CO5	Identify the productivity entimization in ring eninning including

Course C	Contents and Lecture Schedule	
S. No.	Topics	No. of hours
1.0	Unit 1	
1.1	Process Control Concept and Statistical Application Scope of process control in spinning	2
1.2	Identification of process variables	1
1.3	Identification of process variables and product characteristics to control process in the blow room, card,	1
1.4	Identification of process variables	1
1.5	Identification of process variables and product characteristics to control process in speed frame and yarn spinning	1
1.6	Concepts of developing norms and standards for spinning process.	1
1.7	Application of statistical techniques in process and quality control.	1
1.8	Use of HVI and AFIS for process control operation.	
2.0	Unit – 2	
2.1	Control of Raw Material Quality including contaminations, Quality control of mixing quality through fibre quality characteristics	1
2.2	Concept of fibre quality index and its application – Prediction of spinnability and yarn quality	2
2.3	Blending irregularity;- fibre rupture analysis	1
2.4	Causes of nep and hook generation –.nep removal in carding and combing machines.	1
2.5	Online monitoring and control of neps and hooks on modern cards;	2
2.6	Measurement of neps and hooks, performance evaluation parameters for each department	2
3.0	Unit 3	
3.1	Control of Yarn Realization and Waste Estimation of yarn realization	1
3.2	Determination of trash content and cleaning efficiency, cleaning intensity in blow room	1
3.3	Determination of trash content and cleaning efficiency, cleaning intensity in carding	1
3.4	Determination of comber noil and combing efficiency	1
3.5	Control of waste in blow room	1
3.6	Contamination clearing efficiency	1
3.7	Carding and comber	1
3.8	Control of hard waste	1
4.0	Unit 4	
4.1	Yarn quality control assessment of within and between bobbin count variations	1
4.2	Assessment and control of count variations in preparatory machines and ring frame	1
4.3	Assessment of yarn unevenness and imperfections - causes for unevenness and imperfections- Analysis and interpretation spectrograms	1
4.4	Unevenness caused by random fibre arrangement – drafting waves – periodic variation.	1
4.5	Yarn hairiness and compact yarn quality,	1
4.6	Yarn faults – classification – assessment of faults – causes and methods to reduce faults.	1
4.7	Causes for variability in strength, elongation and	1
4.8	Hairiness and measures for their control	1
4.9	Simulation studies for end use performance assessment	1,
5.0	Unit 5	Made

5.1	Production Control Factors affecting the productivity in ring spinning	1				
5.2	Spindle point production standards, Productivity indices like Utilisation					
5.3	Production efficiency ,HOK					
5.4	Methods for maximizing production in spinning machinery					
5.5	New concepts like individual spindle monitoring systems,					
5.6	Effect of Machinery maintenance and Humidity on production & Balancing of machineries	2				

1. Dr Bharani Murugesan – bharanim@ksrct.ac.in

60 TT E 15	Home Textiles	Category	L	Т	Р	Credit
00 11 E 15	Home rexules	PE	3	0	0	3

- To acquire knowledge on recent developments in furnishing and other home textile products.
- To analyze textiles based products used in home textiles.
- To acquire knowledge on various flammability requirements of home textiles.
- To acquire knowledge on recent developments in floor covering home textile products.
- To know the various designs / styles of bed linen classification, types of mattresses and mattresses covers

Pre-requisites

Fabric Manufacturing Technology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Describe different types fabrics, finishes and surface ornamentation on home textiles.	Remember
CO2	Compare different furnishings and analyzing factors influencing in the selection of home furnishings for different products	Understand
CO3	Discuss the type sand end uses of different floor coverings and analyze the types and factors influencing of different floor coverings.	Analyse
CO4	Describe the types of doors, windows and their choice of fabrics used in curtains and draperies	Analyse
CO5	Evaluate the properties of home textiles and describe the home decoration articles and bed linens	Analyse

^{*}CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

Passed in BoS Meeting held on 21/11/2023 Approved in Academic Council Meeting held on 23/12/2023

^{**}End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination, 50 marks for theory cum practical End Semester Examination and 40 marks for practical End semester Examination.

60 TT 501	Knitting Toohnology	Category	L	Т	Р	Credit
00 11 301	Knitting Technology	PC	2	0	2	3

- To explain the mechanism of weft knitting of various knitted structures.
- To demonstrate the mechanism of warp knitting of various knitted structures.
- To impart knowledge on basic knitted structures of various knitted fabrics.
- To explain the modern development in the mechanism of various knitted fabric production.
- To impart knowledge on recent trends in knitted garment production.

Pre-requisites

• Fibre Science, Spinning

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explain the classification of weft knitting machines with its yarn quality and the terminology used in knitting.	Understand
CO2	Attribute the selection of weft knitting elements and weft knitting structures.	Understand
CO3	Classify warp knitting and its structures.	Understand
CO4	Categorize the elements of flat knitting machines and its types.	Understand
CO5	Analyse the developments and quality control in knitting.	Analyse

Course C	Contents and Lecture Schedule	
S. No.	Topics	No. of Hours
1	Weft Knitting	
1.1	Classification of weft knitting machines.	1
1.2	Yarn quality requirements for knitting and its impact	1
1.3	Terminology of the basic circular knitting machine,	1
1.4	Single jersey and Rib – construction and knitting operation	1
1.5	Interlock and purl knitting machines – construction and knitting operation	2
2	Weft Knitting elements and Structures	
2.1	Needle selection in weft knitting - multi-cam tracks	1
2.2	Pattern wheels, pattern drums	1
2.3	Single jersey, rib, purl and interlock structures	1
2.4	Characteristics and their derivatives - half and full cardigan	1
2.5	Fundamentals of formation of knit, tuck and float stitches.	2
3	Warp Knitting	•
3.1	Classification of warp knitting machines	1
3.2	Knitting elements and working of Raschel and Tricot knitting machines,	1
3.3	Production of elementary warp knitted structures - lapping diagrams and notations.	1
3.4	Open lap, closed lap, overlap, underlap, swinging, and shogging.	1
3.5	Warp knit structures. Production calculations in warp knitting	2
4	Flat Knitting	
4.1	Basic principles and elements of flat knitting machines;	2
4.2	Flat knitting machines- manual	2
4.3	Flat knitting machines- mechanical	1
4.4	Flat knitting machines- computer-controlled.	1
5	Recent developments and Quality Control in knitting	•
5.1	Seamless garments	2
5.2	Mechanism of socks knitting and process flow	2
5.3	Process control in knitting; defects in knitted fabrics- causes and remedies	2
Practical		•
1.	Analysing the Single jersey fabric and its derivatives.	4
2.	Analysing the Rib, interlock fabric and its derivatives.	2
3.	Analysing the Purl structures.	2
4.	Production calculation of Flat knitting structures.	4
5.	Study the Spirality of Knitted structure.	2
6.	Identifying the different weft knitted structure faults.	4
7.	Calculation on needle requirement for various yarn count.	4
8.	Material passage and production calculation for single jersey machine.	4
9.	Material passage and production calculation for rib weft knitting machine.	2
10.	Material passage and production calculation for interlock weft knitting machine	2

00 11 302	Textile Chemical Processing in	PC	3	0	0	3

- To impart knowledge on methods and styles of printing.
- To impart knowledge on various printing process.
- To impart knowledge on various methods of finishing.
- To impart knowledge on various functional finishing process.
- To impart knowledge on effluent treatment.

Pre-requisites

· Textile Chemical Processing I

Course Outcomes

On the successful completion of the course, students will be able to

	· · · · · · · · · · · · · · · · · · ·	
CO1	State the ingredients, methods of printing and styles of printing. Printing defects and limitations	Remember
CO2	Describe the printing procedure of cotton, polyester, silk, wool and garment. Discuss its faults- cause&remedies	Understand
CO3	Explain the procedure involved in finishing of cotton materials using various machines and procedure involved in finishing of denims.	Understand
CO4	Describe the procedure involved in crease resistance, water proof, water repellent, flame proof and value added finishing.	Understand
CO5	Analyse the various treatments of textile effluents, waste disposal & solid waste reduction techniquesand concepts of ISO14000.	Analyse

60 TT 503	Wayon Fabria Structura	Category L PC 3	Г	Т	Р	Credit
00 11 303	Woven Fabric Structure	PC	3	0	0	3

- Teaching the foundational principles of woven fabric design and how they influence fabric characteristics
- Instructing on various weaves and production techniques
- Providing insight into color theory and its application in woven fabrics
- Exploring concepts related to pile and multi-layer fabrics
- Disseminating knowledge on advanced fabric structures

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Elaborate on the components of fabric structure and basic weaving patterns.	Understand
CO2	Provide insights into the loom specifications for special weaves and color theory, while examining the interplay of color and weave effects.	Remember
CO3	Discuss the loom prerequisites and applications of additional thread figuring, while scrutinizing backed fabrics and the concept of Bedford cords.	Understand
CO4	Evaluate the design principles behind pile fabrics, multilayer fabrics, and double cloths.	Remember
CO5	Examine advanced weave structures and their corresponding loom requirements.	Understand

Course Contents and Lecture Schedule

S. No.	Topics	No. of hours
1.0	Elements of Simple Structure	•
1.1	Introduction of weave structure	1
1.2	Plain weave and its derivatives	1
1.3	Warp rib, weft rib and Matt rib	1
1.4	Twill weave and its derivatives	2
1.5	Pointed , Herring bone and Broken twill	1
1.6	Satin & Sateen Weaves , Types	2
1.7	Types of Draft	1
2.0	Special Weaves and Colour Theory	1
2.1	Loom requirements and uses of special weaves	1
2.2	Honey comb weaves and its types	1
2.3	Brighton honey comb	1
2.4	Huck –a – back and its modifications	1
2.5	Mock leno weaves	1
2.6	Crepe weaves & types	1
2.7	Colour theory – light and pigment theory	1
2.8	Modification of colours,	1
2.9	Application of colours, colour and weave effects	1
3.0	Compound Structure	
3.1	Introduction of extra warp, extra weft	1
3.2	Methods of producing extra warp and weft	1
3.3	Extra warp with single and two colours	1
3.4	Extra weft f with single and two colours	1
3.5	Principles of backed fabric	1
3.6	Bed ford cords - Plain faced	1
3.7	Twill faced and wadded bed ford cords	1
3.8	Welts, piques and wadded piques	2
4.0	Pile Fabrics and Multi-Layer Fabrics	
4.1	Pile fabrics – Warp pile and wire pile	1
4.2	Terry weaves - stripe and check	1
4.3	Double cloths and its classification	1
4.4	Types of stitches	1
4.5	Wadded double cloth	1
4.6	Warp and weft wadded double cloth	1
4.7	Centre stitched warp and weft way double cloth	2
4.8	Multi-layer fabrics	1
5.0	Advanced Structures	1
5.1	Loom requirements and uses of advanced structures	1
5.2	Damask and Brocades design	1
5.3	Tapestry and gauze	1
5.4	Leno weaves	1
5.5	types of sheds and Doup wire	2
5.6	Easer bar motion and jumper motion	1
5.7	Russian cords structure	1
5.8	Net leno structure	1

1 C

60 TT 504	Technical Textiles I	Category	L	Т	Р	Credit
60 I I 504	reclinical rextiles i	PC	3	0	0	3

- To share information about different fibers utilized in industrial textiles.
- To provide insights into the realm of medical textiles.
- To gain a foundational understanding of geotextiles.
- To convey knowledge about protective textiles.
- To explore the diverse applications of textiles in the field of transportation.

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Summarize the categorization of technical textiles with the fibers, yarns, and fabric varieties employed in technical textiles	Understand									
CO2	Understand the role of textile materials in the medical textiles product development.	Understand									
CO3	Categorize the essential properties for fabric components utilized and applications of Geo textiles.	Analyse									
CO4	State the functions and diverse criteria for protective textiles.	Analyse									
CO5	Outline the functions and various requirements of transportation textiles.	Apply

Course C	Contents and Lecture Schedule	
S. No.	Topics	No. of hours
1.0	Introduction, Fibres and Fabric Structures	
1.1	Introduction : Technical Textiles	1
1.2	Scope of technical textiles	1
1.3	Classification of technical textiles	1
1.4	Fibres used in Technical textiles	1
1.5	Technical yarns - Staple yarns, Mono and multi filament yarns.	2
1.6	Technical fabrics: knitted and woven structures	2
1.7	Nonwoven and braided structures	1
2.0	Medical Textiles	
2.1	Medical Textiles: Introduction	1
2.2	Materials used & its requirements.	2
2.3	Classification of Medical textiles	1
2.4	Textiles for implantations	1
2.5	Non- implantations textiles	1
2.6	Extra-corporeal devices	2
2.7	Healthcare & Hygiene Products	1
3.0	Geo Textiles	
3.1	Geo Textiles: Introduction to geo textiles and geosynthetics	1
3.2	Fibres and its selection for Geo textiles	2
3.3	Functions of Geo textiles	1
3.4	Engineering properties of Geo textiles	1
3.5	Geo textile structures	2
3.6	Applications for natural Geo textiles	1
3.7	Applications for geosynthetics	1
4.0	Protective Textiles	
4.1	Protective Textiles: Introduction	1
4.2	Selection of protective clothing materials	2
4.3	Fibres and fabrics for Protective Textiles	2
4.4	Textiles for environmental protection	1
4.5	Thermal insulation textiles	1
4.6	Biological and chemical warfare protective textiles.	2
5.0	Transportation Textiles	
5.1	Textiles in Transportation	1
5.2	Car seats and air bag	1
5.3	Seat belt, filters and Belts	1
5.4	Tyre cords and hoses	2
5.5	Textiles in Rail applications	1
5.6	Textiles in aircraft and marine applications	2

60W1003	Entrepreneurship	MY	2	0	0	2*

- To Learn basic concepts in entrepreneurship, develop mind-set and skills necessary to explore entrepreneurship
- To provide practical proven tools for transforming an idea into a product or service that creates value for others.
- To Comprehend the process of opportunity identification through design thinking, identify market
 potential and customers while developing a compelling value proposition solution and prototypes
- To create business plan, conduct financial analysis and feasibility analysis to assess the financial viability of a venture ideas & solutions built with domain expertise
- To Prepare and present an investible pitch deck of their practice venture to attract stakeholders

Pre-requisites

• Basic knowledge of reading and writing in English

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop an entrepreneurial mindset and appreciate the concepts of design thinking, entrepreneurship and innovation	Understand
CO2	Apply process of problem -opportunity identification and validation through human centred approach to design thinking in building solutions	Apply
CO3	Understand market types, conduct market estimation, identify customers, create customer persona, develop the skills to create a compelling value proposition and build a Minimum Viable Product	Apply
CO4	Create business plan, conduct financial analysis and feasibility analysis to assess the financial viability of a venture	Apply
CO5	Prepare and deliver an investible pitch deck of their practice venture to attract stakeholders	Apply

S. No.	Contents and Lecture Schedule Topics	No. of hours
1.0	Introduction to Entrepreneurship & Entrepreneur	
1.1	Meaning and concept of Entrepreneurship and the history of Entrepreneurship development	1
1.2	The Entrepreneur: Meaning, the skills required to be an entrepreneur, the entrepreneurial decision process,	1
1.3	Myths of Entrepreneurship, How to Become a Successful Entrepreneur - Dr Romesh Wadhwani (Platform on boarding)	1
1.4	Role models, Mentors and Support system- Masterclass on My Story - Joshua Salins	1
1.5	Role of Entrepreneurship in Economic Development, Agencies in Entrepreneurship Management and Future of Entrepreneurship	1
1.6	Innovation and Creativity, types of innovations, Innovations in current scenario, Concepts of Entrepreneurial Thinking, General Enterprising tendency test	1
2.0	Problem-Opportunity Identification, Customers Discovery and competitive	re
2.1	advantage Understanding the Problem and opportunity, define problem using Design thinking principles and validate problem. Case study and Fireside chat – Desi Hangover	1
2.2	Identifying a problem for practice venture and filling Problem statement canvas (Handout week 1 - class activity)	1
2.3	Customer and markets discovery, knowing your customer and consumer, Customer segmentation and Exploring market types and estimating the market size. Case study and Fireside chat – Verloop	1
2.4	Creating customer personas & Market estimation (Handout week 2 - class activity)	1
2.5	Importance of Value Proposition, Introduce Value Proposition Canvas, Developing Problem-solution fit. Case study and Fireside chat – Honey Twigs	1
2.6	Competition analysis, Blue ocean strategy, Competitive positioning and understanding unique selling points. Case study and Fireside chat on Inzpira Fill Value Proposition Canvas (Handout week 3 - class activity) and Competition analysis framework (Handout week 5 - class activity) Briefing on Assignment 1 - Milestone 1	1
3.0	Business model and Build your MVP	
3.1	Introduction to Business model and types. Case study and Fireside chat - NUOS	1
3.2	Lean approach, 9 block lean canvas model, riskiest assumptions to Business models	1
3.3	Class Activity- Fill Lean canvas for you idea and understand revenue model (Handout week 6)	1
3.4	Prototyping, Meaning of MLP, Difference between MLP and MVP, How to build an MLP? Different types MLP that you can build. Case study and Fireside chat – KNORISH	1
3.5	Hypothesis testing and MVP Validation, MVP Iteration-Importance of Build - Measure – Learn approach	1
3.6	Class Activity- Fill MVP framework (Handout week 7) and learn validation	1
4.0	Business Plan, Financial feasibility and Manging growth	
4.1	Business planning: components of Business plan- Sales plan, People plan and financial plan, Preparing a business plan. Case study and Fireside chat – Bodh Gems	1
4.2	Financial Planning: Types of costs, preparing the financial plan using financial template (Handout week 9)	1
4.3	Class activity - starting up costs, COGS, Sales plan and people plan template.	1
4.4	Class activity - One year P&L projection, Breakeven Analysis, Five year projection	Popple
	in Academic Council Meeting held on 23/12/2023	Chairm and of the Department ment of Textile Tech asamy Gollege of Te

4.5	Understanding basics of Unit economics and analyzing Growth and the financial performance	1
4.6	Class activity - Financial template - Unit economics (Handout week 12)	1
5.0	Go To Market Strategies and Funding	
5.1	Introduction to Go to market strategies, start-up branding and its elements, Selecting the Right Channel	1
5.2	Creating digital presence, building customer acquisition strategy.	1
5.3	Class activity: Handout week 10 - create your GTM strategy	1
5.4	Choosing a form of business organization specific to your venture	1
5.5	Identifying sources of funds: Debt & Equity, Map the Start-up Lifecycle to Funding Options	1
5.6	Class activity - Visit relevant GOI websites, other sites to help students explore funding opportunities and briefing on final submission of the pitch deck Build an Investor ready pitch deck, What Should You Cover in Your Pitch Art of pitching and storytelling	1

60 TT 5P2	Fabric Structure Laboratory	Category	Category L T	Р	Credit
	Fabric Structure Laboratory	PC	0	0	3

- Educate on the intricacies of various weave structures.
- Convey knowledge on utilizing different fabric parameters for designing based on specific applications.
- Offer foundational understanding of color theory for its practical application in fabric design and construction
- Provide exposure to the analysis of diverse fabric structures, emphasizing construction details.
- Impart knowledge on color theory applicable to fabric production, encompassing various color combinations and designs.

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

•	accession comprehensive and country control in the date to	
CO1	Acquire understanding of fabric structure elements and basic weaving patterns.	Analyse
CO2	Elaborate on the loom specifications needed for unique weaves and explore the principles of color theory.	Analyse
CO3	Delve into the loom prerequisites and applications of additional thread figuring.	Analyse
CO4	Evaluate backed fabrics and grasp the concepts of mock leno and bedford cords.	Analyse
CO5	Elaborate on the loom specifications and applications of sophisticated weave structures.	Analyse

^{*}SDG:9 - Industry Innovation and Infrastructure

60 CG 0P4	CAREER SKILL DEVELOPMENT	Category	L	Т	Р	Credit
60 CG 0P4	IV	CG	0	0	2	1*

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts.
- To help learners develop strategies that could be adopted while reading texts.
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations.
- Improve listening, observational skills, and problem-solving capabilities
- Develop message generating and delivery skills

Pre-requisites

Basic knowledge of Arithmetic and Logical Reasoning

Course Outcomes

CO1	Compare and contrast products and ideas in technical texts.	Analyse
CO2	Identify cause and effects in events, industrial processes through technical texts	Analyse
CO3	Analyse problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Analyse
CO4	Report events and the processes of technical and industrial nature.	Apply
CO5	Articulate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Apply

60 TT E 21	Fibres for Smart Textiles	Category	٦	Т	Р	Credit
	Fibres for Smart Textiles	PE	3	0	0	3

- Overview smart textiles' history, trends, and future.
- Detail properties and uses of diverse fibres.
- Explore conductive and responsive fibre fabrication.
- Introduce coatings and composite fibres.
- Promote hands-on application in real-world scenarios

Pre-requisites

Fibre Science

Course Outcomes

CO1	Describe smart textiles and their applications.	Remember
CO2	Evaluate fibres for specific textile uses.	Understand
CO3	Apply fabrication methods for advanced fibres.	Understand
CO4	Develop textiles with functional coatings and composites.	Understand
CO5	Communicate textile concepts effectively through presentations and reports.	Understand

60 TT E 22	Functional Finishes	Category	L	Т	Р	Credit
60 TT E 22	Functional Finishes	PE	3	0	0	3

- To impart knowledge on chemical finishing.
- To impart knowledge on Hand Building Finishes and effects.
- To impart knowledge on Ultraviolet Protection and Elastomeric Finishes.
- To impart knowledge on Antimicrobial and Blood Repellent Finishes.
- To impart knowledge on Novel Finishes on textile fabrics.

Pre-requisites

• Textile Chemical Processing I

Course Outcomes

CO1	Explain the Importance, methods of chemical finishing. Softening finishes: Mechanisms of the softening effect.	Remember
CO2	Describe the hand building effect and valuation methods. Non-Slip Finishes.	Understand
CO3	Explain the mechanism of UV protection, EMI Shielding, elastomeric effect and evaluation.	Understand
CO4	Discuss the procedure involved in antimicrobial and blood repellent finish. Chemicals/agents used and their interaction.	Understand
CO5	Analyse the various novel finishes and Smart textiles by chemical finishing.	Analyse

60 TT E 24	Export Policies and Documentation	Category	L	T	Р	Credit
	Export Folicies and Documentation	PE	3	0	0	3

- Conveying insights into diverse facets of export trade, export finance, and the foreign exchange market.
- Providing understanding of product planning, development, product cycle, and market dynamics.
- Offering knowledge on EXIM policies, export documents, and export procedures.
- Evaluating government-led export promotion initiatives.
- Analysing pricing policies and terms prevalent in export trade.

Pre-requisites

• Total Quality Management

Course Outcomes

CO1	Differentiate domestic and international trade, merits and demerits & functions of Regional Trade Blocksand summarize the international business environment, regulatory framework and export barriers.	Remember
CO2	Analyse the different types of export credit facilities available for exporters and describe the export riskcoverage facilities	Understand
CO3	Summarize the concept of balance of payment and its functions and factors affecting counter trade andforeign exchange functions	Apply
CO4	Outline the export promotion activities undertaken by the government, summaries the foreign traderegulation act for regulating export trade	Analyse
CO5	Discuss the steps involved in export activity from raw material to shipping and the documents to be produced in bank for payment clearance and documents to be produced in central excise department claiming incentives.	Analyse

60 TT E 26	Apparel Production Machinery	Category	L	Т	Р	Credit
	and Equipment	PE	2	0	2	3

- To impart the various aspects of spreading and cutting machines and functions of the sewing machines
- To Select work aid attachments and expertise in computer controlled sewing machine.
- To acquire knowledge on the design and operational features of garment production machinery and equipment.
- To understand the various garment folding, computer controlled sewing machines.
- To know the details of garment machinery and equipment with focus on the means of exploiting the features built in the garment machinery and equipment.

Pre-requisites

· Garment Manufacturing Technology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	State the types and functions of spreading and cutting machine.	Remember
CO2	Explain the various parts and functions of sewing machine.	Understand
CO3	Describe the classification of sewing machine according to bed types, belt drives and the functions of over lock and flat lock.	Understand
CO4	Explain the various work aids and attachments of sewing machines and safety care.	Understand
CO5	Demonstrate the various special purpose machines and its care and maintenance.	Remember

60 TT E 27	Colour Communication	ommunication PE 3 0 0 3	Credit			
00 11 E 21	Colour Communication	PE	3	0	0	3

- The student will be able to understanding colour psychology for various environments.
- The student will be able to gain knowledge on the impact of colour for different moods.
- The student will be able to gain knowledge on various theories of colour.

Pre-requisites

• Textile Chemical Processing

Course Outcomes	

On the successful completion of the course, students will be able to

CO1	Learn the basics of colour perceptions	Analyse
CO2	Understand colour applications in different forms	Analyse
CO3	Apply subtractive colour schemes	Apply
CO4	Learn about colour and its applications in story content	Apply
CO5	Gain knowledge on colour vision	Analyse

^{*}CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

^{**}End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination, 50 marks for theory cum practical End Semester Examination and 40 marks for practical End semester Examination.

60 HS 003	Total Quality	Category	L	Т	Р	Credit
60 H3 003	Management	HS	3	0	0	3

- To facilitate the understanding of total quality management principles, tools and techniques
- To equip the students to apply the TQM principles, tools and techniques in manufacturing sectors
- To equip the students to apply the TQM principles, tools and techniques in service sectors
- To impart knowledge on quality management principles, tools, techniques and quality standards for real life applications
- To make the students understand the importance of standards in the quality assurance process and their impact on the final product

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the need for quality concepts and its application in organizations.	Remember
CO2	Apply the TQM principles for survival and growth in world class competition.	Understand
CO3	Apply the traditional tools and new tools for quality improvement.	Understand
CO4	Apply the tools and techniques like quality circle, QFD, TPM and FMEA for qualityimprovement.	Apply
CO5	Apply QMS and EMS in organizations.	Apply

Course (Contents and Lecture Schedule	
S. No.	Topics	No. of hours
1	Introduction to Fundamentals of Total Quality Management	
1.1	Introduction and Definition of Quality	1
1.2	Need and evolution of quality	1
1.3	Different Dimensions of Quality	1
1.4	Basic concepts of TQM and TQM framework	1
1.5	Deming, Juran and Crosby Philosophy of quality Management	1
1.6	Barriers to TQM Implementation	1
1.7	Quality Statements, Strategic Planning	1
1.8	Customer focus, customer satisfaction customer retention Techniques	1
1.9	Techniques for Quality Costs	1
2	Total Quality Management Principles	
2.1	Total Quality Management Principles	1
2.2	Strategic of quality planning and Quality councils	1
2.3	Motivation, Empowerment, Teams, Recognition and Reward	1
2.4	Performance Appraisal, Benefits, Continuous Process Improvement	1
2.5	Juran Trilogy, PDSA Cycle Continuous Process Improvement	1
2.6	5S, Kaizen, Continuous Process and Supplier Partnership	1
2.7	Partnering, sourcing, Supplier Selection	1
2.8	Supplier Rating, Relationship Development,	1
2.9	Basic Concepts, Strategy, Performance Measure.	1
3	TQM Management Tools and Techniques	
3.1	The seven traditional management tools of quality	1
3.2	The New management tools	1
3.3	Management tools applications to manufacturing	1
3.4	Management tools applications to management tools applications to service sector	1
3.5	Statistical Fundamentals in management tools	1
3.6	Normal Curve, Control Charts for variables and attributes	1
3.7	Concepts of six sigma principles	1 1
3.8	Benchmarking tools and Reasons to benchmark	1
3.9	Benchmarking process tools	1
4	TQM Process based Tools and Techniques	
4.1	Quality circles	1
4.1	Quality Function Deployment (QFD	1
4.2	house of Quality, QFD Process	2
4.4	Benefits, Taguchi Quality Loss Function	1
4.4	Total Productive Maintenance (TPM	1
4.6	Concept, Improvement Needs	1 1
4.6	Performance measuring tools	1
4.7	stages, types of FMEA	1
4.0	Process implementation of FMEA	1
5		
5.1	Quality Management System	1
5.1	Introduction-Benefits of ISO Registration	1
5.2	ISO 9000 Series of Standards- Sector-Specific Standards AS 9100, TS16949 and TL 9000 - ISO 9001, ISO 9001:2008	1 1
5.5	AS 9100, 1516949 and 1E 9000 - 150 9001, 150 9001:2008 requirements	'

Course Outcomes

On the su	On the successful completion of the course, students will be able to							
CO1	Analyse and differentiate between various textile quality types and their influencing factors.	Analyse						
CO2	Assess fiber and yarn properties using specialized instruments, understanding their roles in quality control.	Analyse						
CO3	Design protocols for comprehensive fabric and apparel quality assessments.	Apply						
CO4	Conduct quality evaluations for specialty fabrics, using industry- specific standards.	Apply						
CO5	Interpret textile test results, relating them to performance standards	Analyse

- To impart knowledge on fabric spreading and cutting
- To impart knowledge on stitches, seams and sewing machine
- To impart knowledge on human anatomy and body measurements
- To impart knowledge on basic pattern making
- To impart knowledge on pattern grading and marker planning

Pre-requisites

Basic knowledge about woven and knitted fabrics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the fabric spreading process and various types of cutting machines	Understand
CO2	Sketch various head theories and difference between normal figure and fashion figure	Apply
CO3	Classify the different stitches, seams, sewing threads and Basics of SNLS	Remember
CO4	Demonstrate the skills acquired on basic patterns for mens, womens and childrens	Apply
CO5	Demonstrate the skills acquired on grading patterns for different garments and marker planning and marker making	Apply

Concepts of Industrial Engineering and Productivity Industrial Engineering - definition and scope, Role of industrial engineers, Tools, techniques and benefits of industrial engineering; Productivity - definition, different Productivity indices, factors influencing productivity, Reasons and suggestions for improving productivity. Work Study and Method Study Work Study and Method Study - definition and purpose, Charts indicating process sequence - Outline process chart, Flow process chart (man, material and equipment type). Charts using diagram and travel chart. Motion Study and Work Measurement Motion study - chart, SIMO chart; Work measurement - Techniques of time study - stop watch method; Rating factor, Allowances, Product Layout Layout - Layout - Layout - definition and types of garments lay out with examples, Steps for developing a new layout; Application of IE techniques - capacity study calculation, measurement of operator performance, WIP: Operation Bulletin - objectives and examples. Work Environment and Material Handling Work environment - factors influencing working environment, lighting, ventilation, temperature control, humidity control and noise control; Ergonomics: Classification of material handling equipment's used in textile and apparel industry. Practical: 1. Study of existing method involved in garment manufacturing. 2. Suggestions for improvement in new method. 3. Time study for construction of T-Shirt 4. Time study for construction of Skirt. 6. Economical lay out for garment production. 7. Standard time - method for calculating SAM. 8. TAKT time calculation. 9. Calculate cutting, sewing, and finishing capacities for a new factory setup. 10. Mini-Project Total Hours: (Lecture - 30; Practical - 30) 60 Text Book(s): 1. International Labour Organization, Geneva, "Introduction of Work Study", Universal Publishing Corporation, Mumbai, 2006. 2. Ramesh Babu V, "Industrial Engineering in Apparel Production", Woodhead Publications India Pvt. Ltd., New Delhi, 201									
Industrial Engineering - definition and scope, Role of industrial engineers, Tools, techniques and benefits of industrial engineering; Productivity – definition, different Productivity indices, factors influencing productivity; Reasons and suggestions for improving productivity. Work Study and Method Study Work Study and Method Study Work study and Method Study – definition and purpose, Charts indicating process sequence – Outline process chart, Flow process chart (man, material and equipment type); Charts using time scale - multiple activity charts; Diagrams indicating movement – flow diagram, string diagram and travel chart. Motion Study and Work Measurement Motion Study – Principles of Motion economy, classification of movements, Two handed process chart; Micro motion study – chart, SIMO chart; Work measurement – Techniques of time study – stop watch method; Rating factor, Allowances. Product Layout Lay out – definition and types of garments lay out with examples, Steps for developing a new layout; Application of IE techniques – capacity study calculation, measurement of operator performance, WIP; Operation Bulletin – objectives and examples. Work Environment and Material Handling Work environment – factors influencing working environment, lighting, ventilation, temperature control, humidity control and noise control; Ergonomics: Classification of material handling equipment's used in textile and apparel industry. Course Contents and Lecture Schedule

S. No.	Topics	No. of Hours
1	Concepts of Industrial Engineering and Productivity	
1.1	Industrial Engineering - definition and scope,	1
1.2	Role of industrial engineers, Tools, techniques and benefits of industrial engineering	2
1.3	Productivity – definition, different Productivity indices,	1
1.4	Factors influencing productivity	1
1.5	Reasons and suggestions for improving productivity	1
2	Work Study and Method Study	
2.1	Work study – definition and purpose	1
2.2	Method study – definition and purpose	1
2.3	Method analysis charts, symbols and diagrams	1
2.4	Charts indicating process sequence – outline process chart, Flow process chart (man, material and equipment type)	1
2.5	Charts using time scale - multiple activity charts	1
2.6	Diagrams indicating movement – flow diagram, string diagram and travel chart.	1
3	Motion Study and Work Measurement	
3.1	Motion study – Principles of Motion economy, classification of movements	1
3.2	Two handed process chart, Micro motion study -chart, SIMO chart	1
3.3	Work measurement– definition and purpose	1
3.4	Techniques of time study – stop watch method	1
3.5	Rating factor – Definition and types;	1
3.6	Allowances – definition and types	1
4	Product Layout	
4.1	Lay out – definition and types of garments lay out with examples	1
4.2	Steps for developing a new layout	1
4.3	Application of IE techniques	1
4.4	capacity study calculation, measurement of operator performance	1
4.5	WIP (Work in Progress)	1
4.6	Operation Bulletin – objectives and examples.	1
5	Work Environment and Material Handling	
5.1	Work environment – factors influencing working environment	1
5.2	Lighting, ventilation, temperature control, humidity control and noise control	2
5.3	Ergonomics: Classification of material handling equipment's	1
5.4	Material handling equipment's used in textile and apparel industry	2
Practical		ı
11.	Study of existing method involved in garment manufacturing.	2
12.	Suggestions for improvement in new method.	2
13.	Time study for construction of T-Shirt	2
14.	Time study for construction of Trouser	2
15.	Time study for construction of Skirt.	2
16.	Economical lay out for garment production.	2
17.	Standard time – method for calculating SAM.	2
18.	TAKT time calculation.	2
19.	Calculate cutting, sewing, and finishing capacities for a new factory setup.	2
20.	Mini-Project	12

60 TT E 34	Textile Industry and Mill Management	Category	٦	Т	Р	Credit
	Textile industry and will Management	PE	3	0	0	3

- To acquire knowledge on the scenario of the present textile industry
- To encompass the production management techniques To understand the functions of personnel management
- To learn the concepts of financial management
- To know the different management tools

Pre-requisites

· Yarn Manufacturing and Fabric Manufacturing

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explain the procedure for establishing a new textile unit	Understand
CO2	Discuss the application of ERP in textile industry	Remember
CO3	Describe regarding the human resource planning and grading	Understand
CO4	Analyse the profit and loss account and balance sheet	Remember
CO5	Appraise on the various management tools	Apply

60 TT E 35	Medical Textiles	Category	L	Т	Р	Credit
60 11 E 33	Medical Textiles	PE	3	0	0	3

- To explain key concepts associated with healthcare textiles.
- To explore manufacturing techniques employed in the production of diverse implantable medical textile products.
- To impart knowledge on the characteristics and varied applications of non-implantable and extracorporeal medical textile products.
- To develop an understanding of the materials utilized in wound dressing and their respective applications.
- To impart knowledge on smart medical textiles and legal issues in medical textiles.

Pre-requisites

Technical Textile I & II

Course Outcomes

CO1	Explain the concepts related to healthcare textiles.	Understand
CO2	Interpret techniques involved in the production of various implantable medical textile products.	Understand
CO3	Develop knowledge on the characteristics and uses of non- implantable and extracorporeal medical textile products.	Apply
CO4	Define the materials used in wound dressing	Remember
CO5	Explain the concepts related to smart medical textiles.	Understand

Course C	Contents and Lecture Schedule	
S. No.	Topics	No. of hours
1.0	Introduction to Production and Operation Management	
1.1	Functions of production management, Relationship between production and other functions	1
1.2	Production management and operation management	2
1.3	Characteristics of modern production and operation management	1
1.4	Organization of production function	1
1.5	Recent trends in operation and production management,	2
1.6	Production as an organizational function	1
1.7	Decision making in production operation research.	1
1.8	Functions of production management, Relationship between production and other functions	1
2.0	Production and Operation Systems	
2.1	Production systems - principles and models	1
2.2	CAD and CAM	1
2.3	Automation in production, functions and significance,	2
2.4	Capacity and facility planning, Importance of capacity planning	2
2.5	Capacity measurement	1
2.6	Capacity Requirement Planning (CRP) process for manufacturing and service industry.	2
3.0	Production and Operation Planning	
3.1	Facility planning, Location of facilities, location flexibility	1
3.2	Facility design process and techniques,	1
3.3	Location break even analysis	1
3.4	Production process planning, steps for production process	2
3.5	Characteristics of production process systems,	1
3.6	Production planning control – functions	1
3.7	Planning phases, Action phase and Control phase	1
3.8	Aggregate production planning.	1
4.0	Production and Operation Management Process	
4.1	Process selection with PLC phases, process simulation tools	1
4.2	Work study – significance, methods, evolution of normal/standard time,	2
4.3	Job design and rating, Value analysis	1
4.4	Plant layout – meaning, characters, plant location techniques, types	1
4.5	MRP and layout design	1
4.6	Optimization and Theory of Constraints (TOC), Critical Chain Project Management (CCPM), Relationship (REL) chart,	2
4.7	Assembly line balancing, Plant design optimization, Forecasting methods.	1
4.8	Process selection with PLC phases, process simulation tools	1
4.9	Work study – significance, methods, evolution of normal/standard time,	2
5.0	Controlling Production and Operation Management	1
5.1	Material Requirement Planning (MRP), concept, process and control,	1

^{*}CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

^{**}End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination, 50 marks for theory cum practical End Semester Examination and 40 marks for practical End semester Examination.

60 TT 701	Garment Manufacturing Technology II	Category	L	Т	Р	Credit
00 11 701	Garment Manufacturing recrinology if	PC	3	0	0	3

- Understand the dynamics of the apparel industry including product life cycles, quality, and pricing strategies
- Gain knowledge of apparel production systems and plant layout designs for efficiency
- Master the use of advanced sewing tools and techniques for garment construction
- Learn the application and function of garment accessories and modern pressing techniques
- Develop strategic planning and machinery selection skills tailored for garment manufacturing

Pre-requisites

• Garment Manufacturing Technology I

Course Outcomes

CO1	Analyse and interpret the structure and operations of the apparel industry.	Analyse				
CO2	Design and implement efficient apparel production systems. Apply					
CO3	Demonstrate proficiency in using sewing tools and addressing garment construction challenges.	Apply				
CO4	Apply finishing techniques and accessories to enhance garment quality.	Apply				
CO5	Make informed decisions on machinery selection for optimized garment production.	Apply

^{*}SDG 9 - Industry Innovation and Infrastructure

S. No.	Topics	No. of hours
1.0	Organization of the Apparel Business	Hours
1.1	Objectives and Nature of Apparel Business: Objectives, Nature (Timing of product changes, quality, pricing strategies).	1
1.2	Structure of the Apparel Industry: Types of contractors, Business concepts (Branding, market segmentation).	1
1.3	Types of Retailing: Retail structures (Brick-and-mortar, e-commerce), Retail formats (Specialty stores, discount stores).	1
1.4	Apparel Trade Associations: Global and Indian trade associations.	1
1.5	Textile Manufacturing in India: Overview of the Indian textile sector.	1
1.6	Garment Manufacturing in India: Major garment production hubs, key segments.	1
1.7	Current Issues in the Apparel Industry: Sustainable production, supply chain disruptions.	1
1.8	Global Apparel Market Analysis: Key global players, emerging markets.	1
1.9	Summary and Q&A: Summarize key learnings and address student queries.	
2.0	Apparel Production Systems	
2.1	Basic Concepts of Apparel Production Systems: Overview of production systems, plant layout.	1
2.2	Progressing Bundle System (PBS): Definition, process flow, advantages, and disadvantages.	1
2.3	Unit Production System (UPS): Definition, process flow, advantages, and disadvantages.	1
2.4	Modular Production System (MPS): Definition, process flow, advantages, and disadvantages.	1
2.5	Flexible Manufacturing: Definition and implementation, benefits and challenges.	1
2.6	Workflow, Balancing, and Buffer: Workflow, line balancing, buffer.	1
2.7	Plant Layout Planning: Factors affecting layout design, simulation exercises.	1
2.8	Balancing Practical Exercise: Group exercise, analysis of results.	1
2.9	Review and Q&A: Recap of key production systems, student questions.	1
3.0	Sewing Tools and Attachments	
3.1	Garment Construction Tools Overview: Folders and attachments, basic sewing tools.	1
3.2	Sewing Machine Attachments: Specialized attachments, applications, and usage.	1
3.3	Cutting Tools: Scissors, rotary cutters, pattern notcher.	1
3.4	Pressing Tools: Pressing irons, ironing boards, pressing cloths.	1
3.5	Specialty Sewing Tools: Thread and bobbin accessories, quilting tools.	1
3.6	Serger/Overlocker Attachments: Attachments and their specific uses.	1
3.7	Embroidery Tools and Attachments: Types of embroidery machines, tools.	1
3.8	Storage and Organization: Tool storage techniques, workflow organization.	1
3.9	Review and Practical Demonstration: Summary of key sewing tools, practical demonstration.	
4.0	Garment Accessories and Pressing	
4.1	Fusing Equipment and Principles: Types, working principles, and functions.	1
4.2	Support Materials: Interlinings, linings.	1
4.3	Fasteners and Their Functions: Zippers, buttons, snaps, hooks, and eyes.	1
4.4	Elastic and Embroidery Types: Elastic types, embroidery types.	1

4.5	Labels and Application Methods: Styles and application methods.	1
4.6	Pressing and Packing Methods: Pressing equipment and principles, packing methods.	1
4.7	Practical Session - Pressing and Packing: Hands-on demonstration of pressing and packing.	1
4.8	Quality Standards and Inspection: Quality standards and inspection practices.	1
4.9	Review and Q&A: Recap of key garment accessories, student questions.	1
5.0	Electric and Autonomous Vehicles	
5.1	Introduction to CNC Sewing Machines: Basics of CNC machines and their applications.	1
5.2	Machine Selection and Specifications - Shirts: Types of machines required, machinery specifications.	1
5.3	Machine Selection and Specifications - Trousers: Types of machines required, machinery specifications.	1
5.4	Machine Selection and Specifications - Knit Goods: Types of machines required, machinery specifications.	1
5.5	Machine Selection and Specifications - Made-ups: Types of machines required, machinery specifications.	1
5.6	Machine Selection and Specifications - Suits: Types of machines required, machinery specifications.	1
5.7	Machine Selection and Specifications - Ladies Dress Material: Types of machines required, machinery specifications.	1
5.8	Plant Layout and Logistics: Key factors in layout planning, managing logistics.	1
5.9	Corporate Social Responsibility (CSR): Importance, ethical sourcing, sustainability.	1

60 TT 702	Financial Strategies in Textile and	Category	L	Т	Р	Credit
00 11 702	Apparel Industry	PC	3	1	0	4

- To know the basic concepts of financial accounting and Practice the capital budgeting evaluationmethods.
- To provide an overview on the principles and concepts of working capital and Inventory management.
- To familiarize on the fundamental concepts of costing and costing systems followed in apparel industry.
- To gain knowledge on yarn and fabric cost calculation.
- To offer the students a broad overview on garment costing.

Pre-requisites

Total Quality Management

Course Outcomes

CO1	Describe the concepts of Financial Management, capable of applying appropriate capital Budgeting techniques and calculate the different methods of depreciation.	Understand
CO2	Estimate working capital and inventory control techniques required for the textile industry	Apply
CO3	Summarize the basic concepts in costing and elements of costing and compute the Job order costingand contract costing for apparel industry.	Understand
CO4	Prepare, analyse and interpret the cost sheet for yarn and fabric production.	Apply
CO5	Outline the factors influence the cost of garments and able to arrive at a cost estimation for various garments	Apply

Course Contents and Lecture Schedule									
S. No.	Topics	No. of hours							
1.0	Introduction and Capital Budgeting								
1.1	Objectives and functions of financial management	1							
1.2	Capital budgeting – Nature & Principles	1							
1.3	Evaluation of capital expenditure decisions	1							
1.4	Evaluation of capital expenditure - DCF Techniques	2							
1.5	Evaluation of capital expenditure - Non-DCF Techniques	2							
1.6	Depreciation – method of computing depreciation	2							
1.7	Tutorial	3							
2.0	Working Capital and Inventory Management								
2.1	Capital structure - Capital structure theories and cost of capital	1							
2.2	Computing specific costs of capital – Cost of debt, Preference shares	1							
2.3	Computing specific costs of capital - Equity and Retained earnings	1							
2.4	Working capital – Definition and Principles	1							
2.5	Types of working capital – Gross and Net working capital	2							
2.6	Sources of Finance	1							
2.7	Tutorial	3							
3.0	Cost Accounting	l .							
3.1	Cost accounting - purpose	1							
3.2	Utility of costing	2							
3.3	Methods and Techniques of Costing	1							
3.4	Job, Batch and contract costing	2							
3.5	Process costing	1							
3.6	Joint and by-product costing in apparel manufacturing	2							
3.7	Tutorial	3							
4.0	Costing in Fabric Preparation	l							
4.1	Yarn Conversion cost, Selling price of various wastes	1							
4.2	Calculation of Yarn requirements for weaving - Conversion cost from winding to weaving.	2							
4.3	Knitting Cost - Raw material requirements for knitting	1							
4.4	Cost of knitted fabric	1							
4.5	Processing Cost - Estimating of cost for Bleaching and Dyeing,	2							
4.6	Processing Cost - Estimating of cost for Printing and Finishing of fabric.	2							
4.7	Tutorial	3							
5.0	Garment Costing	•							
5.1	Costing of garments - factors that determine the price of garments	1							
5.2	Calculation of cutting, making and trim costs (CMT cost)	2							
5.3	Calculation of garment weight of different sizes and style	2							
5.4	Accessories Costing	1							
5.5	Costing calculation for various testing	1							
5.6	Calculation of HOK and OHS	2							
5.7	Tutorial	3

60 TT 703	Nonwoven Technology	Category	L	T	Р	Credit
00 11 703	Nonwoven recimology	PC	2	0	2	3

- To Teach students the basics of nonwoven fabrics, including what they are and how they're categorized.
- To Educate students on the materials used in nonwovens and how they're processed.
- To Develop students' skills in creating nonwoven fabrics using different methods.
- To Teach students various ways to bonding of nonwoven materials.
- To Show students how to test nonwovens and explain their uses in different industries

Pre-requisites

Nil

Course Outcomes

CO1	Recognize nonwoven fabrics, their types, and features.	Understand
CO2	Skilled in making nonwoven fabrics using several techniques.	Apply
CO3	Know how to bond nonwoven materials together.	Analyse
CO4	Know how the production of nonwoven materials	Analyse
CO5	Finishing and testing of nonwoven fabrics.	Apply

Course C	Contents and Lecture Schedule	
S. No.	Topics	No. of Hours
1	Nonwoven Essentials	
1.1	Overview of nonwoven tech	1
1.2	Definitions	1
1.3	Classification of nonwovens	1
1.4	Fibre Geometry	1
1.5	Structure of Fibrous Webs	1
1.6	Fibres for Nonwovens	1
2	Web Formation	1
2.1	Overview of Web Formation	1
2.2	Carding Process	1
2.3	Parallel-lay Process & Cross-lay Process	1
2.4	Perpendicular-lay Process & Air-lay Process	1
2.5	Wet-lay Process	1
2.6	Web Quality Factors	1
3	3. Bonding	
3.1	Overview of Bonding	1
3.2	Needle-punch Process	1
3.3	Hydroentanglement Process & Thermal Bonding Principles	1
3.4	Calender Bonding Process & Through-air Bonding	1
3.5	Infra-red Bonding Process	1
3.6	Ultrasonic Bonding Process	1
4	Technology & Finishing Process	
4.1	Spunbond Technology	1
4.2	Meltblown Technology	1
4.3	Spunbond Process Sequence	1
4.4	Mechanical Finishes	1
4.5	Chemical Finishes	1
4.6	Finishing Techniques	1
5	Testing	
5.1	Overview of Testing	1
5.2	CBR Cone Puncture Test	1
5.3	Liquid Strike-through Test	1
5.4	Bacterial Filtration Test	1
5.5	Abrasion Test	1
5.6	Demand Absorbency Test	1
Practical		
1.	Identification of different non woven structure	2
2.	Characterisation of webs meant for natural nonwoven matts	2
3.	Characterisation of webs meant for synthetic nonwoven matts	4
4.	Preparation of needle punched samples	4
5.	Preparation of chemical bonded nonwovens	2
6.	Analyse the tensile behaviour of Nonwoven Matts	4
7.	Analyse the porosit test of meltblown nonwoven	4
8.	Analyse the porosit test of spun bonded nonwoven	4
9.	Analyse the porosit test of needle punched nonwoven	2
10.	Antimicrobial test analysis of face masks	2

60 AC 001	Research Skill Development	AC	1	0	0	0

- To identify research problems, formulate hypotheses, collect data and test hypotheses
- To prepare and submit quality manuscripts and understand peer review process
- To utilize software tools for effective manuscript preparation and visualization of research data
- To familiarize different journal metrics and author-level quality indicators
- To protect creative works, inventions, and branding elements using IPR

Pre-requisites

• Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Develop structured scientific approach to plan and execute research work	Apply
CO2	Comply with the journal requirements to publish research findings effectively	Understand
CO3	Apply various software tools during the manuscript preparation	Apply
CO4	Select suitable journals to publish the work using different publication metrics	Analyse
CO5	Apply the appropriate form of IP protection to a specific invention or creation	Apply

List of Experiments:

- 1. Design, draft and peg plan for plain weave and its derivatives, twill weave and its derivatives and sateen and satin weaves.
 - Simulation of stripped and checked pattern on the above weaves. Costing of warp & weft yarn required for the above fabrics.
- Design, draft and peg plan for twill weave and its derivatives and sateen and satin weaves.
 - Simulation of stripped and checked pattern on the above weaves. Costing of warp & weft yarn required for the above fabrics.
- Design, draft and peg plan for Honey comb, Huck a back, Terry and Bed ford cord weaves.
 - Simulation of stripped and checked patterns on the above weaves. Costing of warp & weft yarn required for the above fabrics.
- 4. Design, draft and peg plan for any one dobby weaves and jacquard weaves. Simulation of stripped and checked patterns. Costing of warp & weft yarn required for the above fabrics.
- 5. Computer aided pattern making, grading and marker planning for the following garments.
 - 1. Half sleeve shirt
 - 2. Full sleeve shirt
 - 3. T-Shirt
- 6. Computer aided pattern making, grading and marker planning for the following garments.
 - 1. Romper
 - 2. Waist coat
- 7. Computer aided pattern making, grading and marker planning for the following garments.
 - 1. Skirt blouse
 - 2. Plain skirt
- 8. Computer aided pattern making, grading and marker planning for the following garments.
 - 1. Pleated trousers
 - 2. Jeans pant
- 9. Computer aided pattern making, grading and marker planning for industry wear
 - 1. Surgeons coat,
 - 2. Industry work wear jackets
 - 3. Bullet proof vest
- Mini Project

60 TT 7D2	Garment Construction Laboratory II	Category	L	Т	Р	Credit
60 11 /P2 Gari	Garment Construction Laboratory in	PC	0	0	4	2

- Equip students with advanced pattern making techniques for a diverse range of garments.
- Develop skills in high-quality garment construction, from casual to formal wear.
- Foster creativity and innovation in designing varied apparel, including both men's and women's clothing.
- Provide specialized knowledge in constructing complex garments with detailed craftsmanship.
- Teach quality control and finishing techniques to ensure market-ready apparel production

Pre-requisites

• Garment Construction Laboratory I

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Accurately draft patterns for a wide array of garments, reflecting current trends and styles.	Understand
CO2	Construct various types of garments with precision, quality, and technical proficiency.	Analyse
CO3	Design and execute patterns for a diverse clothing range, showcasing versatility and creativity.	Apply
CO4	Innovate in the construction of specialized garments, demonstrating advanced sewing and problem-solving skills.	Analyse
CO5	Apply finishing techniques to produce garments that meet industry standards and consumer expectations.	Apply

Each student has to do a project work from any industrial related problems or innovations in technology or critical studies related to textiles (As decided during their VIth semester). The student can undertake the project work individually or in a group not exceeding three students. The works to be undertaken during this phase I is given below:

- I. Complete 20% of project work and present their findings in Review I
- II. Complete 60% of project work and present their findings in Review II
- III. Complete 70% of project work and present their findings in Review III
- IV. Complete 100% of project work before the commencement of VIIIth semester

Each student has to compulsorily undergo an Internship in any one of the textile industry for a minimum period of 4/8 weeks. This has to be carried out after completion of each semester examination and before commencement of the next semester classes.

Each student has to follow the below mentioned guidelines:

- 1. Drawing the layout plan of building and machineries of the selected.
- 2. Listing out the Organization chart.
- 3. Noting down the number of machineries of each type and its technical details-Motor HP, Motor rpm, Production capacity of the machine.
- 4. Making the production process flow chart.
- 5. Noting down the existing production details for all products.
- 6. Noting down the maintenance schedule.
- 7. Learning regarding inventory and despatch sections.
- 8. Noting down the allocation of man power for different processes.
- 9. After completion of training programme a report has to be prepared.
- 10. The report has to be signed by the Internship Coordinator / HoD.
- * Extra credits will be offered as additional credits depending on the duration of the internship

60 TT E 41	Surface Characteristics of Fibres	Category	L	Т	Р	Credit
00 11 E 41	Surface Characteristics of Fibres	PE	3	0	0	3

- Understand the types and surface properties of various fibers.
- Master analytical techniques for fiber surface characterization, such as SEM, AFM, and XPS.
- Analyse how fiber surface properties impact functionality.
- Learn and apply methods to modify fiber surfaces for enhanced properties.
- Explore the sustainable application of surface-characterized fibers in multiple industries.

Pre-requisites

Fibre Science

Course Outcomes

CO1	Differentiate and describe fiber types based on their surface properties.	Analyse
CO2	Skillfully use analytical tools to evaluate fiber surfaces.	Analyse
CO3	Link surface properties with fiber performance in applications.	Apply
CO4	Design and implement fiber surface treatments for specific uses.	Analyse
CO5	Incorporate sustainability into fiber technology projects	Analyse

Course C	ontents and Lecture Schedule	
S. No.	Topics	No. of hours
1.0	Fundamentals of Fiber Surfaces	•
1.1	Introduction to Fiber Types - Natural vs. Synthetic	2
1.2	Basic Properties of Fibers - Mechanical, Thermal, Chemical	1
1.3	The Molecular Structure of Fibers and Impact on Surface Properties	2
1.4	Overview of Surface Properties - Roughness, Porosity, Functionality	2
1.5	Importance of Surface Characteristics in Fiber Performance	2
2.0	Surface Analysis Techniques	
2.1	Introduction to Microscopy – Principles of SEM and TEM	2
2.2	Atomic Force Microscopy (AFM) – Setup and Operation	1
2.3	Spectroscopic Methods for Surface Analysis - XPS, FTIR	2
2.4	Surface Topography Measurements and Interpretations	1
2.5	Practical Aspects of Conducting Contact Angle Measurements	3
3.0	Surface Property Fundamentals	
3.1	Theories of Surface Energy and Implications for Adhesion	2
3.2	Wettability of Fibers and Its Importance in Textile Processing	2
3.3	Chemical Composition of Fiber Surfaces and Effects on Dyeing/Finishing	2
3.4	Mechanical Interlocking and Surface Bonding in Composites	1
3.5	Influence of Environmental Factors on Fiber Surface Properties	2
4.0	Modifying Fiber Surfaces	
4.1	Chemical Surface Modification - Coating and Grafting Techniques	2
4.2	Physical Methods - Plasma Treatment, Corona Discharge	2
4.3	Enzymatic Treatments and Benefits for Natural Fibers	2
4.4	Recent Advances in Nano-Coating and Their Applications	1
4.5	Case Studies on Commercial Application of Modified Fibers	2
5.0	Applications and Sustainability in Fiber Technology	•
5.1	Fiber Applications in High-Performance Textiles and Composites	2
5.2	Biomedical Applications of Surface-Engineered Fibers	2
5.3	Sustainability in Fiber Production - Life Cycle Analysis and Green Chemistry	2
5.4	Emerging Technologies and Innovations in Fiber Surface Characterization	2
5.5	Global Challenges and Opportunities in Fiber Technology	1

00 11 E 42	Cibiling Science	PE	2	0	2	3

- To study the basic understanding of comfort aspects of textile materials.
- To acquire knowledge on use of fabrics for specialty applications.
- To understand the multidisciplinary nature of the subject,
- To encompassing various concepts of physics & psychological science
- To design and development and material characterization with scientific approaches

Pre-requisites

Knitting Technology

Course Outcomes On the successful completion of the course, students will be able to CO1 Know the concepts of clothing science Understand CO2 Apply the theory of psychological factor in apparel manufacturing Apply

COT	Know the concepts of clothing science	Understand				
CO2						
CO3	Recognizes the procedure involved in testing of fabrics with respect to comfort	Understand				
CO4	Analysis the comfort characteristics of various fabrics	Analyse				
CO5	Correlate the property of the fabric with comfort to the wearer	Understand

	ERF and wild in Apparel industry	PE	3	0	0	3

- To automate the business functions, Enterprise Resource Planning (ERP) is Business Process Management Software
- To provide knowledge implementation of ERP
- To give an over view of the business Modules of ERP package
- · To include the concept of ERP in apparel industry
- To implement the management information system in garment industry.

Pre-requisites

• Garment Manufacturing Technology II

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Remember the product and service improvement	Remember
CO2	Comprehend the Enterprise Resource Planning and its Functions	Understand
CO3	Apply growth of existing product lines.	Understand
CO4	Analyse the systems and supports new product development.	Apply
CO5	Recognize the Modernize Business System and Processes	Analyse

- Aware of the importance of entrepreneurship opportunities available in the society for the entrepreneur.
- Acquaint them with the challenges faced by the entrepreneur.
- Comprehend the market survey and techno economic feasibility assessment.
- · Apprise them costing and break-even analysis.
- Mindful the Sickness in small industries, causes and consequences, corrective measures

Pre-requisites

• Garment Manufacturing Technology I&II

Course Outcomes

CO1	State the entrepreneurship concept, definition and characteristics and the types of entrepreneurship and entrepreneurial growth.	Understand	
CO2	Categorize the types of small-scale industries and the market survey and techno-economic feasibility assessment.	Remember	
CO3	Explain the sources of finance and financial assistance, costing and break-even analysis.	Understand	
CO4	Describe the sickness in small industries, its causes and consequences, corrective measures, and the various government policies for small-scale enterprises and business incubators.	Remember	
CO5	Comprehend the various electronic commerce, small enterprises and various leadership in the new economy and hiring the right employees	Apply

- To provide an overview about the smart technology, material selection, design and manufacturing system.
- To teach the heat storage and thermo-regulating properties of textiles.
- To give an overview on of Thermal insulated textiles and educate on the various functional finishes involved in Thermal insulated textiles production.
- To inculcate the scope, construction and functions of wearable technologies.
- To enlighten the Bioprocessing and Tissue engineering applications for smart textiles and clothing.

Pre-requisites

Technical Textiles I and II

Course Outcomes

On the successful completion of the course, students will be able to

on the education of the						
CO1	Recall and list key materials and principles underpinning smart textiles.	Remember				
CO2	Explain the functions and applications of heat storage and thermo- regulated textiles.	Understand				
CO3	Demonstrate the use of thermal sensitive materials in practical scenarios.	Apply				
CO4	Differentiate between various wearable technologies and their specific purposes.	Analyse				
CO5	Design a basic concept for a smart interactive garment for a given context.	Apply

60 TT E 47	Eachion Brand Management	Category	L	Т	Р	Credit
00 11 L 41	Fashion Brand Management	PE	3	0	0	3

- To understand the methods of managing brands and strategies for brand management.
- To understand the importance of brands
- To gain an insight into various brand management activities.
- Students will be able to understand various types of intellectual property rights
- Students will be able to read, understand and interpret branding.

Pre-requisites

• Garment Manufacturing Technology II

Course Outcomes

CO1	Gain knowledge on branding and strategic planning	Analyse
CO2	Learn brand equity and research techniques	Apply
CO3	Gain Knowledge on consumer behavior	Analyse
CO4	Summaries the concepts of market communication in branding	Analyse
CO5	Strategies brand revitalization	Apply

60 TT E 51	New Millennium Fibres	Category	L	T	Р	Credit
60 11 E 31	New Millerinium Fibres	PE	3	0	0	3

- Explore the evolution and current technologies of advanced fibers, including nanofibers and smart textiles.
- Examine production methods and innovations in fiber manufacturing.
- Assess the applications and properties of advanced fibers across various industries.
- Evaluate environmental impacts and promote sustainable practices in the fiber industry.
- Predict future developments and innovate within the field of fiber technology.

Pre-requisites

Fibre Science

Course Outcomes

On the sa	On the successful completion of the course, students will be able to								
CO1	Identify and describe various advanced fibers and their properties.	Analyse							
CO2	Master current production technologies and methods for creating advanced fibers.	Analyse							
CO3	Design and implement fiber-based solutions for practical applications.	Apply							
CO4	Analyse and advocate for sustainability in fiber production and use.	Analyse							
CO5	Innovate and adapt to future trends in fiber technology.	Analyse

60 TT E 54	Lean and Six Sigma concepts for	Category	L	T	Р	Credit
00 11 E 34	Textiles and Apparel Industry	PE	3	0	0	3

- To teach the concepts of Lean Manufacturing and six sigma.
- To provide knowledge on the implementation procedure for lean six sigma.
- To give an overview on various techniques of lean manufacturing.
- To inculcate the concepts of inventory control.
- To taught the implementation of lean techniques with various case studies

Pre-requisites

Garment Manufacturing Technology II

Course Outcomes

	,	
CO1	Explain the concepts, features and elements of lean manufacturing and six sigma.	Understand
CO2	Summarize the evolution, principles and scope of lean six sigma.	Remember
CO3	List out the techniques, approaches and production process for lean manufacturing	Understand
CO4	Discuss the concepts of Kanban, Kaizen, VSM and JIT in inventory control	Remember
CO5	Categorize the concepts of 5S, TPM and Implementation of lean techniques	Understand

60 TT E 55	Textile Composites	Category	L	T	Р	Credit
00 11 L 33	Textile Composites	PE	2	0	2	3

- Understand the fundamental properties and classifications of fiber-reinforced polymers, resins, and composite materials.
- Explore manufacturing techniques of prepregs and preforms, focusing on textile preforms and their geometric aspects.
- Learn various manufacturing processes of composites, including open and closed mould processes and continuous processes for metal and ceramic matrix composites.
- Examine the mechanical properties of textile composites through testing for tensile, flexural, impact, interlaminar shear, and compression properties.
- Investigate the diverse applications of polymer composites in industries such as aerospace, construction, sports, electrical, biomedical, and vibration damping

Pre-requisites

Nonwoven Technology

Course Outcomes

CO1	Recognize about composite materials their classifications and properties	Understand
CO2	Identify the manufacturing techniques for prepregs and preforms,	Understand
CO3	Show expertise in composite manufacturing processes,	Analyse
CO4	Evaluate mechanical properties of textile composites through testing	Apply
CO5	Apply knowledge of polymer composites by highlighting their versatile utility	Apply

60 TT E 57	Fashion Design: Process,	Category	L	T	Р	Credit
00 11 E 37	Innovation and Practice	PE	3	0	0	3

- To understand the sourcing ideas and formulation of design.
- To learn the concepts of boards and methods of display.
- To gain knowledge about the fabric sourcing and pattern development.
- To familiar with the functions of Pattern adaptation and prototype preparation.
- To understand the garment finishing process and portfolio preparation.

Pre-requisites

• Fashion Design – Principles & Silhouttes

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Learn sourcing ideas and formulation of design.	Understand
CO2	Summarize the procedure for mood and story boards.	Understand
CO3	Gain knowledge on fabric sourcing and pattern construction.	Understand
CO4	Outline the procedure for prototype preparation	Understand
CO5	Express the requirement of portfolio presentation.	Apply

The student can undertake the project work individually or in a group not exceeding three students. The work has to be carried out in the college / institute. The works to be undertaken during this phase II is given below:

- I. Demonstrate and present their entire project work with results and discussions in Review 0
- II. Submit first draft of research paper/patent/demo the mobile app development in Review I
- III. Show the evidence of paper submission in journal / filed a patent / demo in the play store for mobile app development in Review II
- IV. Complete project report, paper publication in journals / status of patent / Availability of app in play store in Review III
- V. Complete all works before the last instruction day of that particular semester

^{*}SDG 6: Ensure availability and sustainable management of water and sanitation for all

S. No.	Торіс	No. of hours
1.0	Basics of Fibre Science and Spinning	
1.1	Introduction to textile fibers: Definition, classification, and essential properties.	1
1.2	Sequence of machineries in short staple yarn spinning from ginning to cone winding.	1
1.3	Detailed study of each machinery involved in spinning - Objectives and functioning.	1
1.4	Yarn numbering systems - Direct and indirect systems.	1
1.5	Essential yarn properties - Strength, elasticity, fineness.	1
1.6	Continuation of yarn properties - Evenness, hairiness, and twist.	1
	Hands-on demonstration or virtual demonstration of spinning machineries.	1
	Summary, revision, and quiz/assignment discussion.	2
2.0	Basics of Woven Fabric Production	
2.1	Introduction to woven fabric - Warp, weft, and basic weaving concepts.	1
2.2	Classification of looms - Handloom, power loom, automatic, shuttleless, and special types.	2
2.3	Preparatory machines for weaving - Objectives and their roles.	2
2.4	Primary weaving mechanisms - Shedding, picking, and beating-up.	1
2.5	Secondary and auxiliary weaving mechanisms - Take-up, let-off, warp stop motion, and weft stop motion.	2
2.6	Essential fabric properties - Strength, drape, and aesthetics.	1
3.0	Basics of Knitted and Non-Woven Fabric Production	
3.1	Introduction to knitting - Warp and weft knitting principles.	1
3.2	Classification of knitting machines - Circular, flatbed, and raschel knitting.	2
3.3	Properties of knitted fabrics - Stretch, comfort, and breathability.	1
3.4	Non-woven fabrics - Introduction, classification, and manufacturing principles.	1
3.5	Types of non-woven fabrics - Spunbond, meltblown, needle-punched.	2
3.6	End uses of non-woven fabrics - Medical, automotive, and filtration.	1
3.7	Summary, revision, and quiz/assignment discussion.	1
4.0	Basics of Chemical Processing	
4.1	Objectives of chemical processing - Singeing, de-sizing, scouring.	1
4.2	Detailed process of bleaching and mercerization.	2
4.3	Dyeing - Classification of dyes, methods, and types.	1
4.4	Techniques and equipment used in the dyeing process.	2
4.5	Introduction to textile printing - Types, styles, and techniques (Block, screen, rotary, transfer).	2
4.6	Summary, revision, and discussion on SDG 6 - Water management in textile processing.	1
5.0	Basics of Garment Manufacturing	
5.1	Introduction to garment manufacturing - Fabric sourcing, principles of pattern making.	1
5.2	Marker planning, laying, and cutting processes.	1
5.3	Sorting, sewing, and finishing operations.	1
5.4	Garment packing and quality control - Standards and best practices.	2
5.5	Pattern grading techniques - Basic principles and applications.	2
5.6	Summary, revision, and final quiz/assignment on Garment Manufacturing.	2

	Introduction to Eachion Decign	Category	L	Т	Р	Credit
60 TT L 03	Introduction to Fashion Design	OE	3	0	0	3

- Study the history and theories of fashion movement and fashion cycle
- Learn the significance of clothing in different cultural and social contexts
- Apply knowledge of fashion and clothing in personal wardrobe planning
- Utilize elements and principles of design in creating aesthetically pleasing outfits
- Develop skills in portfolio presentation and organizing fashion shows

Pre-requisites

Basic knowledge about woven and knitted fabrics

Course Outcomes

CO1	Analyse reasons for changes in fashion, classifying styles, trends, and fads	Analyse
CO2	Understand the cultural aspects and societal roles of clothing	Understand
CO3	Develop skills in selecting appropriate clothing for different age groups and occasions	Understand
CO4	Mastery of Design Elements and Principles	Understand
CO5	Create designer boards: Develop fashion illustration skills and portfolio presentation	Apply

Mapp	Mapping with Programme Outcomes

60 TT L04	industrial rextiles	OE	3	0	0	3

- To impart the knowledge on various fibers used in Industrial textile
- To impart the knowledge on medical textiles
- Understand the basic knowledge on geo and agro textiles
- To impart the knowledge on protective and smart textiles
- Understand the industrial application of textiles

Pre-requisites

• Nil

Course Outcomes

CO1	Explain the scope, classification & application of industrial textiles	Understand
CO2	Conclude the role of textile materials in the medical textile's product development.	Remember
CO3	Describe the properties required to use in Agro textiles & Geo textiles and the application of Geo & Agro textiles.	Understand
CO4	Summarize the functions & applications of protective & smart textiles.	Remember
CO5	Outline the miscellaneous & Industrial applications of textile products	Apply
